

TELEPHONE APPARATUS AND EQUIPMENT

The material included herein does not purport to be all-inclusive of our line of standard telephone products. Inquiries are invited regarding products not included.

JANUARY 1970

Western Electric Company

DEFENSE ACTIVITIES DIVISION
83 Maiden Lane, New York, N. Y. 10038

The Telephone Apparatus and Equipment Catalog pertains to the standard apparatus and certain standard equipment manufactured by the Western Electric Company.

To keep you up to date on the latest developments of the material contained herein, periodic supplements will be mailed to you when they are published.

Inquiries of a technical nature pertaining to any equipments listed herein should be directed to Mr. J. F. Reed, Jr. 212-571-5804. Telephone inquiries pertaining to price and delivery should be directed as follows:

- Army 212-571-5715
- Air Force 212-571-5721
- Navy 212-571-5711
- Non Defense Government Agencies
212-571-5711

Instructions and Drawings

Installation and maintenance instructions and installation drawings will not be furnished unless they are ordered.

When requesting quotations for or ordering items on which such information is needed, the Request and the Order should specify as a separate item (1) applicable instructions and (2) applicable equipment and wiring drawings.

The instructions will normally be furnished as Bell System Practices and the drawings will be the equipment, circuit descriptions, and wiring drawings.

The following trademarks and service marks appear on several pages of this publication. They are used to identify products and services of the Bell System.

COMCODE

(Comcode Identification Code Numbers)

As part of our plan to use computer facilities in the handling of quotations and orders, The Telephone Apparatus and Equipment Catalog has been updated to include Comcode numbers.

Comcode numbers are used to identify our apparatus and supplies and to obtain access to information stored in our data banks. These numbers are assigned to most of the apparatus included in the catalog. A Comcode number is assigned to each item of apparatus and to any variation in the item of apparatus such as color, electrical characteristics, and alphabetical coding.

Requests for Quotations and Orders should include these numbers whenever they are listed.

IT SHOULD BE UNDERSTOOD THAT COMCODE NUMBERS ARE NOT THE SAME AND HAVE NO RELATION TO GOVERNMENT FEDERAL STOCK NUMBERS.

ADAPTERS

102 Type

"E" HOLES LOCATED ONLY IN NO. 102B.
 "F" HOLE LOCATED ONLY IN NO. 102D.

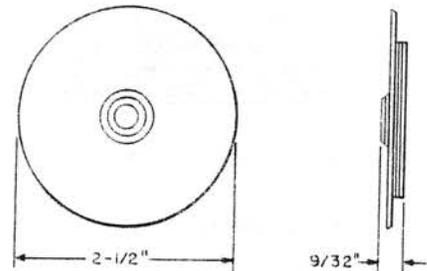

Consists of light olive gray enamel finished formed sheet metal mounting plates, each provided with one fiber fanning strip, one wooden fanning strip, mounting screws and nuts for attaching number 30 or 31 type connecting blocks, and a mounting screw for attaching a cable clamp.

Overall Dimensions (Inches)

Code No.	Mts. in Cable Term. Box	Length B	Width	Thickness	Mounting Centers Width A	Height A
102B	GA11 GB11 GC32	9-5/8	2-23/32	1-7/8	1-3/4	9-1/8
Comcode: 100 000 025						
102C	GA16 GB16 GC32 GC52	12-3/4	2-23/32	1-7/8	1-3/4	12-1/4
Comcode: 100 000 033						
102D	GA26 GB26 GC52 GC102	19	2-23/32	1-7/8	1-3/4	18-1/2
Comcode: 100 000 041						

For mounting 30B, 30C, 30D, 31B, 31C, or 31D Connecting Blocks in GA, GB, and GC type cable terminal boxes. The 102B Adapter will also mount two 31A Connecting Blocks.

104B

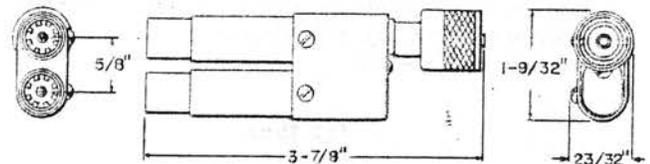

An adapter of black insulating material for use in replacing the receiver caps of operators' head sets to provide for a 101A Pad.

This adapter is to be used with the 10A Receiver Holder.

Comcode: 100 000 108

116A

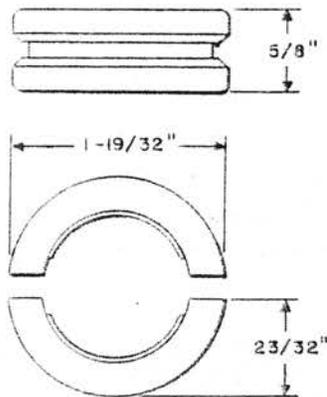

Consists of a twin coaxial jack and a coaxial plug assembled together. The inner contact of each jack member is connected to the inner contact of the plug. The outer contacts of each jack member and the plug are connected together. The plug is provided with a threaded coupling for attaching to the associated apparatus. This adapter is tested at 2000 volts ac.

Intended for use with a high impedance probe to monitor video circuits of television systems.

Comcode: 100 000 215

ADAPTERS

129A

Consists of two cast metal spacers, a metal clamping ring, and a length of lashing wire. The clamping ring and lashing wire are shipped loose.

Arranged to fit inside the cable clamping cavities of 20B and 21B type splice cases and number 61 type cable terminals. One adapter is required for the assembly of each cable less than 1 inch in diameter.

Comcode: 100 000 397

133 Type

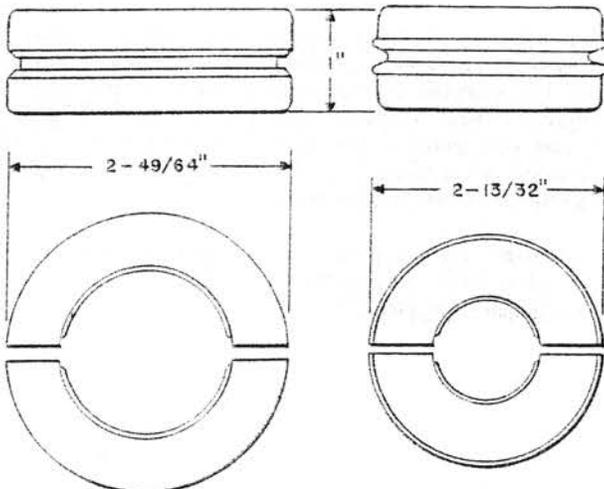

Fig. 1

Fig. 2

Each consists of two cast metal spacers, a clamping ring (shipped loose), and a length of lashing wire (shipped loose).

133A, B, and C: Intended for use with 10A, 12A, 20D type, and 21D type splice cases. See Fig. 1.

133A: Arranged for use with cables 1 inch and less in diameter.

Comcode: 100 000 405

133B: Arranged for use with cables over 1 inch to 1.6 inches in diameter.

Comcode: 100 000 413

133C: Arranged for use with cables over 1.6 inches to 2.2 inches in diameter.

Comcode: 100 000 421

133D and E: Intended for use with 20C and 21C type splice cases. See Fig. 2.

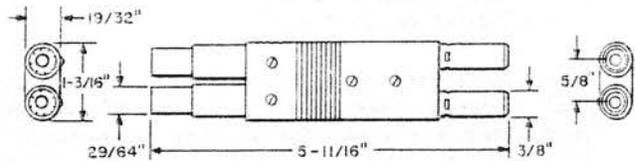

133D: Arranged for use with cables 1 inch and less in diameter.

Comcode: 100 000 439

133E: Arranged for use with cables over 1 inch to 1.6 inches in diameter.

Comcode: 100 000 447

137A

Consists of a twin plug and a twin coaxial jack in a metal case. The jack fingers are those nearest the notches on the case. The center contact of the jack finger nearest the notched edge of the case is electrically connected to the center contacts of both plug fingers. The center contact of the other jack finger is electrically common with the outer contacts of the two plug fingers and the two jack fingers. This adapter is tested at 2000 volts ac.

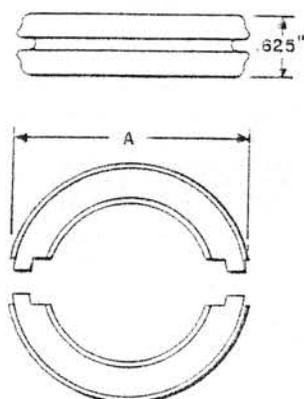

The plug fingers are arranged for two 477B or similar type jacks mounted on 5/8-inch centers. The jack fingers are each arranged for a number 358 or similar type plug.

Intended for use with a video monitoring probe for in-service monitoring in either balanced or unbalanced circuits of the A2A Video System.

Comcode: 100 000 462

ADAPTERS

138 Type

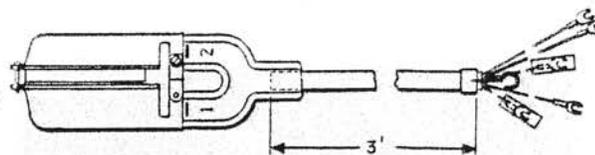

Each consists of two cast metal spacers, a metal clamping ring (shipped loose), and a length of lashing wire (shipped loose).

Code No.	Comcode	Diameter of Cable Arranged for (Inches)	Dimension A (Inches)
138A	100 000 470	1 to 1.6	3.528
138B	100 000 488	1 and less	2.528

138A and B: Arranged to fit between the clamping brackets of the 49B2 Cable Terminal.

148B-49

This adapter consists of a plug, a connector, and a length of light olive gray PVC jacketed cordage with thirty-nine number 27 AWG stranded conductors with PVC insulation.

The adapter end is equipped with a KS-16689L2 Plug and a KS-16690L3 Connector. Pins 1 to 20 and 26 to 45 of the plug are connected to the corresponding pins of the connector with strap conductors. Ten cordage conductors connect only to plug terminals, ten connect only to connector terminals, and the remaining nineteen connect to the strapped terminals.

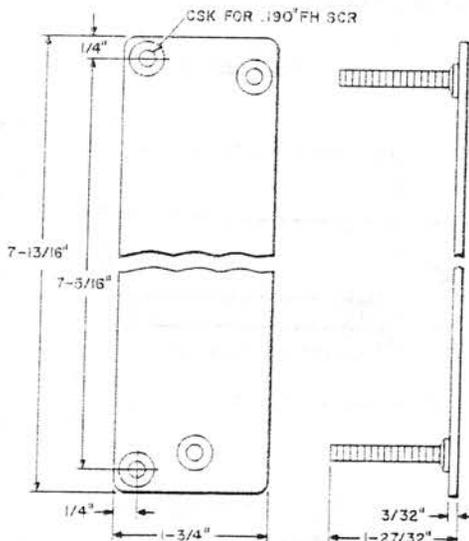

The connecting block end is equipped with a stay cord hook and spade tipped free conductors 3-1/2, 5-1/2, 7-1/4, and 10 inches long. The spade tips on the ten 3-1/2 inch and nine 5-1/2 inch long conductors are dead dressed.

The length of the jacketed cordage is 3 feet.

Intended for use where auxiliary equipment is mounted at the station set location.

Comcode: 100 000 579

144A

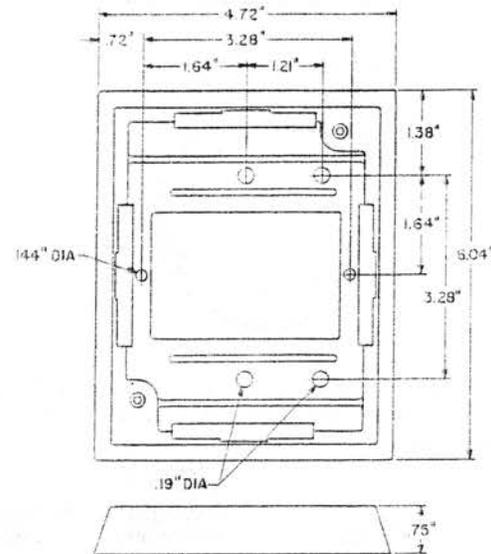

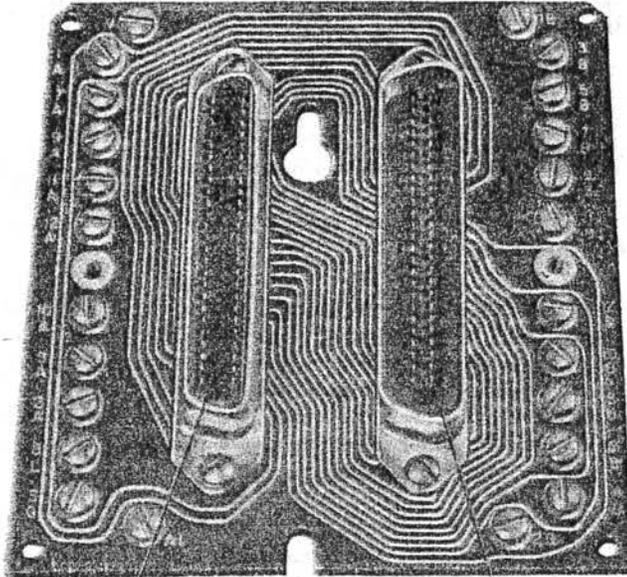

A metal plate arranged to mount a 57A Connecting Block in a 83A Protector Mounting. Mounting screws, nuts, and washers are furnished.

Comcode: 100 000 520

ADAPTERS

1498

152A

KS-16672, LIST 13
CONNECTOR

KS-16671, LIST 10
PLUG

Consists of a KS-16672L13 Connector and a KS-16671L10 Plug assembled on a printed wiring board which in turn is mounted on a board of insulating material. Has a gray removable polystyrene cover.

Overall dimensions are 4.32 inches long by 4.18 inches wide by 1.39 inches high. Has two holes for mounting centrally located on back, 3.062 inches center to center.

Wiring designations are the same as 149A Adapter.

Used with multibutton telephone sets equipped with plug-ended line cords where auxiliary apparatus is required.

Replaces the 149A Adapter.

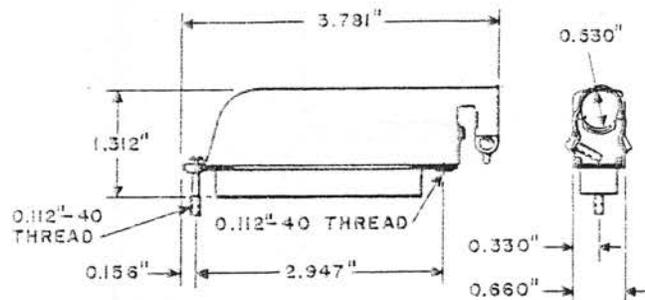

Comcode: 101 220 069

A molded gray plastic adapter, provided with mounting screws and two plates for reinforcing the mounting surface.

Used in mounting a 66E3-25 Connecting Block to over-floor ducts, under-floor ducts, and single-and double-outlet wall boxes.

Comcode: 100 000 611

153A and B

153A: Consists of a KS-16689L6 Plug and a terminal block having eight terminals arranged for screw connections. Comcode: 100 000 629

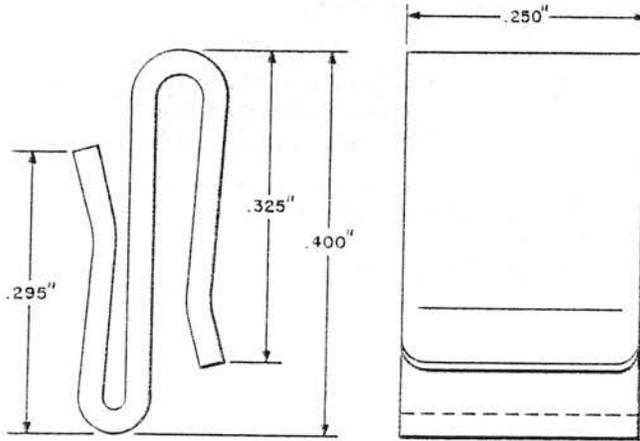

153B: Same as 153A except it contains a KS-16690L4 Connector. Comcode: 100 000 637

The plug is equipped with a nonreturnable dust cover.

Intended use is as a means of connecting non-key telephone sets to cabling systems involving A25B or B25A Connector Cables.

ADAPTERS

161A

A copper tinned stainless steel spring type adapter. Used to terminate spade tip terminated cords to 66 type quick-clip type connectors.
Comcode: 100 000 686

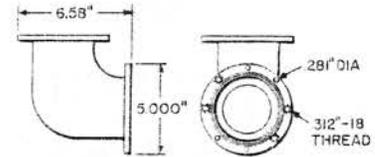

170B1 and C1

Each consists of a molded plastic nipple and aluminum die cast clamps arranged to fit either end of a 1B1 or 1C1 Closure to provide an opening for three cables.

170B1: Used with 1B1 Closures and will accommodate one cable with an outside diameter of from 1.0 inch to 2.2 inches and two cables with an outside diameter of up to 1.0 inch. Comcode: 100 000 777

170C1: Used with 1C1 Closures and will accommodate one cable with an outside diameter of from 2.2 inches to 3.0 inches and two cables with an outside diameter of up to 1.0 inch. Comcode: 100 000 735

172A

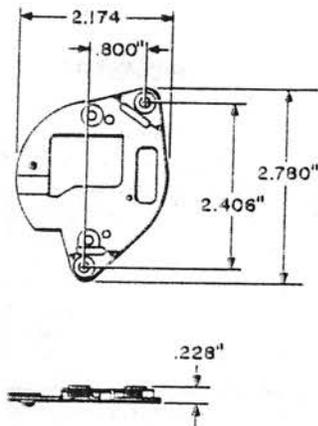

Consists of a gastight galvanized cast iron 90° elbow. Provided with a flange at each end.

Mounting screws and nuts are furnished.

Provides a through pipe for electrical connections between apparatus cases.

Comcode: 100 997 600

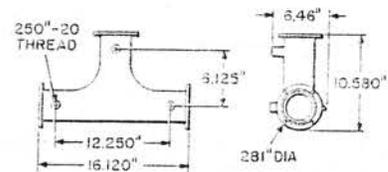

166A

Consists of stamped stainless steel plates used to shock-mount a P-type ringer. To be mounted adjacent to a resonator cavity or inside a telephone set housing which has been tuned as a resonator cavity.

Comcode: 100 000 744

173A

Consists of a gastight galvanized cast iron T-shaped pipe having a pressure test valve. Arranged for mounting on an 85A Bracket.

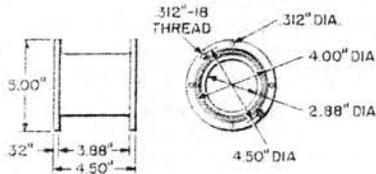

Screws, nuts, and bolts are furnished for mounting flanges and bracket.

Arranged to be used as a substitute for a number 471 type apparatus case.

Comcode: 100 997 618

ADAPTERS

174A

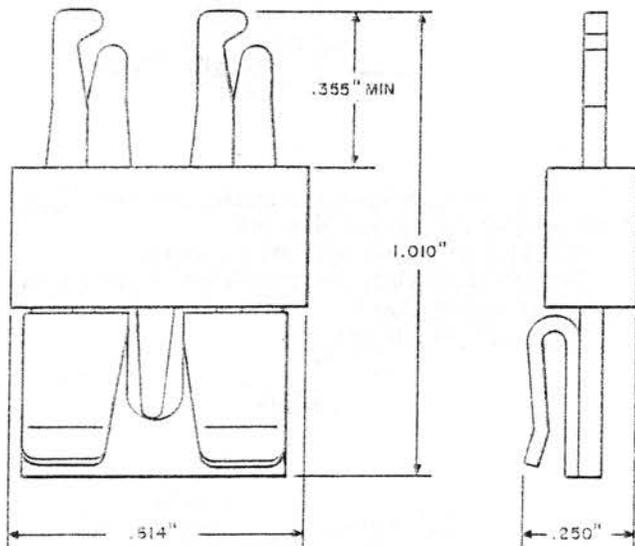

Consists of a gastight galvanized cast iron pipe. Provided with a flange at each end.

Provides a through pipe for electrical connections between apparatus cases.

Comcode: 100 997 626

183A2

Consists of a block and a two terminal connector assembly which provides a mounting clip.

Stacks on the terminal clips of most 66 Connecting Blocks and provides two additional terminals any place it is installed.

Comcode: 101 334 407

197A

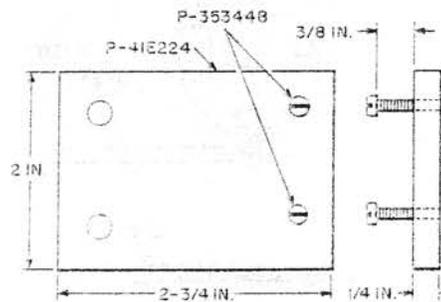

Consists of a single package of unassembled parts. Parts included are listed below.

Quantity	Description
2	AT-6789 No. 1 U Cable Guard Strap
2	P-46L387 C.R. Steel Screw
2	RM-705265 C.R. Steel Nuts

Used initially to adapt the suspension brackets of number 49 type cable terminals to mount on strand supporting two cables.

Comcode: 101 429 439

P-368209

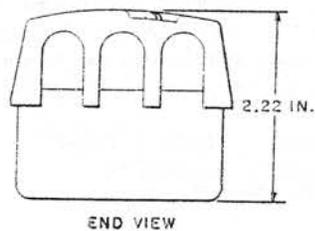

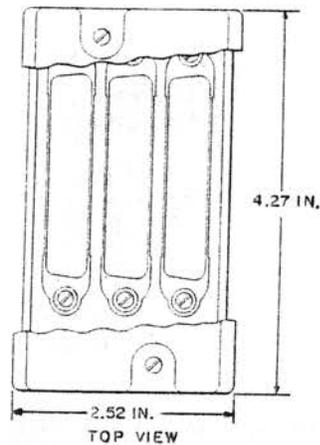

A metal adapter used to mount 19-inch mounting plates on 23-inch span gates and relay racks.

Comcode: 313 622 099

ADAPTERS

Bridging

KS-19252L1, L2, and L3

Consists of a light olive gray plastic box with combinations of three interconnected 50 contact micro-ribbon plugs and connectors mounted inside.

KS-19252L1: Contains one KS-16671L1 Plug and two KS-16672L3 Connectors.

Comcode: 400 000 220

KS-19252L2: Contains two KS-16671L1 Plugs and one KS-16672L3 Connector.

Comcode: 100 000 238

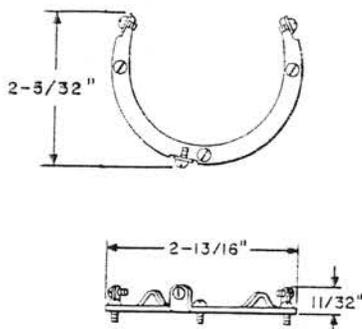

KS-19252L3: Contains three KS-16671L1 Plugs

Comcode: 996 131 363

Used as aids in multiple plug ended, six button telephone sets with A-type or B-type connector cables.

Dial

52D

Used for mounting 2A, 2E, 4H, 5, and 6 type dials on 30A, 31A, 32A, 33A, 36A, 37A, 38A, 39A, 39B, and 40A Dial Mountings, on all 6000 type dial mountings except 6000G, H, and J, and on the 1011 type hand sets. When mounting a number 6 type dial, a 64A Dial Adapter is also required.

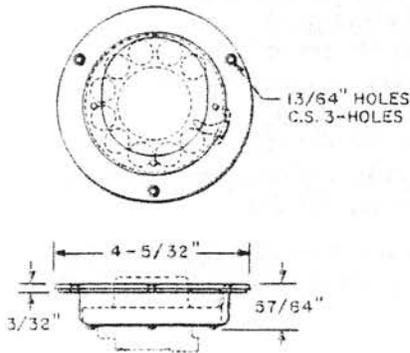

Comcode: 100 000 793

Consists of a metal plate provided with machine screws for attaching adapter to dial and dial mounting.

ADAPTERS

Dial

57A

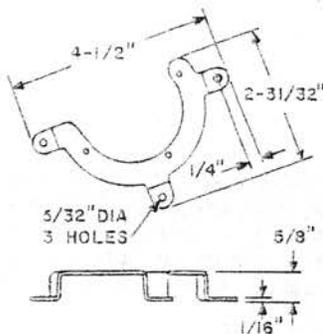

Consists of a black finished flanged metal cup, designed to mount number 2, 4, and 5 type dials, and a black finished metal plate which mounts over the flange of the cup. Screws are furnished for mounting the dial in the dial adapter and for mounting the dial adapter.

Intended for use in mounting dials flush on panels or mounting plates which may be of different thicknesses.

Comcode: 100 000 827

58A

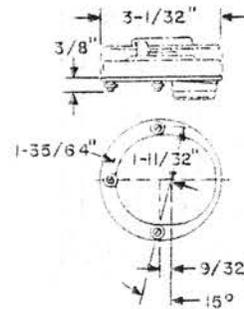

Semicircular flat metal plate with three mounting lugs. Screws, lock washers, and nuts are provided for mounting the dial adapter. Screws and lock washers are also provided for mounting the dial on the dial adapter.

Intended for use in mounting number 4 or 5 type dials in number 300 type telephone sets.

Comcode: 100 000 835

59 Type

Each consists of a soft rubber gasket provided with three eyelets and three screws for mounting, except 59D which is made of semihard rubber and is provided with only two eyelets (those on the vertical center line of the illustration for 59B and C) and two mounting screws. All are black with the exception of 59C which is gray.

59A: Arranged to mount a number 5 or 6 type dial in H-type telephone set mountings.

Comcode: 100 000 843

59B: Arranged to mount a number 5 or 6 type dial in a 44A Dial Mounting.

Comcode: 100 849 421

59C: Arranged to mount a 6E-41 Dial in a 45A Dial Mounting.

Comcode: 101 026 748

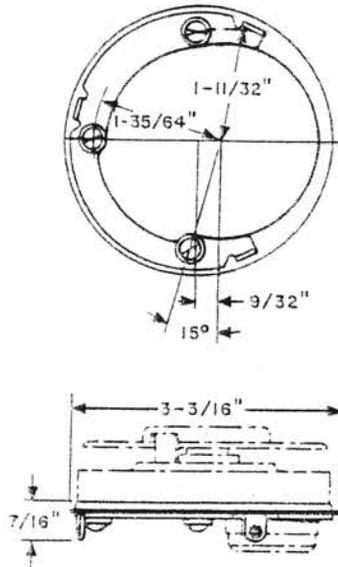

59D: Arranged to mount a 6J, 6K, or 6L type dial in a 44D-3 Dial Mounting.

Comcode: 101 026 755

ADAPTERS

Dial

62B

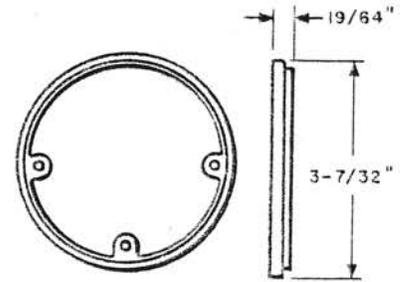

Consists of a metal plate with three mounting lugs, a shield, a 59B Dial Adapter, and the necessary mounting screws.

Used to mount number 4, 5, and 6 type dials on 34G, 34H, and 34J Dial Mountings.

Comcode: 100 000 850

64A

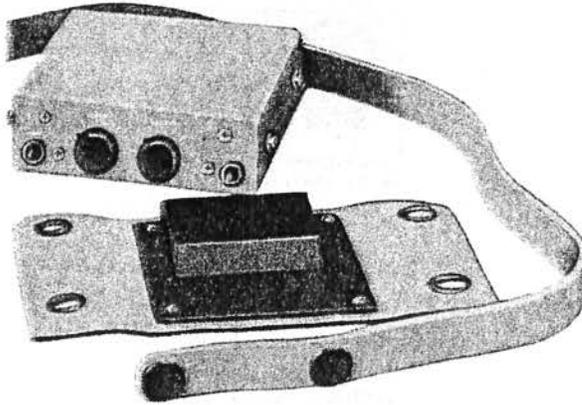

Consists of a spacer ring of black insulating material.

Used with a 59B Dial Adapter for mounting a number 6 type dial on a 44A Dial Mounting. Also used with a 52D Dial Adapter for mounting a number 6 type dial on 30A, 32A, 39A-3, 39B, and 40A Dial Mountings, on all number 6000 type dial mountings except 6000G, H, and J, and on the number 1011 type hand sets.

Comcode: 100 000 892

AMPLIFIERS

1478

A portable amplifier, consisting of three stages of audio frequency amplification with tuned input and output transformers. Input and output jacks and a gain control are provided in addition to a switch for selecting high or low input impedance.

Apparatus is mounted on a metal chassis and a metal panel and is enclosed in a metal case. The terminal is provided with a belt clip and a strap assembly. Overall dimensions are 4-13/16 inches wide, 1-23/32 inches high, and 4-7/16 inches deep.

Has input impedances of approximately 80 ohms and 2.5 megohms and an output impedance of approximately 60 ohms. The voltage gain for high impedance input is approximately 53 db at 500 Hz between 300 ohm input and output impedances.

One CK533AX and two CK534AX Raytheon electron tubes are required for operation and are furnished. In the event of electron tube failures, individual electron tubes can be replaced.

Primarily intended for use, with accessory apparatus, in identifying wires in toll and exchange cables. Forms part of the 91A Test Set. Also used with a 75B Test Set for running down faults in cable, and with the 93A Test Set for tracing the path of buried pipes and cables.

Space is provided in the amplifiers for two ASA type AA and one ASA type 15F20 flat cell batteries which are required for operation but are not furnished as part of the amplifier.

Comcode: 100 000 918

151 Type

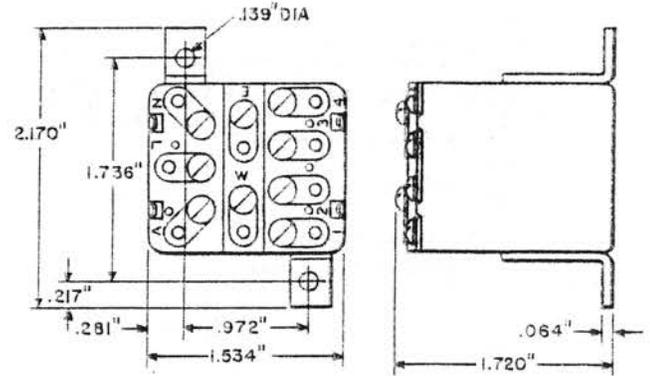

Fig. 1

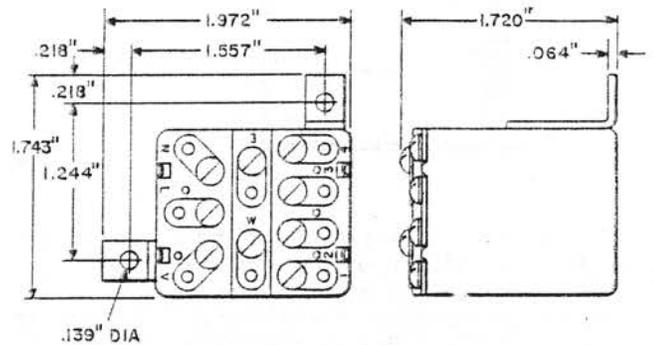

Fig. 2

Single-stage transistor type amplifiers consisting of apparatus such as an inductor, a transistor, capacitors, and resistors assembled in a metal case having a terminal plate of insulating material. 151D and E also contain a network of four diodes connected to terminals 1 to 4, inclusive, to insure proper polarity of the supply voltage for the transistor portion of the amplifier.

151D and E: Have an input impedance of approximately 500 ohms and an output impedance of approximately 150 ohms.

151D: Forms a part of the 636CW1, 638CW1, and 639DW1 Telephone Sets. See Fig. 1.

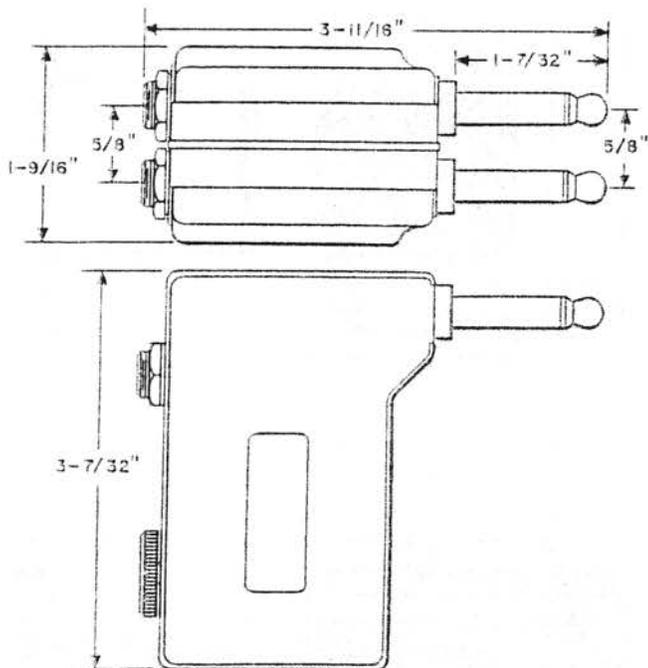

Comcode: 100 000 959

151E: Forms a part of the 3CW1 and 3CW2 type telephone consoles. See Fig. 2.

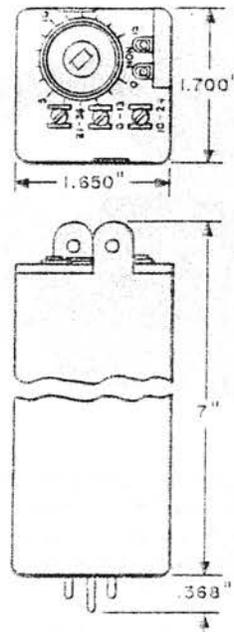

Comcode: 100 000 967

AMPLIFIERS

153BW

227 Type

A single-stage transistor type polarized amplifier consisting of an inductor, a transistor, four diodes, a potentiometer, resistors, capacitors, transformers, a twin jack, and plug assembled in a black plastic housing. Arranged to receive a 289B or similar type plug and can be plugged into two number 364 or similar type jacks mounted on 5/8-inch centers.

Used with 52SW or similar type head telephone set to permit increasing the receiver gain approximately 20 db.
Comcode: 100 001 007

Each is a two-stage transistor, adjustable gain amplifier, consisting of apparatus such as capacitors, resistors, diodes, and transistors mounted on a printed wiring board and assembled in a metal can.

Intended to operate between 600 and 1200 ohm lines over the frequency range of 200 to 5000 Hz. Has a maximum gain of 35 db and a maximum output level of +17 dbm. Requires a -24 volt dc power supply at 19 ma.

227D: Has a gray plastic terminal panel and has transmission characteristics suitable for voice frequency message and data circuits. Intended for use on aerial cable and is protected against lightning surges.

Replaces 227B and C Amplifiers.

Comcode: 101 307 189

227E: Has a gray plastic terminal panel and is used for voice frequency message circuits. Intended for use on buried cables.

Replaces 227A Amplifier.

Comcode: 101 324 973

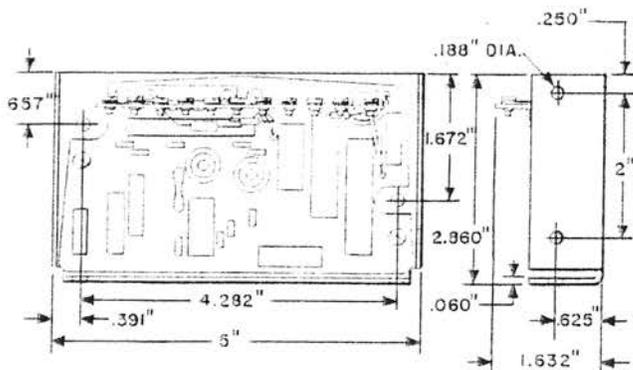

227F: Has a reduced sensitivity to impulse-type noise and a 130 degree change in the insertion phase shift. Used in voice frequency message circuits.

Replaces 227E Amplifier.

Comcode: 101 420 651

AMPLIFIERS

236A

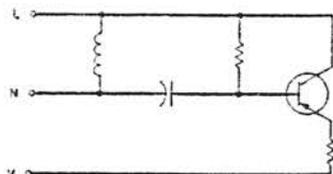

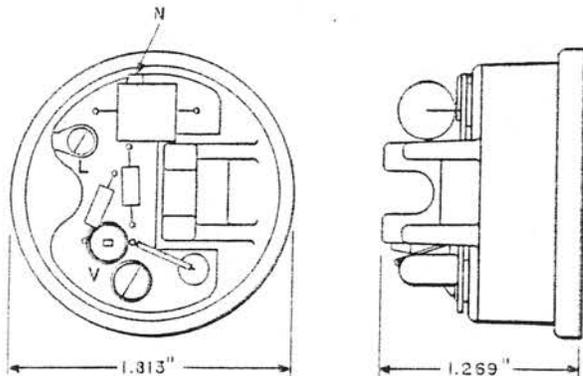

A three-stage transistorized amplifier consisting of resistors, transistors, and capacitors assembled on a printed wiring board within a metal frame. A terminal plate of insulating material containing 11 screw type terminals is assembled to the wiring board.

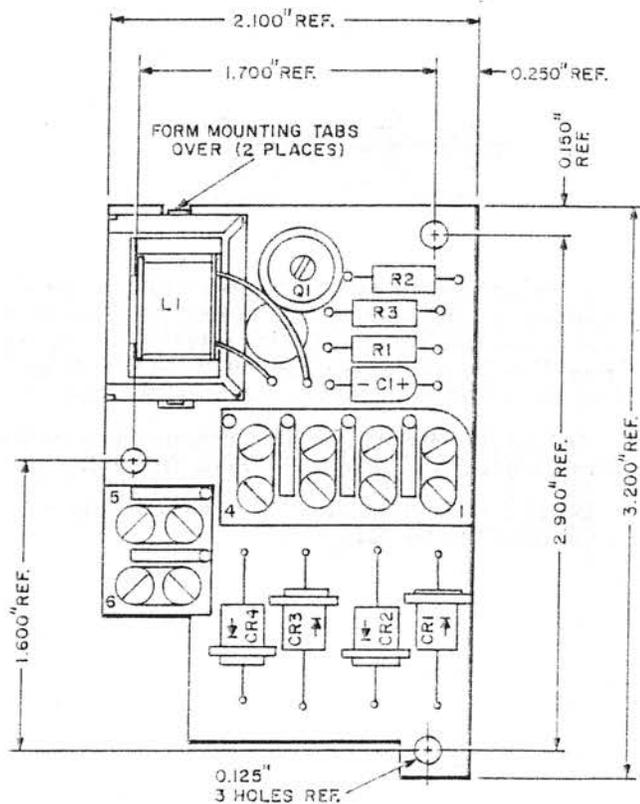

Intended for use in customized installation of 3B Speakerphone Telephone Station Apparatus.

Comcode: 100 004 274

238A

241A

A three-stage transistorized amplifier, consisting of a transistor, a capacitor, an inductor, and resistors assembled on a printed wiring board and mounted on a plastic cup which is arranged for use in the transmitter end of a G-type hand set. Input and output impedances are approximately 500 and 1000 ohms respectively.

Used to amplify transmitter audio signals of hand sets which are converted for use on telephone sets on long loops where the polarity of the line voltage is maintained by central office equipment.

Comcode: 100 004 282

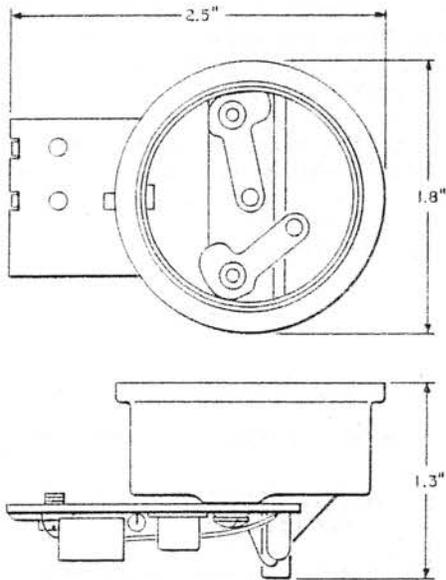

A single-stage transistor audio amplifier incorporating a polarity guard and consisting of apparatus such as capacitors, resistors, diodes, and an inductor mounted on a 0.062 inch thick printed wiring board.

Intended for use with number 636, 637, 638, 639, 1636, 1637, 1638, and 1639 series telephone sets which are arranged for use with 52 or 53 type head telephone sets to amplify output of N-type transmitter unit.

Comcode: 100 004 340

AMPLIFIERS

277A

A single-stage transistor amplifier used to amplify telephone set transmitter audio output. Designed to be used in the same manner as 238A amplifier except that it incorporates a polarity guard which permits it to be used where the line is subject to polarity reversals.

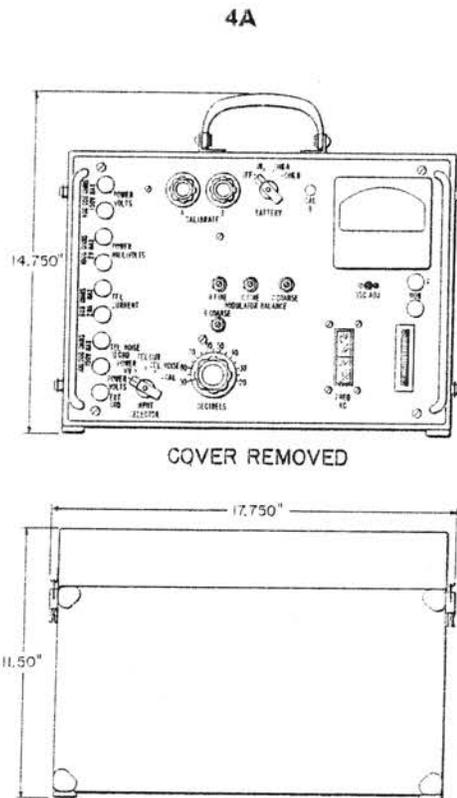

Consists of component apparatus mounted on a printed wiring board and attached to a special transmitter cap.

Designed to be installed in G3 type hand sets.

Comcode: 101 319 754

ANALYZERS

Frequency

Consists essentially of an amplifier, a meter circuit, and two oscillators mounted on a chassis assembly and metal panel. Enclosed in a metal case having a removable cover. Contains a compartment for batteries and one for storing a receiver and cord. The chassis is equipped with three sockets for storing spare electron tubes which are not furnished and if desired must be ordered separately.

Four Eveready batteries, two each of number 482 and 742, are required for the operation of the analyzer but are not furnished and must be ordered separately.

The following apparatus is required and is furnished.

Five—1U4 Electron Tubes

One—1R5 Electron Tube

One—716C Receiver equipped with an R2DE Cord

A portable set intended for frequency analysis of complex current and voltage waves in the voice and program frequency range. Operates over the frequency range from 25 to 20,000 Hz.

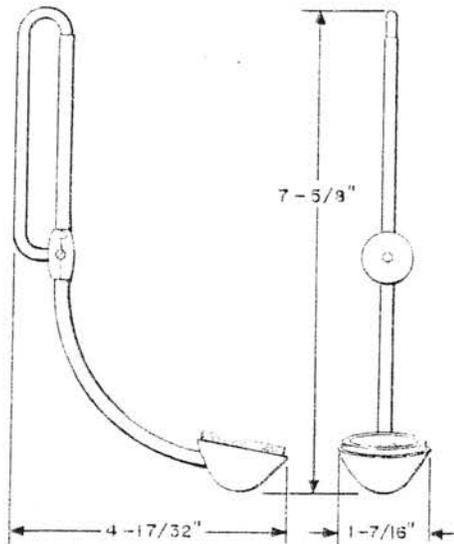

Intended primarily for use in investigating induction problems from power system fundamental and harmonic frequencies.

Comcode: 100 005 321

ARMS

Transmitter

55AW and BW

55AW: Consists of a formed tubular metal arm, a stop bar, a terminal block, and a transmitter case arranged for an N1 Transmitter Unit.

The adjustable arm is connected to the terminal block by wiring inside the tubular arm. The transmitter cap is furnished with the head telephone set of which this transmitter arm forms a part. The terminal blocks and transmitter cases are finished in black.

Forms part of 52SW, LW, MW, NW, EW, FR, and RRW Head Telephone Sets.

Comcode: 100 005 354

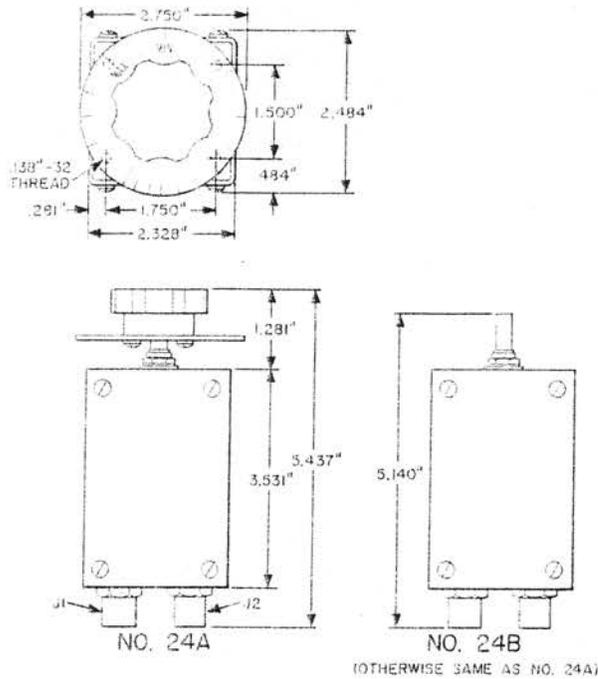

55BW: Same as the 55AW except transmitter case is arranged for an AD1 Transmitter Unit.

Forms part of 52KW and 52TW Head Telephone Sets.

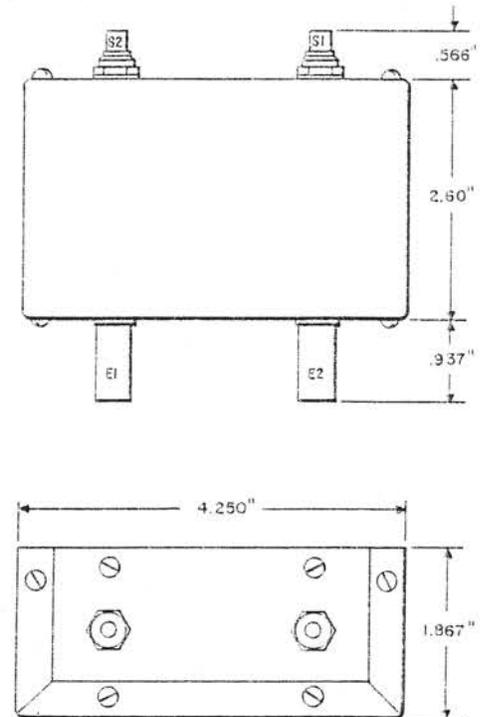

Comcode: 100 005 362

ATTENUATORS

24A and B

37A

24A: Consists of a potentiometer, capacitors, and resistors assembled in a metal can. Two 509A Jacks are provided for external connections. The outer conductors of the jacks are grounded to the can.

When inserted between 75 ohm unbalanced impedances, provides a continuously adjustable loss over the range of approximately 4.2 db to 16 db for 200 degrees of dial rotation.

Arranged to mount on the rear of a 0.091 inch panel with the dial in front of the panel.

Used initially in the J68405A Transmitter Receiver Test Set in the TH Radio System.

Comcode: 100 005 842

24B: Same as 24A Attenuator except that knob and dial plate are not furnished.

Comcode: 101 130 953

Consists of 237A Resistors mounted on two rotary switches enclosed in a metal can. Equipped with two 217A Connectors for input and output connections.

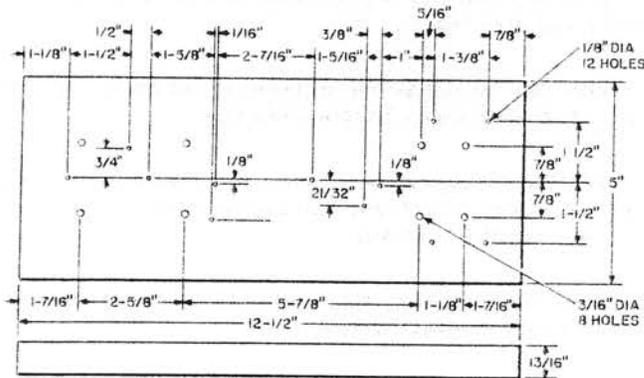

An RF attenuator having dual switches with respective attenuating selections of 0-1 db in 1 db steps and 1-2 db in 0.1 db steps. Input and output impedances are equal to 75 ohms.

Used initially on the gain and equalization panel—J68903-A.

Comcode: 101 292 802

BACKBOARDS

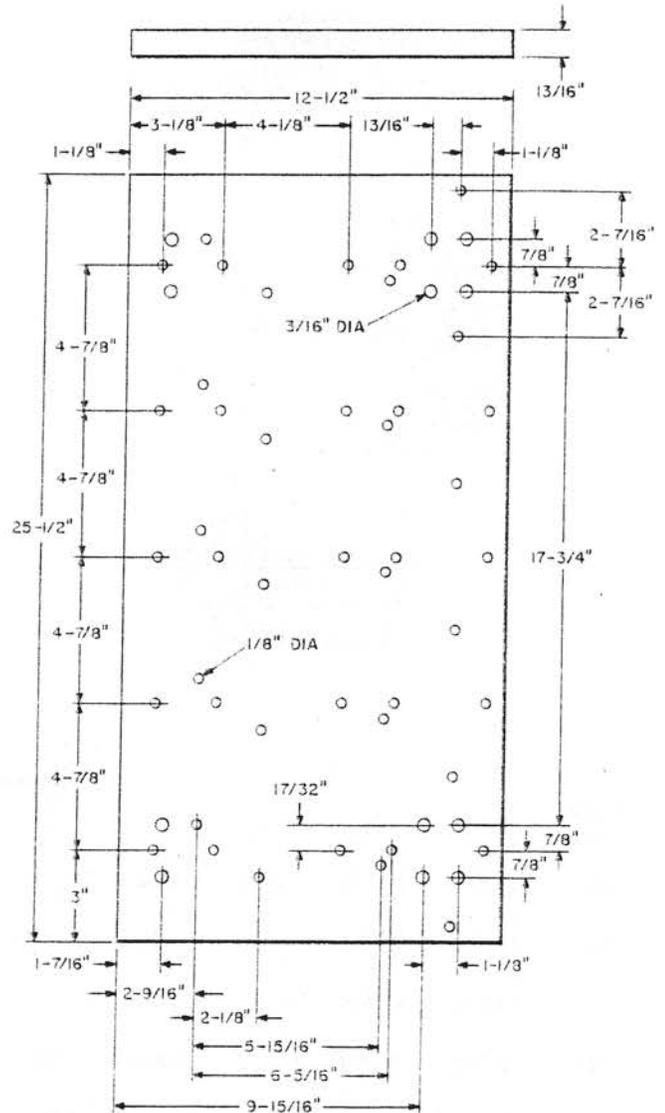

79 Type

Black finished wooden backboard.

For mounting one number 12, 59, or 98 type protector on masonry, corrugated metal, and plastered or insecure wood surfaces.

81 Type

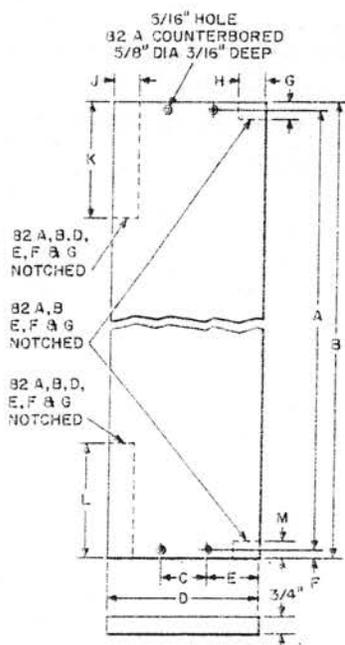

Black finished wooden backboard.

For mounting five number 12, 58, or 98 type protectors on masonry, corrugated metal, and plastered or insecure wood surfaces.

BACKBOARDS

82 Type

Wooden backboards. Mounting hardware furnished.

82A: For mounting miscellaneous apparatus in the H202 Cable Terminal Section.

82B: For mounting miscellaneous apparatus in the H303 and K606 Cable Terminal Sections.

82C: For mounting miscellaneous apparatus and also for use in the K606 Cable Terminal Section to cover the exposed end of wiring rod.

82D: For mounting miscellaneous apparatus in the H102 Cable Terminal Section.

82E: For mounting miscellaneous apparatus in the H102 Cable Terminal Section when ready access terminals are used with plastic insulated conductor cable.

82F: For mounting miscellaneous apparatus in the H202 Cable Terminal Section when ready access terminals are used with plastic insulated conductor cable.

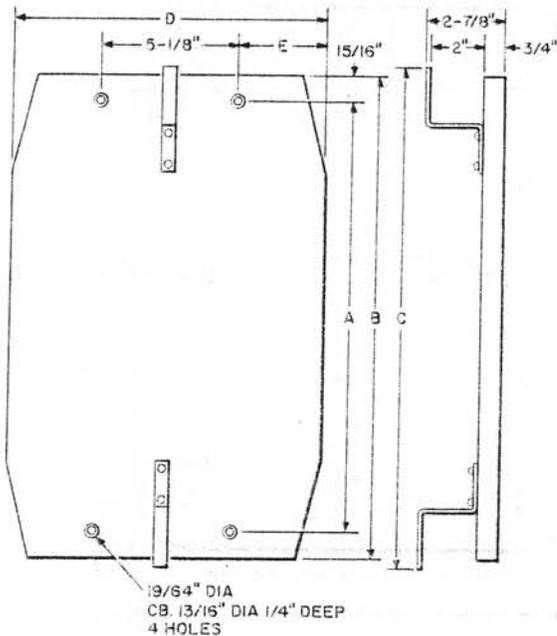

82G: For mounting miscellaneous apparatus in the H303 Cable Terminal Section when ready access terminals are used with plastic insulated conductor cable.

BACKBOARDS

83 and 84 Type

83A: Wooden backboard provided with distributing ring at each end. For mounting binding post chambers or connecting blocks in L-type cable terminal sections. Part of LA16 Cable Terminal Section.

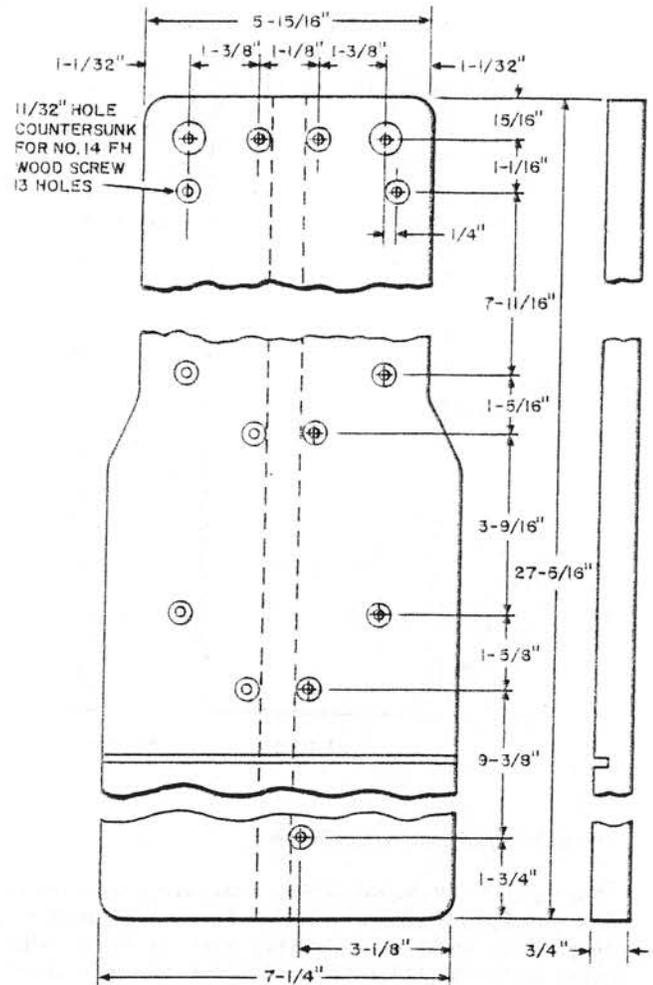

83B: Same as 83A except mounts in LA26 Cable Terminal Section.

83C: Same as 83A except mounts in LA51 Cable Terminal Section.

84A: Wooden backboard provided with distributing ring at each end. For mounting binding post chambers or connecting blocks in LA-type cable terminal sections. Part of LA26 Cable Terminal Section.

84B: Same as 84A except is part of LA51 Cable Terminal Section.

144D

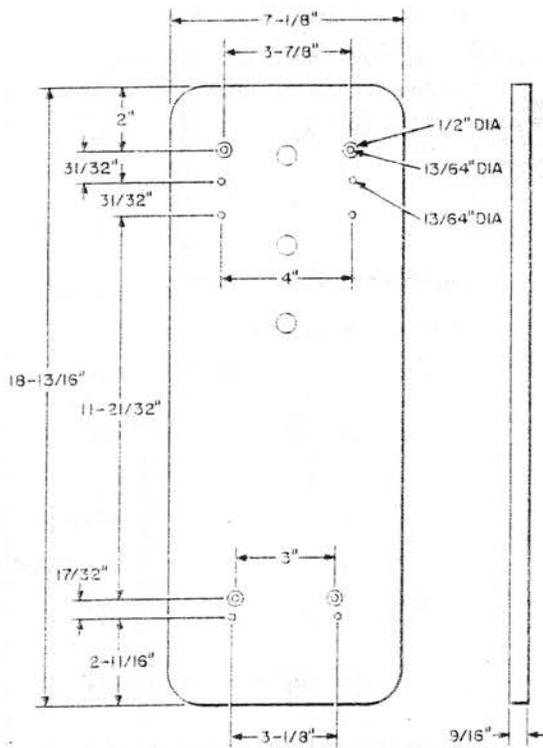

Black finished wooden backboard.

For mounting a number 684, 685, or 687 type subscriber set.

Code No.	Dimensions (Inches)				
	A	B	C	D	E
83A	16	17-7/8	18-3/8	11-1/4	3-1/16

83C	43	44-7/8	45-3/8	11-1/4	3-1/16
84A	23-1/2	25-3/8	25-7/8	14-1/4	4-9/16
84B	43	44-7/8	45-3/8	14-1/4	4-9/16

BACKBOARDS

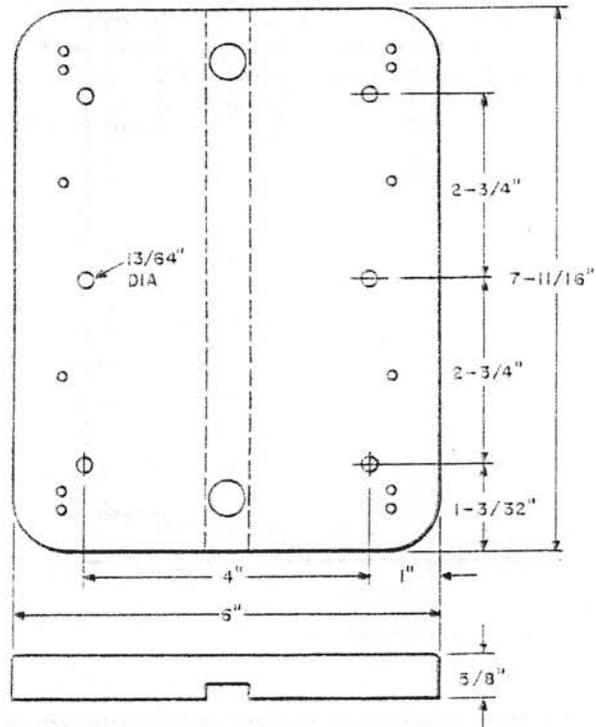

148A

Black finished wooden backboard.

For use with metal subscriber sets when mounted on metal lathed or sheathed walls or other conducting materials. Also used for mounting sets on brick walls. Drilled for number 634, 653, and 684 type subscriber sets.

154A

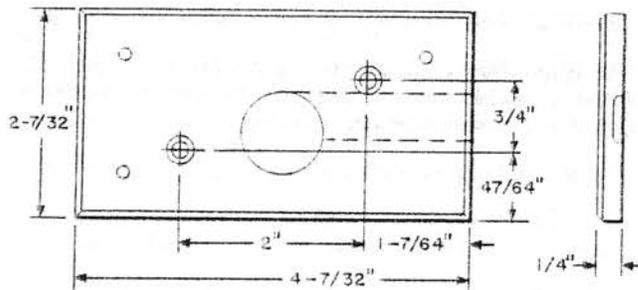

Wooden backboard, light olive gray finish.

Used in mounting number 634 type subscriber sets on brick walls and metal partitions.

BACKBOARDS

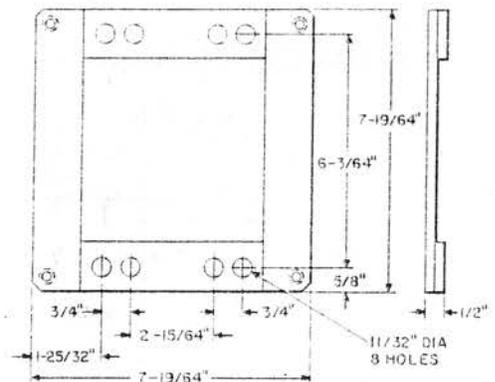

163A

Phenol fiber backboard, light olive gray finish. Screws for mounting backboard to wall and indicator to backboard are furnished.

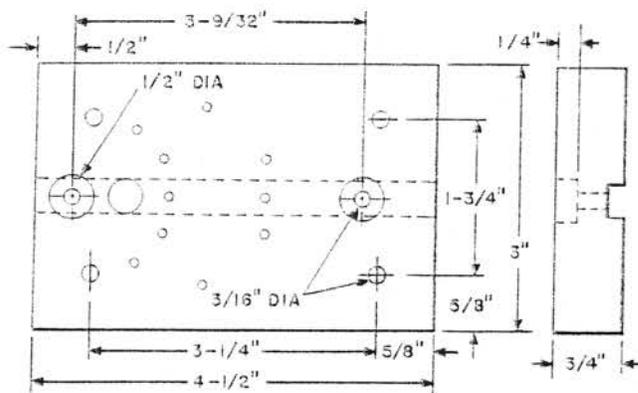

Used to mount 14A or 20A type indicators.

166A

A galvanized welded steel frame. Used for mounting a number 320 type telephone set. Bolts are furnished to mount the telephone set to the backboard.

164A

Black finished wooden backboard.

Intended to mount a G-type hand set mounting on a standard outlet box, wall, or other surface or to mount a directory hanger on a wall or other surface.

168 Type

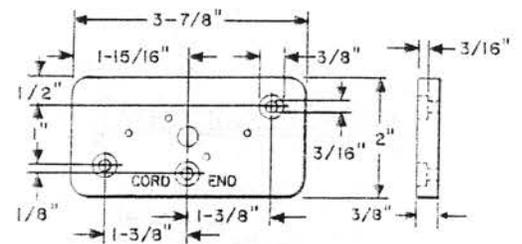

Fig. 1

BACKBOARDS

168 Type (Continued)

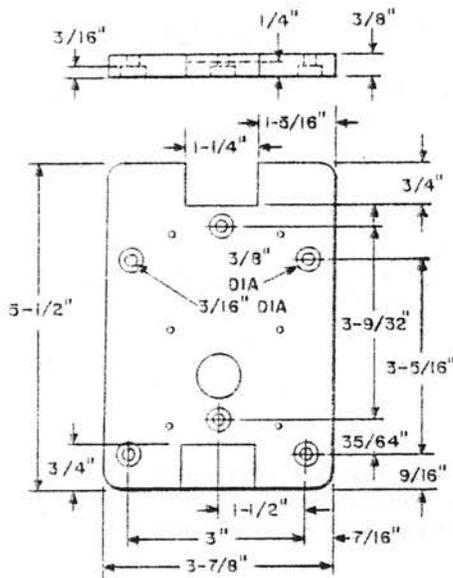

Fig. 2

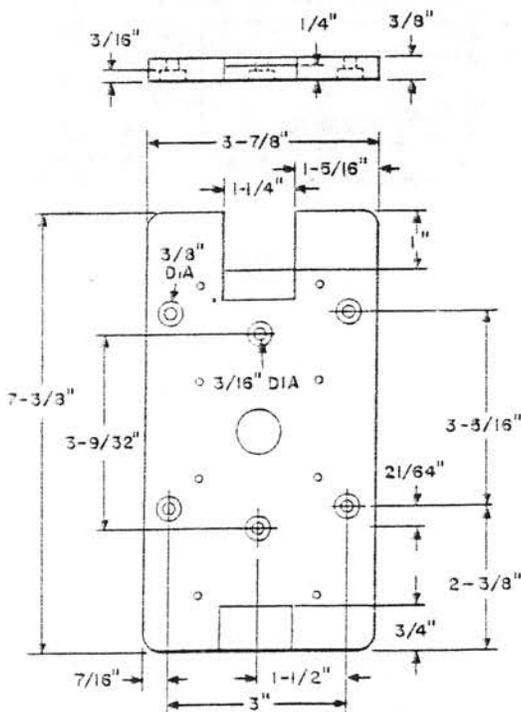

Fig. 3

168D-49: Plastic backboard, light olive gray color. Intended to mount a 42A or 44A Connecting Block on uneven or masonry surfaces. See Fig. 1.

168D-50: Same as 168D-49 except color, which is ivory.

168E-49: Plastic backboard, light olive gray color. Intended to mount two or three 44A Connecting Blocks on uneven or masonry surfaces. See Fig. 2.

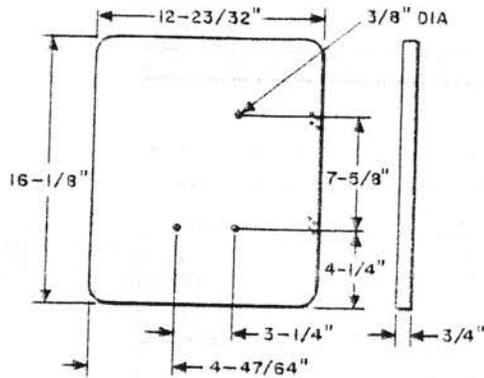

168E-50: Same as 168E-49 except color, which is ivory.

168F-49: Plastic backboard, light olive gray color. Intended to mount four 44A Connecting Blocks. See Fig. 3.

168F-50: Same as 168F-49 except color, which is ivory.

BACKBOARDS

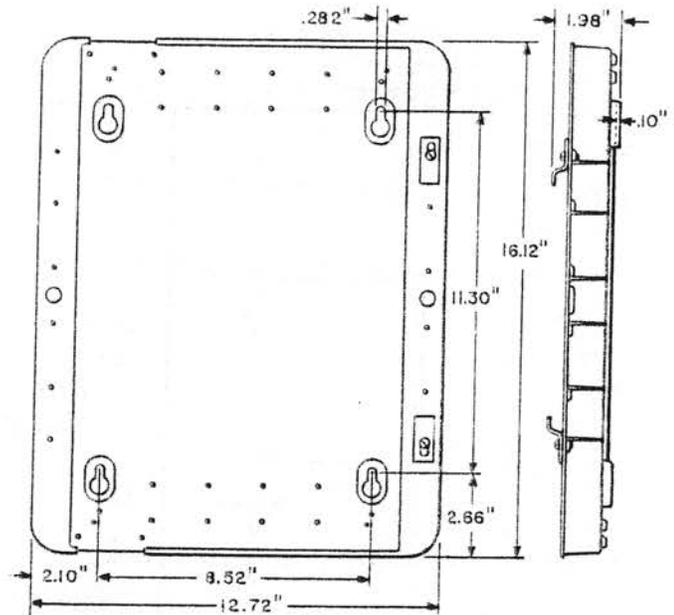

173A

Wooden composition backboard, light olive gray finish.

For mounting two 15A Apparatus Mountings used in 1A1 Key Telephone System. Two backboards butted together will fit under a 117A Cover.

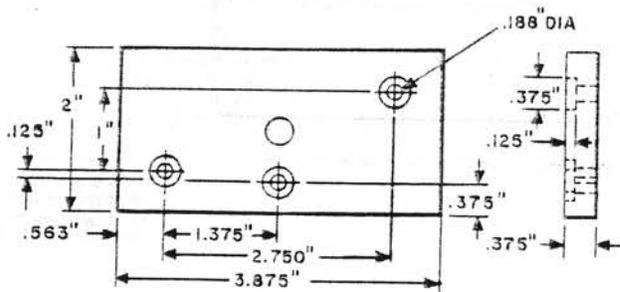

177A

Die cast metal backboard, provided with three cable rings, four blocks, and screws for mounting cable rings and blocks.

Arranged for mounting two 66B1-25 Connecting Blocks, and a 31B Apparatus Mounting in number 300, 301, or 302 type key service units by means of a P-15C309 Bracket and a P-15C308 Hinged Bracket which are not furnished and should be ordered separately.

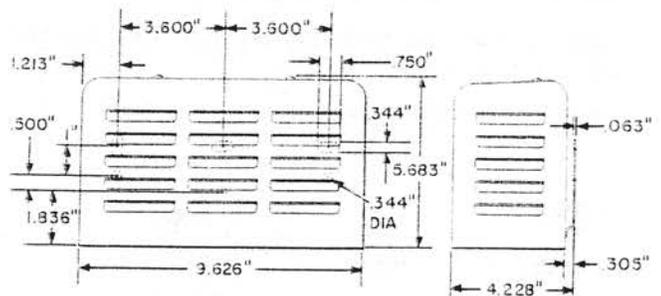

176A-49

Wooden backboard, light olive gray finish.

For mounting small miscellaneous apparatus such as jacks, buzzers, keys, and indicators on uneven or masonry surfaces.

181AW-49

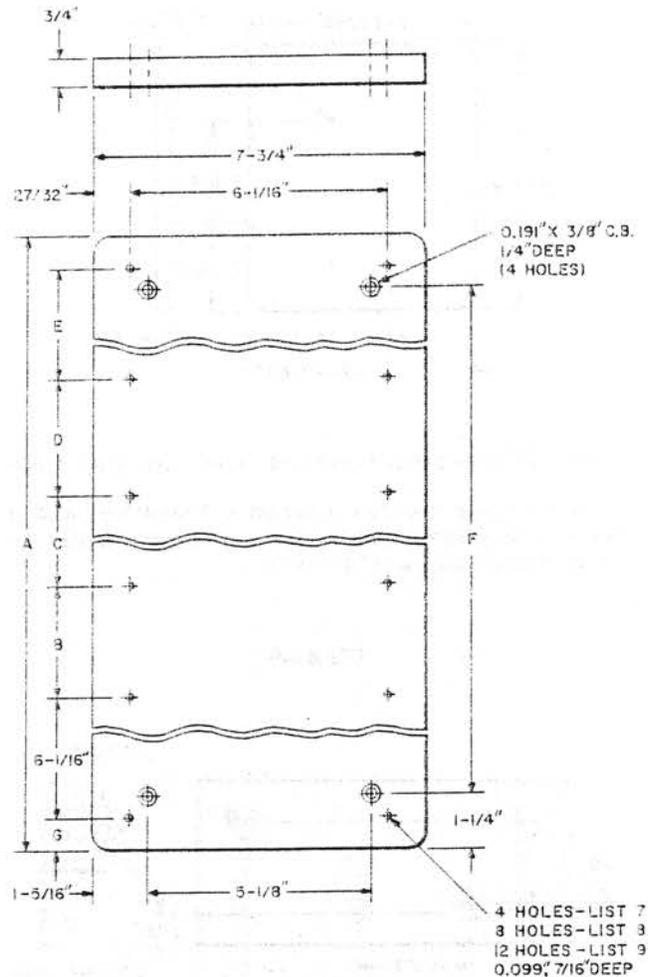

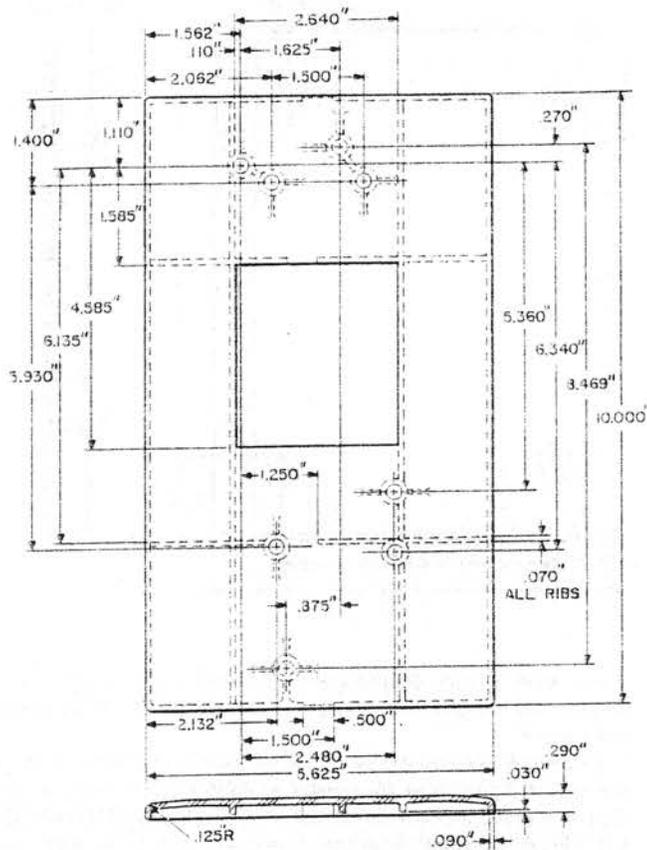

Consists of a metal bracket arranged to mount an L1AW-49 Ringer, and equipped with a removable louvered metal cover having a light olive gray finish. Provided with screws for mounting a ringer.

Intended for mounting an L1AW-49 Ringer on a pole or wall when protection against weather or dust is necessary.

BACKBOARDS

182BW

KS-5796 Type

Plastic backboard, available in the following colors: -3 (black), -50 (ivory), -51 (green), -53 (red), -56 (yellow), -58 (white), -60 (light beige), and -61 (light gray).

May be used when mounting 500 type wall sets if a backboard is necessary.

Replaces 172CW Backboard.

Particle board, light olive gray finish. List 7, 8, and 9 mounts 1, 2, and 3 number 105 type apparatus boxes, respectively.

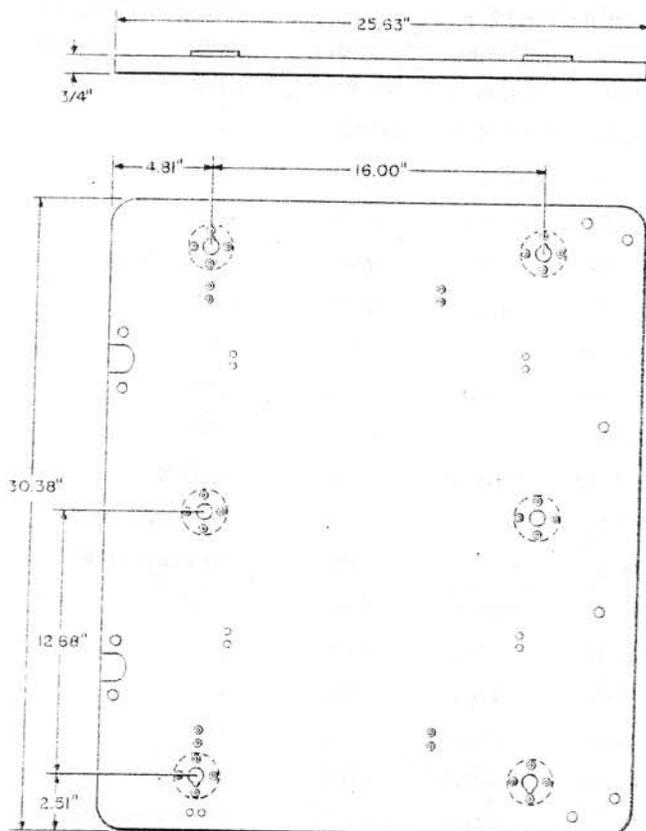

Code No.	Dimension (Inches)

BASES

Telephone

AEW1 and AEW2

Code	Comcode	Color
AEW1-58	101 248 094	White
AEW1-60	101 248 102	Light beige
AEW1-61	101 248 110	Light gray
AEW2-58	101 248 128	White
AEW2-60	101 248 136	Light beige
AEW2-61	101 248 144	Light gray

Each consists of a microphone, preamplifier, and speaker for hands-free communication with the nurse console. The base also includes keys for nurse call (illuminated), privacy operation, normal operation, and call canceling.

One M2ER nurse call cord, in corresponding color, and one 53A lamp are furnished with each telephone base. A D26D cord is terminated in a KS-16689 L5 plug assembly. A D-180032 kit of parts is available to provide an optional data feature.

Approximate overall dimensions are 8.625 inches long by 3.700 inches wide by 3.900 inches high.

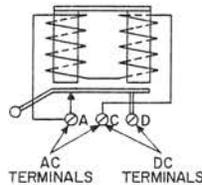

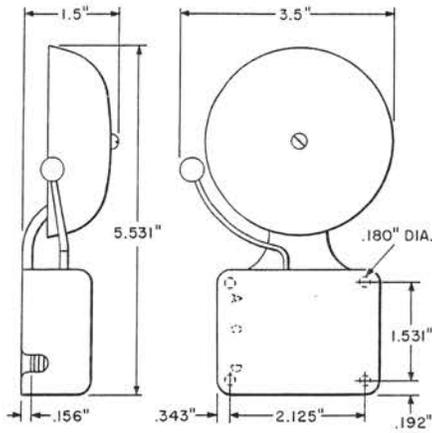

When connected to a 220AW Type Hand Telephone Set, it constitutes a TRIMLINE hospital type telephone set.

The AEW2 Telephone Base is the same as the AEW1 Telephone Base except a message-waiting lamp is provided.

Intended for use in the 3A Communication System.

BELLS

7 Type

Code No.	Comcode	Resistance Ohms	DC		60 Cycles AC	
			Min	Max	Min	Max
7AW	100 007 418	270.0	14	40	25	50

7FW	100 007 459	682.0	24	60	35	60

Equipped with heavy silver contacts and reed mounted armature with a flat retractile spring and a stop. Will normally operate without readjustment on the dc voltage ranges listed below. Readjustment for ac operation is limited to bending the retractile spring stop. The minimum effective resistance to dc or impedance to 60 Hz ac of these bells should be assumed to be approximately three times the nominal dc resistance.

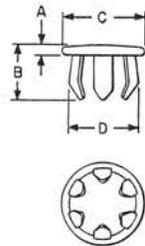

Intended for either dc or 50-60 Hz ac operation. It is recommended that connection be made to terminals C and D for either ac or dc current.

Light olive-gray finish.

BLANKS

Apparatus

39B

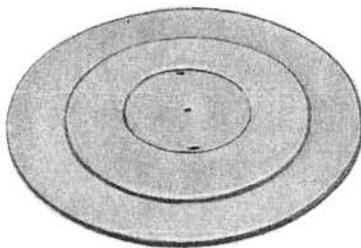

A metal apparatus blank having a black enameled finish on the head. Used in unequipped positions of number 215 or similar type jacks.

Comcode: 100 008 200

DIMENSIONS (INCHES)

A	B	C	D
.078	.391	.531	.484

95C

A plastic plate having overall dimensions of 4.500 inches in diameter with a depth of 0.509 inch.

Used to cover the dial openings in the housings of number 500, 554 and similar type telephone sets when used for manual service.

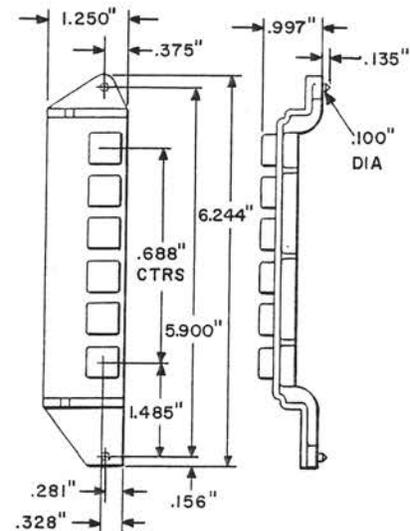

The dial brackets of the telephone set protrude into embossed slots on the back of the blank, and the telephone housing retains it in its proper position.

A card holder is furnished (shipped loose) for all colors. The blank is available in the following colors.

Code No.	Comcode	Color
95C-3	101 052 033	Black
95C-50	101 052 041	Ivory
95C-51	101 052 058	Green
95C-53	101 052 066	Red
95C-56	101 052 082	Yellow
95C-58	101 052 090	White
95C-60	101 052 116	Light beige
95C-61	101 052 124	Light gray

Replaces the 95B Apparatus Blanks.

105B

A molded opaque white plastic apparatus blank. Mounted by means of two extruded dowels.

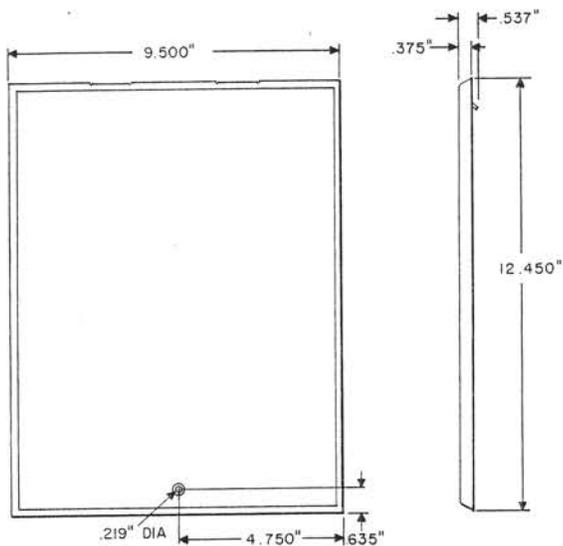

Used to fill space reserved for a 598 or 599 type keys on 630 and 631 type telephone sets.

Comcode: 100 008 911

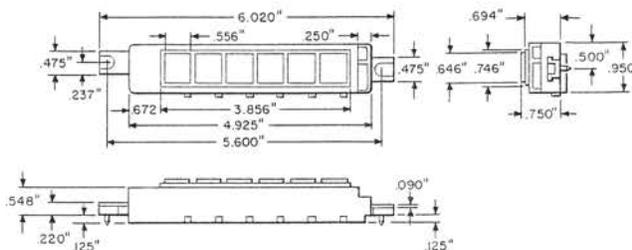

BLANKS

Apparatus

107BW

111A

A white molded compound with a plastic appearance which is intended for use in the 3640AW and 3641AW Type Telephone Sets to fill the space reserved for additional keys. The width of the apparatus blank is the same as one of the keys.

Comcode: 100 009 026

A metal apparatus blank intended to cover the space reserved for a number 750 or 1750 type telephone set in a wall-mounted number 113 type or a 114AW Apparatus Box.

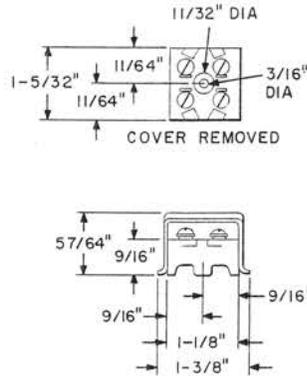

Provided with mounting brackets and screws.

Comcode: 100 008 960

BLOCKS

Connecting

11 Type

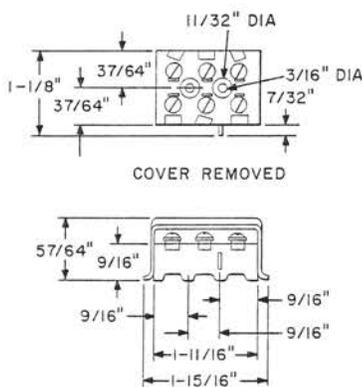

Equipped with screw terminals molded in a black composition base. Opposite terminals are electrically connected.

11B & C Type: Furnished with a metal cover. Cover is not furnished with 11A.

11C Type: Have an insulating strip on the underside of the cover to protect the terminals from short circuits.

Code No.	Comcode	Color of Cover
11A	100 009 067	—
11B-49	100 009 075	Light olive gray
11B-50	100 009 083	Ivory
11C-49	100 009 091	Light olive gray
11C-50	100 009 109	Ivory

12 Type

Equipped with screw terminals molded in a black composition base. Opposite terminals are electrically connected. Provided with a metal insert having a hole which serves as a means of fastening cords equipped with metal stays.

12F Type are furnished with a metal cover. Cover is not furnished with 12E.

Code No.	Comcode	Color of Cover
12E	100 009 117	—
12F-49	100 009 125	Light olive gray
12F-50	100 009 133	Ivory

18F	100 009 174	3	10	228A, 228B

Used to mount on mounting plates of the number 823 or similar type.

26B

A connecting block adapted to mount on mounting plate 7/32-inch thick.

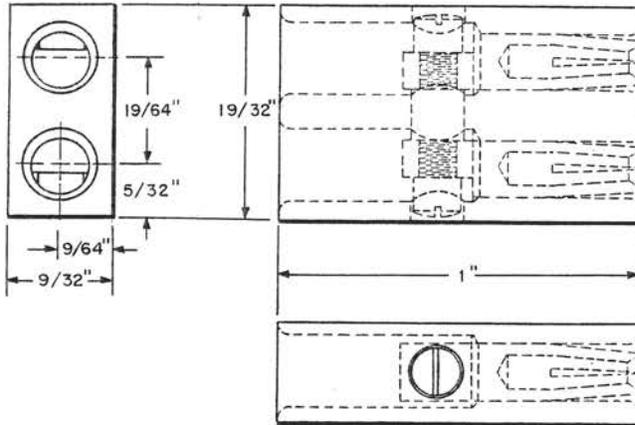

For use with a number 218 type relay. Arranged to engage with terminals of the associated relay and hold it in position by spring tension.

Comcode: 100 009 224

BLOCKS

Connecting

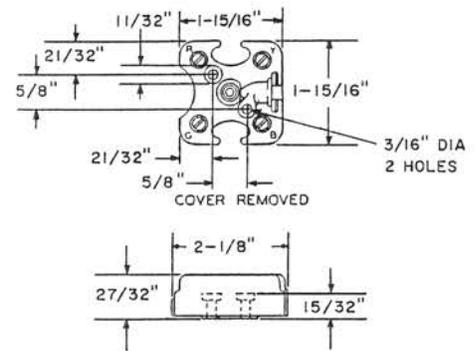

29A

A block of black insulating material provided with two metal sleeves arranged at one end to be attached to an L4T Cord and at the other end to connect to a number 29 Cord Tip by means of plug connections.

Used on L4T Cord to permit chief operator to plug in with supervisor by using a receiver and R2DM Cord.
Comcode: 100 009 265

42AW Type

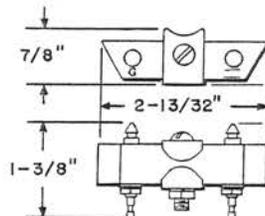

A block of insulating material equipped with four screw terminals, associated screws and washers, and a removable plastic cover.

Code No.	Comcode	Color of Cover
42AW-49	101 846 657	Light Olive Gray
42AW-50	101 846 640	Ivory

Used as a bridging terminal.

44A

33A and B

A block of insulating material provided with terminals for making solder connections at one end and temporary test connections at the other end. Adaptable for bases of either 5/8-inch or 3/4-inch thickness.

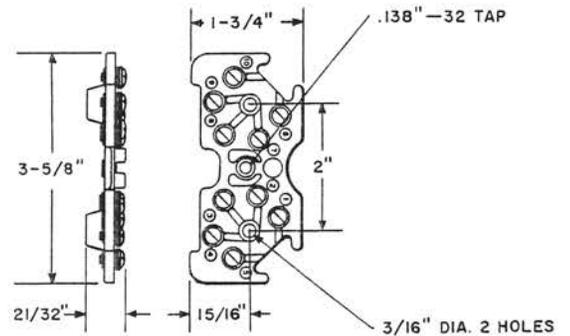

33A is engraved 24 volts.

Comcode: 100 997 345

33B is engraved 48 volts.

Comcode: 100 009 281

For use in testing distributing frames in the rear of switchboards.

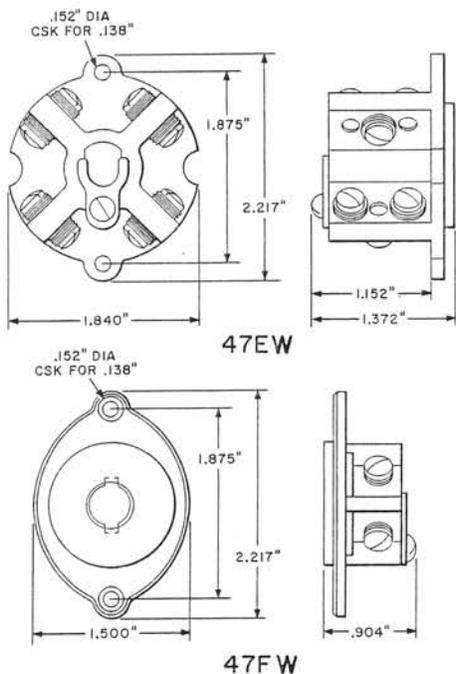

A block of insulating material equipped with ten screw terminals and arranged for number 101 type covers.

For use with telephone sets in installations needing more than four terminals.

Comcode: 100 009 349

BLOCKS
Connecting

47EW and 47FW

57A Type

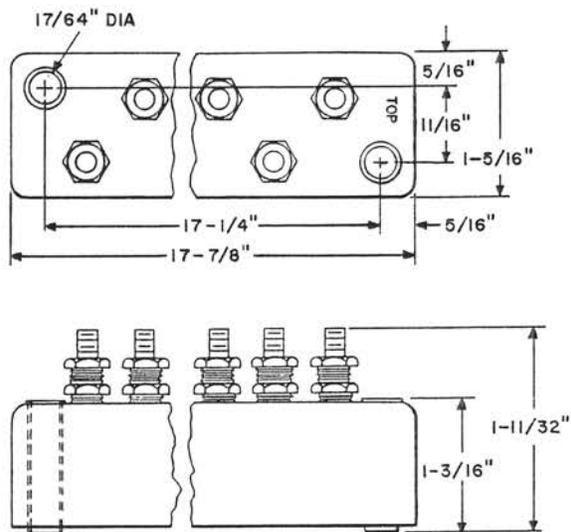

Fig. 1

Each consists of a block of insulating material equipped with screw terminals. Arranged for a mounting cord having either a winged type stay band or an S-hook. Mounting screws are furnished.

Can be used with a 43B Bracket in standard conduit outlet boxes.

BLOCKS

Connecting

60A1A-3 and 60A1B-3

Each consists of a cast resin block containing three pairs of binding posts. Each binding post is equipped with insulation crushing washers to permit making cable terminations without removal of insulation.

60A1A-3: Contains six 2A1A Protector Units and provides 500 volt protection for use in central offices.

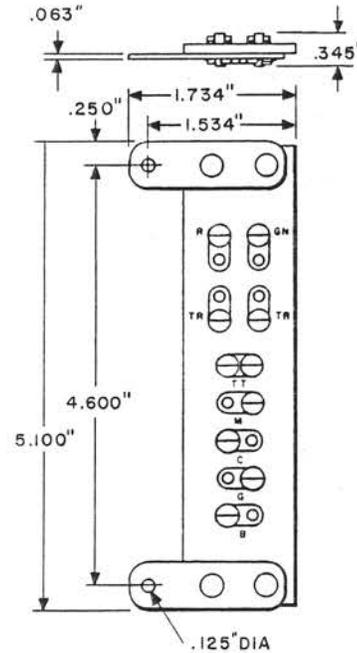

Comcode: 100 009 786

60A1B-3: Contains six 2A1B Protector Units and provides 800 volt protection for use with buried cable terminals.

Used to provide facilities for connecting up to three cable pairs and for terminating drop or service wires.

Comcode: 100 009 794

63A

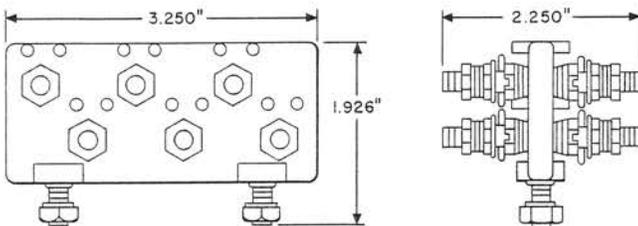

Consists of a strip of insulating material equipped with nine terminals and two mounting brackets.

Used with 1A1 and 6A Key Telephone Systems.

Comcode: 100 009 810

60A2-6

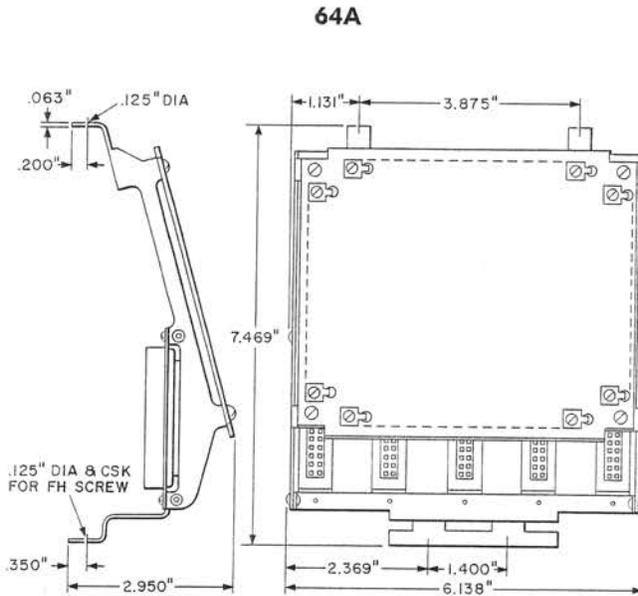

Consists of an injection molded block equipped with six pairs of binding posts mounted back to back with three pairs on each surface of the block. Each binding post is provided with nuts, flat washers, and insulation crushing washers to permit making cable terminations without removing insulation.

Used initially in B buried cable terminals to terminate buried PIC cable.

Replaces the 60A1-6 Connecting Block.

Comcode: 100 999 309

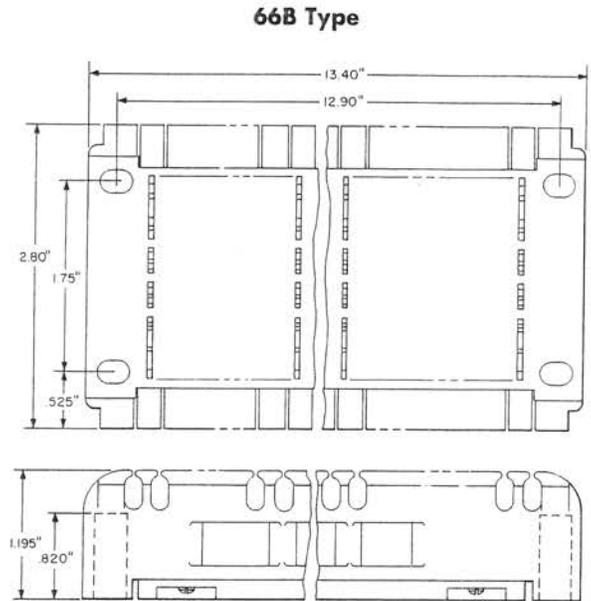

BLOCKS
Connecting

Consists of a block of insulating material equipped with 104 numbered terminals for both screw and solder connections, and five KS-16671L1 Plugs assembled on a metal mounting. Mounting screws are furnished.

For use with 423AW2, 424AW2, 425AW2, and 426AW2 Key Mountings to provide means for connecting the associated keys to 236A Key Telephone Units.

Comcode: 100 009 828

Each consists of a molded plastic block containing quick-connect terminals. Intended for terminating number 20 through 24 AWG polyethylene or polyvinyl chloride insulated conductors on selected wire in multiple without removal of conductor insulation by means of a 714B tool.

Can mount on 115A1 and 115B1 Apparatus Boxes.

66B3-50: Contains 50 rows of two 3-clip terminals, each terminal of which permits the connection of from 1 to 3 conductors. Equipped with a fanning strip on one side of the block, and an additional fanning strip (shipped loose) to mount on the other side of the block. Arranged for 50 pairs of conductors.

Intended for use with 311A, 501A1 and 502A Key Service Units.

Comcode: 100 009 893

66B4-25: Contains 50 rows of 6-clip terminals, each terminal of which permits the connection of from 1 to 6 conductors, and equipped with a fanning strip on each side of the block. Arranged for 25 pairs of conductors.

Intended for use with 115A1 and 115B1 Apparatus Boxes.

Comcode: 100 009 901

66B5-37: Contains 50 rows of terminals. Twenty-six rows contain 6-clip terminals, each terminal of which permits the connection of from 1 to 6 conductors. Twenty-four rows contain two 3-clip terminals, each terminal of which permits the connection of from 1 to 3 conductors. Equipped with a fanning strip on one side of the block, and an additional fanning strip (shipped loose) to mount on the other side of the block. Arranged for 37 pairs of conductors.

Comcode: 100 009 919

BLOCKS

Connecting

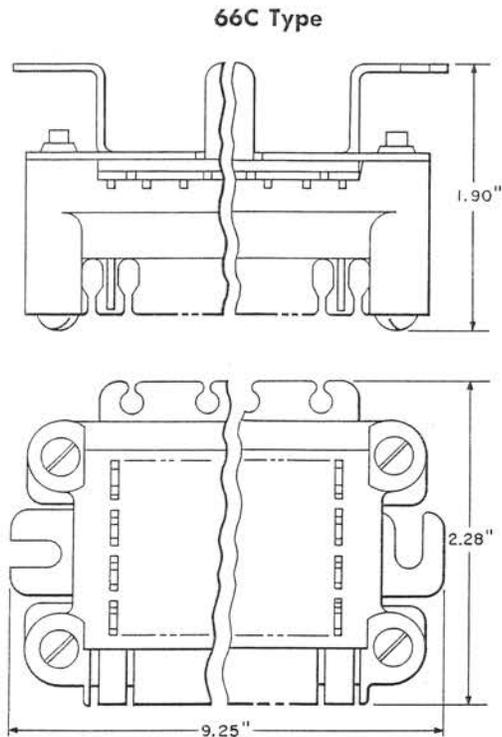

Fig. 1

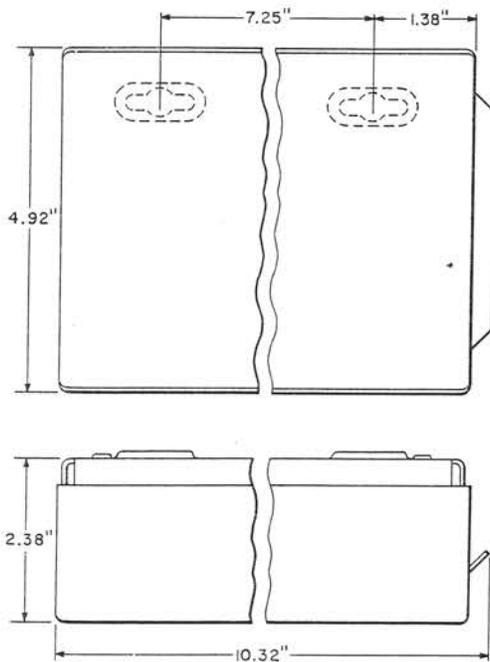

Fig. 2

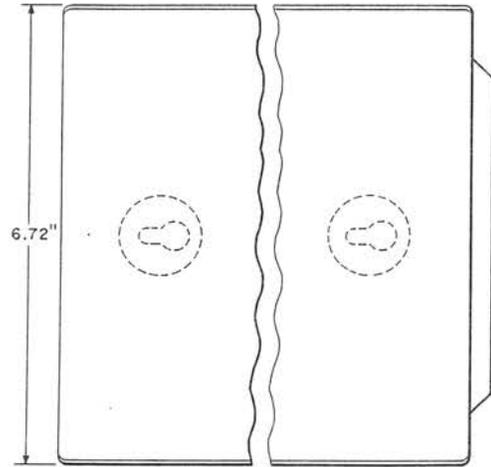

Fig. 3

66C1-16: Consists of 32 clip-type terminals on a molded plastic strip which is mounted on a steel bracket. Each clip terminal permits the connection of from one to four number 20 through 24 AWG conductors without removal of polyvinyl chloride insulation. Two fanning strips are furnished. See Fig. 1.

Forms part of 66C2-16 and 66C2-32 Connecting Block.

Comcode: 100 009 927

66C2-16: Consists of a gray metal housing with a light gray cover and contains one 66C1-16 Connecting Block. The cover is reversible to permit opening from the top or bottom of the housing. See Fig. 2.

Comcode: 100 009 935

66C2-32: Same as 66C2-16 except contains two 66C1-16 Connecting Blocks. See Fig. 3.

Comcode: 100 009 943

Intended for use as bridging facilities in 1A1 and 6A Key Telephone Systems.

BLOCKS
Connecting

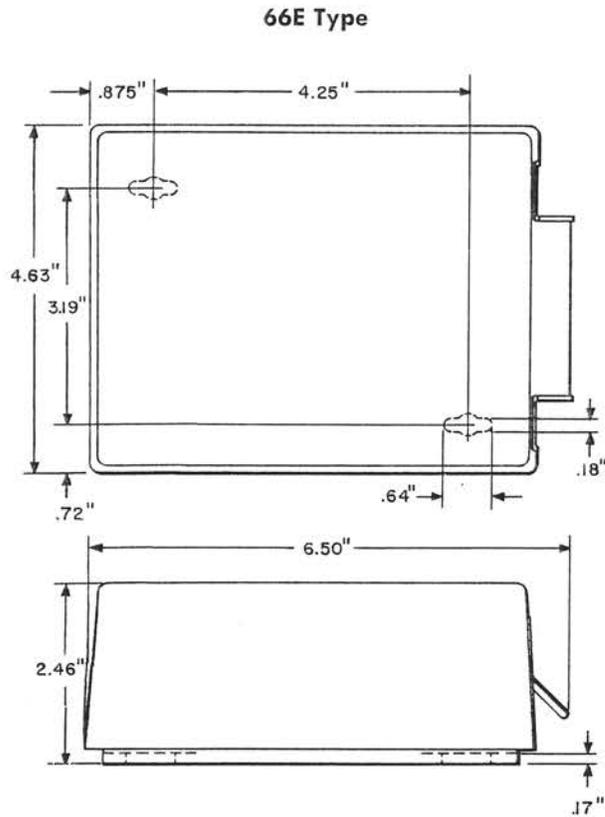

Fig. 1

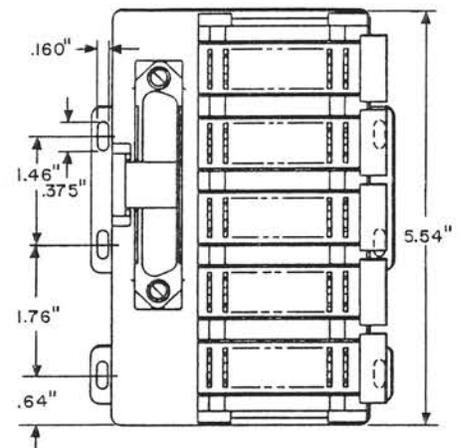

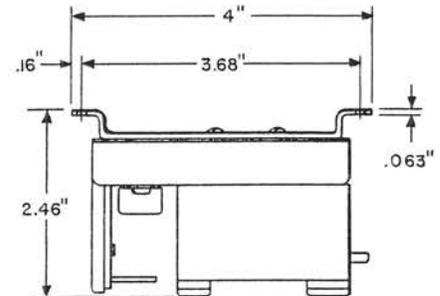

Fig. 2

Consists of a molded plastic block containing 50 clip-type terminals arranged in 5 rows of 10 terminals, and a KS-16672L3 Connector mounted on a light olive gray plastic base. The clip terminals are wired to the connector terminals.

66E3-25: Equipped with a snap-on cover and arranged for wall mounting. A cable trough and fanning strip are provided. See Fig. 1.

Comcode: 100 009 968

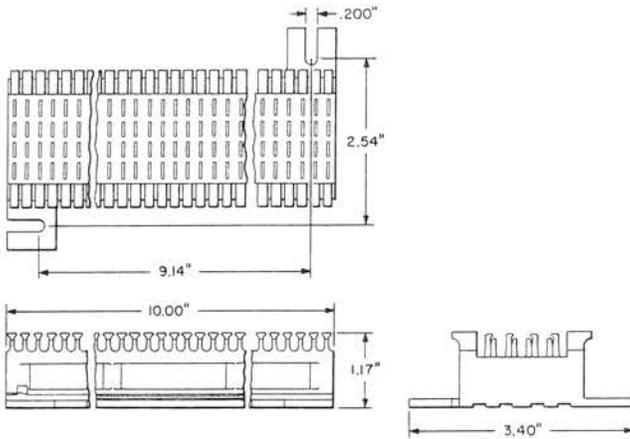

66E4-25: Arranged for mounting in duct adapters under the floor or over the floor. A fanning strip is provided. See Fig. 2.

Comcode: 100 009 976

Used as a connecting block for raw-ended cable in station installations.

BLOCKS
Connecting

66M1-50

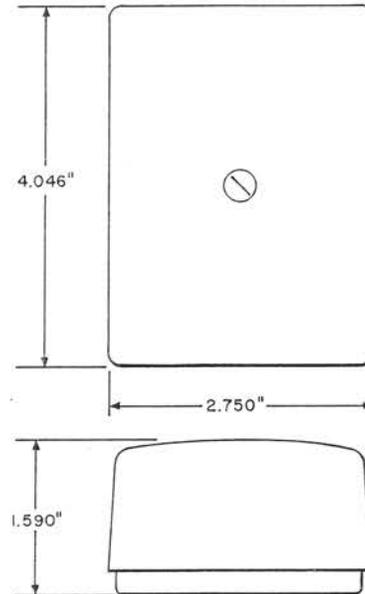

Consists of a molded plastic block containing quick-connect terminals. Intended for terminating number 20 through 24 gauge polyethylene or polyvinyl chloride insulated conductors without removal of conductor insulation.

Contains fifty rows of two "2-clip" terminals, each terminal of which permits the connection of up to two conductors. Equipped with a wire fanning strip on each side of the block.

Used in wire terminating arrangements of cables and key telephone systems.

Comcode: 101 238 178

74A and 74B

Each has painted sheet metal bases and removable plastic covers, which are held together by a screw located in the center of the cover. The 74A contains a 425A Cold Cathode Electron Tube and the 74B contains a 426A Cold Cathode Electron Tube. Each has a fiber board terminal strip containing three triple and two double eyelet terminals. The base is arranged to receive both inside wiring and all lengths of line cords.

Code No.	Comcode	Color
74A-49	100 010 099	Light olive gray
74A-50	100 010 107	Ivory
74B-49	100 010 115	Light olive gray
74B-50	100 010 123	Ivory

Used to mount 425A and 426A Electron Tubes when tubes cannot be mounted inside the telephone set.

APPARATUS

BLOCKS

Connecting

1044A-49 and -50

Arranged for a mounting cord having a hook-type stay band.

1044A-49: Light olive gray color, consists of a 44A Connecting Block and a 101A-49 Cover.

Comcode: 100 010 149

1044A-50: Ivory color, consists of a 44A Connecting Block and a 101A-50 Cover.

Comcode: 100 010 156

For use with telephone sets requiring 10 screw terminals and special wiring plans.

BLOCKS

Fuse

22A & B and 23A & B

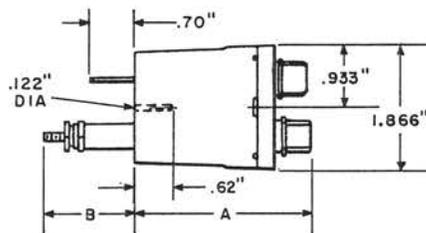

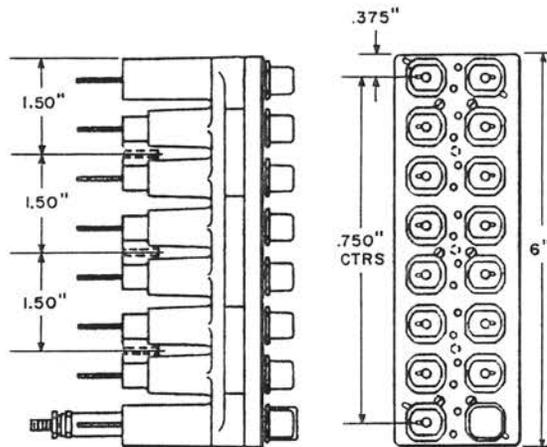

Fig. 1

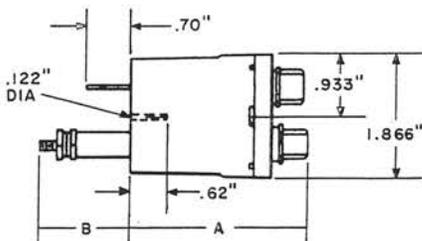

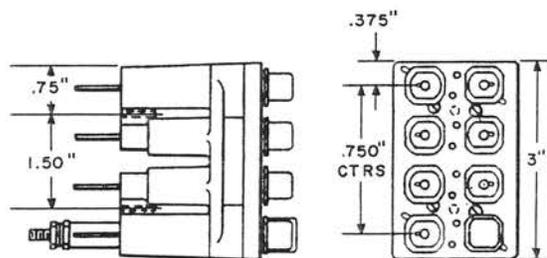

Fig. 2

Each consists of a block of insulating material having a detachable cover and arranged to mount fuses, alarm bus bars, and a battery bus bar. Openings are provided for installation of number 70 type fuses. **The fuses and bus bars are not furnished and must be ordered separately.** Fuse caps and fuse terminals are furnished. Fuse caps have an opening for the protrusion of a fuse bead when blown. Terminals are arranged for mechanically wrapped connections.

Cover contains holes to accommodate KS-14174 or KS-16078 Designation Pins (not furnished) to indicate capacity of the fuses, and holes for testing alarm bars when installed. Block contains slots on ends for common alarm and battery bus bars between adjacently mounted fuse blocks.

Screws are provided for mounting.

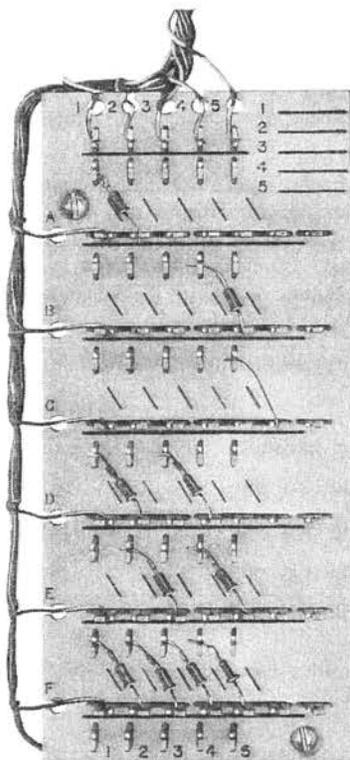

Code No.	Comcode	Fig. No.	No. Fuses Accommodated	Dimensions (Inches)

23B	100 010 495	2	7(a)	2.68	1.37

(a) And one fuse not larger than 30 amp rating and having an end cap diameter of 9/32 inch and an overall length of 1-1/4 inches.

BLOCKS

Matrix

1A1

Consists of a molded plastic block equipped with horizontally and vertically aligned rows of terminal connectors, commonly referred to as clip terminals, arranged to receive pigtailed 446F Diodes. Diodes are not furnished and must be ordered separately. A 714B Tool is required for diode installation and must be ordered separately.

Overall dimensions are approximately 6.375 inches long by 2.813 inches wide by 1.250 inches thick including the projection of the clip terminals.

Vertical rows of terminals are numbered 1 through 5 at the top of the block. Space is provided in the upper right hand corner of each block for designating each of these five rows as desired. Horizontal rows of terminals are labelled alphabetically A through F with ample area available to the left of each row for circuit identification.

Intended for use in key telephone systems to provide for diode control of station audible signals.

Depending on the diode placement, polarity direction, one matrix block can be used to control six ringers, less capacitors, from five separate key system line circuit units or vice versa. This then can be called a "6 by 5" or "5 by 6" matrix unit, capacity wise.

1A1B-25	100 010 818	2	50 No. 2A1B

Arranged for 16, 25, and 25 pairs of conductors, respectively.

1A1A-16 and 1A1A-25: Equipped with a 12-foot lead covered polyvinyl chloride insulated nonquadded stub cable having number 24 AWG conductors. The protectors are grounded to the sheath of the stub cable. Wood screws and a washer are provided for mounting. Intended for terminating the control pairs of coaxial cable systems at auxiliary repeater stations.

1A1B-25: Equipped with a 5-1/2 foot lead covered polyvinyl chloride insulated nonquadded stub cable having number 24 AWG conductors. Can also be obtained in lengths other than 5-1/2 foot when specified.

Two 8-32 x 1-7/16 inch long round head machine screws are furnished for mounting.

Intended for use with buried polyethylene insulated cables and is arranged to mount in a KS-16191 Cable Terminal Box which is pole mounted. One or two terminal blocks can be mounted in the box to provide cable protection at the junction of polyethylene and pulp insulated cable.

BLOCKS

Terminal

1A4A Type

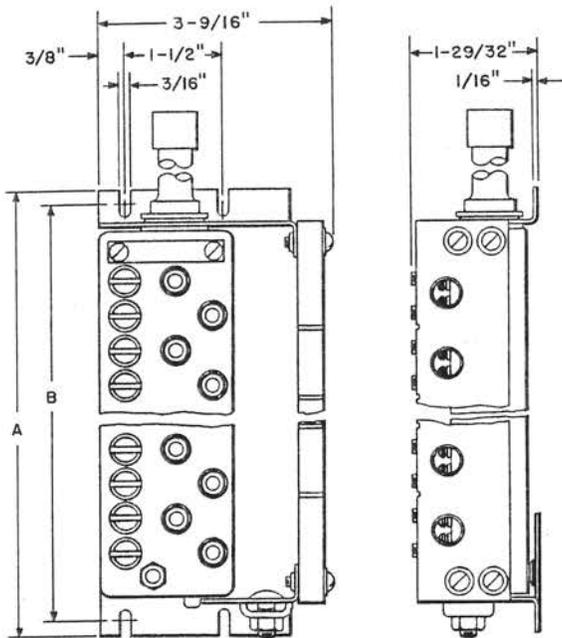

Fig. 1

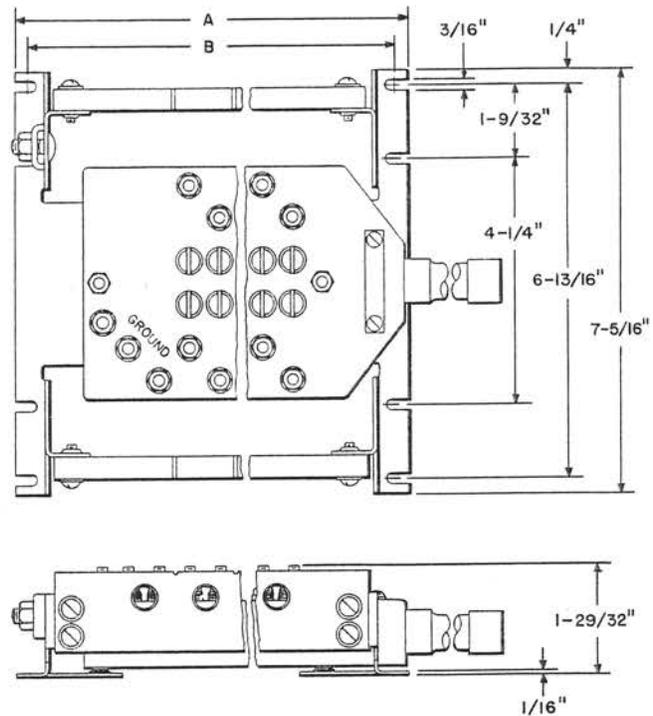

Fig. 2

Gas tight terminal blocks each consisting of a cast resin terminal block containing terminals and protector units assembled to metal mounting brackets. The protector units are grounded to the mounting brackets and to the sheath of the stub cable. Blocks are provided with fanning strips, a clamp for terminating a number 6 AWG ground wire to provide station protector ground, and a removable ground linkage to isolate the cable sheath from station ground where electrolysis conditions exist. Blocks are equipped with a 12-foot lead covered polyvinyl chloride insulated nonquadded stub cable having number 24 AWG conductors. Stub cable is color coded.

1A4A-10, -16, and -25: Intended to be installed in G-type cable terminal boxes or 1A1 Cable Terminal Section. Arranged for 10, 16, and 25 pairs of conductors, respectively.

1A4A-50: Intended to be installed in the H202 Cable Terminal Section. Arranged for 50 pairs of conductors.

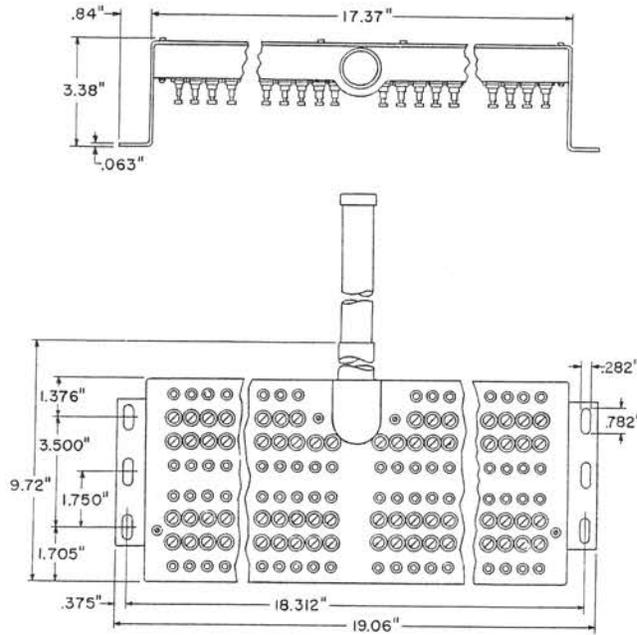

Intended for indoor use as fuseless protected building terminal blocks in lieu of fused L-type cable terminals.

BLOCKS

Terminal

1B3A-54, 1B4A-54 and 1B6A-54

Each consists of a molded terminal block containing 108 P18E150 Protector Units which provide 500 volt protection and 108 binding posts which are arranged for soldered connections, assembled to a metal mounting bracket. The protector units are grounded to the sheath of the stub cable. Provided with a stub cable 25 feet long having 54 pairs of number 22 AWG conductors. Can also be obtained with a 50 foot stub cable when specified in the order.

Arranged to mount in a KS-14296L5 Cabinet or in a 19 inch bay framework.

Used for terminating N1 Carrier Cable at repeater points.

1B3A-54: A stub cable having a polyvinyl chloride jacket over aluminum. It is intended for indoor use only and is not gastight.

Comcode: 100 010 933 E/W 25 Ft Stub
100 010 958 E/W 50 Ft Stub

1B4A-54: A gastight terminal block with a stub cable having a polyethylene jacket over aluminum. It is intended to terminate aerial or underground cable conductors.

Comcode: 100 010 966 E/W 25 Ft Stub
100 010 982 E/W 50 Ft Stub

1B6A-54: A gastight terminal block with a stub cable having a steel armor over alpeith with an outer polyethylene jacket. It is intended to terminate buried cable conductors.

Comcode: 101 055 648 E/W 25 Ft Stub
100 982 321 E/W 50 Ft Stub

BLOCKS

Terminal

2B1 and 2B2 Type (Continued)

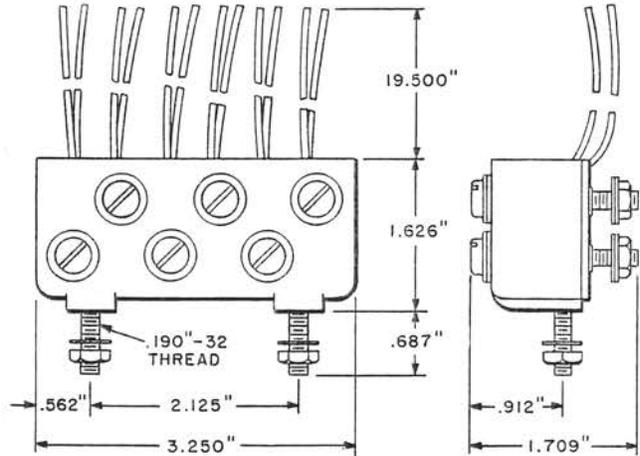

2B1-75, -100, and -300: Each has a top mounted stub cable.

2B2-75, -100, and -300: Same as 2B1-75, -100, and -300, respectively, except stub cable is bottom mounted.

Arranged to mount in H- or K-type cable terminal sections. For terminating either paper insulated or plastic insulated conductor cables in buildings where the ready access principle is used.

3A1A-3

Consists of a cast resin terminal block equipped with six leads, three pairs of binding posts, and six 2A1A Protector Units. Provides facilities for protecting three stations and terminating service wire.

For use in buried distribution cable closures.
Comcode: 100 011 469

3A2B-3

The configuration and dimensions of these terminal blocks are the same as 3A1A-3. It consists of a cast resin terminal block containing 3 pairs of binding posts and six 2A1B Protector Units. It is provided with number 24 AWG polyvinyl chloride insulated wire leads which are connected internally to the binding posts. Two leads are connected to each binding post. The protector units are grounded to the mounting studs.

Provides facilities for protecting up to 3 cable pairs and for terminating drop or service wires. Used in ready access terminals at location close enough to the junction of polyethylene insulated cable and paper insulated cable where protection for the paper insulated cable is required.
Comcode: 100 011 477

Consists of a sheet metal chamber having an insulating panel equipped with 100 binding posts.

Furnished with a gastight six-foot, number 24 AWG lead sheathed, polyvinyl chloride insulated stub cable fully color coded. May also be obtained with a 12-foot or 25-foot stub when specified in the order.

Arranged to mount in the 53A3-50 Cable Terminal.

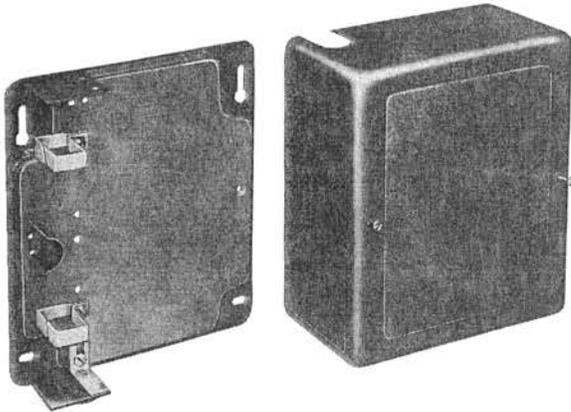

Used as a pole and wall distribution panel. May also be used in place of the G51B Binding Post Chamber.

BOXES

Apparatus

105BW and CW

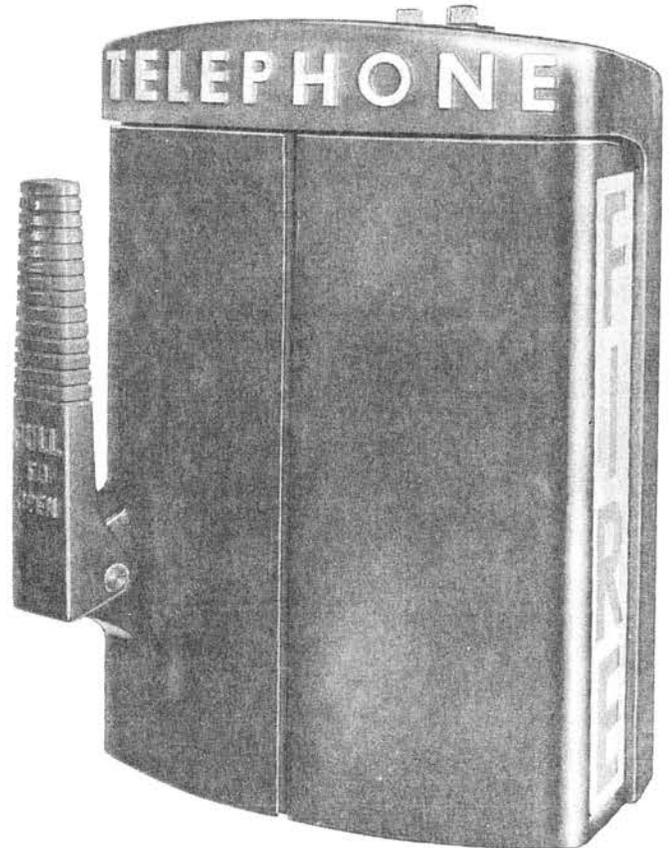

105BW: Metal box having an olive gray finish. Overall dimensions are 7.38 inches high by 6.88 inches wide by 3.38 inches deep. Two cable rings and two escutcheons are furnished. Intended to have key telephone units in the 1A1 Key Telephone System.

Comcode: 100 012 368

105CW: Same as 105BW except cover is plastic and overall dimensions are 7.47 inches high by 6.91 inches wide by 3.48 inches deep.

Comcode: 101 249 852

111 Type

111B: Consists of a red enameled metal housing equipped with a self-closing door with unexposed hinges and cover. The door and cover are red enameled and form the front and side of the housing. The word "Fire" in large letters appears on the door and cover. The box is provided with two 0.500 inch pipe tap holes on the top and two on the bottom for conduit connections and is arranged to mount a number 8 type apparatus unit which is not furnished and must be ordered separately. The overall dimensions are 16.875 inches high by 12 inches wide by 7 inches deep. Arranged to mount on buildings, fences, poles, etc., by means of a 29C Bracket which is not furnished and must be ordered separately.

Comcode: 100 012 392

111C: Same as the 111B Apparatus Box except handle is provided with a cam to assist in opening the door if it is held closed due to freezing. Forms a part of the number 570 type telephone sets.

Comcode: 100 012 400

BOXES

Apparatus

111 Type (Continued)

111D: Same as 111C Apparatus Box except color is yellow and the word "Fire" is omitted and it mounts by a 29E Bracket. Forms a part of the 570 type telephone set for highway emergency reporting service.

Comcode: 101 278 190

111E: Same as 111C except has a yellow housing and the word "Fire" is omitted from door and cover. Mounts by means of a 29E Bracket, which must be ordered separately. Forms a part of 570J4 Telephone Set.

Comcode: 101 390 771

115A1 and 115B1

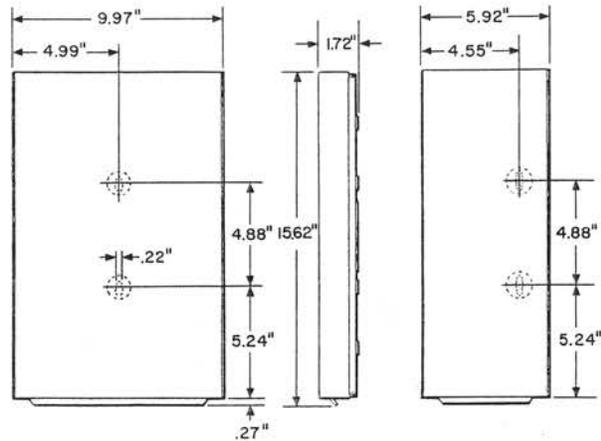

Fig. 1

Fig. 2

Each consists of a gray metal housing equipped with a distributing ring and having a light olive gray snap-on cover. The cover is reversible so as to permit opening from either the top or bottom of the housing.

115A1: Arranged to contain one 66B type connecting block. Screws for mounting connecting block furnished. See Fig. 2.

Comcode: 100 012 442

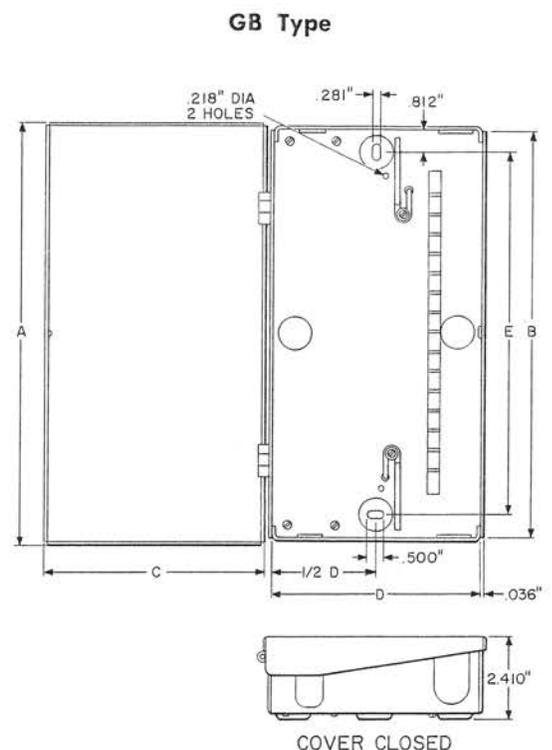

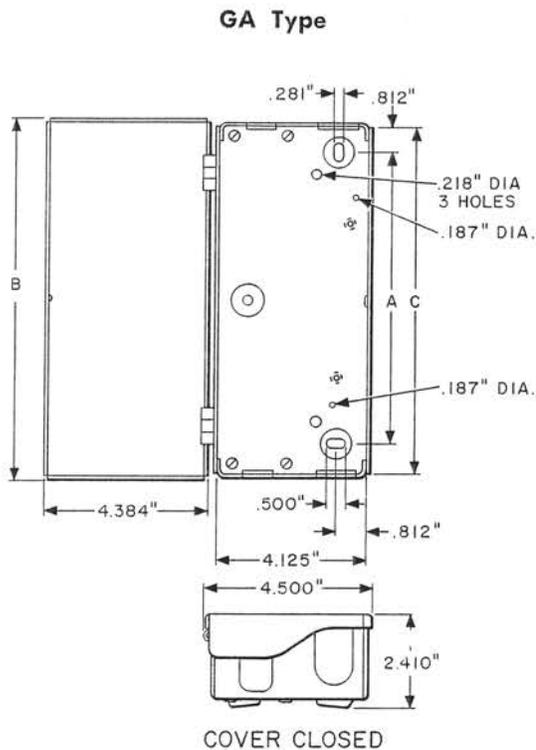

115B1: Arranged to contain two 66B type connecting blocks. See Fig. 1.

Comcode: 100 012 459

For use as bridging facilities in station switching systems such as 1A1, 1A2, and 6A Key Telephone Systems.

BOXES

Cable Terminal

A sheet metal box with a hinged cover, having a light olive gray enamel finish. Provided with knockouts in each end for cable and wire entrance. Also provided with one 8A Distributing Ring and screws for mounting terminal block or adapter and the distributing ring.

A P-17E201 Closure for closing a wire hole can be obtained when specified on the order.

Used for indoor installation.

GA11: Arranged for housing a 2A1-11 or a 2A2-11 Terminal Block or a 102B Adapter.

Comcode: 100 012 574

GA16: Arranged for housing a 2A1-16 or a 2A2-16 Terminal Block or 102C Adapter.

Comcode: 100 012 590

GA16A: Arranged for housing a 2A1-16 or a 2A2-16 Terminal Block.

Comcode: 100 012 608

GA26: Arranged for housing a 2A1-25 or a 2A2-25 Terminal Block or a 102D Adapter.

24A, B, C, and D: Metal brackets intended to mount stud mounted capacitors (3-1/2 inches or less in height) having mounting centers located off center. Two brackets are required to mount one capacitor.

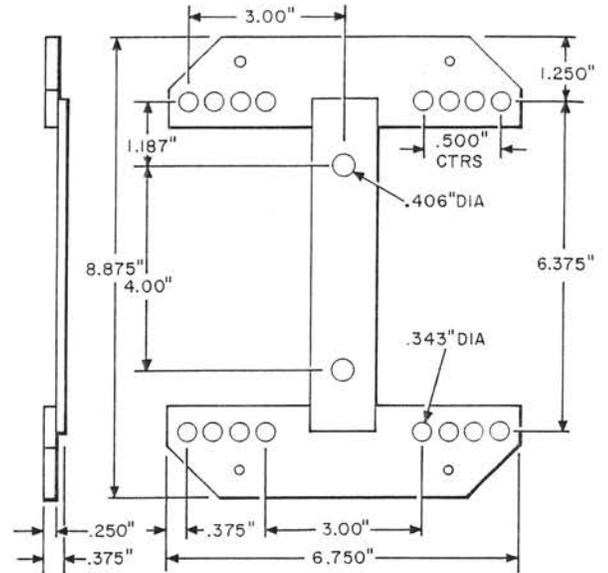

24E: Metal bracket intended to mount number 182 type inductors. Two brackets are required to mount one inductor.

25 Type

Metal brackets intended to mount stud mounted capacitors in place of lug mounted capacitors where mounting plates are drilled for capacitors having the mounting lugs located off center, 3/8-inch for 25A and 5/32-inch for 25B.
Comcode: 100 013 416 and 100 013 424, respectively.

29C and E

29C: A metal mounting intended for use in mounting telephone sets on buildings, fences, poles, etc. Screws and lock washers for mounting telephone set to bracket are furnished.

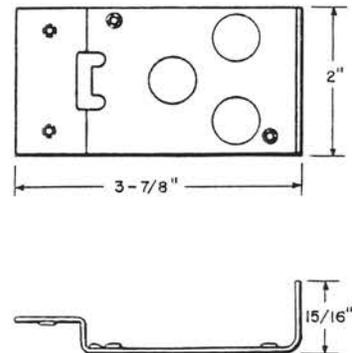

Intended for use in mounting number 570 type telephone sets.

Comcode: 100 013 515

29E: Same as 29C Bracket except has a yellow finish.

Comcode: 101 278 208

36A

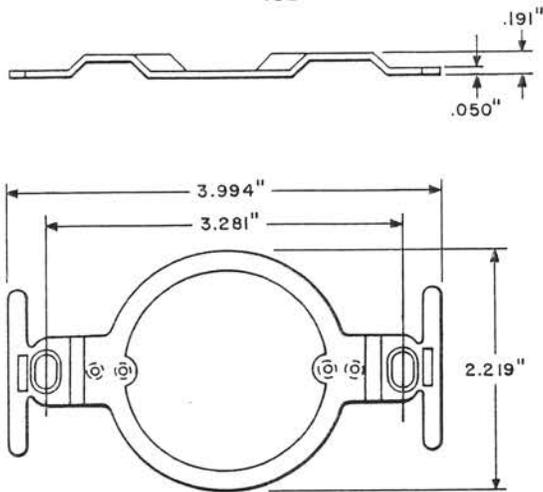

Metal bracket for mounting number 7 type buzzer and a 152A Capacitor. Mounting screws and two leads for connecting buzzers are furnished.

Comcode: 100 013 580

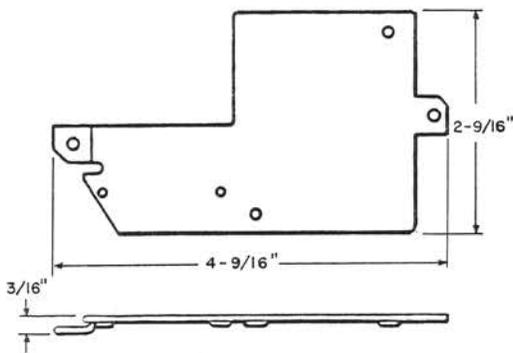

BRACKETS

43B

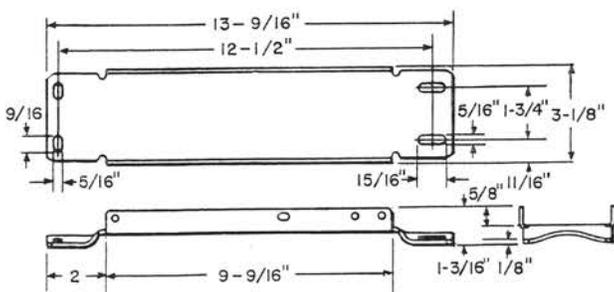

Metal bracket arranged to mount a 47C or D type connecting block or a 108A type apparatus blank in an electrical outlet box. Provided with mounting screws and screws for mounting a connecting block or jack.
Comcode: 100 013 630

44B

Metal bracket for mounting a number 7 type buzzer and a 152A Capacitor. Mounting screws and two leads for connecting buzzer are furnished.
Comcode: 100 013 648

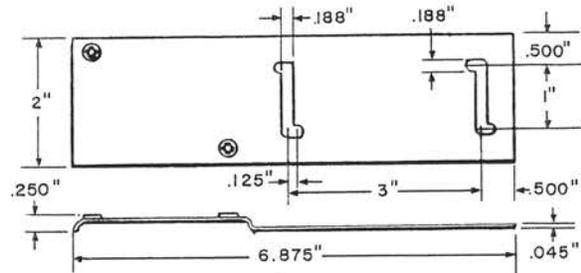

45A

Metal bracket for mounting NC10 and NC16 and NF10

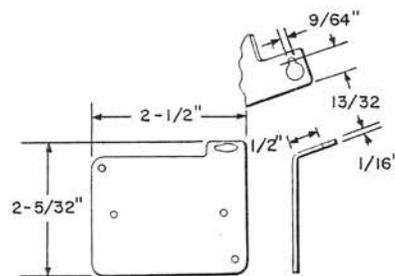

and NF16 Cable Terminals on poles or walls. Arranged for horizontal or vertical mounting on walls.
Comcode: 100 013 655

60A

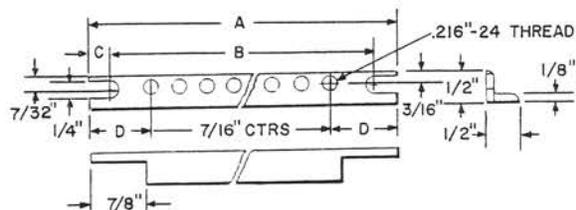

Metal bracket for mounting a number 7 type buzzer on a number 168 type backboard. Mounting screws are furnished.
Comcode: 100 013 804

65A

Metal bracket for mounting a number 7 type buzzer or a KS-8109 type buzzer in a 630DW type and similar multi-button type telephone sets. Mounting screws are furnished and also insulated washers are furnished for mounting a KS-8109 type buzzer.
Comcode: 100 013 846

Metal brackets for mounting 201C and similar type key telephone units on relay racks in the 1A1 Key Telephone System. Mounting screws are furnished.

BRACKETS

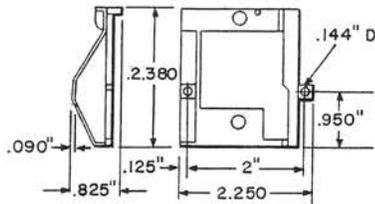

68A

Two-piece metal bracket for mounting 101B Wire Terminal. Intended for pole or crossarm mounting of terminals so that removal and replacement will not interrupt service. Mounting hardware is furnished.

Comcode: 100 013 879

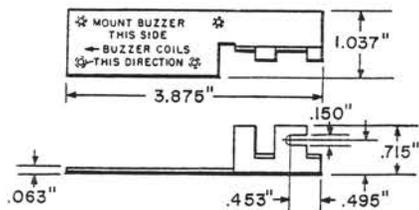

70A

Plastic bracket for mounting KS-8108 type buzzer on a C4A Ringer in 564HLW type telephone sets. Mounting screws are furnished.

Comcode: 100 013 895

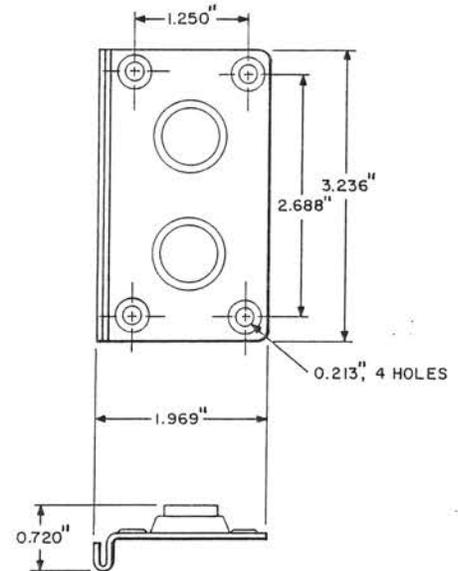

71A

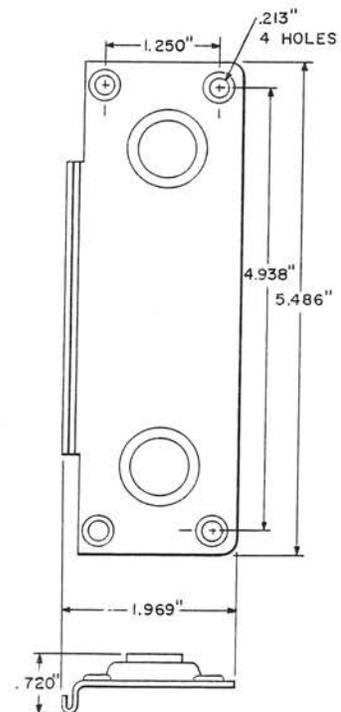

Metal bracket for mounting a number 7AW type buzzer (less housing) or a KS-8109 type buzzer. For use in the number 636, 637, 638, and 639 type telephone sets. Mounting hardware is furnished.

Comcode: 100 013 903

75A, 76A, and 77A

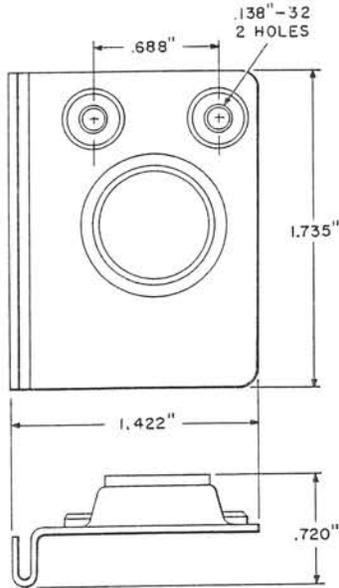

75A

76A

BRACKETS

75A, 76A, and 77A (Continued)

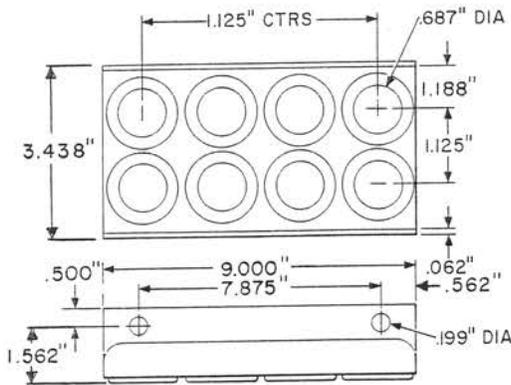

77A

Consist of metal bracket and two friction pads. For mounting number 549 and 551 type keys to the side of number 500 and 1500 type telephone sets. Brackets are attached over the lip of the base of the telephone set and locked in place by the telephone set housing.

- 75A: For 549A or 549B type keys.
Comcode: 100 013 952
- 76A: For 549C or 549D type keys.
Comcode: 100 013 960
- 77A: For 551A type keys.
Comcode: 100 013 978

82A

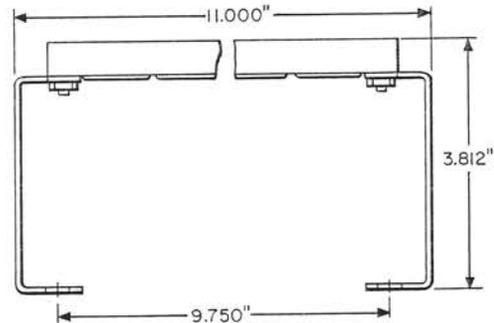

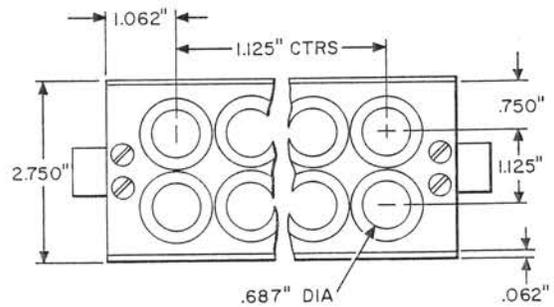

Aluminum brackets equipped with rubber grommets, each of which will accommodate a 25-pair binder group.

Has 16 grommets and will accommodate 200 "Out" cable pairs.

Intended for use in housings to facilitate wiring of PIC cables in dedicated outside plant control and access points.

Used initially in 29C3, 29D3, and 29E3 type cabinets.
Comcode: 100 014 000

83A

An aluminum bracket equipped with 16 rubber grommets, each of which will accommodate a 25-pair binder group. Also equipped with two aluminum mounting supports. Mounting screws and a single pair wire terminal are furnished.

Will accommodate 200 "Out" cable pairs. Bracket hole designations are stamped on marker tape.

Intended for use in housings to facilitate wiring of PIC cables in dedicated outside plant control and access points.

Used initially with an aerial mounted 1B1 Closure.
Comcode: 100 014 018

87A: Consists of one figure 1 and one figure 2 bracket, intended for mounting Data Set 303 or Data Auxiliary Set 809 on 23 inch No. 5 cross-bar type frames or KS-20018 cabinet.

Comcode: 101 203 479

87B: Consists of one figure 1 and one figure 3 bracket, intended for mounting a Data Auxiliary Set 806B type on 23 inch No. 5 cross-bar type frames or KS-20018 cabinet.

Comcode: 101 203 487

87C: Consists of two figure 1 and two figure 15 brackets, intended for mounting a Data Auxiliary Set 806B and a Data Set 404B type adjacent to each other in the same horizontal mounting space on 23 inch No. 5 cross-bar type frames or KS-20018 cabinet.

Comcode: 101 203 495

87D: Consists of one figure 1, one figure 4, and two figure 15 brackets, intended for mounting two Data Auxiliary Sets 806B type adjacent to each other in the same horizontal mounting space on 23 inch No. 5 cross-bar type frames or KS-20018 cabinet.

Comcode: 101 203 503

87E: Consists of one figure 5 and one figure 6 bracket, intended for mounting Data Set 303 or Data Auxiliary Set 809 on 23 inch bulb angle type frames.

Comcode: 101 203 511

87F: Consists of one figure 5 and one figure 10 bracket, for mounting a Data Auxiliary Set 806B type on 23 inch bulb angle type frames.

Comcode: 101 203 529

87G: Consists of two figure 5 and two figure 15 brackets, intended for mounting a Data Auxiliary Set 806B type and Data Set 404B type, adjacent to each other in the same horizontal mounting space, on 23 inch bulb angle type frames.

Comcode: 101 203 537

87H: Consists of one figure 5, one figure 7, and two figure 15 brackets, intended for mounting two Data Auxiliary Sets 806B type, adjacent to each other in the same horizontal mounting space on 23 inch bulb angle type frames.

Comcode: 101 203 545

BRACKETS

87 Type (Continued)

87J: Consists of two figure 5 brackets, intended for mounting Data Set 303 or Data Auxiliary Set 809 on 19 inch bulb angle type frames.

Comcode: 101 203 552

87K: Consists of one figure 5 and one figure 9 bracket, intended for mounting a Data Auxiliary Set 806B type on 19 inch bulb angle type frames.

Comcode: 101 203 560

87L: Consists of one figure 5 and one figure 8 bracket, intended for mounting a Data Set 404B type on 19 inch bulb angle type frames.

Comcode: 101 203 578

87M: Consists of one figure 1 and one figure 11 bracket, intended for mounting Data Set 303 or Data Auxiliary Set 809 on 25 inch mounting plate space in a KS-20093 cabinet.

Comcode: 101 203 586

87N: Consists of one figure 1 and one figure 14 bracket, intended for mounting Data Set 303 or Data Auxiliary Set 809 on 25 inch mounting plate space in a KS-20093 cabinet.

Comcode: 101 203 594

87P: Consists of one figure 1, one figure 13, and two figure 15 brackets, intended for mounting a Data Auxiliary Set 806B type and a Data Set 404B type, adjacent to each other in the same horizontal mounting space, on 25 inch mounting plate space in KS-20093 cabinets.

Comcode: 101 203 602

87R: Consists of one figure 1, one figure 12, and two figure 15 brackets, intended for mounting two Data Auxiliary Sets 806B type, adjacent to each other in the same horizontal mounting space, on 25 inch mounting plate space in KS-20093 cabinets.

Comcode: 101 203 610

87S: Consists of two figure 1 brackets, intended for mounting Data Auxiliary Set 806B type in KS-20018L6 cabinets or Data Set 303 type in KS-20018L5 cabinets.

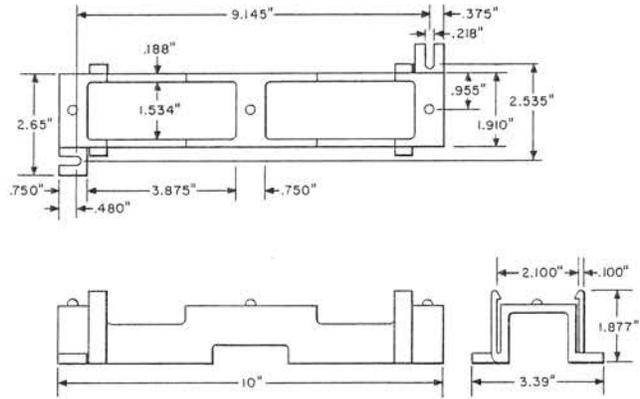

Comcode: 101 429 728

Brackets 87A, B, E, F, J, K, L, M, and N are provided with six P-147379 screws for mounting the brackets to the sets and the sets to the frames or cabinets.

Brackets 87C, D, G, H, P, and R are provided with 14 P-181933 and six P-147379 screws for mounting the brackets to the sets and the sets to the frames or cabinet and mounting the two sets together.

Bracket 87S is provided with six P-181933 and six P-174379 screws for mounting the bracket to the set and the sets to the cabinets.

89B

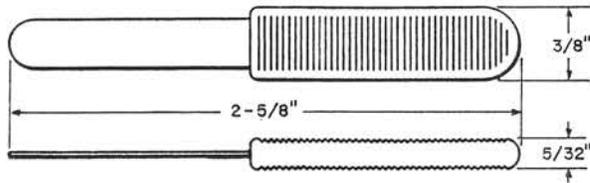

Consists of a molded plastic "stand-off" bracket for mounting 66M type connecting blocks away from flat surfaces so that cables can be stored behind the connecting block. This cable space accommodates three layers of four 25 pair inside wiring cable. The bracket is attached to a wall by means of mounting lugs having slotted holes to accommodate screws or bolts. The connecting block is attached to the bracket by means of a molded in "snap-on" arm.

Comcode: 101 334 167

BURNISHER

1A

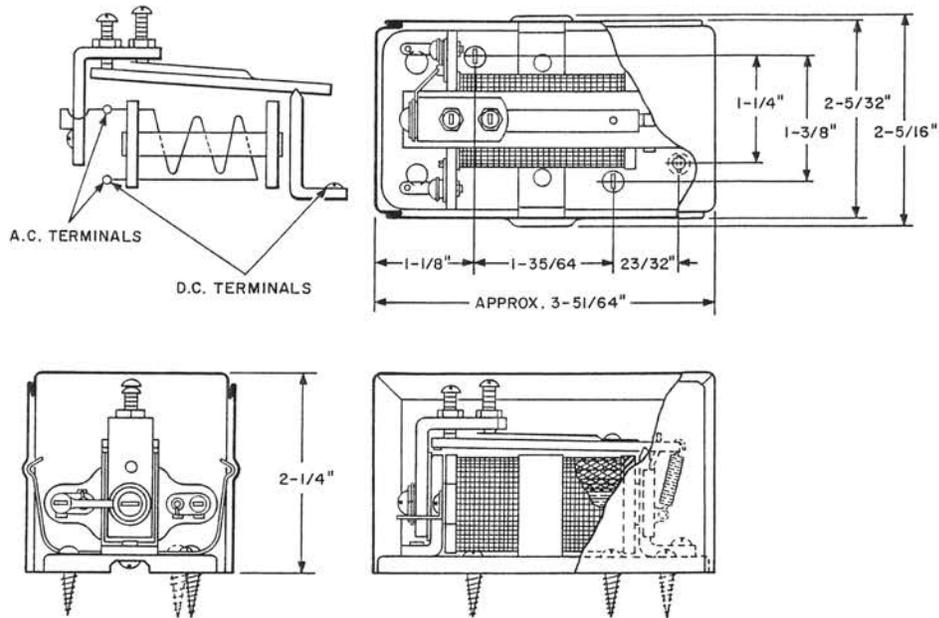

Spring steel blade in an insulating handle. The blade is coarsely ground, giving the effect of a fine file. For use in cleaning contact points.

Comcode: 100 014 240

For other burnishers, see TOOLS.

BUZZERS

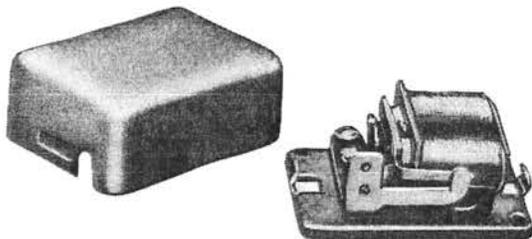

4C

High resistance buzzer equipped with a light olive gray dust cover. Designed to operate on either direct current of 24 volts or alternating ringing current of 16-2/3 cycles. Approximate resistance is 1200 ohms.

When mounted on metal surfaces a number 176A-49 Backboard is required and must be ordered separately.
Comcode: 100 014 281
 For use with private branch exchange switchboards.

7 Type

Equipped with heavy silver contacts and reed mounted armature with a flat retractible spring and stop. Overall dimensions are 1-1/8 inches high, 2-11/16 inches deep, and 1-31/32 inches wide. Light olive gray finish.

7AW, BW, CW, DW, EW, and FW Types: Intended for either dc or 50-60 cycle ac operations. (See table). When

operated on ac, connections are made directly to coils eliminating the make and break contact and thus the need of contact maintenance. Will normally operate without readjustment on the voltage ranges listed under individual codes. The minimum effective resistance to dc or impedance to 60 cycle ac of these buzzers should be assumed to be approximately 3 times the nominal resistance.

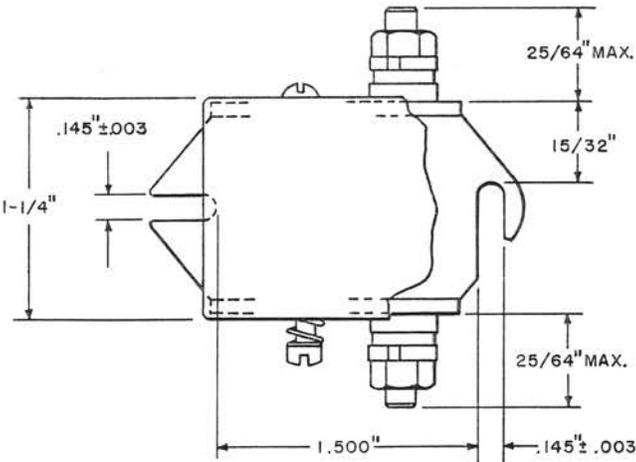

BUZZERS

7 Type (Continued)

Code No.	Comcode	Min.	DC	Operating Voltage		Approx. Resistance (Ohms)
				Max.	60 Cycle AC	
7AW-49	100 014 398	14		40	15	270
7BW-49	100 014 406	2		6	4	10.5
7CW-49	100 014 414	2		8	3	2.6
7DW-49	100 014 422	4		15	4	15.8
7EW-49	100 014 430	10		20	10	105
7FW-49	100 014 448	20		60	20	682

KS-8108L2, KS-8109L2, and KS-8110L2

Designed to operate on either ac or dc voltages. Each buzzer has one coil, an exterior screw for adjusting the contact gap, and two exterior binding posts. The base and press on cover are of magnetic material.

KS-8108L2: 0.5-0.8 ohms resistance and will operate on 3.4 to 4.5 volts dc or 60 cycle ac.

Comcode: 400 021 762

KS-8109L2: 55 ohms resistance and will operate on 14 to 30 volts dc or 60 cycle ac.

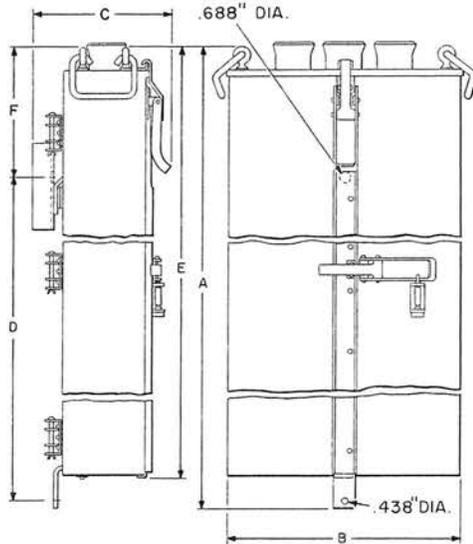

Comcode: 997 912 662

KS-8110L2: 300 ohms resistance and will operate on 24 to 50 volts dc or 60 cycle ac.

Comcode: 400 021 788

CABINETS

29 Type

29A1 and B1: One nipple is provided in the top plate, and two cable entrance holes are provided in the bottom of each cabinet. Used initially in furnishing cross-connecting facilities in the distribution cable plant.

29C2, D2, and E2: Three nipples are provided in the top plate, and four cable entrance holes are provided in the bottom of each cabinet. A lead disk 0.125 inch thick is soldered flush with the top of each nipple. Used initially for control points in dedicated plant.

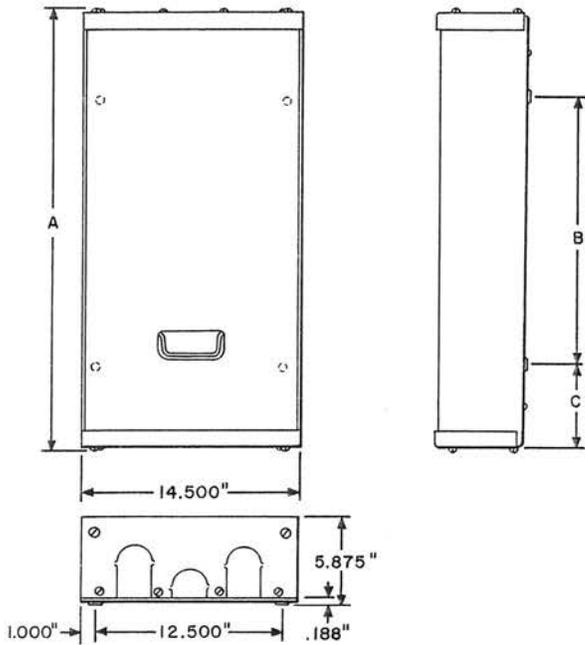

29C3-800, D3-1200, and E3-1800: Same as 29C2, D2, and E2 except equipped with wiring brackets and distributing rings on the wooden backboard, and they are not equipped with the lead disk. Used initially for furnishing access and control points in dedicated outside plant.

Each consists of a metal housing having hinged doors and a wooden backboard. Brackets for pole or wall mounting are furnished.

Equipment

ED-69488-50

A floor-supported single rack steel cabinet with light olive gray finish designed to take one 26A Apparatus Mounting and one ED-69366-51, Group 3, Terminal Plate Assembly. The terminal plate assembly is mounted on top of the apparatus mounting. The sides and ends are removable in two halves by removing the lift off top and releasing a spring catch on each set. This allows lowering of hinged tracks on which the apparatus mounting rolls. Requires approximately 30 inches of clear space in front of cabinet to allow complete lowering of track. Provision is made for floor mounting when required. **The group required as described below must be specified on the order.** All items in group 2 are shipped loose. Dimensions are 32-1/2 inches wide by 32-1/2 inches high by 13 inches deep.

Group	Description
1	Single rack cabinet with an apparatus mounting and terminal plate assembly. Comcode: 600 016 232
2	Single rack cabinet. Comcode: 600 017 156

CABINETS

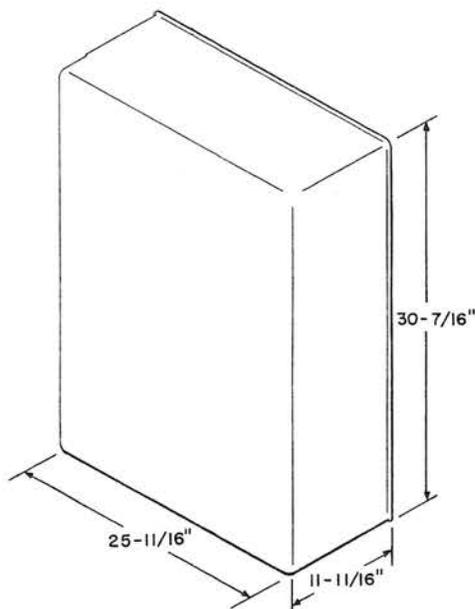

Equipment

ED-69489-50

Same as ED-69488-50 except has a double rack and has a capacity of two 26A Apparatus Mountings and two ED-69366-51, Group 3 Terminal Plate Assemblies. Dimensions are 32-1/2 inches wide by 32-1/2 inches high by 24-3/8 inches deep. The group required as described below must be specified on the order.

Group	Description
1	Double rack cabinet with two apparatus mountings and two terminal plate assemblies. Comcode: 600 016 240
2	Double rack cabinet. Comcode: 600 016 570

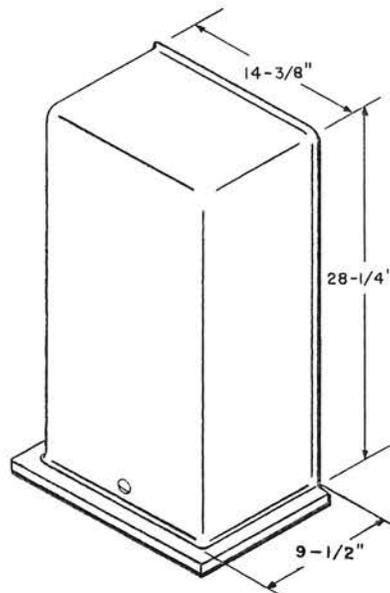

ED-69368-50

Designed for wall mounting a 26A Apparatus Mounting. Consists of a cover group 2, nameplate group NP, and a backboard group 3. The groups required as described below must be specified on the order. Assorted hardware used for mounting the 26A Apparatus Mounting is shipped unassembled.

Group	Description
2 and NP	Cover for group 3. Has a light olive gray wrinkle enamel finish. Comcode: 600 016 231
3	Backboard for mounting. Comcode: 600 003 321

ED-69462-50

Designed for floor or wall mounted number 301 type key service units. Consists of a base plate assembly group 1, cover group 2, floor board assembly group 3, and nameplate group NP. The groups required as described below must be specified on the order. The floor board assembly is shipped separate; other assorted hardware remains unassembled until equipment is mounted.

Group	Description
1	Base plate assembly with mounting hardware. Comcode: 600 017 164
2 and NP	Glass fiber cover for group 1. Comcode: 600 017 172
3	Floor board assembly with mounting hardware. Comcode: 600 016 174

CABLES

Switchboard

A-Type

The A-type switchboard cables are provided with a thin plastic (polyvinyl chloride) covering. Cables are prefixed by code numbers.

Cables prefixed by code numbers below 300 employ BU wire. The conductors are tinned and have polyvinyl chloride insulation (PVC).

Cables prefixed by code numbers 400 through 405 employ BH wire. The conductors are tinned and have extruded polyvinyl chloride, cotton braid, lacquer treated insulation.

Cables prefixed by code numbers in the 750 to 759 series, except 754, employ conductors of polyethylene insulated wire. Each wire is shielded with a tinned copper braid having a number 26 AWG ground wire braided into the shield.

A general table of A-type cables follows giving the gauge of wire, the color combination codes, and the number of conductors, triples, pairs, and singles. Two additional tables follow the general table and cover codes 400 through 405 and 750 through 759.

(a) Minimum number of good conductors is 205 as cable may include 1 defective pair and 1 defective single.

(b) Minimum number of good conductors is 305 as cable may include 1 defective pair and 1 defective single.

(c) Minimum number of good conductors is 204 as cable may include 1 defective pair.

(d) Minimum number of good conductors is 262 as cable may include one defective pair.

(a) Furnished with braided covers having crepe paper tape applied longitudinally over the shielded pairs. Over this is applied a braid of slate cotton.

(b) Twisted pair covered with extruded jacket of polyethylene, two braided shields of copper wire silver coated, and a polyvinyl-chloride jacket. Nominal characteristic impedance of 124 ohms at 4 mc, a nominal mutual capacitance 12.6 mmf per foot, and nominal attenuations per 100 feet of .245 db at 1 mc, .490 db at 4 mc and .786 db at 10 mc.

(c) Furnished in cartons of 500 feet. Larger lengths will be furnished on billable reels.

CABLES

Switchboard

M-Type

The M-type switchboard cables are provided with a thin plastic (polyvinyl chloride) covering. Cables are prefixed by code numbers. The conductors are number 22 AWG C Wire, tinned, having polyvinyl chloride insulation, cotton

covered, and lacquered.

A general table of M-type cable follows giving the gauge of wire, the color combination codes, and the number of conductors, pairs, and signals.

CABLES

Switchboard

721 Type

Rubber insulated, twisted, tinned number 22 AWG conductors covered with a rubber jacket. One conductor has longitudinal ridges on the rubber insulation as a means of identification. Cable has 1 pair, 2 conductors and is approximately 0.28 inch in diameter. See Charts IV and V for color combinations.

Comcode: 101 007 888
100 015 999 (Less reel)

722 Type

Has number 22 AWG conductors of K Wire with no binding or outer covering. Cable has 10 pairs, 20 conductors and is approximately 0.33 inch in diameter. See Charts IV and V for color combinations.

Comcode: 100 016 005

723 Type

Consists of one 720 Cable and one cable same as 720 except for having a red tracer bound together with slate cotton braid. Cable has 2 pairs, 4 conductors and is approximately 0.78 by 0.40 inch in diameter. See Charts IV and V for color combinations.

Comcode: 100 016 013 (Carton)
100 016 021 (Reel)

724 Type

A flexible coaxial cable consisting of an inner conductor of number 20 AWG solid copper wire covered with solid stabilized polyethylene of natural color to a diameter of approximately 0.200 inch, and an outer conductor consisting of a double braid of tinned copper wire covered with a sheath of stabilized polyethylene of natural color. The overall diameter is approximately 0.31 inch.

Characteristic Impedance: 75 ohms
Capacitance: 21 uuf per foot.
Attenuation: 0.23 db per 100 feet at 1 mc.
0.54 db per 100 feet at 5 mc.
0.80 db per 100 feet at 10 mc.

Comcode: 100 016 039 (Carton)
100 016 047 (Reel)

725 Type

Round flexible cable consisting of 30 conductors of number 24 AWG tinned copper wire, each insulated with two servings of cellulose acetate rayon yarn, a close serving

of cotton yarn, and a coating of cellulose acetate lacquer. Has no binding, serving, or external braiding, but each end of cable is tied to prevent untwisting of the conductors. The overall diameter is approximately 0.29 inch.

Colors are as follows:

Blue	Red-orange
Orange	Red-green
Green	Red-brown
Brown	Red-slate
Slate	Red-blue-white
Blue-white	Red-blue-orange
Blue-orange	Red-blue-green
Blue-green	Red-blue-brown
Blue-brown	Red-blue-slate
Blue-slate	Blue-Novelty red white
Red-blue	Orange-Novelty red white
	Green-Novelty red white
	Brown-Novelty red white
	Slate-Novelty red white
	Blue-White-Novelty red white
	Blue-Orange-Novelty red white
	Blue-Brown-Novelty red white
	Blue-Slate-Novelty red white

Note: Color listed as "Novelty red white" consists of one ply of red yarn twisted together with one ply of white yarn to form a single thread.

Comcode: 100 016 054

726 Type

A flexible high-attenuation coaxial cable consisting of an inner conductor of number 20 AWG nichrome wire covered with a solid stabilized polyethylene of natural color to a diameter of approximately 0.200 inch, and an outer conductor consisting of a double braid of tinned copper wire covered with a sheath of brown polyethylene. The overall diameter is approximately 0.31 inch.

Characteristic Impedance: 75 ohms.
Capacitance: 21 uuf per foot.
Comcode: 100 016 062 (Carton)
100 016 070 (Reel)

727A, 728A, and 729A

Flexible coaxial cables, each consisting of an inner conductor of solid copper wire, covered with solid stabilized polyethylene of natural color to a diameter of approximately 0.200 inch, and an outer conductor consisting of a double braid of tinned copper wire and a jacket as indicated in the table.

CABLES

Switchboard

727A, 728A, and 729A (Continued)

Intended for use as an outdoor patching cable for breaks in coaxial lines.

Impedance: 727A—75 ohms at 2 mc.
728A—75 ohms at 10 mc.
729A—75 ohms at 2 mc.

Corona-free at voltages up to 3500 volts rms.

Capacitance: 727A—21 uuf per foot.
728A—20.5 uuf per foot.
729A—21 uuf per foot.

Attenuation: 0.23 db per 100 feet at 1 mc.
0.54 db per 100 feet at 5 mc.
0.80 db per 100 feet at 10 mc.
2.2 db per 100 feet at 70 mc.
5.0 db per 100 feet at 300 mc.
10.0 db per 100 feet at 1000 mc.

728A has a return loss of at least 35 db for any length up to 210 feet, over the frequency range of 55 to 95 mc, when driven and terminated in 75-ohm resistance impedances.

Code No.	Comcode	Diameter of Inner Conductor	Jacket Material	Approximate Diameter (Inch)	Color
*727A	100 016 088 (Carton) 100 016 096 (Reel)	20 AWG	Polyethylene	.31	Natural
728A	100 016 104 (Carton) 100 016 112 (Reel)	.0311 inch	Polyethylene	.31	Slate
**729A	100 016 120 (Carton) 100 016 138 (Reel)	20 AWG	Polyvinyl chloride	.36	Black

*Has a longitudinal red rayon tracer under the jacket for identification purposes.

**Has a longitudinal triangular ridge on the jacket for identification purposes.

730A

A coaxial cable consisting of number 23 AWG solid copper-covered steel center conductor insulated with a natural color polyethylene two-tinned copper braided shields and covered with a light olive gray polyvinyl chloride jacket. It has an overall diameter of 0.260 inch maximum.

Used for patching and cabling in L type carrier systems.

Comcode: 100 847 060

760A Type

Has two conductors of number 22 AWG copper wire, each insulated with an extruded coating of polyethylene. Insulated conductors are twisted into a pair which is covered with an extruded polyethylene jacket, two braided shields of silver coated copper wire, and a polyvinyl chloride slate colored jacket. The overall diameter is approximately 0.305 inch. Has nominal characteristic impedance of 124 ohms at 4 mc, a nominal mutual capacitance of 12.6 uuf per foot, and nominal attenuations per 100 feet of 0.135 db at 100 kc, 0.345 db at 1 mc, 0.70 db at 4 mc, and 1.15 db at 10 mc.

Comcode: 100 016 310 (Carton)
100 016 328 (Reel)

CABLES

Switchboard

761A1 Type

Has two conductors of number 24 AWG tinned copper wire, each insulated with an extruded coating of polyethylene. The insulated conductors are twisted into a pair which is covered with two braided shields of tinned copper wire and a light olive gray plastic jacket. The overall diameter is approximately 0.225 inch. Has a maximum mutual capacitance of 17.5 pF/ft.

762A

Consists of ten shielded pairs (761A1 through 761A10 cables) which are stranded together and covered with a light olive gray plastic jacket. Modification consists of substituting various colored jackets on individual 761A1 cables to provide color coding. Cable is oval shaped, 0.64 by 0.81 inch in diameter.

For use on L type multiplex.

Comcode: 100 016 351

CABLES

Connector

B25A Type

A beige, vinyl jacketed cable containing 25 pairs of number 24 AWG color coded conductors. Equipped with a KS-16690L1 Connector and KS-16689L3 Plug. A dust cover is furnished for the plug and connector. Can be obtained in 5, 15, 30, 60, or 100-foot lengths. Lengths must be specified on order.

Used as an extension cable for connecting between plug ended telephone sets and connector ended bridging terminals or apparatus cabinets.

Comcode: 100 017 326 5 Ft
100 017 334 15 Ft
100 017 342 30 Ft
100 017 359 60 Ft
100 017 367 100 Ft

CABLES

Multiple Sheath

ABAM Type

Has number 22 AWG copper tinned conductors with polyethylene and polyvinyl chloride insulation and covered with an aluminum and polyvinyl chloride sheath. Has an average ac capacitance of 0.083 uf per mile of cable with

a conductor resistance of not more than 192 ohms per mile of cable at 68° F. Attenuation is approximately 1.8 db at 1000 Hz.

Code No.	Comcode	Minimum Number of Good Pairs	Approximate Overall Diameter (Inches)	Approximate Weight Per Foot (Lbs.)	Factory Stock Lengths (Feet)	Reel No.

Intended for terminating exchange type cable and for certain building cable uses.

CABLES

Multiple Sheath

In descriptions of multiple sheath cables, the terms BT and GT are used. The definition of each term is provided as follows.

Buried Tape-Armored Cable (BT)

In cases where protection against low frequency induction from power lines or somewhat more mechanical protection is desired, a steel tape armor can be furnished. This type of sheath covering is similar to that used for jute protected cables, except for the addition of two servings of steel tapes. This protection consists of the following materials in the order named:

1. Asphalt compound.
2. One or more layers impregnated paper.
3. Asphalt compound.
4. One layer impregnated jute.
5. Asphalt compound.
6. Two layers steel tape.
7. Asphalt compound.
8. One or two layers impregnated jute.
9. Asphalt compound.
10. Coating of whitening.

For this construction the increase in diameter varies with the size of cable from about 0.3 inch to about 0.6 inch.

Gopher Protected Cable (GT)

Where conditions do not justify the heavy steel tapes used for regular tape armored cables and but little mechanical protection is required, such as for example, protection against rodents, a single tape armored cable is available using thin steel tape. This protection consists of the following materials in the order named:

1. Asphalt compound.
2. One layer impregnated paper.
3. Asphalt compound.

4. One layer steel tape.
5. Asphalt compound.
6. One or more layers impregnated paper.
7. Asphalt compound.
8. One or two layers impregnated jute.
9. Asphalt compound.
10. Coating of whitening.

BHAA and BHAG Type**Electrical Characteristics**

DC Resistance: Approximately 117 ohms not to exceed 186 ohms per loop mile at 68° F.

Capacitance: 0.083 uf, approximately, per mile at 1000 Hz.

Attenuation: 1.8 db, approximately, per mile at 1000 Hz.

Dielectric Strength: BHAA—In excess of 8000 volts dc between conductors, in excess of 10,000 volts dc between conductors and sheath. BHAG—In excess of 8000 volts dc between conductors, in excess of 20,000 volts dc between conductors and sheath.

Mechanical Characteristics

Sheath: BHAA 11 to 600 pairs, (Alpeth)
Aluminum and Polyethylene.

BHAG 11 to 600 pairs, (PAP)
Polyethylene, Aluminum and Polyethylene.

Conductors: Number 22 AWG solid copper, insulated with extruded polyethylene applied directly to the wires.

All cables are color coded in accordance with the color code identification shown in Chart V.

Intended use: BHAA—Outside plant—General

BHAG—Outside plant—Buried

CABLES

Multiple Sheath

BKTA and BKTG Type

Mechanical Characteristics

Electrical Characteristics

DC Resistance: Approximately 440 ohms not to exceed 472 ohms per loop mile at 68° F.

Capacitance: Approximately 0.083 uf not to exceed 0.090 uf per mile at 1000 Hz, at 60° F.

Attenuation 2.9 db, approximately, per mile at 1000 Hz.

Dielectric Strength: BKTA—In excess of 3000 volts dc between conductors, in excess of 5000 volts dc between conductors and sheath. BKTG—In excess of 3000 volts dc between conductors, in excess of 20,000 volts dc between conductors and sheath.

Sheath: BKTA 11 to 900 pairs, (Alpeth) Aluminum and Polyethylene.

BKTG 11 to 900 pairs, (PAP) Polyethylene, Aluminum, Polyethylene.

Conductors: Number 26 AWG solid copper, insulated with extruded polyethylene applied directly to the wires.

All cables are color coded in accordance with color code identification shown in Chart V.

Intended use: BKTA—Outside plant—General

BKTG—Outside plant—Buried

The mechanical characteristics of BKTA and BKTG cables are indicated in the following tabulations.

BKTA Type

(GT) Gopher tape

CABLES

Multichannel Educational Television Cable (ETV)

CA-3015

A cable consisting of one coaxial and a choice of 16, 37, or 63 PIC pairs of 19 gauge conductors. Intended for high frequency transmission.

The pairs are insulated with solid polyethylene and the coaxial with polyethylene discs. The cable has a PASP sheath. The pairs are color coded.

The weights and diameters vary according to the number of PIC pairs included and are approximately as follows:

No. of Pairs	Weight (Lbs. per Ft.)	Diameter (Inches)
16	0.66	1.16
37	0.94	1.37
63	1.25	1.56

The electrical characteristics are as follows:

The characteristic impedance is approximately 75 ohms at 1 MHz and above.

The velocity of propagation at 70°F is 176,000 miles per second at 10-200 MHz.

The dc resistance of the inner and outer conductors of the coaxial is 0.102 and 0.054 ohm, respectively, per 100 feet at 70°F.

The nominal values of impedance at 70°F are as follows:

Frequency (MHz)	Attenuation (DB at 100 Ft.)
10	0.23
50	0.53
100	0.75
200	1.06
216	1.11

The design average mutual capacitance per mile of the pairs is 0.083 uf.

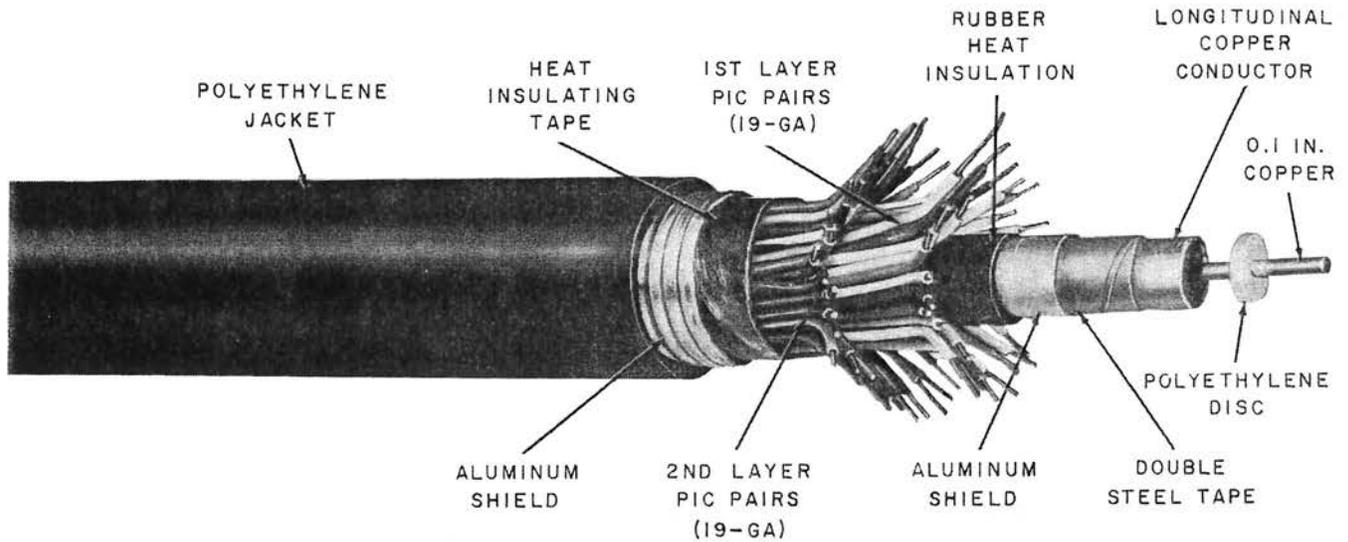

The dielectric strength of the insulation is as follows:

Core to sheath	— 20,000 volts
Conductor to conductor of 19 gauge pairs and to outer conductor of the coaxial	— 10,000 volts

CABLES

Multichannel Educational Television Cable (ETV)

CA-3016

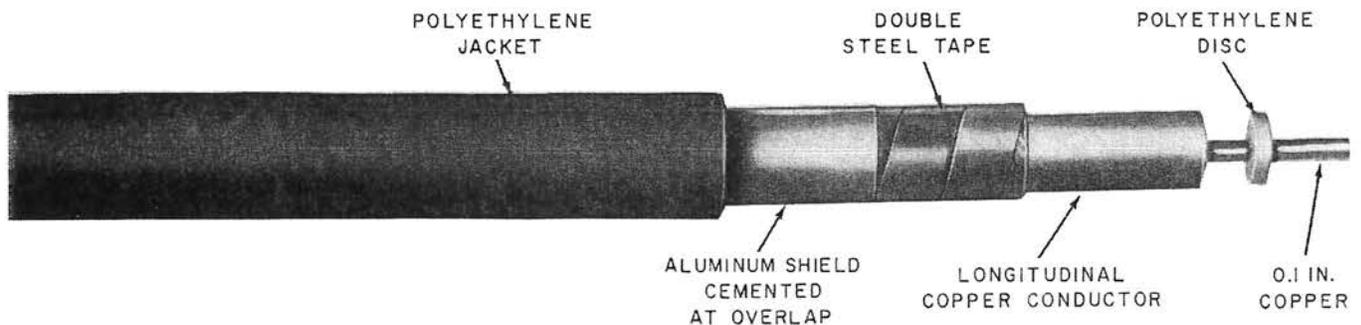

This cable is the same as CA-3015 except as follows:
Dielectric strength—core to sheath, 10,000 volts.

The cable has an ALPETH sheath and the weights and diameters are as follows:

No. of Pairs	Weight (Lbs. per Ft.)	Diameter (Inches)
16	0.44	0.99
37	0.66	1.19
63	0.98	1.38

CA-3185

A single coaxial cable manufactured for high frequency transmission.

The center conductor is 0.1003 inch in diameter, insulated with polyethylene discs. The outer conductor consists of a longitudinal seam tube of single copper tape having a wall thickness of approximately 0.012 inch thick and an inside diameter of approximately 0.375 inch. The

cable has a shield consisting of two steel tapes over the copper tube and a sheath of ALPETH with bonded aluminum overlap.

The cable weighs approximately 0.2 pound per foot and is approximately 0.61 inch in diameter.

The following electrical characteristics apply:

CABLES

Multichannel Educational Television Cable (ETV)

CA-3185 (Continued)

The characteristic impedance is approximately 75 ohms at 1 MHz and above.

The velocity of propagation at 70°F is 176,000 miles per second at 10-200 MHz.

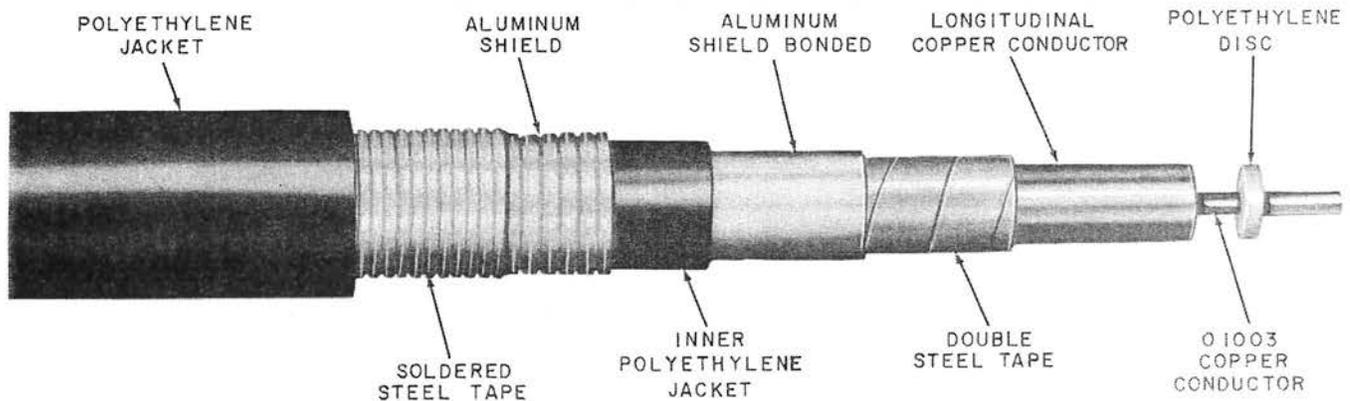

The dc resistance of the center conductor and outer conductor is 0.102 ohm and 0.054 ohm, respectively, per 100 feet at 70°F.

The nominal values of impedance at 70°F are as follows:

Frequency (MHz)	Attenuation (DB at 100 Ft.)
10	0.23
50	0.53
100	0.75
200	1.06
216	1.11

Replaces CA-1878.

CA-3198

This cable is the same as CA-3185 except as follows:
The cable has a PASP sheath with an additional moisture barrier under the inner jacket consisting of longitudinal aluminum tape with bonded overlap.

The cable weighs approximately 0.35 pound per foot and is approximately 0.84 inch in diameter.

Replaces the CA-3002.

CABLES

Exchange Even-Count Cable

Polyethylene-Insulated Conductor (PIC) Cable

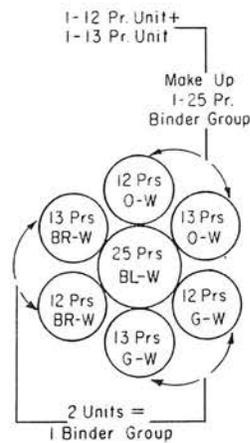

PIC cable is composed of conductors which are insulated with polyethylene. Polyethylene has excellent insulating and dielectric qualities and can be applied to the conductors by an extrusion process. It is resistant to moisture to a degree that makes sealing of the cable sheath unnecessary except at buried or submerged splicing points. It is obtainable in distinctive colors.

the groups is accomplished by placing them in layers within the cable. The groups in each layer have distinct binder colors and are arranged systematically with respect to a group having a blue-white binder. EVEN PIC cables are manufactured to supply most of the requirements for cables of 600 or smaller. Some EVEN PIC will be manufactured in sizes larger than 600, but pulp insulated cables will predominate in the larger sizes.

For mechanical lay-up reasons, it is necessary in some instances to divide the uniform 25-pair groups into two or three smaller units. Each of these units is bound with the colored binder of the group with which it is associated and the pair color code advances progressively through one unit to another. A combination of these units, which adds to 25 pairs, is designated as a binder group. A binder group may consist of three units (2 of 8 pairs and 1 of 9 pairs), or two units (1 of 12 pairs and 1 of 13 pairs), or a single unit of 25 pairs. Examples of cross-sections and color-code identification are shown in the following list.

Twenty-five different pair twist lengths are used for the pairs of a binder group. This permits splicing of subscriber cables, binder group-to-binder group and pair-to-pair, by color code, for at least 10 miles without excessive crosstalk.

Even-Count PIC Cable

100 Pairs

EVEN-COUNT PIC cable is so designated because it does not have an extra pair for each 100 pairs or fraction thereof. Since all pairs in PIC cables are guaranteed to be free from opens, shorts, crosses, and grounds, the extra pair is not needed as a substitute for defects. It is obvious that, without extra pairs, the pairs within a cable may be divided into uniform size groups. Twenty-five pairs have been selected as the most suitable sizes for this uniform group. All standard size cables, except those smaller than 25 pairs, can be divided by this number. The pairs of the 25-pair group are identified by a simple code which uses 10 colors, 5 for tip and 5 for ring, with no duplication. The 25-pair groups are bound with bicolor binders. The color of these binders follows the same color code as used for pairs. Such an arrangement permits fast and easy identification of any conductor or pair in a 25-pair group without the aid of translation charts, mechanical devices, or tag boards. The maximum standard size cable of this design is then 600 pairs. The features of the uniform 25-pair color code group are used for larger than 600 pair cables, but the identification of

Inside Wiring

AT-7441

Thermoplastic insulated and jacketed cable. Light olive gray jacket will be provided in all pair sizes listed below.

Has annealed number 24 AWG copper conductors insulated with semirigid PVC compounds distinctively colored for conductor identification. The insulated conductors are twisted into pairs. In pair sizes 6 to 25 inclusive, the pairs are stranded in layer construction to form the core. In the 50- to 100-pair sizes, two to four units of 25 pairs each, as required, are stranded together to form the core. Each unit is bound with a different colored textile yarn. The first 25 pairs (Unit No. 1) is bound with blue-white yarn, and each successive unit is bound with orange-white, green-white, or brown-white yarn, respectively. Over the core is applied a light olive gray colored jacket of thermoplastic compound, underlaid by a nylon jacket slitting cord.

Conductor has a diameter of 0.020 inch. The thickness of the insulating wall is 0.006 inch minimum and the average diameter of the insulated conductor is 0.036 inch. The average thickness of the jacket is:

- 0.035 inch for the 6 to 25 pairs
- 0.045 inch for the 50 to 100 pairs

The diameters and weights of the cables are:

No. of Pairs	Approx Diameter (Inches)	Approx Weight (Lbs per 1000 Ft)
6	0.26	36
12	0.32	61
16	0.35	77
21	0.38	97
25	0.41	112
50	0.56	221
75	0.65	320
100	0.73	420

13	Black	Green			

Conductor Resistance: 53 ohms, average, per 1000 circuit feet at 68° F.

Mutual Capacitance (Dry): 0.025 uf, average per 1000 feet.

Voltage Test: The finished cable will withstand 2000 volts RMS between conductors.

Attenuation (Dry): 0.56 db, average, per 1000 feet at 1000 Hz.

The cables, excepting short pieces, are furnished on reels, each containing one to five lengths. Short pieces of 50 to 150 feet are furnished in coils. Short pieces of any pair size are limited to 5 percent of the total length of that size in a shipment. The lengths on reels are as shown in the table. Number of pairs and color must be specified on the order.

No. of Pairs	Nominal Length on Reel (Feet)	Minimum Length	
		Length for One Piece (Feet)	Remaining for Any Piece (Feet)

75	2,250	150	200
100	1,740	150	200

Intended primarily for use in PBX and station wiring.

CABLES

Colors of Insulation on Conductors

Color Code Identification

In all types of switchboard cable, the outer insulation on the conductors is colored in accordance with a definite color scheme so that they may be easily identified. In the tabulations of switchboard cable on preceding pages, under the heading of Color, the various color combinations of the conductors are identified by the numbers shown.

CHART I

PAIRS

Combination No.	Colors of Insulation*	Paired With**
1c	Blue-1-white	Blue-2-white
2c	Orange-1-white	Orange-2-white
3c	Green-1-white	Green-2-white
4c	Brown-1-white	Brown-2-white

*1 Single dot marking. For example, Blue-1-white is a blue wire with single white dots spaced approximately 11/16-inch apart.

**2 Double dot marking. For example, Orange-2-red is an orange wire with two red dots spaced approximately 3/16-inch apart. The distance between pairs of dots is approximately 11/16-inch.

***3 Dash marking. For example, Green-3-white is a green wire with white dashes, approximately 5/16-inch long, spaced approximately 11/16-inch apart.

CAPACITORS

152A

Plastic film capacitor, cord tips arranged for number 4 screw rated 0.1 uf, maximum .115 uf, minimum .085 uf. Intended for use in station circuits to eliminate radio interference caused by sparking at pulse contacts of dials. Comcode: 100 026 962

187 Type

Consists of 10 small paper units potted in metal can with metal cover. One side of each unit is connected to common terminal; other side is connected to one of 10 terminals.

For mounting on 1-3/4 inch horizontal, 1-1/2 inch vertical centers. Two nuts and washers are furnished.

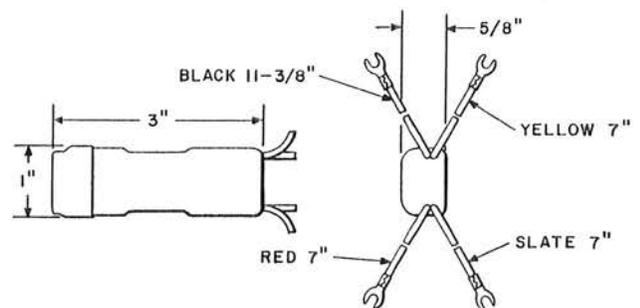

Suitable for use on continuously applied potentials not exceeding 300 volts dc or ac (60 Hz or less) and at operating temperatures not exceeding 120° F.

Code No.	Comcode	Obtainable Capacitance	To Within
*187A	100 027 085	0 to .346 uf	.00133 uf
187B	100 027 093	0 to .069 uf	.00066 uf
†187C	100 027 101	0 to .00584 uf	.000084 uf

*Together with 25A Bracket replaces 57AK and 57E Capacitors on equipments arranged for lug mounting.

†Together with 25B Bracket replaces 134A Capacitor on equipments arranged for lug mounting.

195 Type

Plastic film capacitors wrapped in tape. The cord tips are arranged for number 4, 5, or 6 screws.

Used in miscellaneous telephone sets.

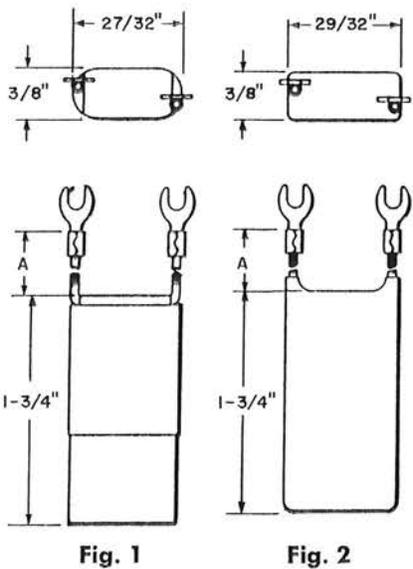

Code No.	Capacitance (UF)		Test Voltage (DC)	Between Leads
	Max	Min		
195A	{ (a) 2.5 (b) .63	{ 2.0 .5	500 500	Red and black } Yellow and slate }

Comcode: 100 027 143				

CAPACITORS

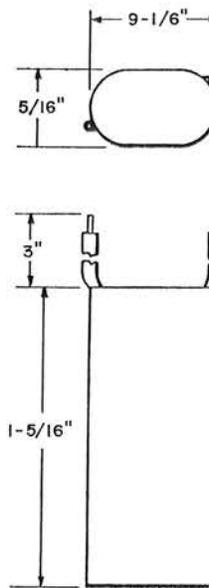

195 Type (Continued)

- (a) Suitable for use on continuously applied potentials not exceeding 130 volts dc or 100 volts ac (60 Hz or less) and at operating temperatures not exceeding 150° F.
- (b) Suitable for use on continuously applied potentials not exceeding 200 volts dc or 180 volts ac (60 Hz or less) and at operating temperatures not exceeding 150° F.
- (c) 195B is same as 195A except that it meets a cross-talk requirement of 50 uuf maximum between capacitor units.

198 Type

361C

Plastic film capacitor, maximum 0.15 uf and minimum 0.10 uf.

Suitable for use on continuously applied potentials not exceeding 250 volts dc or 180 volts ac (60 Hz or less) at operating temperatures not exceeding 150° F. Used on number 1011 type hand set.

Comcode: 100 028 331

Plastic film wax impregnated capacitors each having an enveloping gray finish, except 198C which is wrapped with tape.

Code No.	Fig. No.	Dimension A (Inches)	Color of Leads	Capacitance (UF)	
				Max	Min
198A	1	2-1/2	Black	.625	.5
198B	1	4	Yellow	.625	.5
198C	2	2-1/2	Yellow	.5	.4

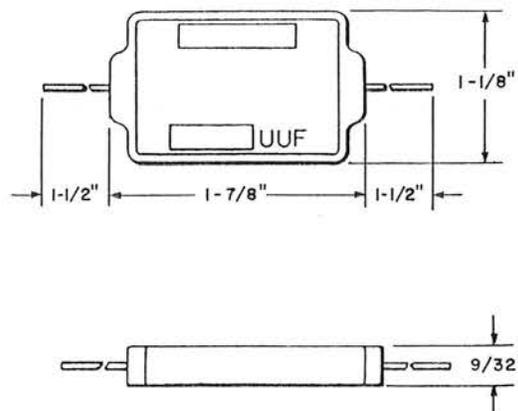

198A: Intended for use in the L1AW-49 Ringer.
Comcode: 100 027 150

198B: Intended for use in the number 687 type subscriber set.
Comcode: 100 027 168

198C: Intended for use in the 687AW-49 Subscriber Set.
Comcode: 100 027 176

Suitable for use on continuously applied potentials not exceeding 200 volts dc or 180 volts ac (60 Hz or less) and at operating temperatures not exceeding 150° F.

402 Type

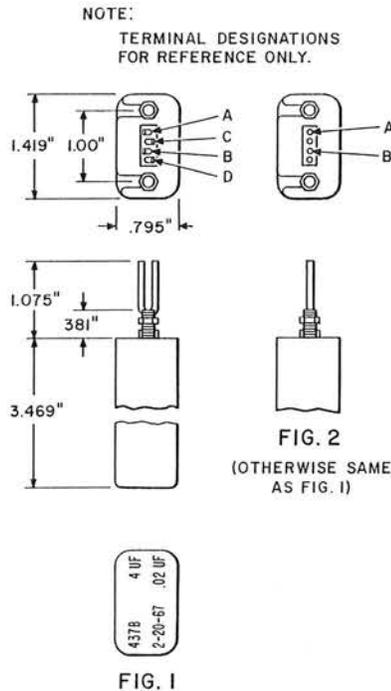

CAPACITORS

Mica capacitors equipped with tinned wire terminal leads. Case is of insulating material. Capacitors can be obtained in any nominal capacitance value from 10 to 25,000 uuf. Nominal capacitance value desired must be specified in the order; the value is stamped on each capacitor.

Code No.	Capacitance Limits
402B	± (0.5% + 1 uuf)
402C	± (1% + 1 uuf)
402D	± (5% + 1 uuf)

Suitable for use on continuously applied potentials not exceeding 200 volts dc or 200 volts ac (60 Hz or less) and at operating temperatures within the range -50° F to +185° F.

437 Type

Metallized mylar capacitors potted in synthetic gel in aluminum cans. Minimum capacitance values are stamped on end of can.

Number 24 type brackets required when mounted in place of number 57 or similar type capacitors. Each mounting stud is connected electrically to can.

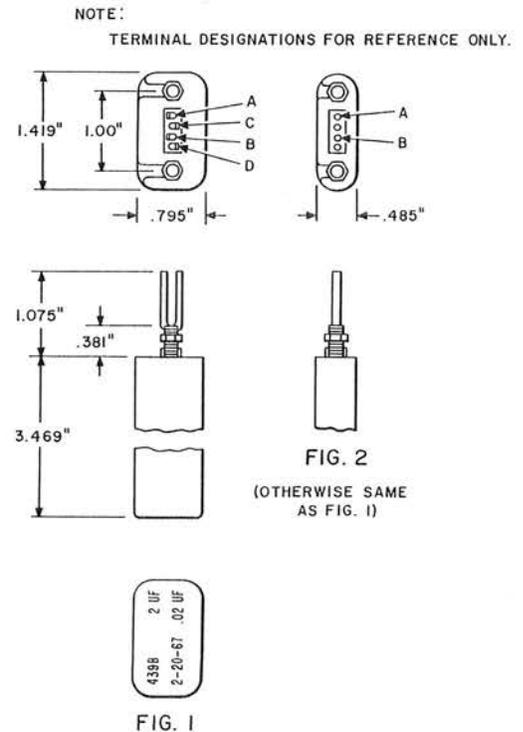

Suitable for use on continuously applied potentials not exceeding 200 volts dc or 180 volts ac (60 Hz or less) and at operating temperatures not exceeding 70° C.

Code No.	Comcode	Fig. No.	Capacitance (UF) Between Terminals			
			(A-B)		(C-D)	
			Max	Min	Max	Min

*437QB	100 039 098	1	4.36	4.28	.03	.02

*Consists of two separate capacitors insulated but not shielded from each other. These capacitors should not be used bridged off or across two separate transmission circuits. Should not be used in the same circuit where effect of capacitance between the separate units will be detrimental to transmission.

†Same as 437C except the two units are matched so they do not differ by more than 0.11 uf.

439 Type

Metallized mylar capacitors potted in synthetic gel in aluminum cans. Minimum capacitance values unless otherwise noted are stamped on end of can.

CAPACITORS

439 Type (Continued)

Where adjacent electrical potentials exist, closest recommended mounting centers are 0.891 inch for Fig. 1 and 0.576 inch for Fig. 2 by 1.512 inches. Requires number 24 type brackets when mounted in place of number 57 or similar type capacitors. Each mounting stud is connected electrically to can.

Suitable for use on continuously applied potentials not exceeding 200 volts dc or 180 volts ac (60 Hz or less) and at operating temperatures not exceeding 70° C.

440QA	100 039 288	1.09	1.07
440QB	100 039 296	1.12	1.04

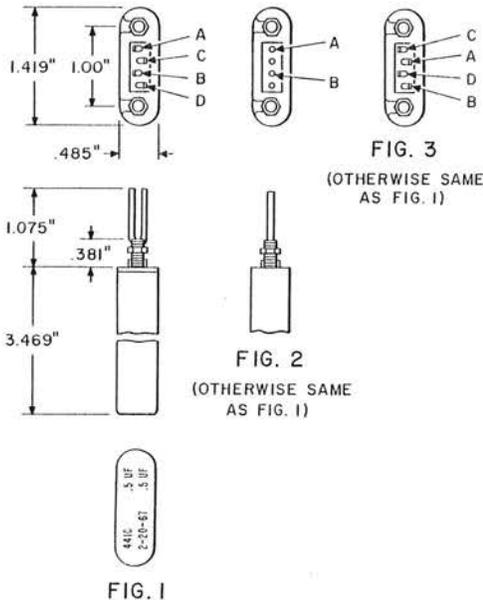

*For use as plate blocking capacitor in repeater circuits where high insulation resistance is required.

Suitable for use on continuously applied potentials not exceeding 300 volts dc or 300 volts ac (60 Hz or less) and at operating temperatures not exceeding 70° C.

CAPACITORS

441 Type

NOTE:
TERMINAL DESIGNATIONS FOR REFERENCE ONLY.

Metallized mylar capacitors potted in synthetic gel in aluminum cans. Minimum capacitance values are stamped on end of can unless otherwise noted.

Where adjacent electrical potentials exist, closest recommended mounting centers are 0.576 inch by 1.512 inches. Require number 24 type brackets when mounted in place of number 57 or similar type capacitors. Each mounting stud is connected electrically to can.

Suitable for use on continuously applied potentials not exceeding 200 volts dc or 180 volts ac (60 Hz or less) and at operating temperatures not exceeding 70° C.

* Consists of two separate capacitors insulated but not shielded from each other.

(a) Consists of two capacitors having one common terminal.

(b) Same as 447B except equipped with 7-3/4 inch flexible leads, having number 127 Cord Tips, at the following terminals: (A;RD-GN) (B;YEL), (C;YEL) and (D;BLK).

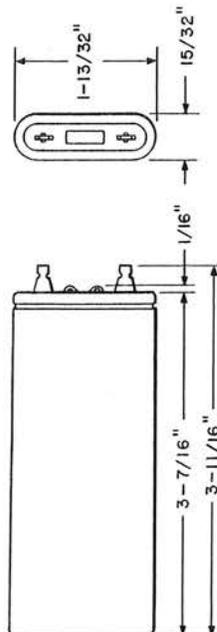

(c) Same as 447D except equipped with 7-3/4 inch flexible leads, having number 127 Cord Tips, at the following terminals: (B;RD), (C;YEL) and (D;BL).

(d) Stamped .04 UF on end of can.

(e) Same as Fig. 2 except equipped with flexible leads, having number 127 Cord Tips, at the following terminals: (A;BLK), (B;RD), (C;YEL) and (D;SL). RD and YEL leads are 8-1/4 inches long. BLK and SL leads are 7 inches long.

(f) Same as Fig. 2 except equipped with flexible leads, having number 127 Cord Tips, at the following terminals: (A BLK), (B;RD), (C;YEL) and (D;SL). RD and YEL leads are 8-1/4 inches long. BLK and SL leads are 7 inches long.

449 Type

Paper capacitors potted in wax in aluminum cans. Minimum capacitance values are stamped on the end of can.

Suitable for use on continuously applied potentials not exceeding 200 volts dc or 180 volts ac (60 Hz or less) and at operating temperatures not exceeding 120° F except 449J which is suitable for use on potentials not exceeding 300 volts dc or ac (60 Hz or less) and at operating temperatures not exceeding 120° F.

(a) Equipped with two 8-inch yellow flexible leads having number 144 Cord Tips.

(b) Equipped with two 5-1/2 inch flexible leads, one yellow and one black, having number 127 Cord Tips.

(c) Equipped with two 6-inch yellow flexible leads having number 144 Cord Tips.

CAPACITORS

535 Type

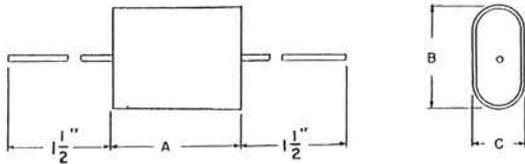

Plastic film, wax impregnated capacitors, wrapped with tape and end filled with epoxy. Equipped with tinned terminal leads.

Suitable for use on continuously applied potentials not exceeding 200 volts dc except in specific instances and at operating temperatures within the range of -40°F and $+150^{\circ}\text{F}$.

The 535 type capacitors are available in varying capacitances from .00822 uf max., .007899 uf min. to 4.363 uf max., 4.277 uf min. The dimensions vary with the value of the capacitor. The A dimension is from 1 inch to 1.800 inches; the B dimension is from .600 inch to 1.300 inches and the C dimension is from .200 to .500 inch. Available capacitance and operating voltages may be established by contacting the sources in the front of this catalog.

542 Type

Metallized polyester film capacitors, wrapped with tape and end filled with epoxy. Equipped with tinned terminal leads.

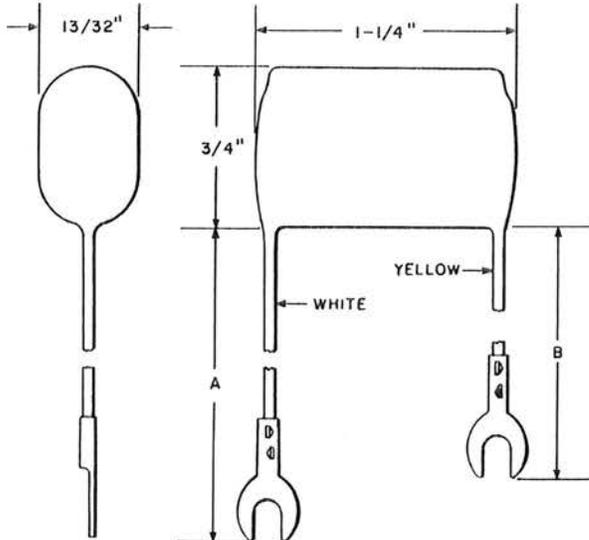

Suitable for use on continuously applied potentials not to exceed 200 volts dc unless otherwise specified and at operating temperatures within the range of -40°F to $+150^{\circ}\text{F}$ unless otherwise specified.

(a) Maximum operating voltage 250 volts dc.
 (b) Maximum operating voltage 500 volts dc.
 (c) Maximum operating voltage 350 volts.

CAPACITORS

548A and B

Metalized plastic film wax impregnated capacitors having an epoxy coating. Equipped with flexible insulated terminal leads having cord tips arranged for a number 4 screw. Capacitance is maximum .52 uf and minimum .38 uf.

Suitable for use on continuously applied potentials not exceeding 250 volts dc and at operating temperatures within the range of -40° F and +150° F.

548A: Forms a part of E1A-42 Ringer.

548B: Forms a part of the number 689 type subscriber sets.

Code No.	Comcode	Dimensions (Inches)	
		A	B
548A	100 047 265	6.25	4.75
548B	100 047 273	2.75	2.75

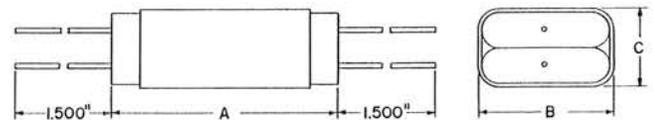

579 Type

Metal polyester film capacitors, wrapped with tape and end filled with epoxy. Equipped with tinned terminal leads.

Suitable for use on continuously applied potentials not exceeding the maximum operating voltage specified in the following table and at operating temperatures within the range of -40° F to +150° F. The configuration of these capacitors is the same as the number 542 type and the dimensions shown in the following table are keyed to that illustration.

Code No.	Comcode	Capacitance (UF)		Operating Voltage (Max. DC)	Dimensions (Inches)		
					A	B	C
579A	100 055 003	2.00	±10%	200	1.800	.840	.400
579B	100 055 011	1.50	±10%	200	1.800	.840	.400

579D	100 055 037	0.464	±20%	250	1.000	.865	.400
579E	100 055 045	0.147	±20%	250	1.000	.500	.245
579F	100 055 052	0.0215	±10%	350	1.000	.600	.165

580A and 580B

Each consists of two metalized polyester film capacitor units wrapped together with tape and end filled with epoxy. Equipped with tinned terminal leads.

Suitable for use on continuously applied potentials not exceeding 200 volts dc and at operating temperatures within the range of -40° F to +150° F.

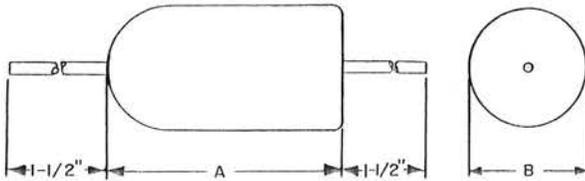

580A: Capacitance of the two units is matched so that they do not differ more than 0.11 uf.

580B: Capacitance of the two units is matched so that they do not differ more than 0.055 uf.

Code No.	Comcode	Capacitance of Each Unit (UF)		Dimensions (Inches)		
				A	B	C
580A	101 568 731	2.25	±10%	1.800	1.150	.800
580B	100 055 078	1.125	±10%	1.800	1.050	.600

CAPACITORS

600, 601, 602, 603, and 604 Type

Each is a tantalum, solid, polarized, electrolytic capacitor in a case of insulating material. Equipped with tinned axial terminal leads. The positive terminal is identified by a plus (+) symbol at the hemispherical end.

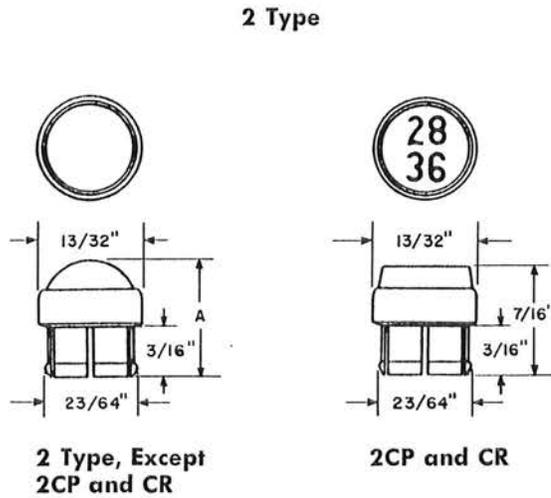

Suitable for use on continuously applied dc potentials not exceeding the rated operating voltage specified in the following table and at operating temperatures within the range of -20°F to +150°F.

Code No.	Comcode	Rated Operating Dimensions		
		Capacitance (UF ± 20%)	Voltage (Volts DC)	(Inches) A B

604B	100 056 233	50	8	.600 .350

(a) Tolerance is ±10% and has special characteristics which restrict them for use only in the 3A Echo Suppressor.

CAPS

Lamp

Thick, substantial lenses made from specially selected and treated glass, unless otherwise noted. Lenses are held firmly in place in cap cases by spinning the edges over the lenses. Dimension A is 17/32 inch for the 2BR, 2BS, 2BT, 2EE, 2EF, and 2EG, and 15/32 inch for all other codes.

Used with number 12, 13, 49, and 50 type lamp sockets.

75A	100 081 710	White
75B	100 081 728	Red
75C	100 081 736	Green

For use with A1 Lamps in number 102 type key telephone system.

77A Type

Each consists of a plastic shell and retainer with a clear plastic lens. Equipped with a designation card that will be stamped per order with up to four characters in one line, or up to four characters in each of two lines. When an "I" is required as one of the characters, four additional characters can be stamped on that line.

Each has a gastight steel case, equipped with "O" ring seal, which has been hot dip galvanized and has a black enamel finish. For use in cable vaults.

Provided with mounting bolts, nuts, and lock washers, brackets, and a hinged support for use when mounting in a horizontal or vertical position.

Arranged to contain the quantities of individual codes of 1574A or 1574B Inductors as specified in the table. The inductors do not form a part of the cases. The code number and quantity of inductors required must be specified in the order and all inductors in a case must be of the same code number.

Shipped filled with dry air at approximately 9 pounds pressure and provided with an air valve in the top cover.

Equipped with a 50-foot number 24 AWG stub cable which has polyvinyl chloride insulation and is covered in a gray polyvinyl chloride sheath. Can be obtained equipped with a stub cable 75 or 100 feet long when specified in the order.

Initially used in dedicated plant installations.

CASES

Coil

The loading coil cases listed in this catalog pot the various non-phantom loading coils used in loading trunk, toll and exchange type cables.

Information on side and phantom loading may be obtained by written request to Western Electric Company.

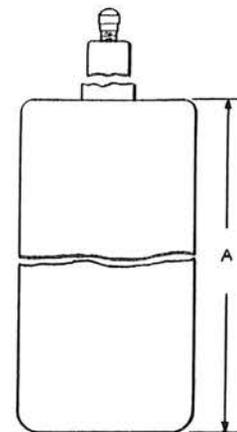

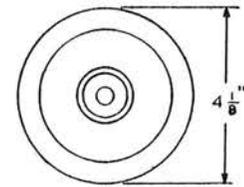

The electrical characteristics of the loading coils that can be provided in the load coil cases listed in this catalog are included in the following table:

Electrical Data

Coil Code No.	Nominal Induct. MH	Resistance Ave. D-C	Ohms (1) 1000 Cycles
641*	44	3.7	4.2
642*	88	6.3	7.5
643*	135	9.3	11.4
644*	175	12.6	14.3
652	88	8.5	10.6
658	44	4.5	6.2
659	22	2.25	3.25

*Loading for toll cables.

124 Type

Welded steel cases having an asphalt coating and aluminum paint finish. For use in either aerial or underground locations. Arranged to contain either number 652, 658, or 659 loading coils in the quantities specified in the table. The code number and quantity of loading coils required must be specified in the order. All loading coils in a case must be of the same code number.

Shipped filled with dry air at approximately 9 pounds pressure and provided with an air valve in the stub cable. Equipped with 10-foot number 24 AWG stub cable. Can also be obtained with stub cable 5 feet, 15 feet, or 20 feet long when specified in the order.

Used in connection with loading exchange area cables.

167 Type

137A

Each consists of an insulating tube and a wood dowel. The cases are equipped with 18-inch number 22 AWG terminal leads at each end.

Arranged for potting loading coils as indicated in the following table. The quantity and code number of the coils to be potted must be specified in the order. All loading coils in a case must be the same code number.

Used to load long subscriber loops, exchange area cables, and toll cables. Designed for installation in cable splices.

Plastic container provided with terminals which are also used for mounting on terminal distribution blocks.

Arranged to contain one 652, 658, or 659 Loading Coil or a 1574A or B Inductor. The code number of the loading coil or inductor required must be specified in the order.

When equipped with a loading coil, used in loading the B Rural Distribution System and at distribution terminals in buried plant. When equipped with an inductor, used in bridged subscriber loops to reduce transmission loss when one branch is idle.

171C, 171D, 172B, and 172C

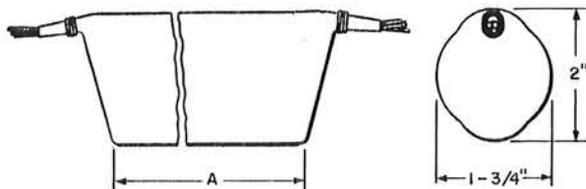

Fig. 1

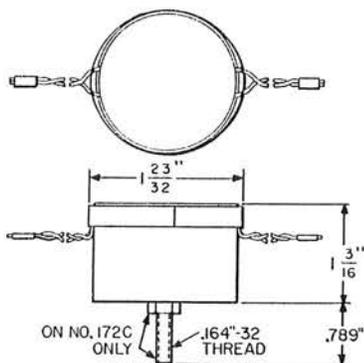

Fig. 2

Each case is designed to contain number 652, 658, or 659 Loading Coils or 1574A or B Inductors as specified in the table. The code number and quantity of loading coils or inductors required must be specified in the order. All loading coils or inductors in a case must be of the same code number.

171C and D: Case is of sheet plastic and is equipped with number 24 AWG pair terminal leads approximately 21 inches long, having polyvinyl chloride insulation. All IN pairs are brought out at one end of the case and OUT pairs at the opposite end. Case is arranged so that each coil is insulated from all other coils to withstand 10,000 volts dc.

Intend for inclusion in splices of cables having conductors insulated with polyethylene.

172B: Plastic box equipped with number 24 AWG paired terminal leads approximately 31 inches long, having polyvinyl chloride insulation.

Intend for inclusion in splices of cables having conductors insulated with polyethylene where a dielectric strength of 20,000 volts dc between coils is desired.

172C: Same as 172B except equipped with a stud for mounting directly to the frame of a number 49 type cable terminal.

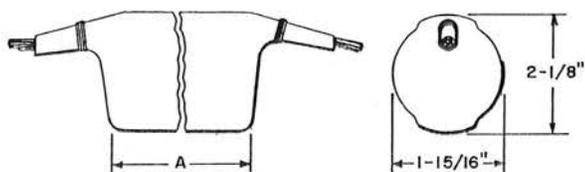

Fig. 2

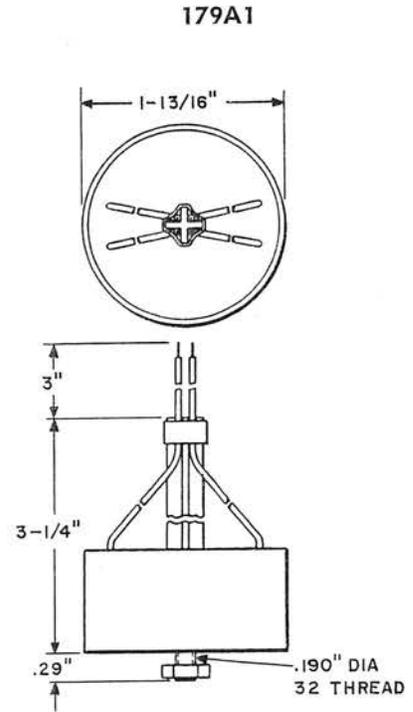

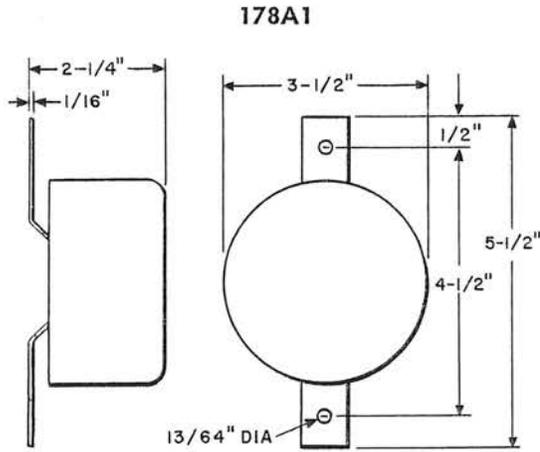

Each case is designed to contain number 641, 642, or 643 Loading Coils as specified in the table. The code number and quantities of loading coils required must be specified in the order. All loading coils in a case must be of the same code number.

The 173B is used for inclusion in a splice of cables having conductors insulated with polyethylene where a dielectric strength of 20,000 volts dc between coils is desired.

The 174C and D are used for inclusion in splices of cables having conductors insulated with polyethylene where a dielectric strength of 10,000 volts dc between coils is desired.

CASES

Coil

Cylindrical plastic case with black semiflexible insulated snap-on cover for potting one 652, 658, 659, 641, 642, 643, or 644 Loading Coil or a 1574A or B Inductor. Equipped with four 2A1B Protector Units for protection against lightning or heavy surge currents. Mounting screws are provided for pole mounting.

The code number of the coil or inductor required must be specified in the order.

When equipped with a loading coil, is intended for loading C Rural Wire. When equipped with an inductor, is intended for use in bridged subscriber loops to reduce transmission loss when one branch is idle.

100 095 314	E/W 1574A Inductor
100 095 322	E/W 1574B Inductor

Plastic case arranged for potting one 642 Loading Coil or one 1574A or B Inductor. The code number of the loading coil or inductor required must be specified in the order. Case is equipped with number 19 AWG terminal leads.

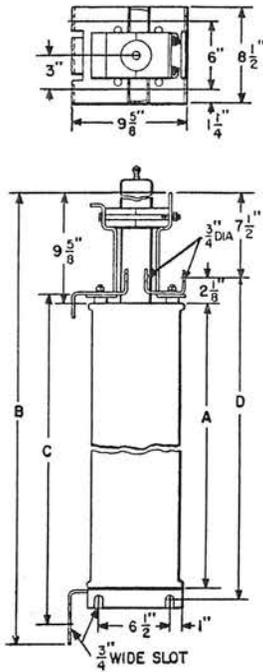

Used in connection with loading underground wire for rural distribution.

Comcode: 100 095 330	E/W 642 Loading Coil
100 095 348	E/W 1574A Inductor
100 095 355	E/W 1574B Inductor

CASES

Coil

226 Type

Welded steel cases having an asphalt coating and aluminum paint finish. For use in either aerial or underground locations. Provided with an additional bracket for mounting in aerial locations. Designed to contain the quantities of individual codes of number 652, 658, or 659 Loading Coils as specified in the table. The code number and quantity of loading coils required must be specified in the order. All loading coils in a case must be of the same code number.

Shipped filled with dry air at approximately 9 pounds pressure and provided with an air valve in the stub cable. Equipped with a 10-foot number 24 AWG stub cable. Can also be obtained equipped with stub cable 15 or 20 feet long when specified in the order. The IN and OUT pairs to each coil are quadded.

The top and bottom mounting brackets may be rotated to any one of four 90 degree positions.

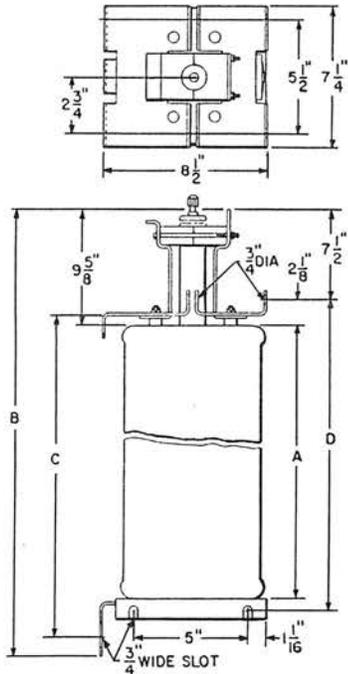

Used in connection with loading exchange area cables.

CASES

Coil

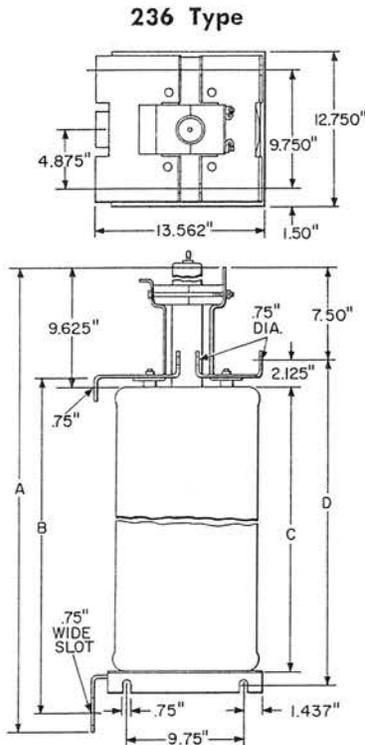

FIG. 1

Welded steel cases having an asphalt coating and aluminum paint finish. For use in either aerial or underground locations. Provided with an additional bracket for mounting in aerial locations. Intended to contain the quantities of individual codes of number 652, 658, or 659 Loading Coils as specified in the table.

The code number and quantity of loading coils must be specified in the order. All loading coils in a case must be of the same code number.

Shipped filled with dry air at approximately 9 pounds pressure and provided with an air valve in the stub cable. The 236A, B, and C Coil Cases are equipped with a 10-foot number 24 AWG stub cable. The 236F and G Coil Cases are equipped with a 10-foot number 26 AWG stub cable. Can also be obtained equipped with a stub cable 15 or 20 feet long when specified in the order.

The IN and OUT pairs of each coil are quadded and color coded to identify quads in each quint of the cable core.

The top and bottom mounting brackets may be rotated to any one of four 90 degree positions.

Used in loading exchange area cable and non-phantom circuits in toll cables.

CASES

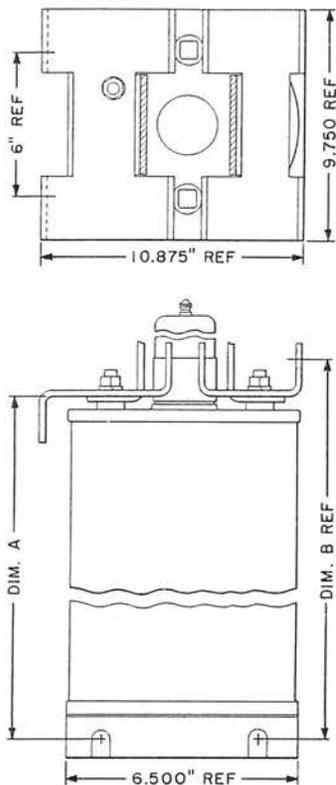

Coil

237 Type

Steel case, double wall construction with potting compound between walls, and an asphalt coating and aluminum paint finish. For use in underground locations where severe corrosion conditions exist. Intended to contain the quantities of individual codes of number 652, 658, or 659 Loading Coils as specified in the table. The code number and quantity of loading coils required must be specified in the order. All loading coils in a case must be of the same code number.

Shipped filled with dry air at approximately 9 pounds pressure and provided with an air valve in the stub cable. Equipped with a 10-foot number 24 AWG stub cable. Can also be obtained equipped with stub cable 15 or 20 feet long when specified in the order. The IN and OUT pairs to each coil are quadded.

For use in connection with loading exchange area cable.

CASES

Coil

500 Type

Welded steel cases having an asphalt coating and aluminum paint finish. For use in either aerial or underground locations. Intended to contain the quantities of individual codes of number 652, 658, or 659 Loading Coils or 1574A or B Inductors as specified in the table. The code number and quantity of loading coils or inductors required must be specified in the order. All loading coils or inductors in a case must be of the same code number.

Shipped filled with dry air at approximately 9 pounds pressure and provided with an air valve in the stub cable. Equipped with a 10-foot number 24 AWG stub cable having polyvinyl chloride insulation. Can also be obtained equipped with stub cable 15 or 20 feet long when specified in the order. The IN and OUT pairs to each coil or inductor are quadded.

Arranged so that each coil or inductor is insulated from all other coils or inductors to withstand 10,000 volts dc and insulated from the case to withstand 20,000 volts dc.

The top and bottom mounting brackets may be rotated to any one of four 90 degree positions.

When the cases contain loading coils, they are intended for use in loading exchange area polyethylene insulated conductor cables. When the cases contain inductors, they are intended for use in bridged subscriber loops to reduce transmission loss when one branch is idle.

501 Type

Welded steel cases having an asphalt coating and aluminum paint finish. For use in either aerial or underground locations. Intended to contain the quantities of individual codes of number 652, 658, or 659 Loading Coils or 1574A or B Inductors as specified in the table. The loading coils or inductors required must be specified in the order. All loading coils or inductors in a case must be of the same code number.

Shipped filled with dry air at approximately 9 pounds pressure and provided with an air valve in the stub cable. Equipped with a 10-foot number 24 AWG stub cable having polyvinyl chloride insulation. Can also be obtained equipped with stub cable 15 or 20 feet long when specified in the order. The IN and OUT pairs to each coil or inductor are quadded.

Arranged so that each coil or inductor is insulated from all other coils or inductors to withstand 10,000 volts dc, and insulated from the case to withstand 20,000 volts dc.

The top and bottom mounting brackets may be rotated to any one of four 90 degree positions. A pole mounting bracket is furnished with each case.

When the cases contain loading coils, they are intended for use in loading exchange area polyethylene insulated conductor cables. When the cases contain inductors, they are intended for use in bridged subscriber loops to reduce transmission loss when one branch is idle.

CASES

Coil

601A1

A metal container arranged to contain two 652, 658, 659, 641, 642, or 643 Loading Coils or 1574A, 1574B, or 1613A Inductors. The quantity and code numbers of the coils or inductors must be specified in the order. Individual cases cannot contain mixed codes.

Mounts on a .2188-inch thick, or less, mounting plate. Mounting centers are 1.250 inches horizontal and 1.750 inches vertical. Cases are provided with mounting screws and washers.

When equipped with loading coils, is intended for use in central offices and PBX systems for loading exchange area and toll lines. When equipped with inductors, is intended for use in bridged subscriber loops to reduce transmission loss when one branch is idle.

Comcode: 101 749 307	E/W 652 Loading Coils

100 105 337	E/W 1613A Inductors

CASES

Splice

9A, 10A, 11A, and 12A

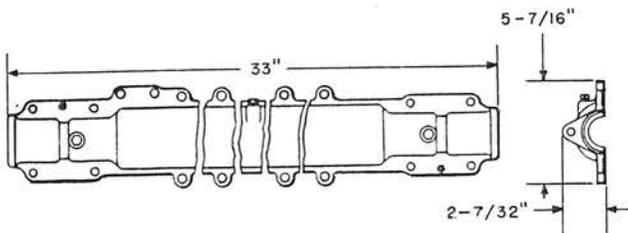

Fig. 1

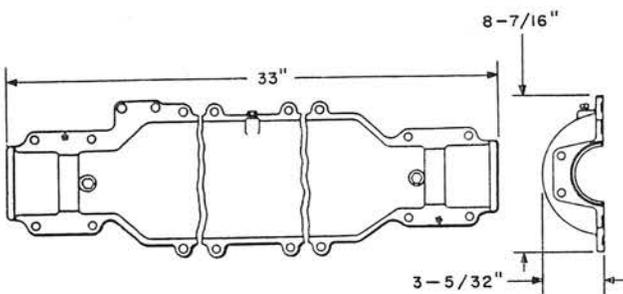

Fig. 2

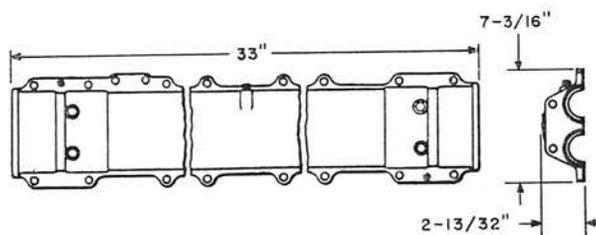

Fig. 3

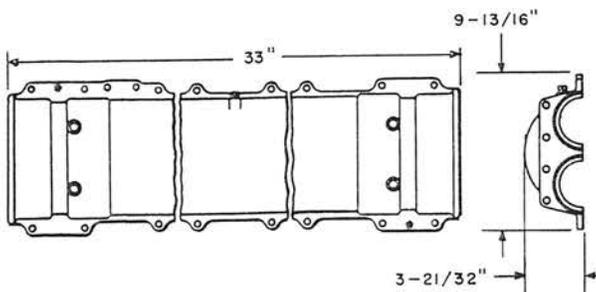

Fig. 4

These types consist of a cast metal housing with a semi-cylindrical cavity and are provided with pipe plugs for pressure testings. They are used as gas and moisture tight splice closures on multiple sheath cables having an inner layer of polyethylene of diameter indicated below. They may be used aerially, buried, or underground.

9A is for a straight splice. It is provided with one 129A Adapter for cables less than 1 inch in diameter.

10A is for a straight splice. It is provided with one 133C Adapter for cables 1.6 to 2.2 inches in diameter.

11A is for a branch splice. It is provided with two 129A Adapters for cables less than 1 inch in diameter.

12A is for a branch splice. It is provided with two 133C Adapters for cables 1.6 to 2.2 inches in diameter.

10A and 12A can be arranged for cables less than 1 inch in diameter by using 133A Adapter, and for cables from 1.0 to 1.6 inches in diameter by using 133B Adapters.

The 133A and 133B Adapters are not furnished and must be ordered separately.

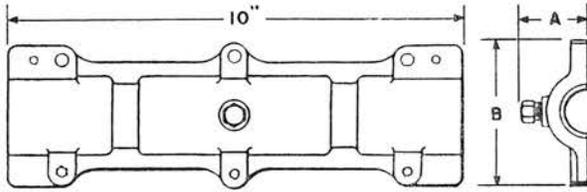

Two splice cases of the same number are required for a complete splice closure. Half of the hardware for a complete splice is furnished with each case. In addition, B Sealing Tape and Cord, and B, C, D, and E Sealing Washers are required and must be ordered separately. See information following description of splice cases for quantities and types required. In cases where only one cable hole is used, the unused hole must be plugged.

Code No.	Comcode	Fig. No.	Diameter of Cable Arranged for (Inches)
9A	100 105 352	1	Less than 1.6
10A	100 105 360	2	1.6 to 2.9
11A	100 105 378	3	Less than 1.6
12A	100 105 386	4	1.6 to 2.9

CASES

Splice

13A and 14A

These types consist of a cast metal housing with a semi-cylindrical cavity. Provided with a pipe plug for pressure testing. Used as gas and moisture tight splice closures for multiple sheath cables and lead covered cables. They accommodate cables of diameters listed in the table.

Also used for establishing pressure points, for plugging at locations where pulp insulated cables are spliced to plastic insulated cables, for sheath repair, for repairing of cable conductors, for sheath insulating joints, and for electrically bonding plastic sheath cable to the strand.

Two splice cases of the same number are required for a complete splice closure. Half of the required hardware is supplied with each case. In addition, sealing compound and sealing washers are required and must be ordered separately. See information following description of splice cases for quantities and types required.

Code No.	Comcode	Diameter of Cable Arranged for (Inches)	Dimensions (Inches)	
			A	B
13A	100 105 394	1 and less	1-1/2	3-1/4
14A	100 105 402	Over 1 to 1.6	1-3/4	3-7/8

Pipe Stik type commercial pipe joint compound or equivalent (in cylindrical form) may be used as a sealing compound and should be procured locally.

CASES

Splice

20 Type

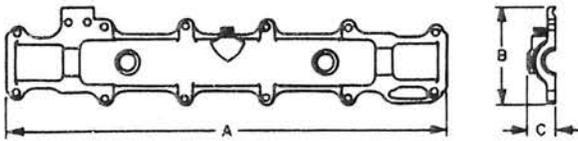

Fig. 1

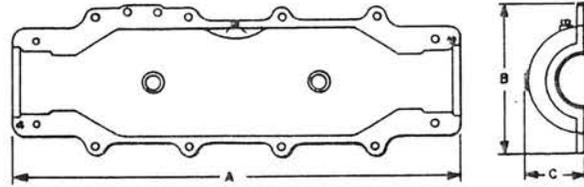

Fig. 2

Each consists of a cast metal housing with a semi-cylindrical cavity. Provided with a pipe plug for pressure testing. Used as part of a gas and moisture tight splice closure for multiple sheath cable and lead covered cable of diameter indicated in table.

Two splice cases of the same code number are required for a complete splice closure. The 20A type is used with a 61A type cable terminal to complete the splice closure; 20B type is also used with a 61B type cable terminal to complete the splice closure.

One half of the quantity of screws, nuts, clamps, lugs, etc. required for a complete splice installation is furnished with a splice case. The other half of the parts required is furnished with the mating splice case or cable terminal. Sealing tape and cord, and sealing washers are required and must be ordered separately. See information following descriptions of splice cases for quantities and types required.

20A1 and 20B1: For aerial use and arranged for suspension from stand.

20A2, 20B2, 20C2, and 20D2: Used in manholes and for buried cable plant when protected from corrosion in accordance with standard practices. Can also be used in aerial installations by suspension from strand, using two 50A Hangers which must be ordered separately. Ground lugs are provided.

20C1 and 20D1: For aerial use. Provided with a 50A Hanger to permit suspension from strand and a ground lug.

B Sealing Kit may be ordered for maintenance purposes for resealing 20A2 and 20B1 Splice Cases and associated cable terminal. See information following descriptions of splice cases for quantities and types required.

*Can be arranged for cables of less than 1-inch diameter by using 129A Adapter. This adapter must be ordered separately.

†Can be arranged for cables of less than 1-inch diameter by using 133D Adapter and for cables from 1.0 to 1.6 inches in diameter by using 133E Adapter. These adapters must be ordered separately.

‡Can be arranged for cables of less than 1-inch diameter by using 133A Adapter; for cables from 1.0 to 1.6 inches in diameter by using 133B Adapter; and for cables from 1.6 to 2.2 inches in diameter by using 133C Adapter. These adapters must be ordered separately.

CASES

Splice

21 Type

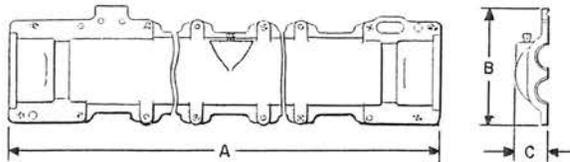

Fig. 1

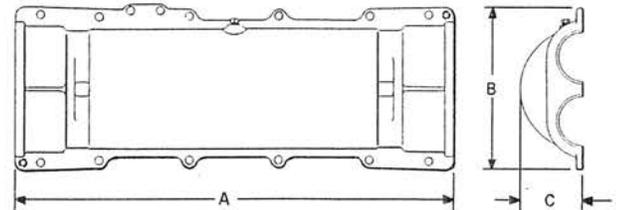

Fig. 2

Each consists essentially of a cast metal housing with a semicylindrical cavity. Provided with a pipe plug for pressure testing.

Intended for use as part of a gas and moisture tight branch splice closure for multiple sheath cable and lead covered cable of diameter indicated in table, except 21D4 is not intended as a gas tight closure.

Two splice cases of the same code number are required for a complete splice closure. In cases where only one cable hole is used at either end of a splice closure, the unused holes must be plugged.

One half of the quantity of screws, nuts, clamps, lugs, etc. required for a complete splice installation is furnished with a splice case. The other half of the parts required is furnished with the mating splice case.

Sealing tape and cord, and sealing washers are required and must be ordered separately. See information following description of splice cases for quantities and types required. Sealing washers are not required for 21D4.

21A1 and 21B1: For aerial use and arranged for suspension from strand.

21A2, 21B2, 21C2, and 21D2: Used in manholes and for buried cable plant when protected from corrosion in accordance with standard practices. Can also be used in aerial installations by suspension from strand, using two 50A Hangers which must be ordered separately. Provided with a ground lug.

21C1 and 21D1: For aerial use. Provided with a 50A Hanger to permit suspension from strand, and a ground lug.

21D4: Used in central offices as a moisture tight closure for splices between a 2424 pair feeder cable and the stub cables of twenty-four 300 type connectors.

*Can be arranged for cables of less than 1-inch diameter by using 129A Adapter. This adapter must be ordered separately.

†Can be arranged for cables of less than 1-inch in diameter by using 133D Adapter, and for cables from 1.0 to 1.6 inches in diameter by using 133E Adapter. These adapters must be ordered separately.

‡Can be arranged for cables of less than 1 inch in diameter by using 133A Adapter; for cables from 1.0 to 1.6 inches in diameter by using 133B Adapter; and for cables from 1.6 to 2.2 inches in diameter by using 133C Adapter. These adapters must be ordered separately.

(a) To accommodate a group of (8) stub cables bound together in each of three entrance holes and a 2424 pair feeder cable in the fourth entrance hole. All (4) entrance holes will accommodate cables over 2.2 to 3.0 inches in diameter.

CASES

Splice

30D2 and 31D2

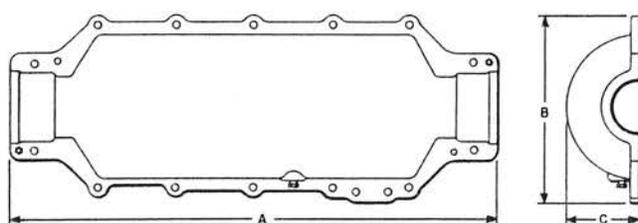

Fig. 1

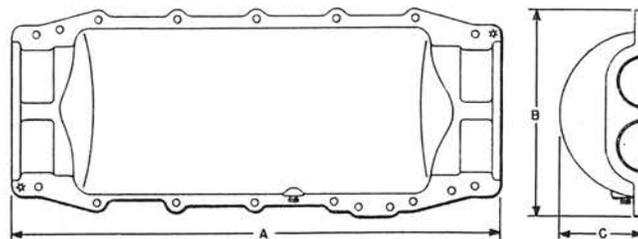

Fig. 2

Each consists of a cast metal housing with a semi-cylindrical cavity. Provided with a pipe plug for pressure testing and a ground lug.

Two splice cases of the same code number are required for a complete splice closure. In cases where only one cable hole is used at either end of a splice closure, the unused holes must be plugged.

One half of the quantity of screws, nuts, and clamps required for a complete splice installation is furnished with a splice case. The other half of the parts required is furnished with the mating splice case. In addition, sealing tape and cord, and sealing washers are required and must be ordered separately. See information following descriptions of splice cases for quantities and types required.

Used as part of a gas and moisture tight splice closure for multiple sheath cable and lead covered cable of diameter indicated in table. For use in manholes and for buried cable plant when protected from corrosion in accordance with standard practices. Can also be used in aerial installations by suspension from strand using two 50A Hangers which must be ordered separately.

Can be arranged for cables less than 1 inch in diameter by using 133A Adapter, for cables from 1.0 to 1.6 inches in diameter by using 133B Adapter, and for cables from 1.6 to 2.2 inches in diameter by using 133C Adapter. These adapters must be ordered separately.

Used in dedicated plant on 2424 pair cable with fold back method of splicing.

Code No.	Comcode	Fig. No.
30D2	100 105 584	1
31D2	100 105 592	2

Diameter of Cable Arranged for (Inches)	Dimensions (Inches)		
	A	B	C
Over 2.2 to 3.0	27.87	10.781	4.28
Over 2.2 to 3.0	27.87	11.81	4.78

Splicing Material

Polyethylene sealing washers are required for use in the end seals surrounding the cable sheath on splice cases and cable terminals. These sealing washers are identified as B and D Sealing Washers. The B Washers have a center hole and a radial slit. The D washers are concentrically grooved sealing washers of polyethylene with grooves in 1/10 inch steps from .3 inch to 1.0 inch for size 100 and from .3 inch to 1.6 inches for size 200. The D washers are used at the end of the cable to seal the vacant end of the splice or terminal case. They are also used when the correct size of B washer is not available. In the latter case, the D washer is cut along the circular groove and fitted to the cable by means of the washer cutter.

The 20A1 Splice Cases and the 61A type cable terminals require four washers of the 100 series per installation. As the diameter of the hole in the B Sealing Washer must be of the same size as the cable, these washers are available in the sizes listed and must be ordered separately.

The B Sealing Washers are packed in small quantities of four washers of the same size per package sufficient for one installation, and in large quantities of 25 packages (four washers per package) to a box.

Size	Diameter Center Hole (Inch)	Size	Diameter Center Hole (Inch)
103	.3	107	.7
104	.4	108	.8
105	.5	109	.9
106	.6	110	1.0

With the 20A1 Splice Case and 61A type cable terminals half of the total quantity of sealing tape and sealing cord needed for installation is packaged in each splice case or terminal carton.

CASES

Splice

Splicing Material (Continued)

The AT-7601 B Sealing Kit may be ordered for maintenance purposes for resealing the 20A1 Splice Cases and associated cable terminals. This kit is a package containing double the amount of sealing cord and sealing tape furnished with each splice case or cable terminal.

For cables less than 1.0 inch, a 129A Adapter is required.

The 20B1 Splice Case and the 61B type cable terminals require four washers of the 200 series per installation for use in the end seals as described previously. As the diameter of the hole in the B Sealing Washer must be of the same size as the cable, these washers are available in the sizes listed and must be ordered separately.

Size	Diameter Center Hole (Inches)	Size	Diameter Center Hole (Inches)
210	1.0	214	1.4
211	1.1	215	1.5
212	1.2	216	1.6
213	1.3	—	—

With the 21B1 Splice Case and the 61B type cable terminals, the SEALING CORD and SEALING TAPE must be ordered separately. For a single installation, ONE PACKAGE OF B SEALING CORD consisting of two 26-1/2 inch lengths and TWO PACKAGES OF B SEALING TAPE each consisting of three 10-inch lengths are required. This combination is used on new installations and for maintenance purposes.

B Sealing Tape, B Sealing Cord and Sealing Washers must be ordered separately for use in conjunction with the large mechanical splice cases for use on aerial, buried, and underground cables up to 2.9 inches in diameter. C and E Sealing Washers are made of lead and are used in the end seals of large mechanical splice cases. The C and E Sealing Washers are furnished in packages each containing two washers. Each package is marked with the name, size, and diameter of the cable with which it is used.

The 300 series C Sealing Washers are intended for use in 20C1 Splice Cases on cables 1.6 to 2.2 inches in diameter. The 400 series C Sealing Washers are available for use in number 10 and 12 type and 20D1 Splice Cases on cables 1.6 to 2.9 inches in diameter. Orders for all sizes must be in multiples of 25 packages.

E Sealing Washers are available for use on cables smaller than 1.6 inches in diameter. They provide a recess for inserting B and D Sealing Washers of the proper size for the cable with which they are used. E Sealing Washers series 3100 and 3200 are used in the 20C1 Splice Case. The 4100 and 4200 series are used in the number 10 and 12 type and 20D1 Splice Case. Orders for all sizes must be in multiples of 12 packages.

The tables give the sealing washers, or combinations of sealing washers used with the full range cable sizes in all of the large mechanical splice cases.

Only C Sealing Tape and C Sealing Cord shall be used in number 20 and 21 type splice cases on all alpth sheath buried PIC cables.

CHAMBERS

Binding Post

G16B

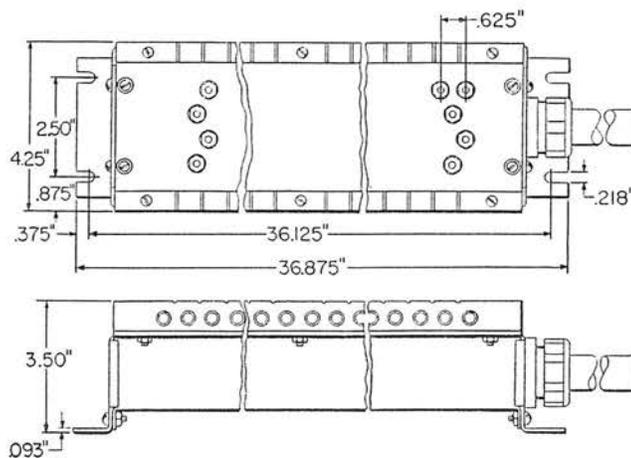

Consists of an olive green enamel finished sheet metal sealing chamber having an insulating panel equipped with 16 pairs of binding posts with associated nuts and washers. Furnished with a 12-foot number 19 AWG quadded stub cable.

Forms a part of the 48B and C Cable Terminals.

Comcode: 100 105 998

H100A

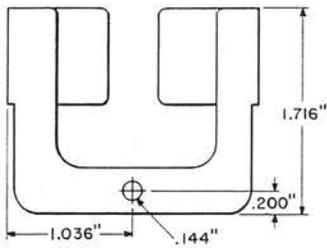

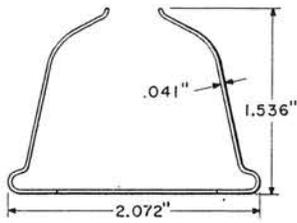

Consists of a light olive gray enamel finished sheet metal sealing chamber having an insulating panel equipped with 100 pairs of binding posts with associated nuts and washers. Furnished with a 12-foot, 25-foot, or 40-foot long, beige, number 24 AWG copper-tin color coded 100 pair stub cable with a polyvinyl chloride jacket. The required length of the stub cable must be specified in the order.

For indoor use with small PBX's, such as the 740E, to provide connection from the binding post stub to the PBX terminal strip.

Comcode: 100 106 038 E/W 12 Ft Stub
 100 106 046 E/W 25 Ft Stub
 100 106 053 E/W 40 Ft Stub

CLAMPS

2A-49 and 2A-50

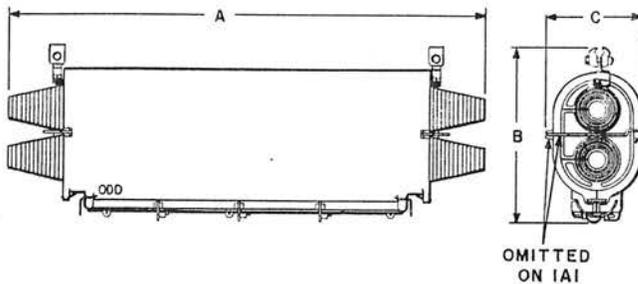

Each consists of a metal spring clamp equipped with a mounting screw.

Used to provide a clamping arrangement to prevent accidental dislodgement of a number 2012 type transformer from an electrical outlet.

Code No.	Comcode	Color
2A-49	100 106 103	Light olive gray
2A-50	100 106 111	Ivory

CLOSURES

1A1, 1B1, and 1C1

Each consists of a base of molded insulating material, reinforced with metal and equipped with cable sheath clamps and brackets for strand mounting. A cover of molded insulating material is assembled to the base by means of wire clips.

Clamps are furnished for clamping the cable sheath tabs. Closures are arranged for suspension from strand by means of strand brackets. For cases where only one cable hole is used at either end, plugs are provided for plugging the unused holes.

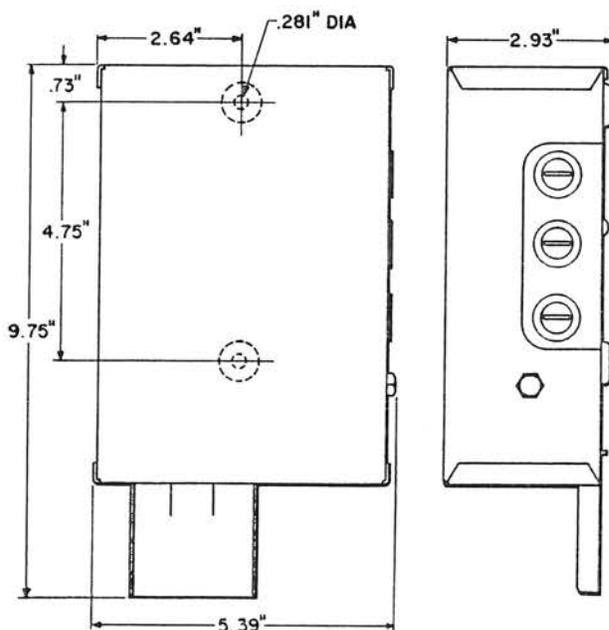

Intended for enclosing branch splices of aerial polyethylene insulated conductor cables of diameter indicated in table.

Code No.	Comcode	Diameter of Cable Arranged for (Inches)	Dimensions (Inches)		
			A	B	C
1A1	100 106 186	1.0 and less	24-5/8	7-3/4	3-3/16
1B1	100 106 194	(a) 1.0 to 2.2	28-1/4	10-13/32	5-1/2
1C1	100 106 202	(b) 2.2 to 3.0	26-1/4	10-7/64	6-5/16

(a) Provided with four 138A Adapters for use with cables less than 1-inch diameter.

(b) Arranged for cables having an alpeh sheath. 133A, B, and C Adapters may be used to clamp cables less than 2.2 inches in diameter. Adapters are not furnished and must be ordered separately.

3A1

Consists of a sheet metal base having a snap on metal cover and equipped with 3 grommets for entrance of station and ground wires. An opening in the bottom accommodates a polyethylene insulated conductor cable up to 1-inch diameter.

Provided are B Cable Tie for anchoring the cable, a hose clamp for grounding the metallic shield of the cable, and a hose clamp for securing a number 2 U Cable Guard.

Arranged to mount two 123A1A or 128A1A-2 Protectors which are not furnished and must be ordered separately.

Used in buried distribution cable systems.

Comcode: 100 106 228

CLOSURES

4A1 and 4B1

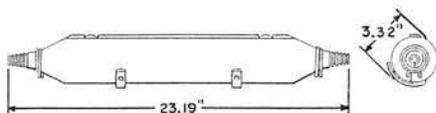

Fig. 1

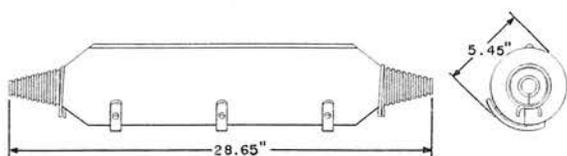

Fig. 2

Each consists of two metal tie rods equipped with cable sheath clamps at each end and enclosed in a cover of molded insulating material. Provision is made for electrical continuity of the metallic portion of the cable sheath across the splice opening.

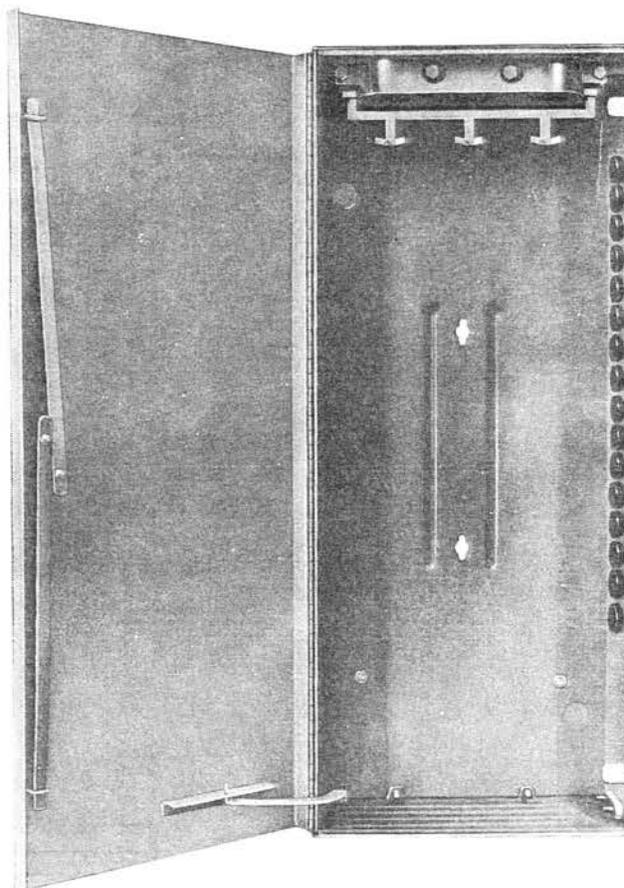

4A1: Used for enclosing straight splices of aerial polyethylene insulated conductor cable of 1-inch diameter and less. On cables 0.6 inch diameter and less, two inner sheath clamps (P-18E113), and a 138C Adapter are required and must be ordered separately. See Fig. 1.

Comcode: 100 106 236

4B1: Used for enclosing straight splices of aerial polyethylene insulated conductor cable of 2.2 inches and less. On cables 1.1 inches to 1.5 inches diameter, two inner sheath clamps (P-18E117), and a 138A Adapter are required and must be ordered separately. See Fig. 2.

Comcode: 100 106 244

5A3 and 5B3

5B3 Also General Design of 5A3

Each consists of an aluminum housing having a hinged cover and arranged for pole or wall mounting. Double keyhole slots in the back permit mounting for right or left hand door opening. A sealing gland on the top provides a weather-proof entry for up to three cables having a maximum diameter of 1.6 inches. The top and bottom end pieces are interchangeable and the blank bottom end piece can be replaced by another sealing gland end piece which

CLOSURES

must be ordered separately as a 196A adapter, thus permitting top or bottom cable entry, or both, as required.

Clamps for external grounding, and screws for mounting number 57 type connecting blocks are furnished. B Sealing Tape and Cord are furnished with each closure. B and D Sealing Washers are required but must be ordered separately. A 216B Tool, required to open or close the door, must also be ordered separately.

5A3: Equipped with 10 grommets on each side of the closure to permit entrance of drop wires or multiple line wires. Two 1.0 inch diameter knockouts are located in the upper left and lower right of the back for direct entry of wires and cables through walls upon which mounted. Arranged to mount one 57A2-10 and one 57A2B-10 connecting block.

Overall dimensions are approximately 22.250 inches high by 11.00 inches wide by 4.250 inches deep.

Comcode: 101 548 626

5B3: Same as 5A3 except equipped with 16 grommets on each side and 1.25 inch diameter knockouts. Arranged to mount one 57A2-16 and one 57A2B-16 connecting block.

Overall dimensions are approximately 27.250 inches high by 11.00 inches wide by 4.250 inches deep.

Comcode: 101 548 642

Used as a ready access cable terminal housing, cable to wire junction point or a distribution terminal housing for subscribers in high density areas.

Replace 5A1 and 5B1 closures, respectively.

6A1 and 6B1

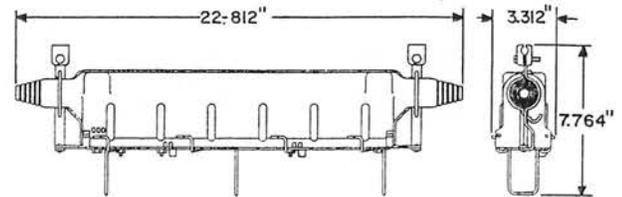

Fig. 1

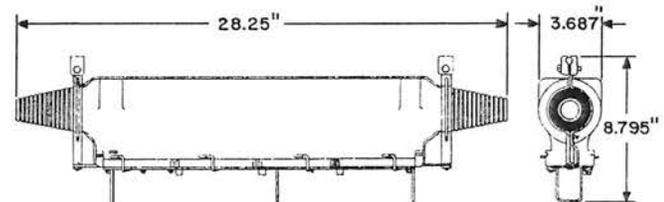

Fig. 2

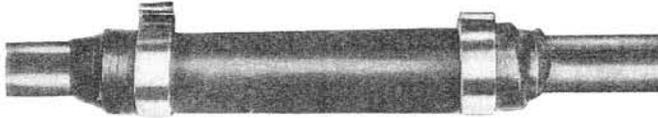

Each consists of a base of molded insulating material, reinforced with metal. A cover of molded insulating material is assembled to the base by means of wire clips. Three distributing rings are furnished for support of drop wires. Closures are arranged for suspension from strand by means of clamps that are part of the base.

Code No.	Comcode	Fig. No.	Diameter of Cable Arranged for (Inches)
6A1	100 106 293	1	1.0 and less
6B1	100 106 301	2	From 1.0 to 2.2

Suitable for enclosing sheath openings at straight splices of polyethylene insulated cables at access points in dedicated plant installations.

CLOSURES

7A1

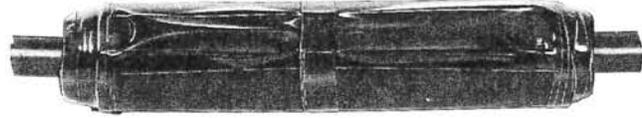

Consists of a 10.0 inch long polyethylene cover, a bonding strap for connecting the metal shield of the cable to the strand member, B Sealing tape for building a moisture seal at the ends of sheath opening, and straps for securing the cover in place. Four 10.0 inch long fusible links made of 24 gauge twisted pairs of polyethylene insulated conductors are furnished for use as a fusible link between cable pairs and drop wire. Each conductor has a press sleeve installed on the end for connecting to the skinned drop wire.

Used with self supporting cable for connecting drop wires to cable conductors. A maximum of four drop wires can be accommodated in one closure.

Comcode: 101 199 099

9 Type

9A1, 9A2, 9B1, 9B2, 9C1, and 9D1: Each consists of two metal tie rods equipped with cable sheath clamps at each end and enclosed in a cover of polyethylene material. Provision is made for mechanical strength and electrical continuity of the metallic portion of the cable sheath across the plug or splice opening.

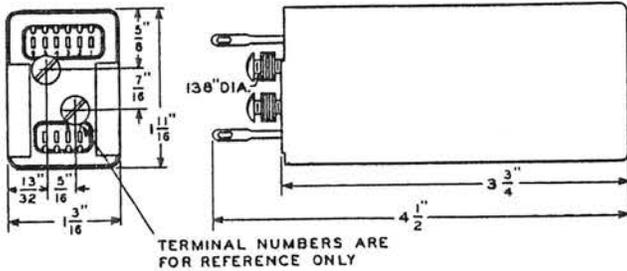

9A3, 9B3, 9C3, and 9D3: Same as 9A1 except equipped with insulating tie bars and provisions are made for capacitor connection, testing and strapping across the opening. A combination gas pressure plug and insulating joint.

The following materials are required for installation but are not furnished and must be ordered separately: 3/4 inch and 1-1/2 inch wide B Sealing Tape, B Paper Tape, F Vinyl Tape and 3/4 inch wide DR Tape.

COILS
Induction

181A, B, and C

when viewed from the terminal end. Also can be mounted on a 7/32 inch thick mounting plate or can be mounted on a thinner plate by use of washers which are provided.

181A: Intended for use in central offices and in station apparatus.

Comcode: 100 106 996

181B: With 3 volts 900 Hz applied to winding (1-2) and (5-6) in series aiding (terminal 2 connected to 5), the inductance is .267 ±25% henry.

Intended for use in operators' or attendants' switchboards, desks, and PBXs.

Comcode: 100 107 002

181C: Same as 181B except inductance is .267 ±10% henry.

Intended for use in the type L carrier telephone system.

Comcode: 100 107 010

Each consists of windings on a silicon steel core and assembled in a metal can. Mounts on a 1-1/4 inch horizontal center; however, where space above or below the coil is required, it can be rotated 90 degrees clockwise

93 Type

Winding For Each Coil

Consists of two toroidal type coils, each enclosed in a metal case and assembled on a common metal base. Suitable for 20, 135, and 1000 Hz signaling. Arrangement and balance of line windings (4-3) (8-7) make them suitable for use in deriving phantom circuits.

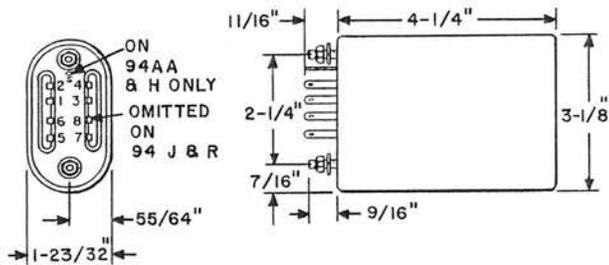

For use in toll circuits.

- (a) Windings (3-4) and (7-8), and windings (1-2) and (5-6) are parallel wound.
- (b) Unpotted.
- (c) Provided with electrostatic shield which is connected to S-terminal.
Provided with an electrostatic shield which is connected to the mounting studs.
- (d) Windings (1-2) and (3-4) are parallel wound.
- (e) Windings (3-7) has taps 4, 5 and 6. Approximate dc resistance of windings (3-4), (3-5), (3-6) and (3-7), is 0.065, 0.21, 0.60 and 1.42 ohms, respectively.

- (f) Has a primary winding (1-4) with taps 2 and 3, so that windings (1-3) and (1-2) are suitable for use with the 20 Hz supplies normally used in panel and crossbar dial systems, and a secondary winding (5-8), nominally 120 volts open circuit with taps 7 and 6 at 2-1/2 and 5 volts, respectively, below terminal 8. Approximate dc resistance of winding (1-4) is 350 ohms.
- (g) Winding (3-7) has a resistance of 370 ohms and taps 4, 5, and 6. Tap 5 is the mid-point of winding (4-6). Approximate DC resistance of winding (3-4), (4-5), (5-6) and (6-7) is 12, 1.7, 1.7 and 355 ohms respectively. Optimum terminating impedance of winding (1-2) is 30 ohms and of winding (4-6) is 60 ohms.

(a) The 111A and 111C Repeat Coils; each has an electrostatic shield between windings (3-4) (7-8) and (1-2) (5-6) connected to S terminal. On 111A, the shield is also connected to the case. The 111A is used in the 1A Sending Panel.

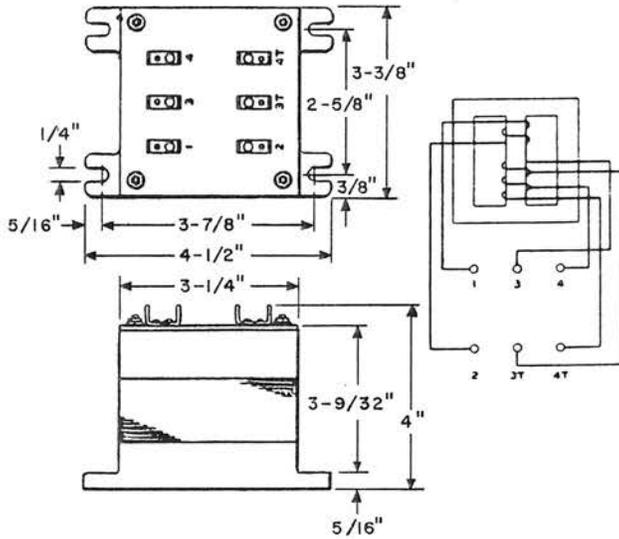

(b) Operates directly from a 600 ohm cable into a 600 ohm line corrector. Used with the regulating and

nonregulating repeaters for program transmission over long number 16 AWG cable circuits equipped with B22 loading.

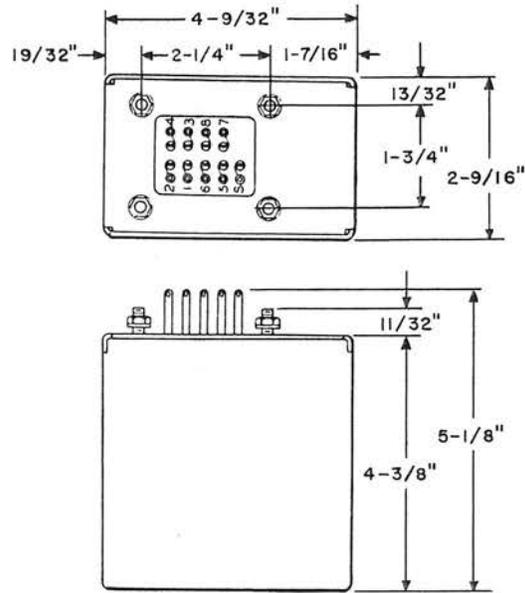

(c) Optimum terminating impedance of windings (1-2) (5-6) is 1200 ohms and of windings (7-8) (3-4) is 600 ohms. Used in automatic outgoing toll connecting trunk test circuits.

- (a) For use at central switching stations on open-wire program transmission circuits for bridging repeaters.
- (b) For use in repeater circuits to operate out of a 600 ohm line into a 600 ohm line corrector network.
- (c) For use in repeater circuits to operate out of a loaded cable program circuit into a monitoring bridging network.

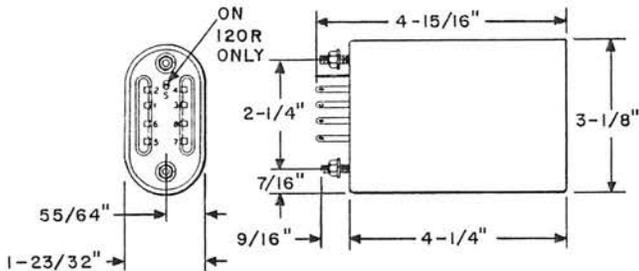

(d) For use in program channel terminal equipment for type K carrier telephone systems. Electrically equivalent to 111C.

(e) Series aiding connections may be obtained by strapping terminals 1 to 6 and 3 to 8. Winding (2-1) and (6-5) are wound as a twisted pair. The 119F is intended for use in transmission measuring equipment.

COILS

Repeating

120 Type

Shell type coils enclosed in metal cases. Operate over voice frequency range. Closest recommended mounting centers are 3-3/16 inches by 1-3/4 inches.

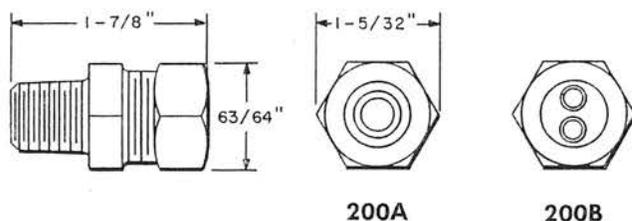

Used for terminating side circuits of phantom group trunks at subscriber offices and at toll offices when non-repeated and composite signaling is used. Serve also as battery supply repeating coils in side circuits.

CONNECTORS

200 Type

200A

200B

Each consists of a coupling, hexagon cap, rubber bushing, and compression washers.

200A: Used with a one or two pair service cable. Also usable with NP Drop Wire and one pair B Underground Wire or UG Wire with jacket and armor removed or C Underground Wire with jacket removed.

Comcode: 100 111 590

200B: Used with a U Bridle Wire pair.

Comcode: 100 111 608

200C: Same as 200A except bushing has a larger hole. Used with a two pair B Underground Wire or UG Wire with jacket and armor removed. Can also be used with a one pair B Underground Wire or UG Wire when its outer jacket and armor are not removed.

Comcode: 100 111 616

200D: Same as 200A except also contains an inner spacer, and bushing has an oval hole. Used with one pair D Underground Wire.

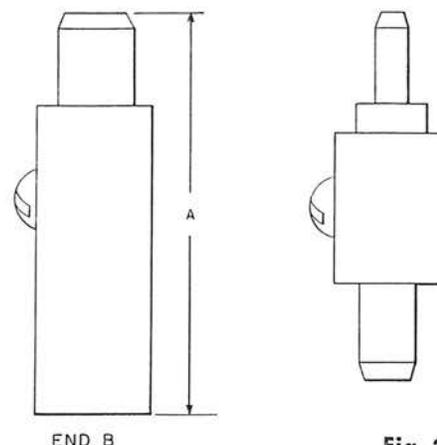

Comcode: 100 111 624

200E: Same as 200A except also contains an inner spacer, and bushing has a smaller hole. Used with two pair B Service Wire.

Comcode: 100 111 632

Intended for use in UG16 Cable Terminals to provide a water tight entrance.

219 Type

END B

Fig. 2

(Otherwise same as Fig. 1)

Fig. 1

219A: A combination cable termination or cable connector. When used for cable termination, a 724A or 730A Cable is connected to the appropriate terminal and a resistor (not furnished) is soldered from the wire to the outer surface of the unused cable terminal. A sleeve is then positioned so its longer end will be over the resistor side of the connector.

When used for connecting 724A and 730A Cable, the longer end of the sleeve is positioned over the 730A Cable.

219B: Same as 219A Connector except used for connecting 730A Cable to KS-19224L2 Cable.

219C: Same as 219B Connector except used for connecting two 724A Cables.

219D: Same as 219B except used for connecting 724A Cable to KS-19224L1 Cable.

219E: Same as 219B except used for connecting two 730A Cables.

219F: Same as 219B except used for connecting two KS-19224L2 Cables.

219G: Same as 219B except used for connecting 724A Cable to KS-19906L1 Cable.

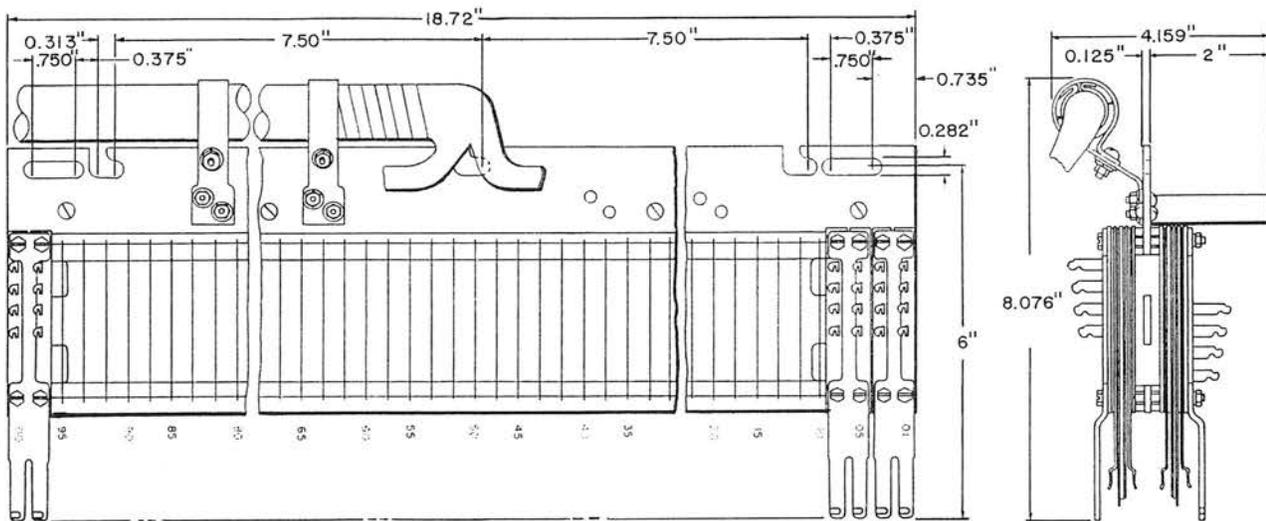

219H: Same as 219D except used for connecting 724A or 728-type cable to KS-19224L2 Cable.

301A1-100 and 301A2-100

301A1-100: Consists of a 444C Jack equipped with a universally mounted number 24 AWG color-coded plastic insulated stub cable with an aluminum shield, a polyvinyl chloride sheath, and a fanning strip. The stub cable is equipped with a gas plug. Connectors are arranged for 100 pairs of conductors and provide a ready means of opening lines and trunks for testing and other purposes. Mounting screws are furnished.

- Comcode: 100 114 677 E/W 30 Ft Stub.
 100 114 685 E/W 50 Ft Stub.
 100 114 693 E/W 80 Ft Stub.
 100 114 701 E/W 100 Ft Stub.

301A2-100: Same as 301A1-100 except stub cable and clamps are reversed for top mounting.

Used in central offices located in areas where incoming circuits are in underground cables and do not require heat coil or carbon block protection.

- Comcode: 100 114 719 E/W 30 Ft Stub.
 100 114 727 E/W 50 Ft Stub.
 100 114 735 E/W 80 Ft Stub.

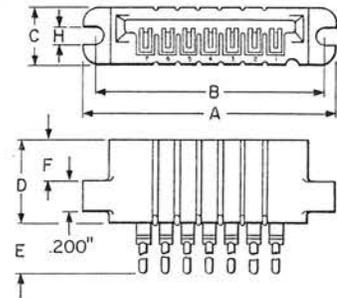

Fig. 4

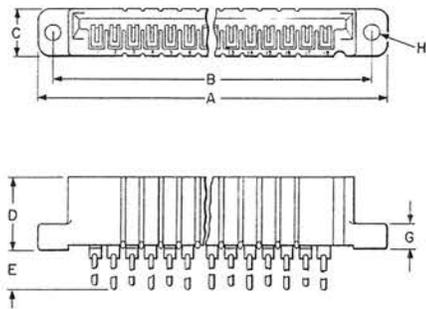

Fig. 2

Each consists of a molded block of insulating material containing spring terminals equipped with twin contacts of number 3 metal for connection to a printed wiring board. Wiring end of the terminals is arranged for mechanically wrapped connections unless otherwise indicated in text. Arranged with terminals in a single row or double row as indicated in table. Single rows of terminals are arranged to make contact with printed wiring terminals on one side of a printed wiring board. Double rows of terminals are arranged to make contact with printed wiring terminals on two sides of a printed board.

Provided with two index clips shipped loose unless otherwise indicated in text. Closest recommended mounting centers side by side are 1/2 inch.

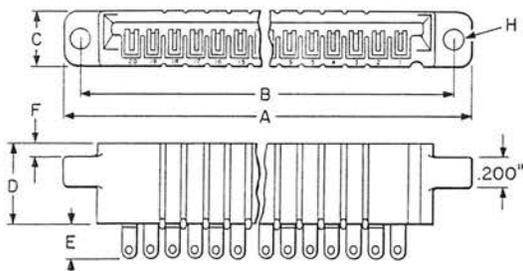

Fig. 3

CONNECTORS

906 Type (Continued)

906A: Provided with two index clips in fixed positions. Used in 1A2 Key Telephone System.

906C: Equipped with an index clip in positions 5 and 12. Used in 1A2 Key Telephone System.

906D: Terminals are arranged for solder connections. One index clip (shipped loose) is provided. Arranged for rigid mounting by means of number 6 screws, with closest recommended mounting centers side-by-side of 1/2 inch, or for floating mounting by means of two P-12B953 screws with closest recommended mounting centers of 17/32 inch. The mounting screws are not furnished and must be ordered separately. Used in Data Set 401AW1.

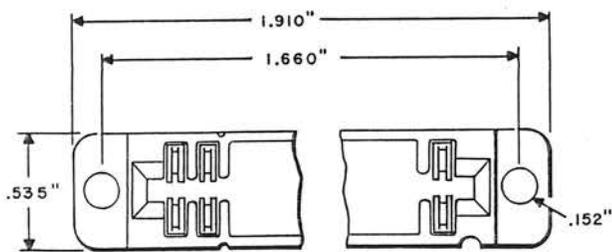

906G: Same as 906C except has lower insulation resistance between adjacent terminals and sturdier punched index clips. Used in 1A2 Key Telephone System.

906J: Terminals are arranged for mechanically wrapped connections. The number of P-49F596 clips must be specified on the order.

906K: Same as 906G except equipped with a double row of terminals.

907B

Consists of a molded block of insulating material containing 14 spring terminals in two rows of seven each. Equipped with twin contacts of No. 3 metal for connection to a printed wiring terminal.

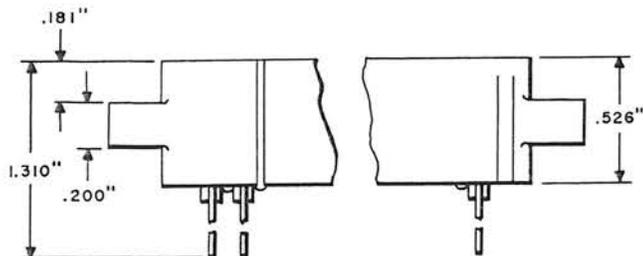

Arranged to make contact with printed wiring terminals on two sides of a 3/32 inch thick printed wiring board when inserted into the connector.

The other end of each terminal protrudes through the wall of the housing and is arranged for mechanically wrapped connections.

Closest recommended mounting centers are 21/32 inch for rigid mounting or 45/64 for floating mounting. Mounting screws are furnished.

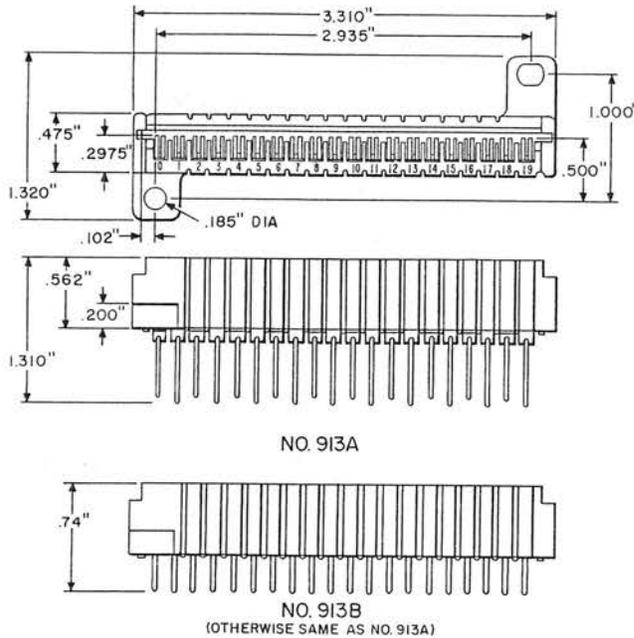

Used in 1A2 Key Telephone System.

Comcode: 101 137 180

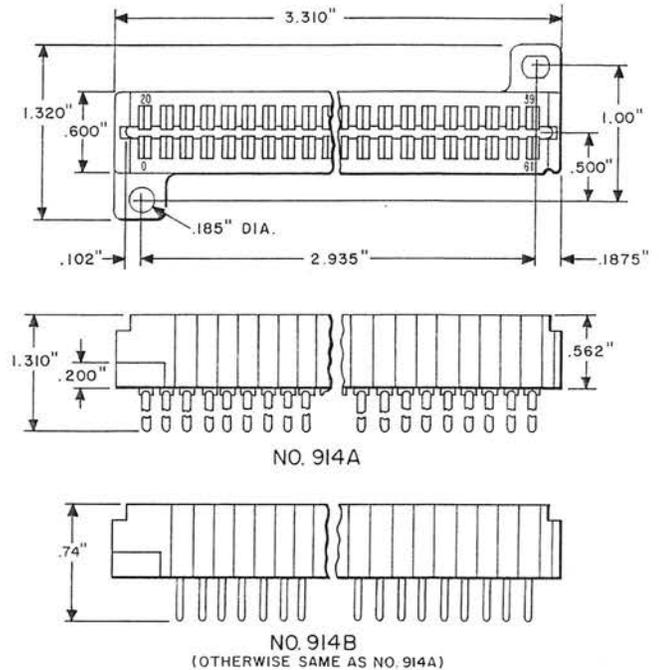

CONNECTORS

913A & B

914A & B

913A: Consists of a molded housing of insulating material equipped with 20 contacts.

On the mating end, a single row of contact springs having contacts of No. 3 metal connects with circuit terminations on one side of a 1/16 inch thick printed wiring board when inserted into the connector.

On the wiring end, the contact springs are provided in two equal rows and arranged for mechanically wrapped connections.

Closest recommended mounting centers are 1.0 inch. Shoulder screws are furnished for floating mounting. Index clips are furnished only when specified on the order.

Used in 1A2 Key Telephone System.

Comcode: 100 115 575

913B: Same as 913A except the contact springs on the wiring end are arranged for mounting on printed wiring boards.

Used in 400 Type Key Telephone Units.

Comcode: 101 567 741

914A: Consists of a molded housing of insulating material equipped with forty contacts.

On the mating end, two equal rows of contact springs having contacts of No. 3 metal connects with circuit terminations on both sides of a 1/16 inch thick printed wiring board when inserted into the connector.

On the wiring end, the contact springs are provided in four equal rows and arranged for mechanically wrapped connections.

Closest recommended mounting centers are 1.0 inch. Shoulder screws are furnished for floating mounting. Index clips are furnished only when specified on the order.

Used in 1A2 Key Telephone System.

Comcode: 100 115 583

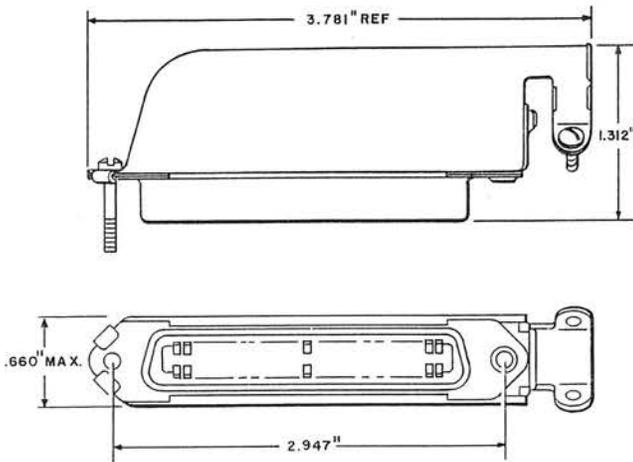

914B: Same as 914A except the contacts on the wiring end are arranged for mounting on printed wiring boards.

Used in 400 Type Key Telephone Units.

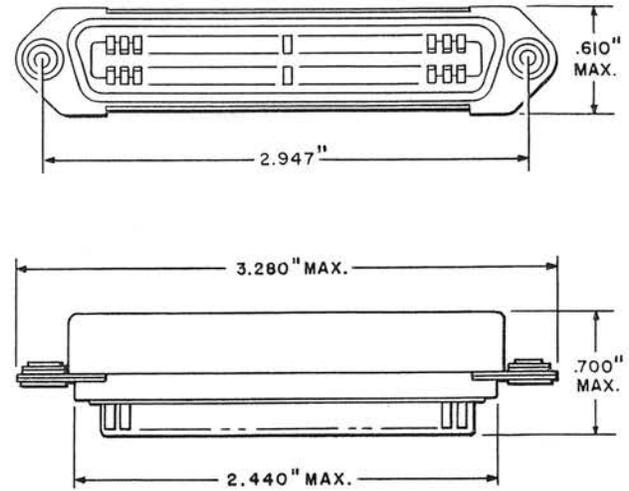

Comcode: 101 567 785

CONNECTORS

KS-16690L1

KS-16672L3

This connector consists of a molded rectangular block of insulating material equipped to handle up to 50 gold plated contacts and is assembled in a metal shell. The connector is polarized to insure proper mating with the corresponding plug.

Comcode: 997 200 076

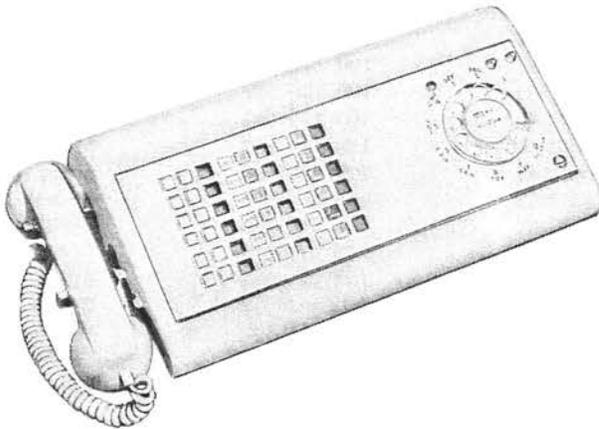

This connector consists of a molded rectangular block of insulating material equipped with gold plated contacts and is assembled in a metal shell. The connector is polarized to insure proper mating with the corresponding plug.

Comcode: 400 127 346

CONSOLES

Telephone

3C Type

Key telephone consoles are provided with five face mats colored silver, gold, blue, green, and white to provide a choice of color contrasts, with a clear plastic face plate, and with a snap on bezel to retain the face plate and mat. Overall dimensions are 18.64 inches long by 9 inches wide by 4.375 inches high.

Each is equipped with a NITE key which permits an attendant to establish night connections, and a red alarm lamp above the dial which indicates malfunction within the PBX or a power failure.

3CW1: Has a rotary dial and is equipped with one 105 Apparatus Blank, one 598A Key, and one 598B Key. The 598A Key accommodates six central office trunks and the 598B Key accommodates three attendant trunks plus a dial back, hold, and release function.

3CW2: Has a rotary dial and is equipped with two 598A Keys and one 598B Key, each having the same functions as indicated for 3CW1.

3CW3 and 3CW4: Same as 3CW1 and 3CW2 types, respectively, except each contains a TOUCH-TONE dial.

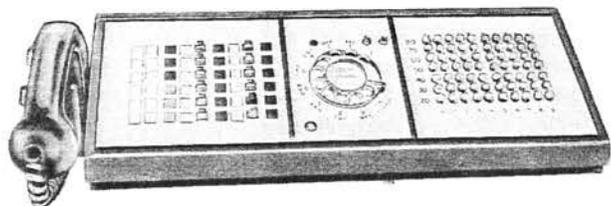

3CW5 and 3CW6: Same as 3CW3 and 3CW4 types, respectively, except equipped with a new face plate to accommodate a 35A3A TOUCH-TONE dial.

Key and direct station selection telephone consoles are provided with five face mats colored silver, gold, blue, green, and white to provide a choice of color contrasts, with a clear plastic face plate, and with a snap on bezel to retain the face plate and mat. The hand set can be replaced by a number 52 or 53 type head telephone set (not furnished) for hands free operation. Overall dimensions are 24.10 inches long by 9 inches wide by 4.4 inches high.

The ringer provides for manual control to loud, soft, and off by means of a ringer arm projecting through the base. Consoles are arranged for direct station to central office connection by means of the NITE switch. They are equipped with a red alarm lamp above the dial which indicates a malfunction within the PBX or a power failure, and a green lamp which indicates an All Register Busy condition.

4BW1 and 4BW2: Each contains a rotary dial.

4BW1: Equipped with one 105 Apparatus Blank, a 598A Key which accommodates six central office trunks, and a 598B Key which accommodates three attendant trunks plus a dial back, hold, and release function. Also there is a field of 70 nonlocking illuminated pushbutton keys for direct station location. Each key is equipped with a 51A Lamp to indicate a busy position.

4BW2: Same as 4BW1 except equipped with three keys, one 598A Key and two 598B Keys, which accommodate ten central office trunks, two station lines, and three attendant trunks plus a dial back, hold, and release function.

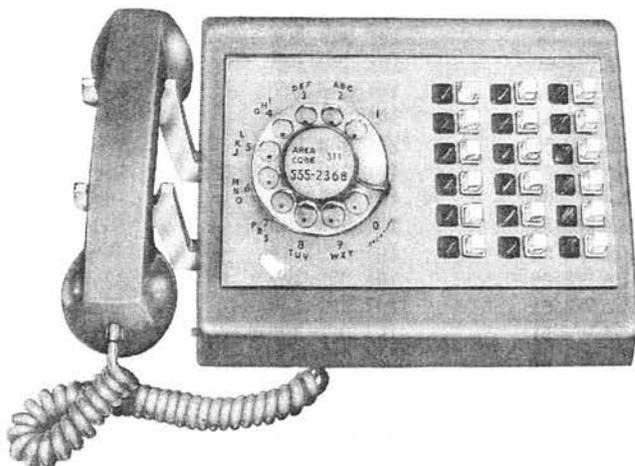

4BW3 and 4BW4: Same as 4BW1 and 4BW2, respectively, except each contains a TOUCH-TONE dial.

Intended for use with 756A PBX.

CONSOLES

Telephone

14 Type

14AW1: A desk surface type telephone console having 6 control buttons (Night Service, Position Release, Transfer, Release Destination, Hold, and Start) and 12 pickup buttons. Overall dimensions are approximately 12.500 inches wide by 8.250 inches deep by 4.226 inches high. Designed for use with 800A PBX. Provides Series 100 service.

The console is shipped completely assembled, equipped with the housing, an 8P Dial (Rotary), a D80C type mounting cord, a G3AR type hand set, a 20NW1 Face Plate, a 599J Key, two 598A Keys, a 4010B Network, an A50B Connector Cable, a 185A Network, and an N1A Ringer.

14AW2: Same as the 14AW1 except it is equipped with a 25A3 TOUCH-TONE Dial and a 120NW1 Face Plate.

14AW3: Same as the 14AW1 except it is equipped with one 598A Key and one 105B Apparatus Blank in lieu of two 598A Keys.

14AW4: Same as the 14AW2 except it is equipped with one 598A Key and one 105B Apparatus Blank in lieu of two 598A Keys.

14AW5: Same as 14AW2 except it is equipped with a 35A3A TOUCH-TONE Dial and a 220NW1 Face Plate. Arranged for mounting, but not equipped with a P-90D012 polarity guard, which must be ordered separately.

14AW6: Same as 14AW5 except it is equipped with one 599J Key, one 598A Key, and one 105B Apparatus Blank.

CORDS

This section pertains to cords used with apparatus which is or has appeared in this catalog. The section is divided into the following tables.

Table I — An alpha-numerical list of cords indicating lengths, colors, material of outer covering, and usage.

Table II — A list of Data Sets and Data Auxiliary Sets indicating cords required.

Table III — A list of Hand Sets indicating cords required.

Table IV — A list of Hand Telephone Sets and Head Telephone Sets indicating cords required.

Table V — A list of Telephone Sets indicating cords required.

Table VI — A list of miscellaneous apparatus indicating cords required.

The tables are arranged to facilitate cross reference of cord to usage and usage to cord. Any questions pertaining to cords or apparatus not listed herein should be forwarded as directed on Page ii, Volume I, of this catalog.

TABLE I

Letter-Number-Letter Codes Applied to Cords

Letter: First character; designates principle use as follows:

D-Telephone Set Cord. Includes desk stand cords; used between switchhook and base of desk stands.

H-Handset Cords. Connected directly to hand sets.

L-Operator's Telephone Set Cords or Head Telephone Set Cords.

M-Miscellaneous Cords. Not classified under other designations.

P-Patching Cords. For patching purposes; usually arranged for plug, jack or connector at each end of cord.

R-Receiver Cords.

S-Switchboard Cords. One end for connecting to switchboard; other end for a plug.

W-Test Cords. Used with test sets in connection with central office and other testing.

Number. Second character; corresponds to number of conductors.

Letter or Letters. Third character; no special significance; is arbitrarily assigned to indicate variation in physical structure, such as insulation, cord tips, etc.

Dash Number. Indicates color as follows:

CORDS
Patching

The following is a list of schematics for each type patching cord, which indicates the termination on each end of the cord and the cord color. This, in conjunction with the information following the schematics, describes the cord.

COVERS

101A

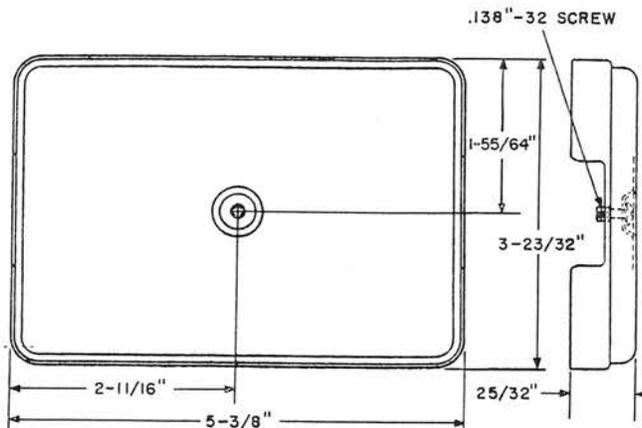

A metal cover furnished in colors listed in table and equipped with a captive mounting screw. Color must be specified on order.

Intended for use with one 44A Connecting Block.

Code No.	Comcode	Color
101A-49	100 169 697	Light olive gray
101A-50	100 169 705	Ivory

101C

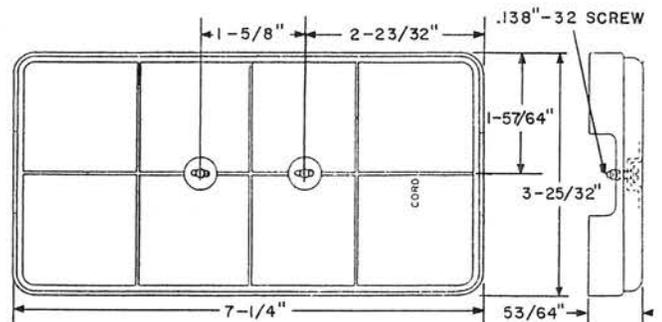

A metal cover furnished in colors listed in table and equipped with a captive mounting screw and a screw for cord attachments. Color must be specified in order.

Intended for use with two or three 44A Connecting Blocks.

Code No.	Comcode	Color
101C-49	100 169 713	Light olive gray
101C-50	100 169 721	Ivory

101D

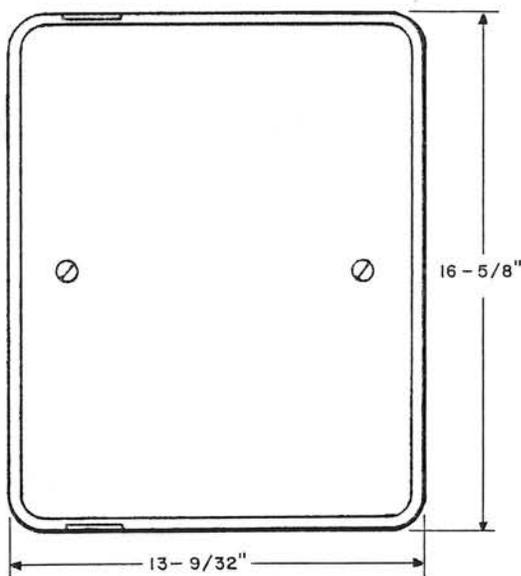

A plastic cover furnished in colors listed in table and equipped with a captive mounting screw and a screw for cord attachment. Color must be specified on order.

Intended for use with four 44A Connecting Blocks.

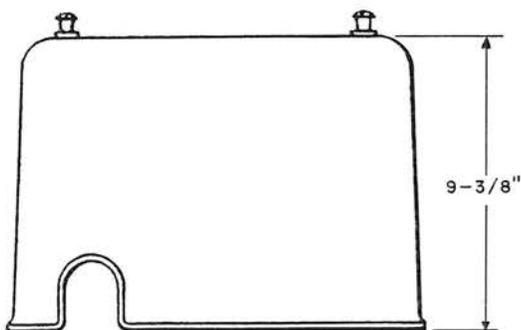

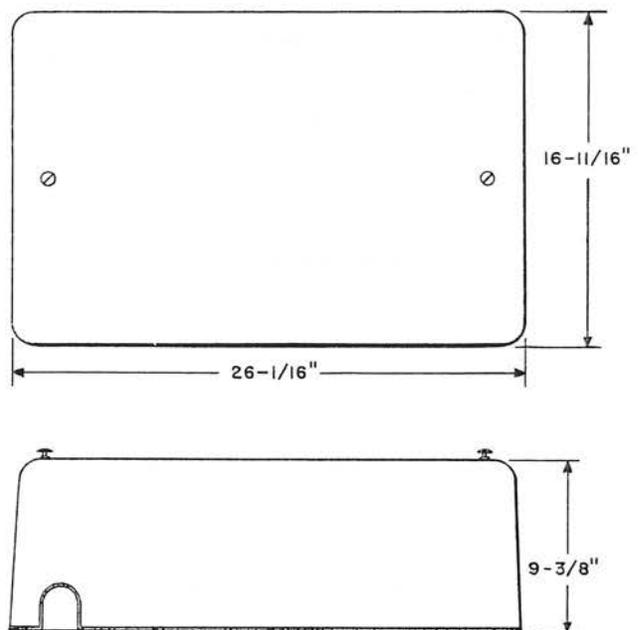

Code No.	Comcode	Color
101D-49	100 169 739	Light olive gray
101D-50	100 169 747	Ivory

COVERS

116A

117A

A cover of molded insulating material with a light olive gray wrinkle enamel finish. Has a bottom cable opening and is furnished with a noise suppression blanket.

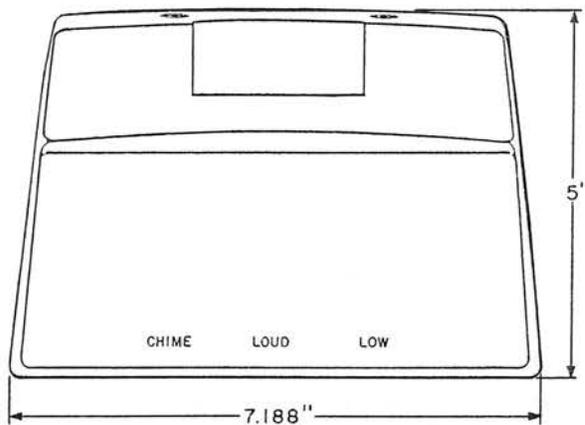

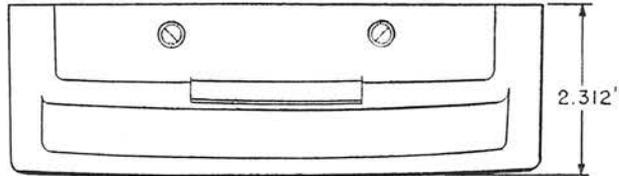

Used as cover for 16C Apparatus Mounting.
Comcode: 100 169 960

Light olive gray molded cover of insulating material having top and bottom cable openings. Arranged to cover one or two 15A Apparatus Mountings when mounted on a 173A Backboard. Provided with two cover supports and eight round head machine screws for assembly to the apparatus mountings, and with a dust guard and two round head wood screws for covering one cable opening.

Intended for use in the 1A1 Key Telephone System.
Comcode: 100 169 945

COVERS

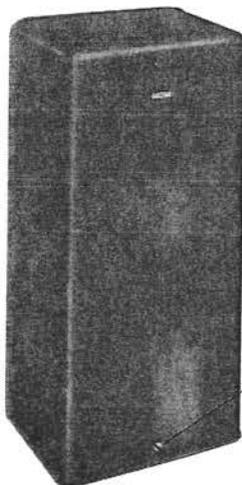

125AW-50

Plastic ivory covers each arranged to mount on an F1A Ringer. Bottom surface is slotted to permit sufficient gong sound output and recessed to permit access to the signal lever. Captive mounting screws are furnished.

Comcode: 100 170 026

ED-69462-50, Group 2 and NP

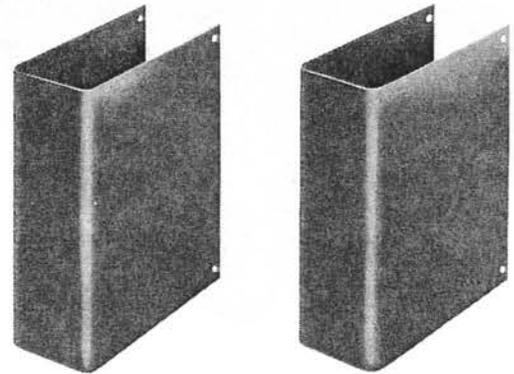

SIMMONS
NO. 7 O H
STUD

A glass fiber cover which is 14-3/8 inches wide by 28-1/4 inches high by 9-1/2 inches deep.

Designed for use with the ED-69462-50, Group 1 Base Plate Assembly.

Comcode: 600 017 172

ED-95023-70, Groups 4 and 5

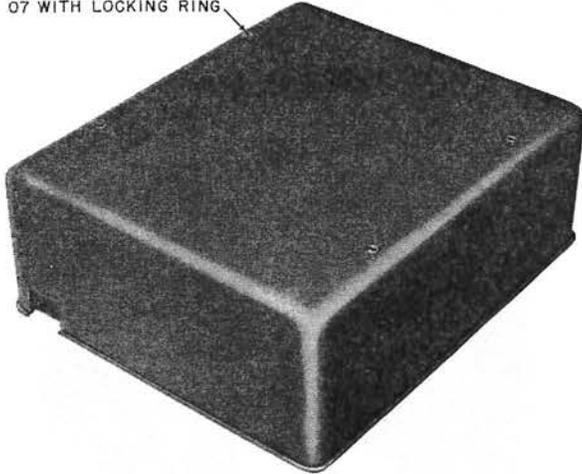

ED-95023-70, Groups 4 and 5, consist of two baked gray enamel finished metal covers used to conceal exposed portion of metal stand where appearance is important. Each cover has four 0.191 inch diameter mounting holes and eight number 8-32 round head machine screws are furnished with each group. The group required must be specified on the order.

Group	Description
4	Covers for use with the metal stand ED-95023-70, Group 10. Overall dimensions are 8-11/16 inches long by 10 inches high with a 3-3/16 inch inside width. Comcode: 600 017 206
5	Covers for use with the metal stand ED-95023-70, Group 3. Overall dimensions are 4-3/4 inches long by 10 inches high with a 3-3/16 inch inside width. Comcode: 600 016 422

ED-69368-50, Group 2 and NP

SIMMONS STUD OH NO.
07 WITH LOCKING RING

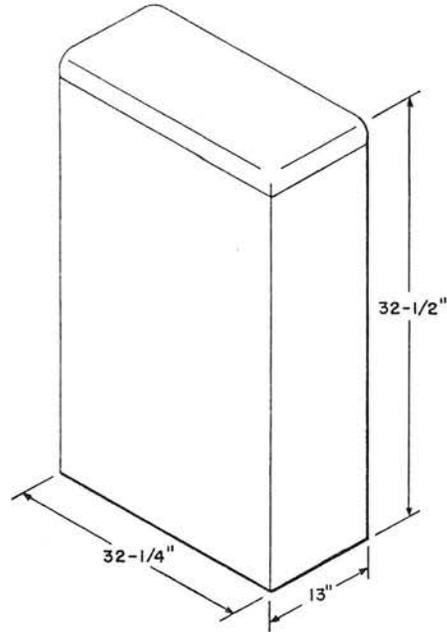

A metal cover with a light olive gray wrinkled enamel finish. Dimensions are 30-7/16 inches long by 25-11/16 inches wide by 11-11/16 inches high.

Designed to enclose one 26A Apparatus Mounting on a ED-69368-50, Group 3 Backboard.

Comcode: 600 016 281

ED-69448-50, Group 1

A metal cover assembly consisting of a cover, side assembly, base plate assembly, ramp assembly, bracket, and two bracket assemblies; all are shipped separately. Has a gray textured vinyl finished top and beige-gray wrinkle baked enamel finished sides.

Used for floor mounted 26A Apparatus Mounting.

Comcode: 600 017 214

DIALS

6 Type

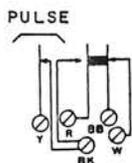

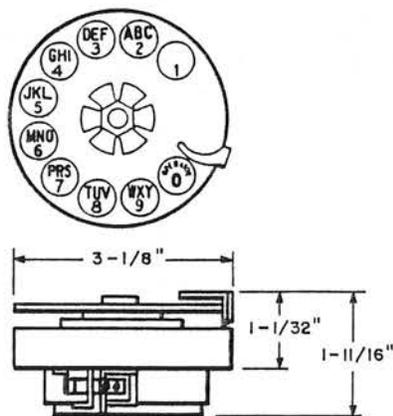

Fig. 1

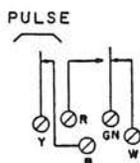

Fig. 2

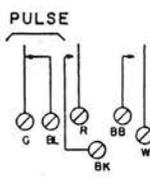

Fig. 3

Each consists of a rotary mechanism actuated by a finger wheel which when wound up and released causes a pair of pulsing contacts to interrupt the line current and operate the central office selecting equipment in accordance with the digit or letter dialed. Operation of the finger wheel also causes the opening and closing of other contacts, thus providing for the necessary changes required in the station circuit in which the dial is used. These contacts remain in their changed positions and do not return to normal until the finger wheel has returned to normal. The mechanism is protected by a plastic cover.

6A and 6D type: When used under certain conditions, it is necessary to strap the BB and R terminals of the dial with a P-290076 Strap. This strap is not furnished with the dial and must be ordered separately.

6F and G: Arranged to mount by means of a 52D and a 64A Dial Adapter on 32A or similar type dial mountings and on all number 6000 type except 6000G, H, and J.

Also arranged to mount on 6000G, H, and J Dial Mountings by means of a 62B Dial Adapter.

6A-3: Forms a part of the 1011GW Hand Set.

6D-3: Forms part of the 211MR-3 and 212MR-3 Hand Telephone Sets.

6D-41: Forms part of the 751A Apparatus Unit.

6E: Arranged to mount by means of a 52D and a 64A Dial Adapter on 32A or similar type dial mountings and on all number 6000 type except 6000G, H, and J. Also arranged to mount on 6000G, H, and J Dial Mountings by means of a 62B Dial Adapter. Intended for use in PBX and central office switchboards for local and intertoll dialing.

6E-41: Intended for use in the number 520 type PBX.

6F: Intended for use in PBX and central office switchboards with circuits arranged for high speed dialing in panel and crossbar dial telephone systems.

6F-43: Intended for use with number 6044 type dial mountings as part of 608A PBX.

6G: Intended for use in number 555 type PBX switchboards.

6J-3: Forms part of the 211PR type hand telephone sets.

6J-41: Forms part of the 750A Apparatus Unit.

6K-41: Intended for use with 112A Key Equipment.

6L-41: Forms part of the number 630 and 631 type telephone sets.

6P-43: Intended for use with number 6044 type dial mountings as part of 608A PBX.

6R-3: Intended for use with PBX systems and order turret.

6S-3: Forms part of 525BW Telephone Set.

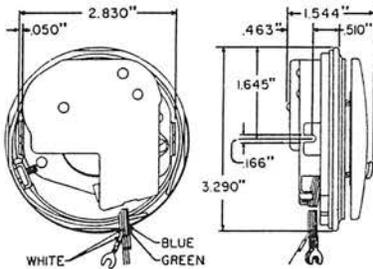

DIALS

8H

Each consists of a rotary mechanism actuated by a transparent plastic finger wheel which when wound up and released causes one or two pairs of pulsing contacts to interrupt the line current and operate central office selecting equipment in accordance with the digit or letter dialed. Another pair of contacts short circuits the telephone receiver during the dialing period. Each is equipped with a plastic cover to protect the mechanism. 8B, 8C, and 8H each contain additional pairs of contacts.

A pulsing rate of 10 pulses (line current interruptions) per second is provided. A separate card holder is not required since the card holder is an integral part of the finger wheel. Terminal leads are equipped with cord tips that are arranged for number 4, 5, or 6 screws.

Intended for use with:

8A: Number 701 and 711 Type Telephone Sets.

8B: 112A Key Equipment and in the 102A equipment.

8C-58: Number 637, 638, 639, and 661 type telephone sets.

8F: Data sets number 200, 400, and 600 types.

8H: 1A1 Key Telephone Systems.

8J: Data Sets 202CW1, 202CW2, 804AW1 and 804AW2.

9N-61	101 092 203	2	Light gray	Black

Consists of a rotary mechanism actuated by a white plastic (Implex) fingerwheel which, when wound up and released, causes the pulsing contacts to interrupt the line current and operate central office selecting equipment in accordance with the digit or letter dialed. The number plate is metal with ceramic coating and the characters are black with a white background. Plastic gears and bearings are utilized and the governor is of a small high speed design. Bearing lubrication is omitted for improved cold weather operation.

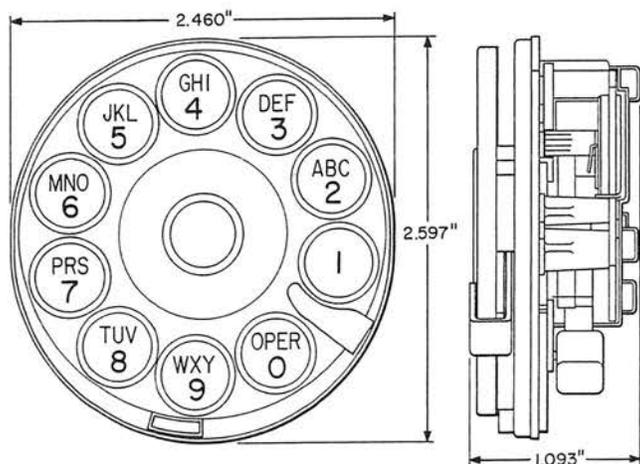

The fingerwheel has finger holes on a 10-1/3 division spacing instead of the standard 12. The fingerstop moves during dialing through an arc of 52 degrees and then returns to its normal position at the end of rundown. No facilities are provided for off-normal switching.

The pulse rate is 10 line current interruptions per second. Has 61 per cent break of pulse interval during which contacts are open.

The frame plate has four 0.125"-40 threaded mounting holes which permit positioning the dial in the hand set for either left or right handed dialing. Intended for use in the 1013AW and 1014AW Hand Sets.

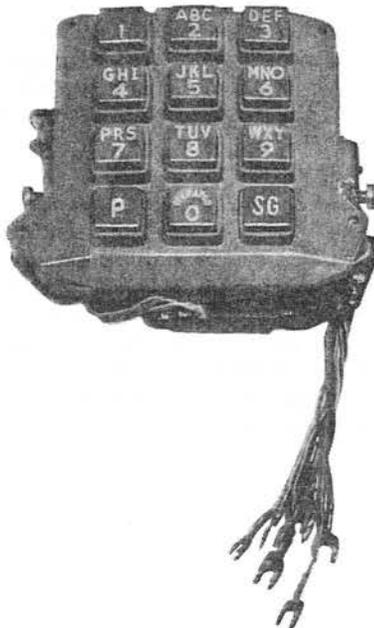

Comcode: 101 234 698

11A

DIALS

22E3

A multifrequency TOUCH-TONE dial having 12 push buttons and a medium gray cover plate. Each of the buttons, when operated, generates a dual frequency signal distinctive to that button. Overall dimensions are 3.480 inches high by 3.421 inches wide by 1.760 inches deep.

Ten buttons are for normal "letter-number" dialing. The special service buttons, one designated "P" and the other "SG", are respectively located in the lower left-hand and right-hand corners of the button array. Leads are provided to permit use with 3B Speakphone, telephone sets having a polarity guard and surge protector, G6-() and G8-() type hand sets, and telephone sets wired for two- and four-wire operation. An appended switch is operated by depression of the "SG" special service button.

Thirteen spade-tipped leads are provided for connection between the dial and the telephone set.

Intended for use in SCAN, 1616 type telephone sets, and is also used in the 1568HTW-3 Telephone Set.

Replaces the 22A Dial.

Comcode: 101 146 553

26G

A combination TOUCH-TONE dial and a card reading mechanism for multifrequency dialing manually or from a coded card. One P-24E238 Card Set is furnished.

Manual dialing is accomplished by depressing buttons which operate pairs of coil tap switches and a common switch to generate double frequency signals. Card dialing is accomplished by inserting a precoded card into a card reading mechanism. A start bar operates the dial common switch and releases the gear train mechanism to raise the card. As the card moves up, card hole sensors operate coil tap switches to generate the double frequency signals.

Overall dimensions are 4.052 inches high by 5.930 inches long by 3.479 inches wide.

Used in the 557A and B PBX and is recommended in place of the 26E Dial.

Comcode: 100 172 055

DIALS

35 Type

Each is a 12-button TOUCH-TONE dial. Ten buttons are used in a number-letter dialing and two are used to give special service connection and are identified by an asterisk and a pound symbol. Overall dimensions are approximately 3.425 inches by 3.531 inches by 1.790 inches.

Leads are provided to permit their use with telephone sets having a polarity and surge protector with G6- and G8-type hand sets and with telephone sets wired for two-wire and four-wire operation.

35A3A: Eight spade-tipped leads are provided for connection between the dial and telephone.

Used in general purpose TOUCH-TONE number 2500 series desk type and number 2554 series wall type telephone sets.

Comcode: 101 024 065

35C3A: Eleven spade-tipped leads are provided for connection between the dial and the telephone set. Used in the number 1035 type dial.

Comcode: 101 024 081

35D3A: Eleven spade-tipped leads are provided for connections between the dial and the telephone set and nine additional leads are provided for connection to a card reader. Used in the 36E Dial for TOUCH-TONE card dialer telephone sets with 3B Speakerphone.

Comcode: 101 126 076

35E4A: Eight spade-tipped leads are provided to connect the dial to the telephone set. Used in a standard telephone set using a 4010D Network or equivalent. Components are arranged specifically to meet the physical requirements of apparatus employing the 1702 type telephone set component layout. Has translucent type buttons, illuminated by a lamp in the telephone set. Used initially in 11G and H Apparatus Units and the 2712B type telephone sets.

Comcode: 101 126 084

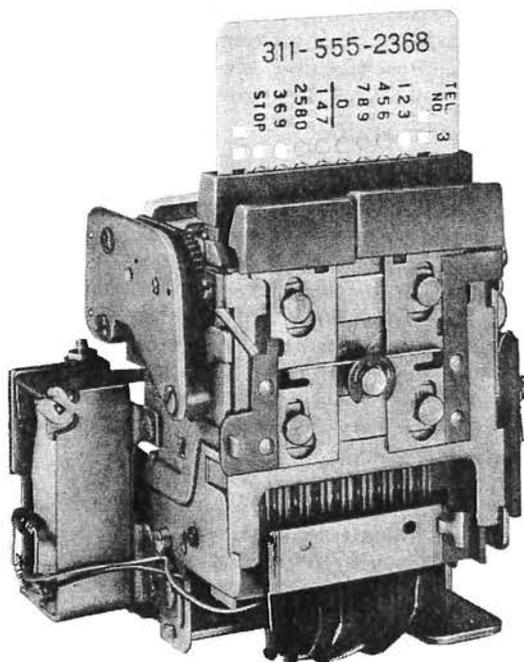

35H3A: Same as 35A3A except provides circuitry for operation in PBX Switchboards. The common switch provides one make and one break function used in the dial circuit plus two makes and two breaks for external switching. Nine electrical connections are required between the dial and the PBX Switchboard. These are terminated in a male nine-pin KS-19088L5 connector.

Used in the 50 type Dial Mounting on PBX Switchboards.

Comcode: 101 248 284

DIALS

41B

An electromechanical device which, when incorporated into a 660AW or 662AW type telephone set, permits an automatic dialing function. The telephone numbers of frequently called stations are stored in a repertory of punched cards (P-24E238), the blanks of which are furnished as part of the telephone set. Overall dimensions are 4.250 inches wide by 3.145 inches deep by 4.018 inches high.

When a card is inserted into the dial mechanism and the operation started by manually depressing the START button, the punchings control a series of coded electrical breaks and makes of the line current. These dial pulses transmit the card number information to the central office at the rate of 10 pulses per second.

The dial requires 14 to 21 volts ac for proper operation. Refer to table A and B for selection of power supplies which are not furnished and must be ordered separately. When wiring keyless stations, the dials may be paralleled. For key stations, it is recommended that individual power supply leads be run to each station.

Comcode: 100 172 121

DIALS

66 Type

The 66 type dial is a 16 pushbutton multifrequency dialing device. Ten of the pushbuttons, from one to zero, are used for station-to-station calling and the remaining six are used to provide special service signals. Each of the 16 pushbuttons, when operated, generates a double frequency signal distinctive to that button. Overall dimensions are 4.150 inches by 3.397 inches by 1.765 inches. The mounting holes on the mounting bracket are 3.818 inches center to center.

66A3A: This dial is designed for use in a standard telephone set circuit using a 425E Network or equivalent. The necessary switching for use with speakerphone is provided. Eleven spade-tipped leads extend from the dial to connect to telephone set terminals. Flat tabs extend from each side to permit front access to dial mounting screws. The right hand column of special service pushbuttons are red and have snap-on caps which may be removed and replaced with caps having other designations. All other buttons are medium gray including the STAR and A special service buttons which also have snap-on caps. Used in the 3568HTW-3 Telephone Set and 3640A1A and 3641A1A type telephone sets for the AUTOVON project.

Comcode: 100 172 162

66A4B: Same as 66A3A Dial except that the buttons on this dial are illuminated by a pair of lamps mounted on the underside of the dial. The special service buttons in the right hand column are the red translucent type. The other pushbuttons are the white translucent type. The 13 spade-tipped leads extend from the dial to connect to telephone set terminals. Used in the AUTOVON project.

Comcode: 100 172 170

66B3A: Same as 66A3A Dial except this dial is designed to use in the 67A Dial in the 3666A1A Card Dialer for the AUTOVON project. It has 11 spade-tipped leads extending from the dial to connect to the telephone set terminals and 10 other tinned leads are brought out from the dial for connection to the card reader.

Comcode: 100 172 188

66C3A: Same as 66A3A Dial except this dial is designed for use in the Dial Restoration Panel for the AUTOVON project. Each pushbutton operates two electrically independent make contacts corresponding to the row and column position of the button. Eight additional make contacts are provided which operate when the frequency signal switches are operated. Only six of these are wired for use. An additional make contact is provided on the common switch. Twenty connections are brought out from the dial to the set in a 20-pin KS-19080L2 Connector.

Comcode: 100 172 196

66B4B: This dial is similar to the 66B3A Dial except that a pair of lamps, mounted on the underside of the dial, illuminate the 16 pushbuttons. Spade-tipped leads from the lamp sockets provide connection to the lighting circuit.

The right hand row of pushbuttons are a red translucent type. All other pushbuttons, including the A and STAR special service buttons, are a white translucent type. Buttons are not equipped with snap-on caps.

This dial is used in the 67B Card Dialer which is used in the 3666A1B Telephone Set where a set with an illuminated card dialer is desired.

Comcode: 101 092 211

66D4B: This dial is similar to the 66A3A Dial except that nine leads extend from the dial and are terminated in a 9-pin connector to provide connection to PBX switchboard in the AUTOVON project. It is intended to mount in a 50B Dial Mounting. A pair of lamps are mounted on the underside of the dial to provide illumination for the 16 pushbuttons. Two spade-tipped leads extend from the dial for connection to the lamp power circuit.

The right hand row of pushbuttons are a red translucent type. All other pushbuttons, including the A and STAR special service buttons, are a white translucent type. The buttons are not equipped with snap-on caps.

Comcode: 101 146 645

DIALS

67A and 67B

67A: A combination of a manual 16 button TOUCH-TONE dial and a card reader mechanism which permits multifrequency dialing performed either manually or from a coded card. Manual dialing is accomplished by sequentially pushing buttons on the manual TOUCH-TONE dial corresponding to the desired button. Card dialing is accomplished by inserting a precoded card into the card reading mechanism and depressing the START bar. Provisions have been made for manual dialing from a stop position. In the event that the card reader mechanism fails during card dialing, the dial can be returned to the manual dialing mode by operating the switchhook. Switching is provided for use with speakerphone.

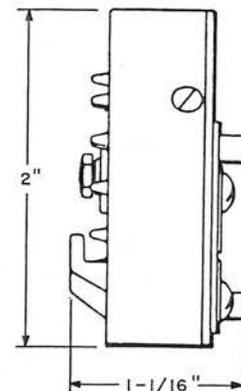

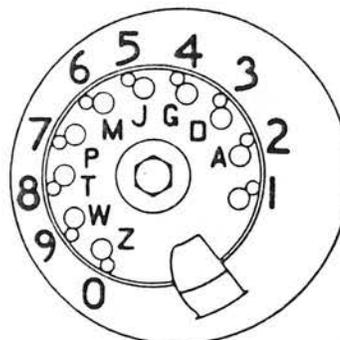

Uses a 66B3A manual TOUCH-TONE dial which consists of a 4 by 4 array of 16 buttons. Ten number letter buttons are used for standard dialing and six buttons designated FO, F, I, P, A and an open star are used for special service signaling. The overall dimensions are 5.950 inches long by 4.210 inches wide by 4.052 inches high. The dial uses a P-29E161 card which has a storage capacity of 16 digits and provides for encoding the standard 10 number letter codes as well as the six special service codes. The 67A Dial is used in the 3666A1A Telephone Set for the AUTOVON project.

Comcode: 100 172 212

67B: Same as the 67A Dial except it uses the 66B4B Dial which provides the features necessary to illuminate the buttons.

Comcode: 101 146 637

103A

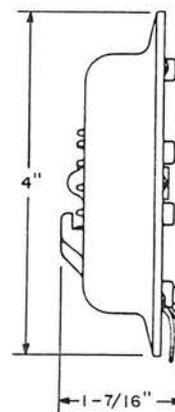

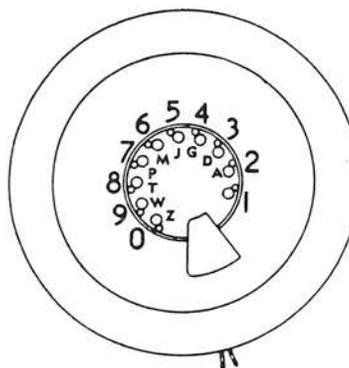

Provided with a finger wheel which when rotated causes a pair of contacts to make and break, thus permitting impulses to be sent into the dial system offices.

Intended for use in the 1011BW Hand Set which is used by linemen.

Comcode 100 172 279

104A

Provided with an insulated black case and an insulated finger wheel. The finger wheel when rotated causes a pair of contacts to make and break thus permitting impulses to be sent into the dial system offices. Two black terminal leads approximately 9 inches long connected to the contact spring are furnished.

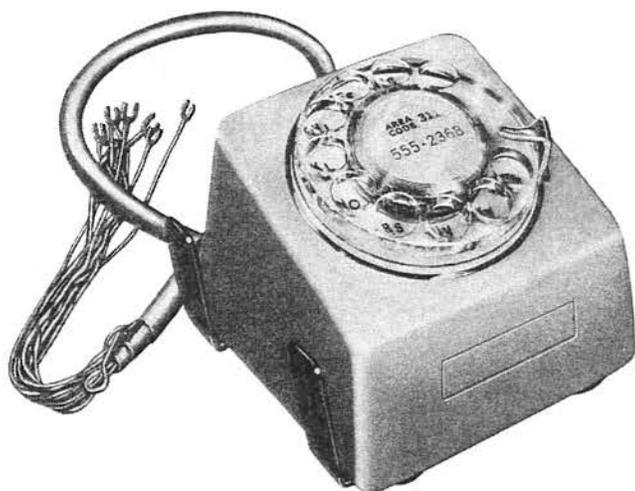

Used on 107B Test Set.

Comcode: 100 172 287

DIALS

1008BW

1066 Type

Consists of an 8B Dial (Rotary) in a special molded housing containing termination for a D10R type cord which is included and is used to connect 1008BW Dial to an adjacent telephone set.

Used in conjunction with a console telephone set in AUTOVON service.

1066A3AW-61: Consists of a 66A3A Dial, a D14M-61 Cord, and a P-90D012 Guard Assembly which are mounted on a metal base and are housed in a plastic housing. Overall dimensions are approximately 4.600 inches long by 4.080 inches wide by 2.670 inches deep. Available in light gray (-61) only. Used with a variety of station equipment in AUTOVON.

Comcode: 101 128 452

1066A4BW-61: Same as 1066A3AW-61 except it is equipped with a 66A4B Dial which provides illuminated buttons.

Comcode: 101 128 478

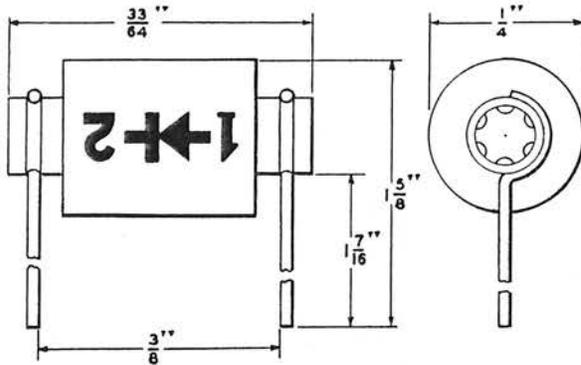

1066D4BW-61: Similar to 1066A4BW-61 except it is equipped with a 66D4B Dial and an M12M-61 Cord having a connector which is used to connect the dial to a key telephone system console in AUTOVON.

(†)400H	100 172 774	60	35	5.0	(a) 0.9
400J	100 172 782	140	40	5.0	0.4

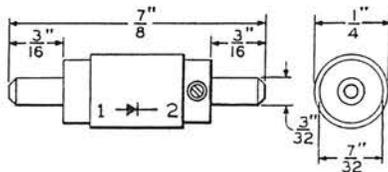

(*) Has special ac impedance characteristics.

(†) With 0.5 milliamperes dc flowing from terminal 1 to terminal 2, the voltage across the diode at 25° C will be 0.32 volts maximum, 0.28 volts minimum.

(a) Maximum reverse current at 5 volts dc at 25° C is 0.02 milliamperes.

(b) If this voltage is exceeded the diode will be permanently damaged.

405 Type

Semiconductor type, point contact silicon diodes enclosed in a ceramic case having metal terminals.

405B: Intended for use in the 40 megacycle shifter of the TD-2 Radio System where a pair has a maximum conversion loss of 11.0 db at 4000 megacycles.

Comcode: 100 172 873

405C: Intended for use as a rectifier of microwave frequencies in the RF sweep oscillator of the TD-2 Radio System.

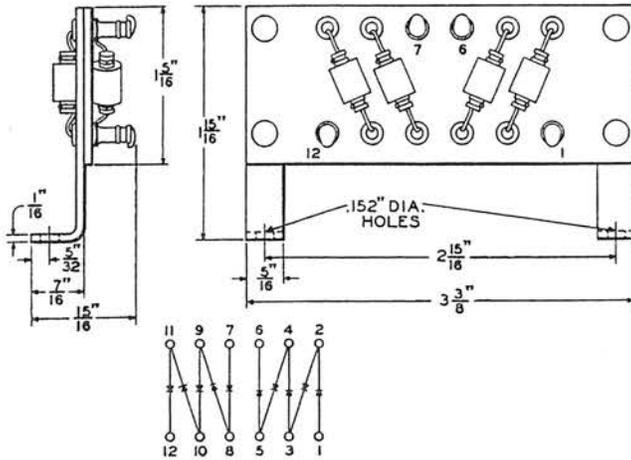

Comcode: 100 172 881

405D: Intended for use as a rectifier in the pilot distributing and emergency alarm panels in the L3 Carrier Terminal.

Comcode: 100 172 899

DIODES

410A

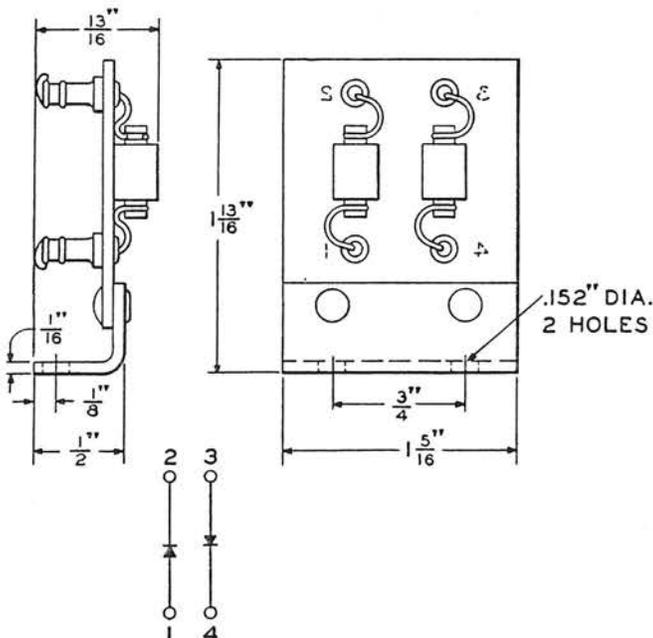

Multiple semiconductor type, consists of 10 selected number 400 type diodes mounted on a plate of insulating material assembled on two metal mounting brackets.

Used in the radio transmitter of the LD-T2 Radio System.

Comcode: 100 172 998

411A

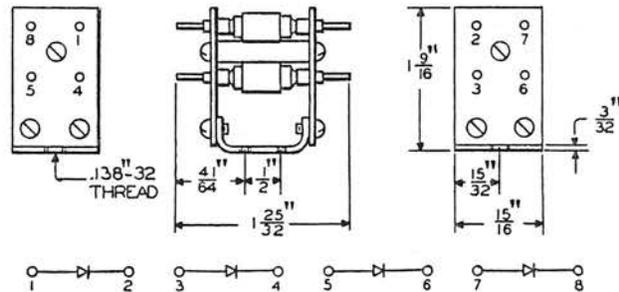

Multiple semiconductor type, consists of two selected number 400 type diodes mounted on a plate of insulating material assembled on a metal mounting bracket.

Used in the radio transmitter of the LD-T2 Radio System.

Comcode: 100 173 004

414A

Multiple semiconductor type, consists of four arms, each arm having a single number 405 type diode, assembled between terminal plates which are supported by a metal bracket containing two mounting holes.

As furnished, is equipped with wires wrapped around the four terminals at each end for protection against accidental burnout during installation. These wires should be removed only after the diode has been installed.

Used in the transmission measuring set in the L3 Carrier Telephone System.

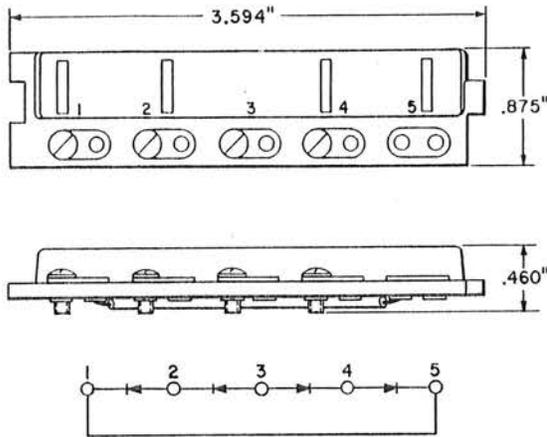

Comcode: 100 173 020

(a) Forward Current per Arm (Milliamps DC)	(a) Maximum Spread in Forward Current between Arms (Milliamps DC)	(b) Maximum Reverse Current per Arm (Microamps DC)	(a) Maximum Spread in Reverse Current between Arms (Microamps DC)
38 to 94	2.5	500	80

- (a) At 25° C and with 1.33 volts dc across each arm.
- (b) At 25° C and with 2 volts dc across each arm.

DIODES

419A

Multiple semiconductor type, consists of four diodes assembled and wired to a terminal block of insulating material.

Mounts on the dial bracket of number 532 and 533 type telephone sets.

Absolute Maximum Ratings 55° C:

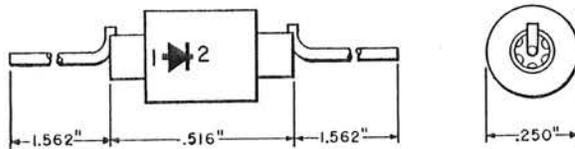

Used as a polarizing network to provide polarity of supply voltage for the 151A Amplifier.

Comcode: 100 173 079

Between
Terminals

Inverse voltage, peak	(2-4)	200 volts
Max DC output current	(1-3)	100 ma
Continuous reverse working voltage	(2-4)	65 volts

441 Type

Semiconductor type, point contact germanium diodes in case of insulating material.

441A: Used in the O1, ON, N1, and T1 Carrier Telephone Systems.

Comcode: 100 173 889

441F and H: Used in the O1, ON, and N1 Carrier Telephone Systems.

Comcode: 100 173 897 and 100 173 905, respectively.

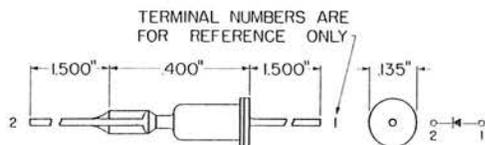

441J: Used in number 400 type key telephone units.

Comcode: 100 173 913

Electrical Characteristics at 25° C:	441A	441F	441H	441J
Minimum breakdown voltage	60	60	60	140 Vdc

Forward voltage at 0.5 mAdc	—	—	284 to 326 mVdc	—

DIODES

446F

A hermetically sealed silicon diffused junction diode. Used in the number 101 Electronic Switching System.

Comcode: 100 174 010

Maximum ratings at 25°C

Power dissipation	.4 watt (a)
Reverse current	.4 mA _{dc}
Forward current	.4 A _{dc}
Peak forward surge current	3.0 A
Storage temperature	200°C

Electrical characteristics

Maximum saturation voltage	2.0 uA _{dc} (b)
Breakdown voltage	400 to 950 V _{dc} (c)
Maximum forward voltage	1.0 V _{dc} (d)

- (a) Derate at 2.28 mW/°C rise
- (b) At 320 V_{dc}
- (c) At 10 uA_{dc}
- (d) At 0.40 A_{dc}

Each consists of a pair of silicon diffused-junction planar diodes matched for forward impedance and enclosed in a two-lead encapsulation.

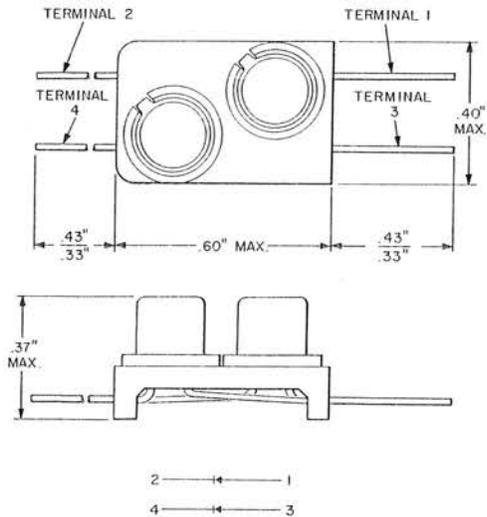

484A: Intended for use as a compressor pair to replace the 434B Diode (pair II) in the compandors in the N2 and N3 Carrier Systems.

Comcode: 100 853 514

484B: Intended for use as an expander pair to replace the 434B Diode (pair I) in the compandors in the N2 and N3 Carrier Systems.

Comcode: 100 853 522

484A and B

- (a) Applies to the individual diode.
 (b) See Note 1.
 (c) Applies to the diode assembly.
 (d) See Notes 1 and 3.
 (e) Applies to the individual diode and the assembly.
 (f) See Notes 1, 2, and 3.
 (g) See Note 3.
 (h) See Notes 1 and 4.

Notes:

1. The signal voltage across a single diode shall be 6.0 ±5 mV at frequency of 1 kHz.
2. The impedance ratio is the ratio of the small-signal forward impedance, at the first specified current, to the small-signal forward impedance, at the second specified current.
3. The diodes are connected in series for this test.
4. The impedance difference is the difference between the small-signal forward impedance of the two diodes of the pair.

EQUALIZERS

352C

Consists of component apparatus mounted on a printed wiring board and assembled in a metal case. Terminated in two 217A Terminals.

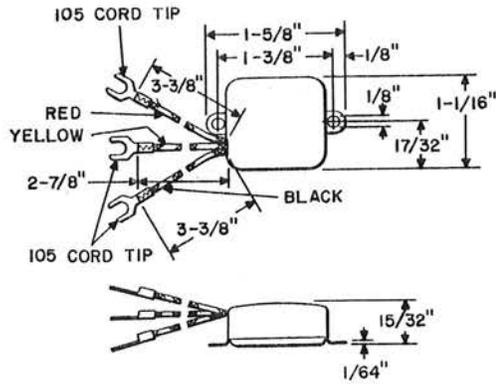

An unbalanced 75 ohm, constant resistance equalizer that equalizes the loss characteristics of 520 feet of number 724 Cable over the frequency range of 0 to 10 MHz.

Used initially as a wire link between L Multiplex and Microwave Radio Systems—J68903A gain and equalization panel.

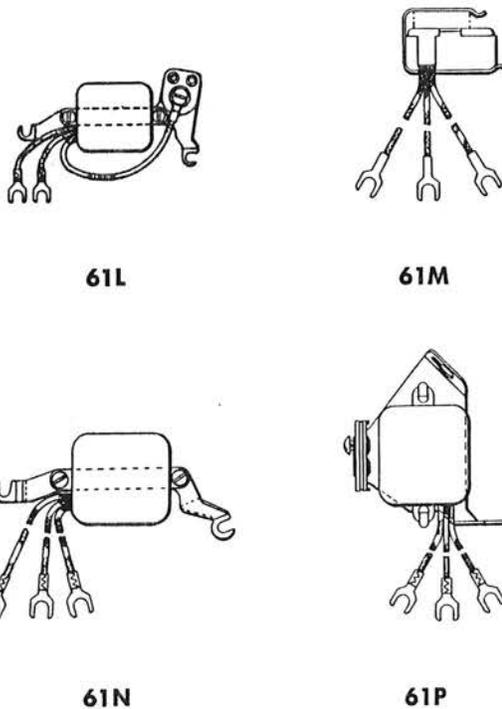

Comcode: 101 144 079

FILTERS

61 Type

61A

61L: Consists of a 61A Filter mounted on a metal bracket. Used in number 300 or similar type telephone sets.

Comcode: 100 182 203

61M: Consists of a 61A Filter mounted on a metal spring clip. Used in G-type hand set mountings.

Comcode: 100 182 211

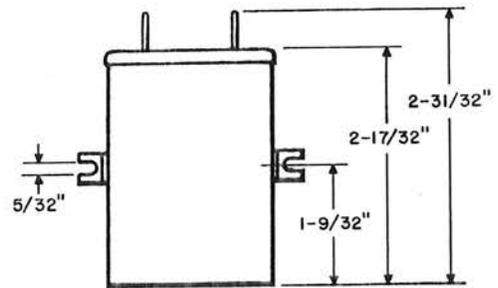

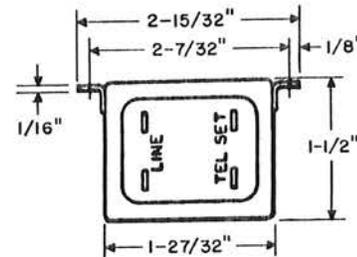

61N: Consists of a 61A Filter mounted on a metal bracket. Used in B- and D-type hand set mountings.

Comcode: 100 182 229

61P: Consists of a 61A Filter mounted on a metal bracket. Used in Number 302 or similar type telephone sets.

Comcode: 100 182 237

98A

Consists of loading coil and capacitors potted in metal case. Passes frequencies below 3000 Hz and is designed to operate between 600-ohm line and subscriber set.

Used at intermediate bridge points in circuits equipped for carrier telephone operation.

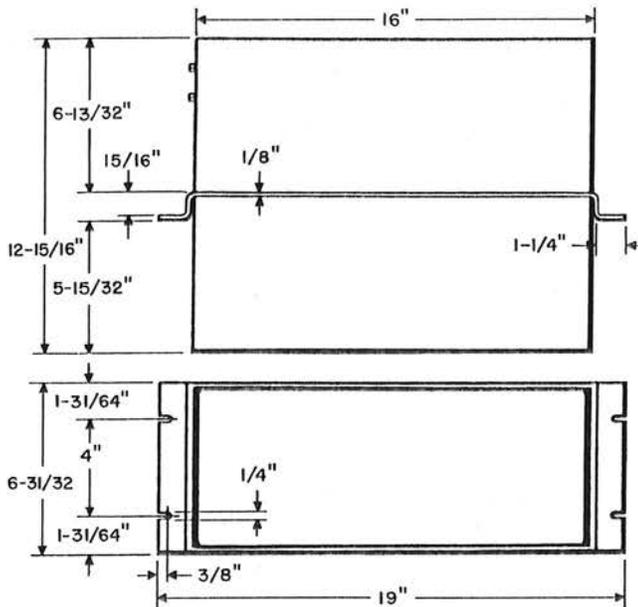

Comcode: 100 182 633

61A: Small three terminal filter unit assembled in a metal case equipped with mounting lugs. For use in station circuits to suppress radio frequency induction due to dialing.

Comcode: 100 182 138

FILTERS

121A

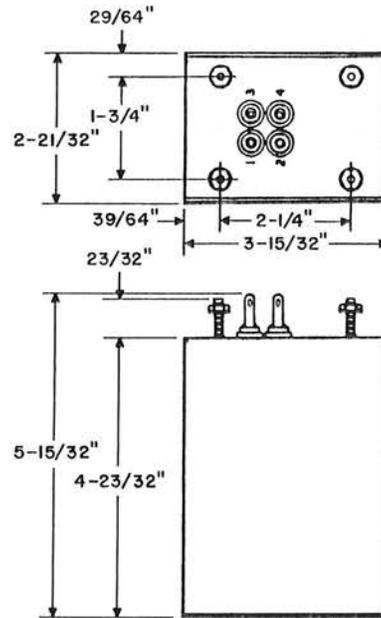

A balanced structure consisting of low-pass line filter designed to pass frequencies below 5000 Hz; high-pass filter to pass frequencies above 6500 Hz; and balancing filter used in voice repeaters to simulate impedance of line filter. Low-pass filter intended to operate between 600 ohm impedances; high-pass intended to operate between 570 ohms line end and 600 ohms drop end.

Used at terminals and repeaters of carrier type telephone systems in separating program or voice channel from carrier system channels.

Comcode: 100 183 052

124 Type

Unbalanced band-pass filters consisting of inductors and capacitors enclosed in a metal can. Arranged to pass a band of frequencies about 140 Hz wide with its mid-frequency located as shown in table.

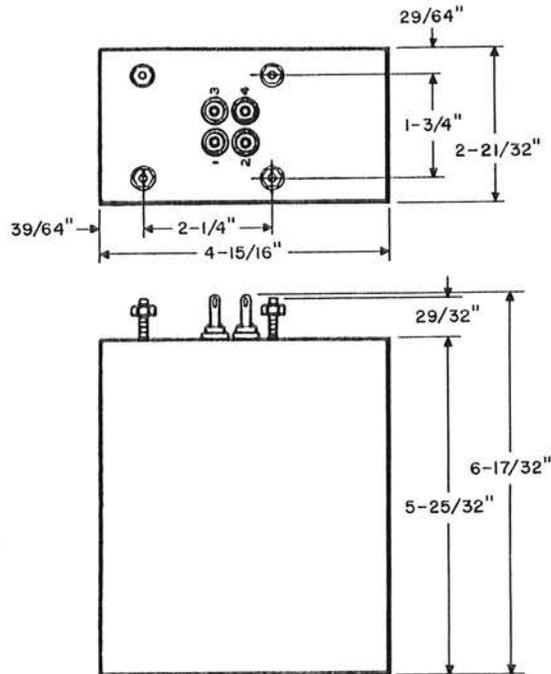

Closest recommended mounting centers are 3-17/32 inches by 2-23/32 inches.

For use as sending filters at the terminals of voice frequency carrier telegraph systems.

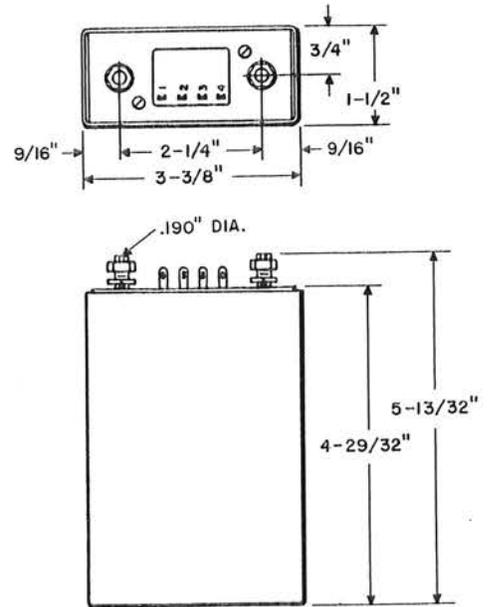

Code No.	Comcode	Midfrequency (Hz)
124A	100 183 078	425
124B	100 183 086	595

FILTERS

125 Type

128 Type

Unbalanced band-pass filters consisting of inductors and capacitors enclosed in a metal can. Arranged to pass a band of frequencies about 110 Hz wide with its mid-frequency located as shown in table.

Closest recommended mounting centers are 5 inches by $2-23/32$ inches.

For use as receiving filters at the terminals of voice frequency carrier telegraph systems.

Code No.	Comcode	Midfrequency (Hz)
125A	100 183 250	425
125B	100 183 268	595

125T	100 183 417	3145
125U	100 183 425	255

Balanced low-pass filters. Each filter consists of capacitors and inductors enclosed in metal can.

Closest recommended mounting centers are $1-3/4$ inches by $3-1/2$ inches.

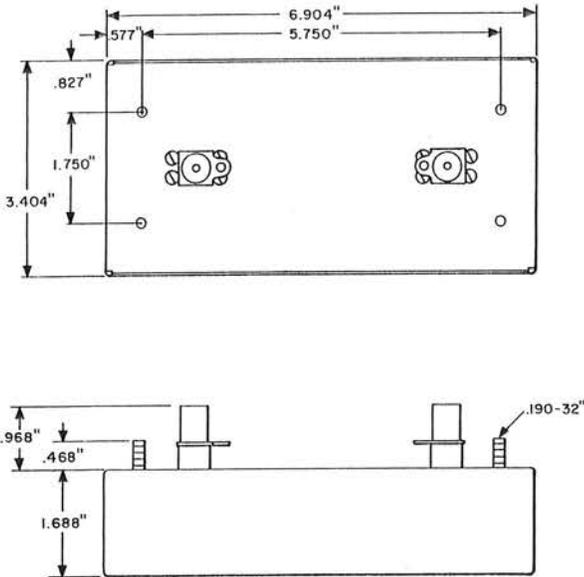

128A, B, and C: Used with telephone repeaters.

128D and E: Used in ac key pulsing receiver in crossbar toll office.

Code No.	Comcode	Impedance (Ohms)	Transmit Frequencies (Hz)
128A	100 183 441	600	Up to 3300
128B	100 183 458	600	Up to 2350
128C	100 183 466	600	Up to 2750
128D	100 183 474	600	600 to 1900
128E	100 183 482	635	Above 600

FILTERS

695A

Unbalanced high-pass filter intended to operate between sending and receiving resistances of 75 ohms.

Consists of inductors, capacitors, and resistors mounted on a printed wiring board and enclosed in a metal container.

Intended to suppress the frequencies from 200 kc to 296 kc by more than 35 db, pass from 308 kc to 8 megacycles with less than 0.2 db distortion, and attenuate frequencies below 200 kc by more than 20 db.

Input and output connections are made through 358A Coaxial Plugs.

Comcode: 100 838 531

733 Type

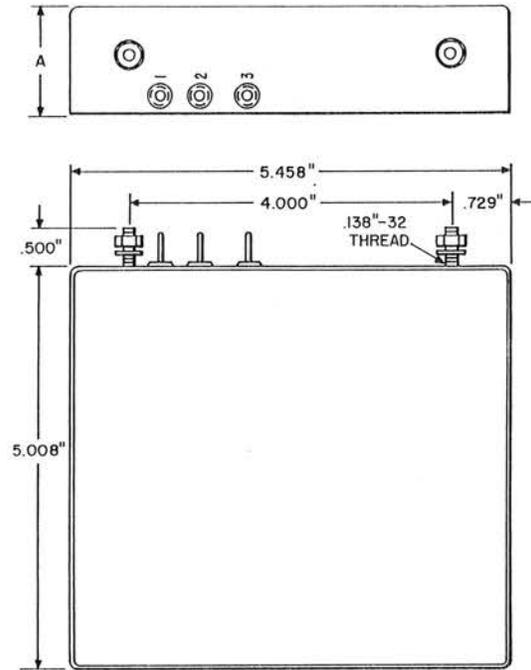

FIG. 1

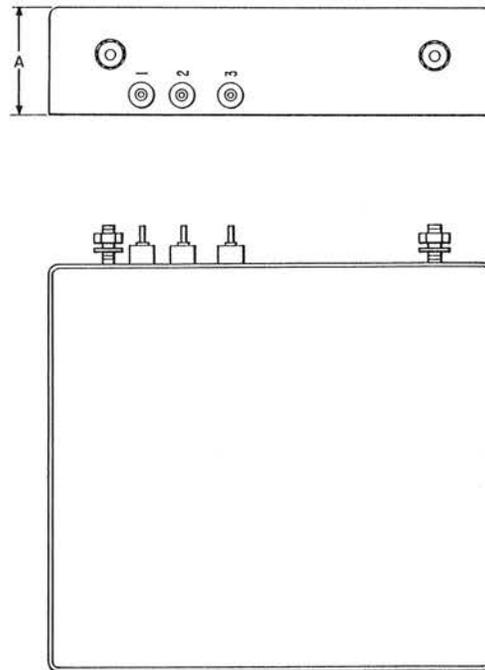

FIG. 2

(OTHERWISE SAME AS FIG. 1)

FILTERS

Each consists of component apparatus assembled in a metal can.

733A: Unbalanced band elimination filter intended to operate between sending and receiving impedances of 600 ohms. Provides 60 db suppression at 2300 Hz and less than 4 db passband loss below 2200 Hz and above 2400 Hz.

Terminals 1 and 2 are input terminals and 2 and 3 are output terminals.

Closest recommended mounting centers are 1.563 inches by 5.563 inches.

733B: Same as 733A except that it provides 60 db suppression at 2125 Hz and less than 4 db passband loss below 2025 Hz and above 2225 Hz.

733C: Same as 733A except that it provides 30 db suppression between 1930 and 1980 Hz and has less than 4 db suppression below 1825 Hz and above 2975 Hz. Terminal 1 is input, 2 is ground, and 3 is output.

733D: Same as 733A except it is an unbalanced frequency shaping network intended to operate between 600 ohm terminations.

Provides 9.02 db loss at 100 Hz and has a nominal minimum loss of 1.56 db at 2500 Hz and a loss of 17.90 db at 5000 Hz.

Terminals 1 and 3 are input terminals and 2 and 3 are output terminals. Terminal 3 is ground but is not connected to the can.

Closest recommended mounting centers are 5.531 inches by 1.475 inches.

733E: Same as 733A except it is a high-pass filter intended to operate between sending and receiving impedances of 75 ohms. Provides a cutoff frequency at 58.6 kHz and a flat loss characteristic of ± 0.05 db from 60 to 1052 kHz.

Code No.	Comcode	Fig. No.	Dimension A (Inches)
733A	100 193 408	1	1.349
733B	100 193 416	1	1.349
733C	101 007 243	1	1.365
733D	101 004 455	1	1.349
733E	101 004 463	2	1.365

733A, B, and C used initially in the Sage AUTOVON System.

733D used initially in J94001W Noise Amplifier Rectifier.

733E used initially in Long Lines as filter in the wire line entrance link.

768A

Consists of component apparatus mounted on a printed wiring board. Overall dimensions are approximately 5.70 inches long by 4.50 inches high by 0.813 inches wide.

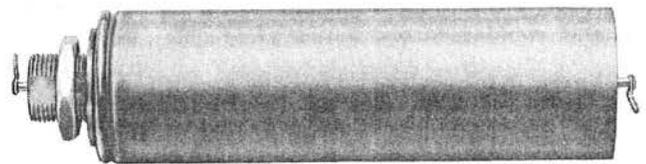

An unbalanced structure intended to operate between input and output impedances of 6000 ohms. Input connected to 900 ohms balanced line through 6000:900 line transformer. Two output connections operate into 6000 ohm unbalanced loads. A low-pass filter in parallel with a high-pass filter at one end with crossover frequency of 1610 Hz.

Replaces the CJ3 Circuit Pack.

Used initially in Data Set 103EW1.

Comcode: 101 200 996

KS-20161

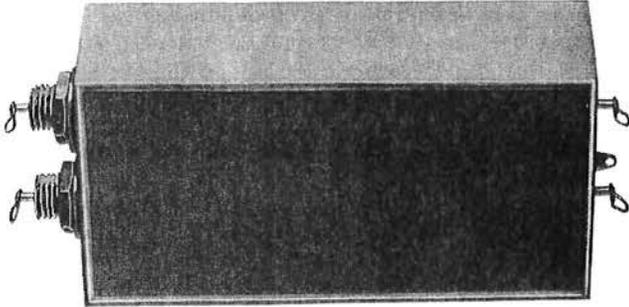

A single-lead filter designed to pass telephone signaling frequencies. It has a D.C. voltage rating of 600 volts maximum with a D.C. working current rating of 350 M.A. maximum. The maximum D.C. resistance is 4.0 ohms. The unit is tubular and is stud mounted. Overall dimensions are 1.375 inches in diameter by 5.25 inches long, excluding the terminals.

Intended solely for specially engineered lines — not for general telephone use.

Comcode: 400 346 649

FILTERS

KS-20162

A balanced two-lead filter designed for transmission circuits and capable of passing telephone voice frequencies. It has a D.C. voltage rating of 600 volts maximum and a D.C. working current rating of 160 M.A. maximum. The maximum D.C. resistance is 12 ohms. The insertion loss is as follows:

Frequency (Hz)	Insertion Loss (db)
1,000	.25 maximum
3,000	.60 maximum
5,000	1.50 maximum

This filter is rectangular and is stud mounted. Overall dimensions are 1.25 inches by 2.50 inches by 5.25 inches long, excluding the terminals.

Intended solely for specially engineered lines — not for general telephone use.

Comcode: 400 346 656

FUSES
Tubular

7A and 7T

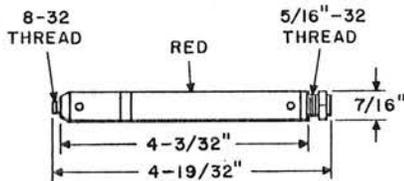

Fig. 1

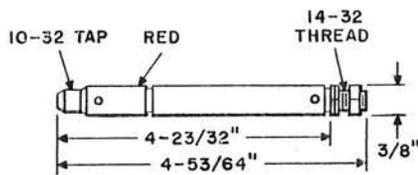

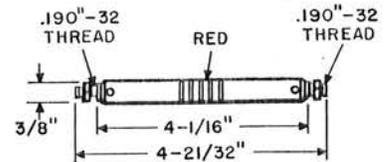

Fig. 2

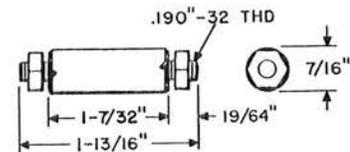

A tubular type fuse, operates in less than 5 minutes on a 50 percent increase over rated capacity. See table at end of fuse descriptions for capacities obtained and operating current values. Fig. 1 shows 7A Fuse and Fig. 2 shows 7T Fuse.

11C

A tubular type fuse with fuse wire enclosed in asbestos sleeving. See table at end of fuse descriptions for capacities obtainable and operating current values. May be obtained in rated capacities of 1 through 8 amperes. However unless specified on order 7 amperes will be furnished.

60 Type

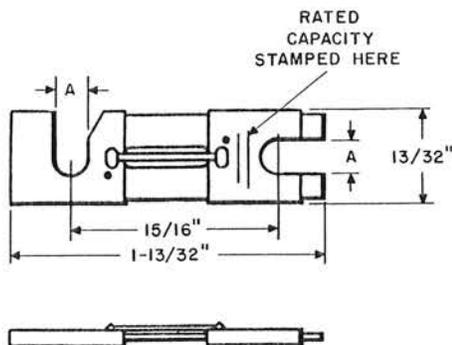

A tubular type fuse having the element enclosed in a sleeve of insulating material. See table at end of fuse descriptions for capacities obtainable and operating current values.

60D: Used with LA and LB type fuse chambers.

60E: Used in battery feeder circuits in connection with LA and LB type cable terminals.

24 Type

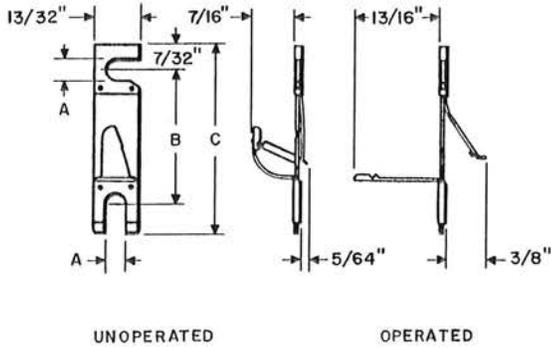

Non-Alarm

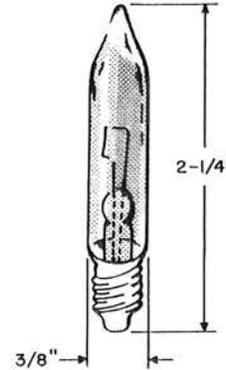

A non-alarm fuse that mounts on 1-inch centers. See table at end of fuse descriptions for capacities obtainable and operating current values.

FUSES
Indicator Alarm

35 Type

59A

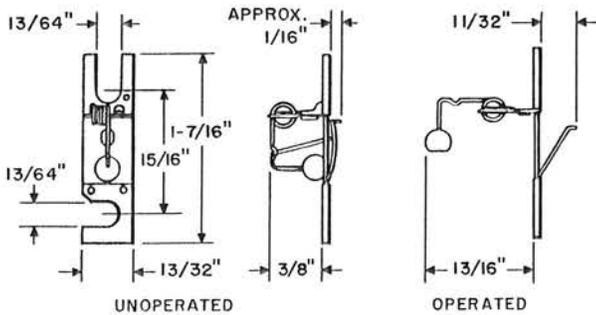

An indicator alarm type fuse with tinned finish terminals. See table at end of fuse descriptions for capacities obtainable and operating current values.

35J, P, and S: Fuse wire enclosed in glass tube to prevent side flash.

A vacuum type fuse arranged to screw into a miniature lamp receptacle. See table at end of fuse descriptions for capacities obtainable and operating current values.

For use in the protection of thermocouples.

44C

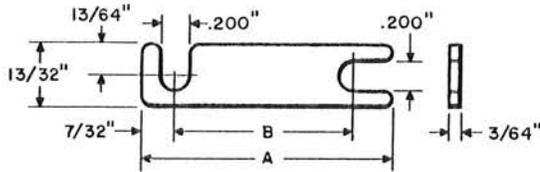

An indicator alarm type fuse mounting on 1-inch centers with tinned finish terminal. See table at end of fuse descriptions for capacities obtainable and operating current values.

FUSES

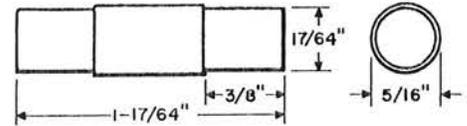

Dummy

63A and 64A

A dummy fuse composed of black insulating material. The A dimension for 63A and 64A is 1-43/64 inches and 1-13/64 inches respectively. The B dimension for 63A and 64A is 1-3/8 inches and 15/16 inch respectively. Intended for use in fuse panels.

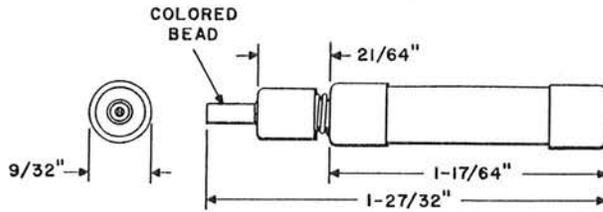

72A

Composed of black insulating material. Intended to retain the fuse cap of 18A Fuse Blocks in place while the fuse blocks are being handled or shipped in equipment.

Alarm and Indicator

70 Type

Each consists essentially of a tube of insulating material containing a fusible element which is attached to a metal cap at one end and to a coil spring and metal cap at the other end. A colored bead is attached to one end of the coil spring. When the fuse operates, the spring is released forcing the cap on the spring against the alarm terminal of the fuse block. See table at end of fuse descriptions for capacities obtainable and operating current values.

For use in circuits operating on voltages up to 300 volts.

- (a) Capacity must be specified.
- (b) For use in circuits operating on voltages up to 90 volts.
- (c) For use in circuits operating on 90-160 volts.

- (d) For use in circuits operating on 90-150 volts.
- (e) For use in circuits operating on voltages up to 160 volts of current is limited as covered in the standard equipment information on fuse boards.

GAUGES

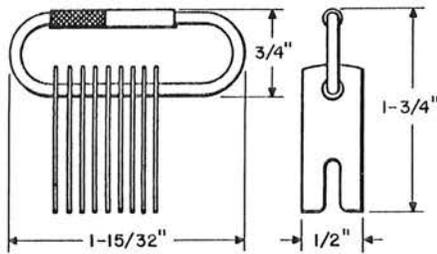

62B

Consists of handle on which indicating spring is mounted. Both sides of handle have scale graduated in 50 gram steps from 0 to 700 grams. Used to measure spring tension in grams. Comcode: 100 204 213

Code No.	Comcode	Thickness (Inches)
67D	100 204 270	.030
67E	100 204 288	.035
67F	100 204 296	.040

GAUGES

79B and C

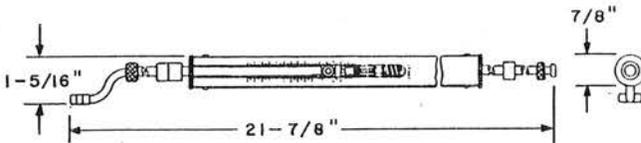

79B: A spiral spring tension and pressure gauge calibrated for 1000 grams in 25 gram steps. For use in adjusting and testing on number 200 type selectors.

Comcode: 100 204 684

79C: Same as 79B Gauge except calibrated for 200 grams in 5 gram steps. Can be obtained with an additional (longer) Finger (P-11B374) when specified on order.

Comcode: 100 204 692

79F

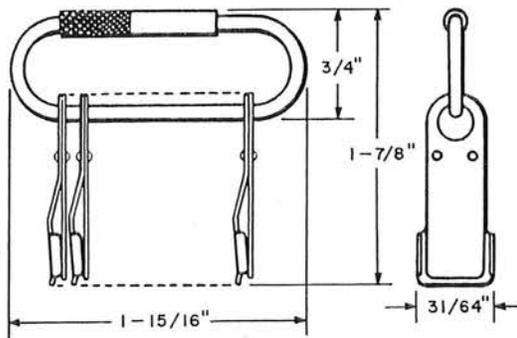

A spiral spring tension and pressure gauge calibrated for 6000 grams in 50 gram steps. Can also be obtained with a Finger (P-10A878) when specified on order.

Used in checking key lever and plunger installation and maintenance. May be used in horizontal, vertical, or inclined positions.

Comcode: 100 204 700

99A

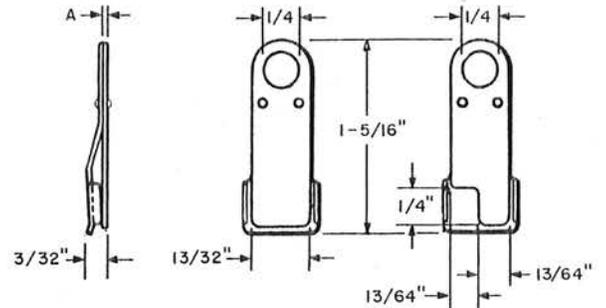

Consists of 100A through 100H and 101A through 101E Gauges assembled on a holding ring.

For use in adjusting the armature air gaps of B- and G-type relays.

Comcode: 100 205 160

100 and 101 Type

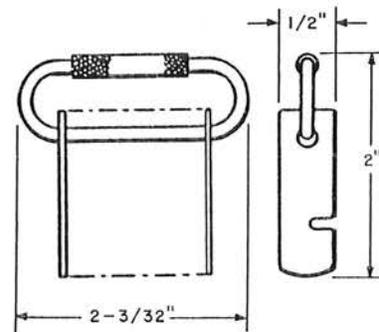

100 Type

101 Type

Components of 99A Gauge. Individual gauges of thickness are indicated in table.

Code No.	Comcode	Dimension A (Inches)

132AH	100 205 947	.040
132AJ	100 205 954	.060

185A: Consists of one each of the 186A through 186E gauges, assembled on a metal key ring.

Used in gauging the armature gap adjustment of the number 286 type relays.

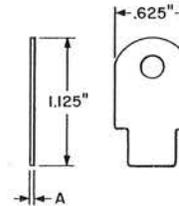

Comcode: 100 206 945

185B: Consists of one each of the 186F through 186J gauges, assembled on a metal key ring.

Used in gauging the armature travel of the BF, BG, BJ, and BL type relays.

Comcode: 101 153 104

186 Type

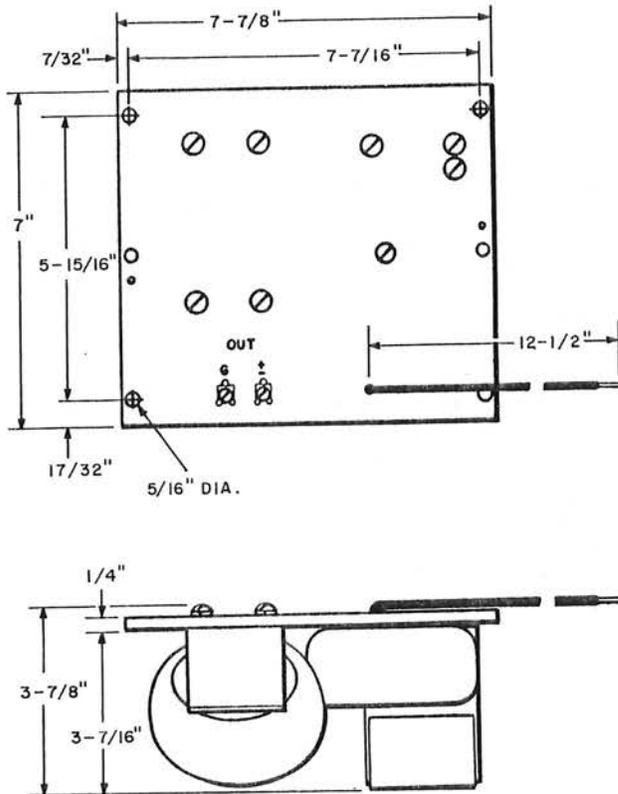

Metal feeler gauges. Forms a part of 185A or 185B gauges.

Code No.	Comcode	Thickness (Inches)
186A	100 206 952	.002
186B	100 206 960	.006

186J	101 324 606	.040

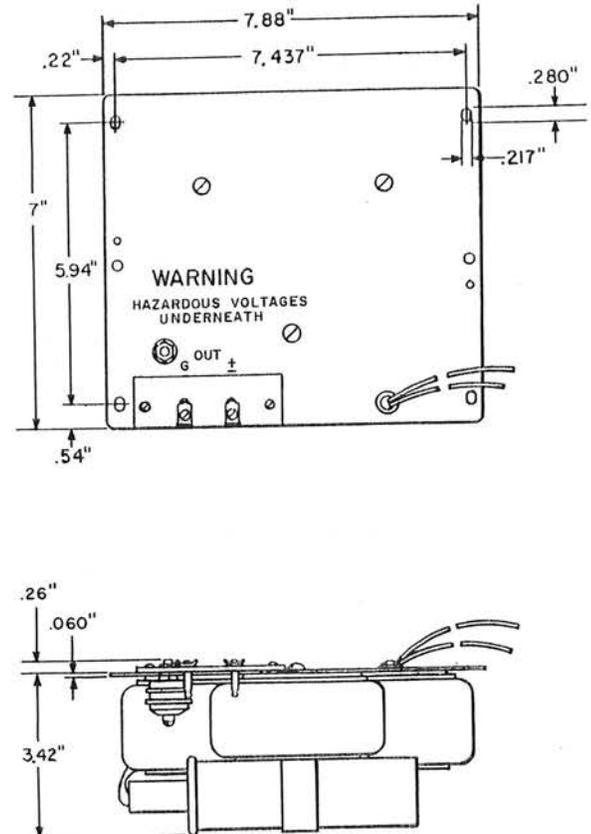

GENERATORS

Frequency

107B

107D

Consists of a harmonic generating transformer, a capacitor, an inductor, and a combined tuning, isolating, and load transformer mounted on a panel of insulating material. Flexible terminal leads are provided for input connections.

Closest recommended mounting centers are 7-1/32 inches by 7-29/32 inches.

With 105 to 125 volts, 60 Hz, applied to the input, the generator will deliver 20 Hz power at the output terminals. The voltage at the output terminals will remain between 75 and 90 volts for variations of line voltage within the rating and for values of load impedances above 1600 ohms at 60 percent lagging power factor and above 3600 ohms at unity power factor.

Used in supplying 20 Hz ringing power in the 1A and 1A1 Key Telephone System and in other packaged power supplies.

Comcode: 100 207 166

Consists of a harmonic generating transformer, a linear inductor, a dual section capacitor, a varistor, and a combined tuning, isolating, and load transformer mounted on a metal panel. Flexible terminal leads approximately 18 inches long are provided for input connections.

Closest recommended mounting centers are 7.031 inches by 7.906 inches.

With 105 to 125 volts, 60 Hz, applied to the input, the frequency generator will deliver 20 Hz power at the output terminals. The voltage at the output terminals will remain between 75 and 100 volts for loads consisting of eight B1A Ringers or six B1A Ringers with series capacitor. Heavier loads than those referred to above may be connected but the output voltage may drop below 75 volts.

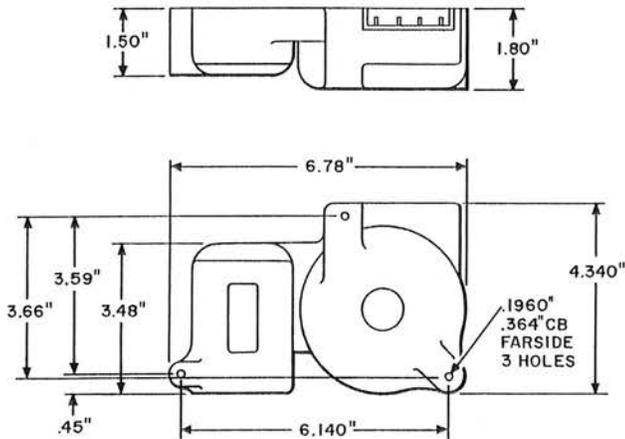

Used in supplying 20 Hz ringing power in the 6A Key Telephone System, 756A PBX, and in other packaged power supplies.

Comcode: 100 207 174

GENERATORS

Frequency

113A

Consists of a subharmonic generating transformer, capacitor, diode, and resistor. The parts are enclosed in an

epoxy filled plastic case. Input and output leads extend from solder type terminals recessed in the case. It is arranged to be an integral part of the 20AW1 Power Unit which may be mounted within a cover on system framework or wall mounted within a ventilated cabinet. It weighs approximately 3 pounds.

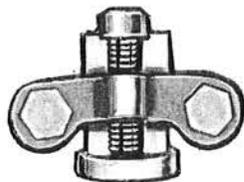

With 105 to 109 volts, 60 Hz, applied to the input leads, this frequency generator will deliver 30 Hz power to a suitable load connected to the output leads. The output voltage will be in the range of 110 to 125 volts for loads consisting of 16 high impedance ringers or 6 high impedance ringers with capacitors of 16 high impedance ringers with series diodes. Heavier loads than those specified may be connected but the output voltage may drop below 110 volts. The generator is self-protecting, i.e., a short circuit across the output leads results in a 60 Hz input current which is less than the normal operating current. The 30 Hz output voltage is immediately restored upon removal of the fault.

Used to furnish 30 Hz ringing voltage in key telephone systems and in package power supplies.

Comcode: 101 153 153

HANGERS

50A

Consists of a keeper equipped with a cap screw, a clamp, and two mounting screws. Two hangers are required to suspend one complete splice closure consisting of two splice cases.

For use in mounting 20C and 20D type splice cases on strands of any diameter.

Comcode: 100 208 024

HEADBANDS

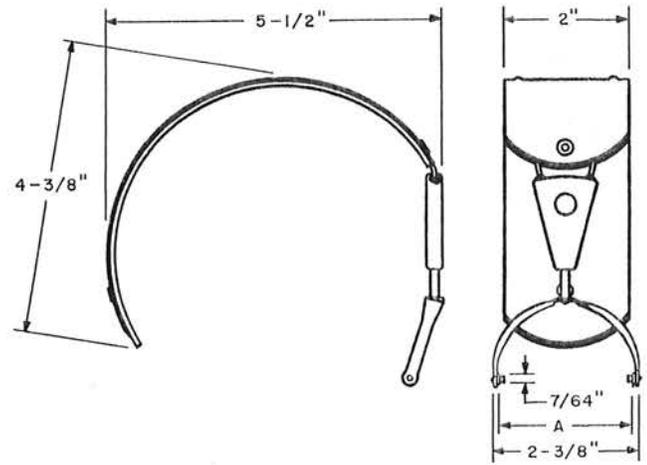

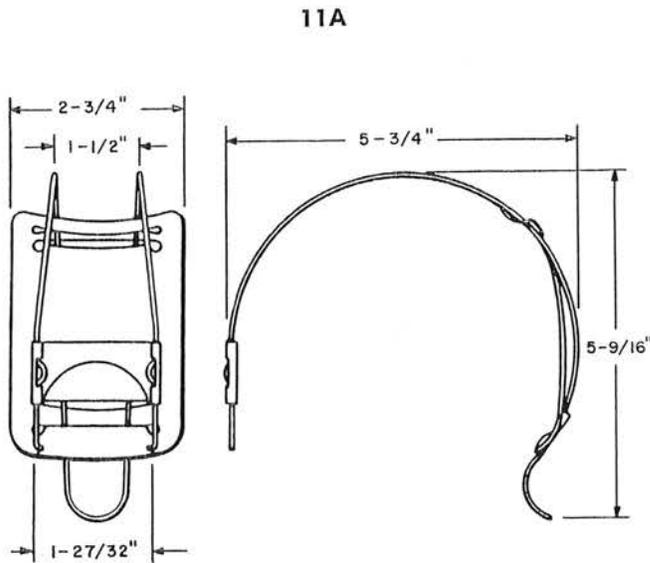

Fig. 2

A one piece nickel finished wire headband which holds 716A or similar type receiver. P-240421 Pad is furnished as part of a headband. P-10E121 Pad furnished only when specified on order.

Comcode: 101 314 243 E/W P-240421 Pad
101 314 250 E/W P-10E121 Pad

15 Type

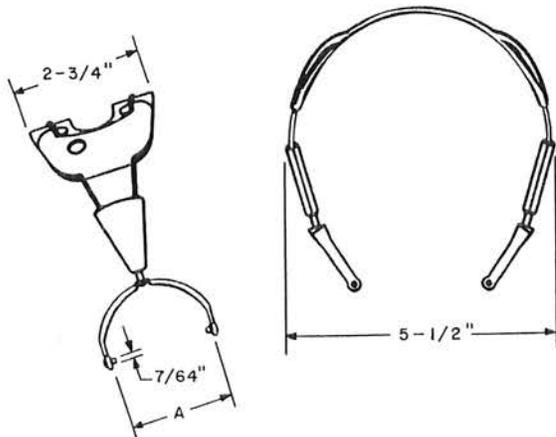

Fig. 1

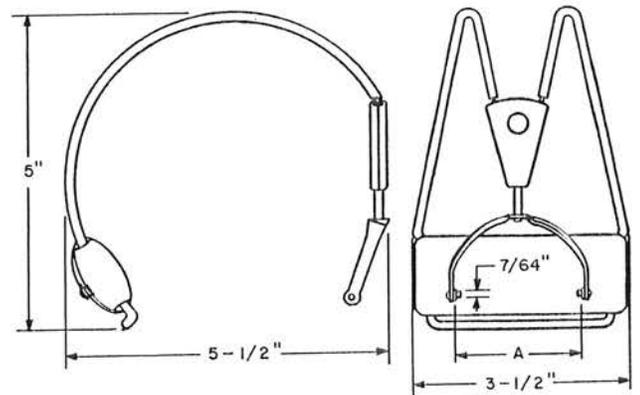

Fig. 3

Lightweight, adjustable, wire headbands each equipped with a pad.

15A: Equipped with a synthetic rubber pad P-240421. Can also be obtained with a simulated leather, multiple layer pad P-10E121 instead of pad P-240421 when specified on the order. Arranged for a single 723A or similar type receiver. Forms a part of number 52 type head set.

15B: Arranged for two 723A or similar type receivers. Forms part of the 1020A and B Head Sets.

15C: Arranged for a single 723A or similar type receiver. Forms part of the 53DRW Head Telephone Set.

15E: Arranged for two 716A or similar type receivers.

15F and G: Have a plastic coated wire frame and are equipped with a foam plastic pad.

15F: Intended for use with number 52 type head telephone sets.

HEADBANDS

15 Type (Continued)

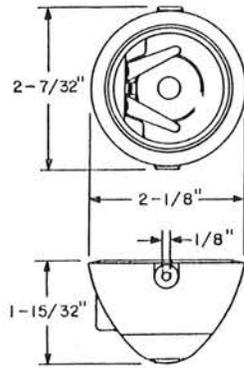

15G: Arranged for a single 716A or similar type receiver.

Code No.	Comcode	Fig. No.	Dimension A (Inches)

HOLDERS

Receiver

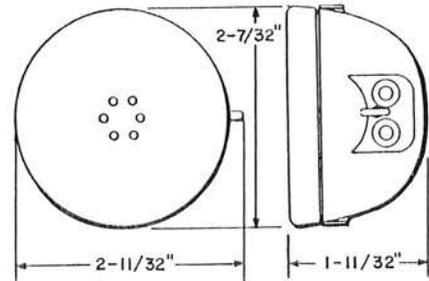

10A

Black plastic case arranged to accommodate an HC3 or HC4 Receiver Unit. Provisions are made for attaching a transmitter arm and a headband to the receiver holder. Necessary receiver cap is furnished with the number 52 type head telephone sets of which this receiver holder forms a part.

Comcode: 100 208 446

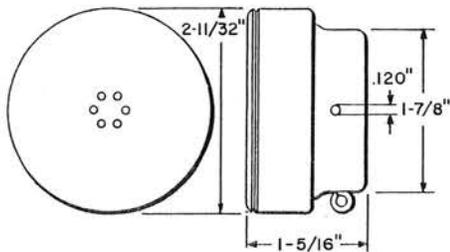

12A

Molded plastic receiver holder. Primarily a component of 723A Receiver. Will house an HC3 Receiver Unit. Arranged for use with number 15 type headband. Will accommodate cords with number 130 Cord Tips.

Comcode: 100 208 495

11A

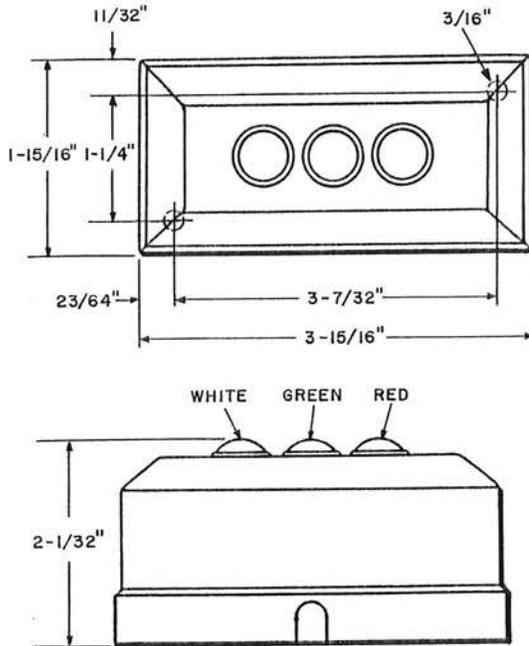

Black plastic case and cap arranged for HA type receiver unit. Forms a part of 716A, B, or C Receiver. Provisions are made for attachment of 11A Headband.

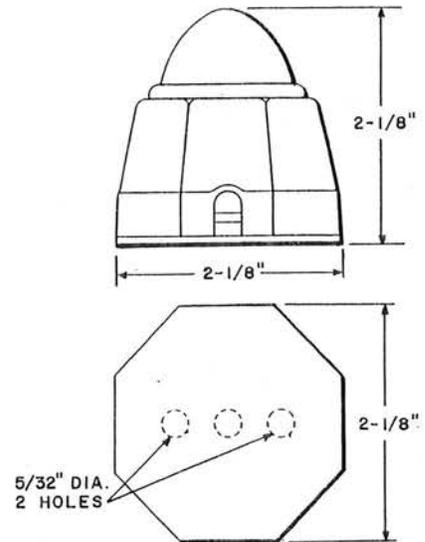

Comcode: 100 208 461

INDICATORS

14BW-49

15 Type

Three lamp indicator equipped with colored lamp caps. Housing is made of insulating material and has a light olive gray finish.

Arranged for fixed mounting by means of wood screws (not furnished), or for mounting without fastening on a horizontal surface. A pad for mounting without fastening is furnished.

Used to mount standard switchboard lamps for use as visual indicators of line or busy signals, or both. May be used with either D4BD-49 Cord or concealed wiring. **Lamps and cords must be ordered separately.**

Comcode: 101 826 667

Single lamp indicator equipped with a beehive lens colored as indicated below. Housing is of insulating material and has a light olive gray finish.

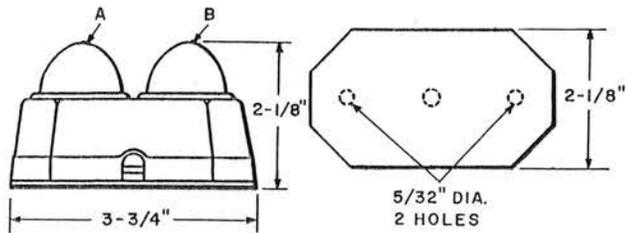

Arranged for fixed mounting by means of wood screws (not furnished) or for mounting without fastening on a horizontal surface. A pad for mounting without fastening is furnished.

Arranged to mount a standard switchboard lamp for use as a visual telephone signal. May be used with a D3BU or D3BP-49 Cord or concealed wiring. **Lamps and cords must be ordered separately.**

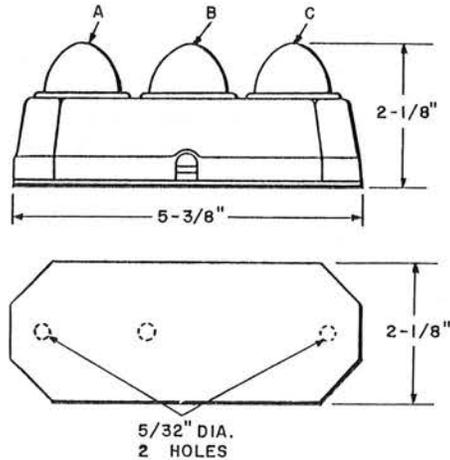

Code No.	Comcode	Color of Lens
15D-49	100 210 152	White

INDICATORS

17 Type

18 Type

Two lamp indicator equipped with beehive lenses colored as indicated below. Housing is of insulating material and has a light olive gray finish.

Arranged for fixed mounting by means of wood screws (not furnished) or for mounting without fastening. A pad for mounting without fastening is furnished.

Arranged to mount standard switchboard lamps for use as a visual telephone signal where two signals are required. May be used with a D3BU or D4BD-49 Cord or concealed wiring. Lamps and cords must be ordered separately.

Three lamp indicator equipped with beehive lenses colored as indicated below. Housing is of insulating material and has a light olive gray finish.

Arranged for fixed mounting by means of wood screws (not furnished) or for mounting without fastening on a horizontal surface. A pad for mounting without fastening is furnished.

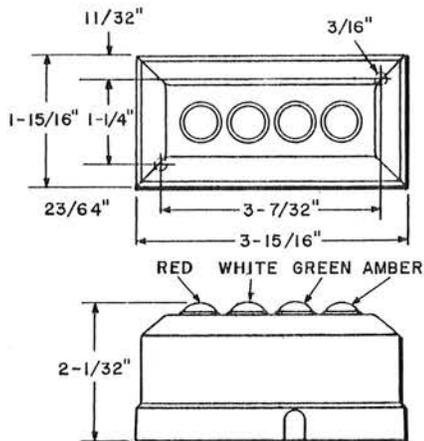

Arranged to mount standard switchboard lamps for use as a visual telephone signal where three signals are required. May be used with D4BD-49 Cord or concealed wiring. Lamps and cords must be ordered separately.

INDICATORS

20BW-49

Single lamp indicator equipped with a 358A Electron Tube, in series with a KS-13490L1 (8200 ohm) resistor, and having a clear beehive lens. Housing is of insulating material.

Arranged for fixed mounting by means of wood screws (not furnished) or for mounting without fastening on a horizontal surface. A pad for mounting without fastening is furnished.

For use as a visual ringing signal and intended to operate directly on ringing voltage. May be used with a D3AK-49 Cord or concealed wiring. Tubes and cords must be ordered separately.

Comcode: 100 210 301

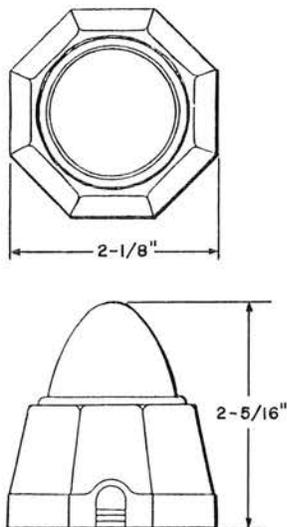

Four lamp indicator equipped with colored lamp caps. Housing is of insulating material and has a light olive gray finish.

Arranged for fixed mounting by means of wood screws (not furnished) or for mounting without fastening on a horizontal surface. A pad for mounting without fastening is furnished.

Arranged to mount standard switchboard lamps for use as a visual indicator of line or busy signals, or both. Also arranged to mount in 755A PBX as a visual indicator of trunk signals. May be used with D6W-49 Cord or concealed wiring. Lamps and cords must be ordered separately.

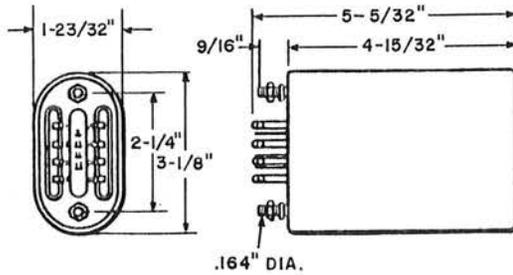

Comcode: 101 847 119

21C-49

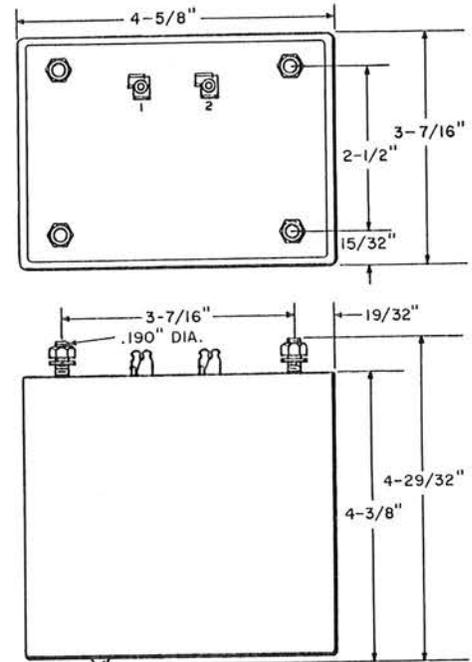

INDUCTORS

149 Type

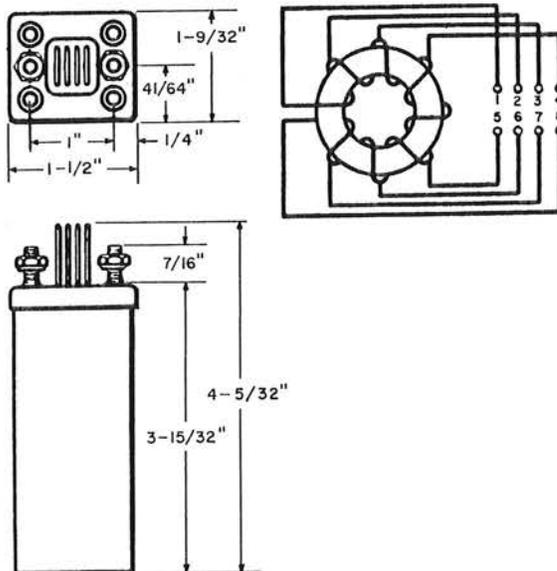

Consists of a shell type coil with silicon steel core potted in metal case. Closest recommended mounting centers are $1-3/4$ inches by $3-3/16$ inches. For electrical characteristics, see table at end of inductor descriptions.

275A

251A and B

Consists of windings on a silicon steel core potted in a metal case. The closest recommended mounting centers are $3-11/16$ inches by $4-7/8$ inches.

For use in battery supply filters.

For electrical characteristics, see table at end of inductor descriptions.

302 Type

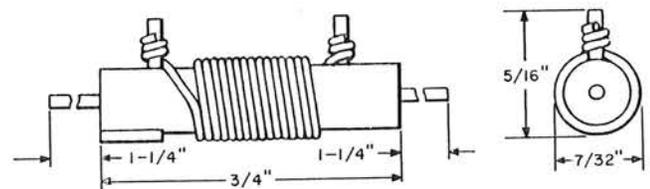

Fig. 1

Toroidal type coils having permalloy core; enclosed in metal case. Closest recommended mounting centers are $1-9/16$ inches by $1-3/8$ inches.

Used in telephone repeaters.

For electrical characteristics, see table at end of inductor descriptions.

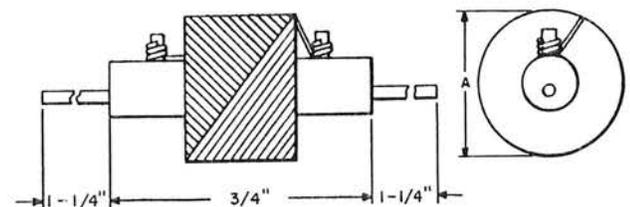

Fig. 2

INDUCTORS

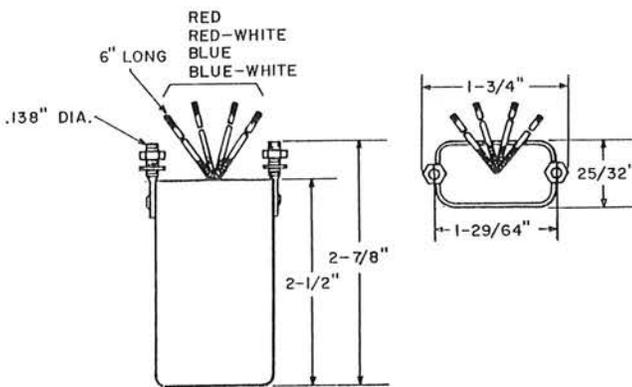

302 Type (Continued)

Consists of a winding on a core of insulating material equipped with tinned axial terminal leads. Wiring is coated with an insulating material.

See Fig. 1 for 302A through 302DA and Fig. 2 for 302DB through 302DP.

For electrical characteristics, see table at end of inductor descriptions.

321A

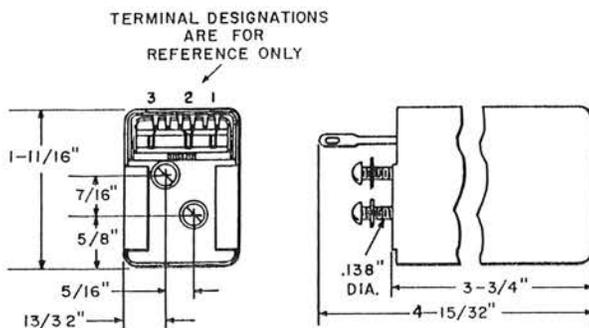

Consists of a toroidal type coil having a permalloy powder core, and a capacitor potted in a metal case. The capacitor (5100 mmf) is connected between terminal leads red and blue-white.

Closest recommended mounting centers are 7/8 inch by 1-7/8 inches.

For use as an oscillator coil in the 50BW Recorder Connector.

For electrical characteristics, see table at end of inductor descriptions.

333 Type

Shell type coils each having a silicon steel core and assembled in a metal case provided with a magnetic shield.

Normally intended to mount on 1-1/4 inch horizontal centers and 1-3/4 inch vertical centers. Mounting screw and washers are furnished with 333A and B but not with 333C.

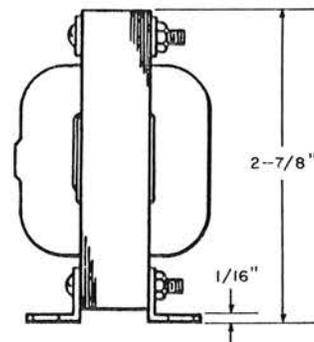

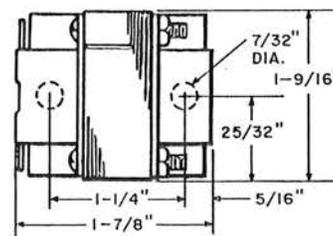

Terminal 2 is a center tap on winding 1-3.

333A and 333B: Each forms a part of the 108C Protector.

333C: Similar to 333A except has a lower interwinding capacitance. Forms a part of the 108C Protector.

For electrical characteristics, see table at end of inductor descriptions.

336A

Consists of a winding on a silicon steel core clamped between metal brackets which provide means for mounting.

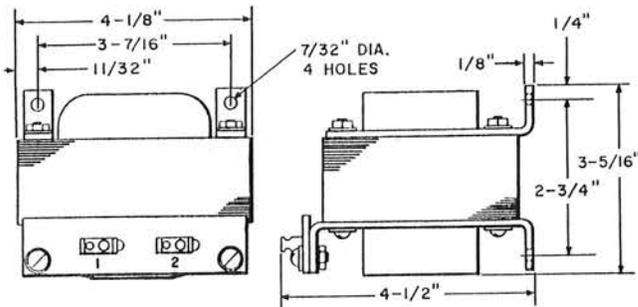

Closest recommended mounting centers are 1-11/16 inches by 2 inches.

Used in 101G Power Plant.

For electrical characteristics, see table at end of inductor descriptions.

INDUCTORS

1016A and B

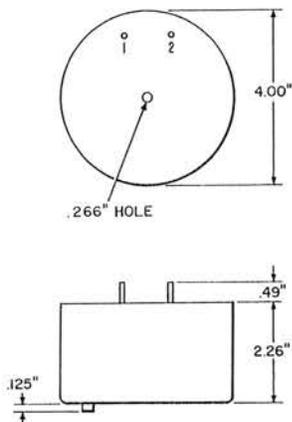

Each consists of a winding on a silicon steel core clamped between metal brackets which provide means for mounting.

Closest recommended mounting centers are 3-3/8 inches by 4-1/2 inches.

Used in 101G Power Plant of 6A Key Telephone Systems and 756A PBX.

For electrical characteristics, see table at end of inductor descriptions.

1079B

Consists of a winding on two moly-permalloy power cores encapsulated in epoxy. Arranged to mount by means of a 0.266 inch clearance hole through the center of the inductor. Mounting hardware is not furnished.

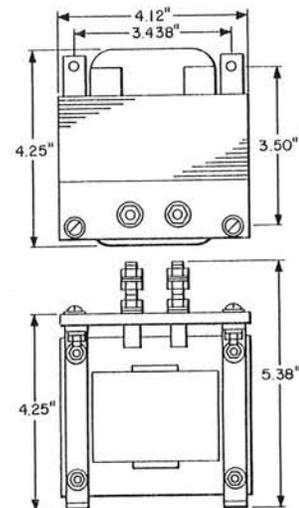

Nominal inductance is 60 mh with 775 volts, 20 kHz across winding (1-2) and with 0.5 ampere through the winding.

Approximate dc resistance of winding (1-2) is 2 ohms and is not intended to be operated at more than 1600 volts peak to ground.

Closest recommended mounting center is 4.12 inches.

Initially used in the J87289AL4 Carrier Power Supply.

1081B

Consists of a winding on a grain oriented silicon steel core clamped between metal brackets which provides a means for mounting.

Nominal inductance is 280 mh with 0.3 volt, 40 kHz and 50 amperes dc across winding (1-2). With 0.5 volt, 10 kHz and 12 amperes dc across winding (1-2), the inductance is approximately 310 mh.

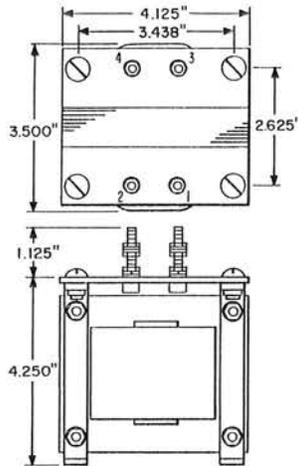

Approximate dc resistance of winding (1-2) is 0.004 ohm and is intended to be operated at ground potential.

Closest recommended mounting centers are 4.50 inches by 4.38 inches.

Used initially in J87289AL4 Carrier Power Supply.

INDUCTORS

1092A

Consists of winding on grain oriented silicon steel core clamped between brackets which provides a means for mounting.

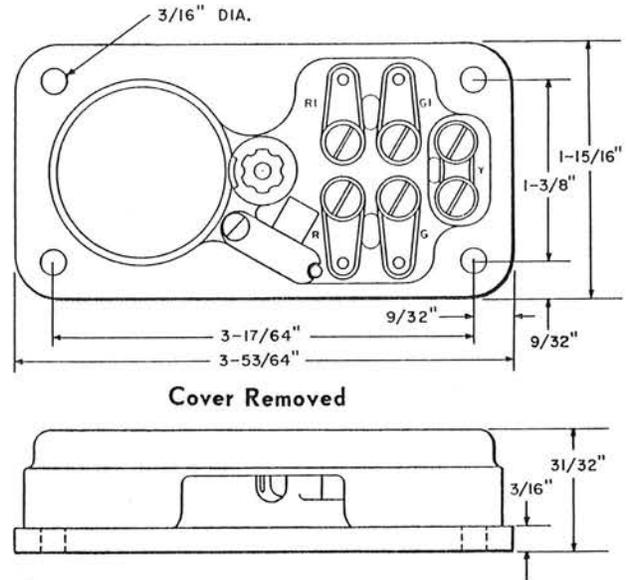

Nominal inductance is 75 uh with 0.6 volt, 40 kHz across windings (1-2) and (3-4). With 0.5 volt, 10 kHz across windings (1-2) and (3-4), the nominal inductance is 79 uh. With 50 amperes dc flowing through windings (1-2) and (3-4) connected in opposition, the net dc effect is zero.

Approximate dc resistance of windings (1-2) and (3-4) is 0.0015 ohm. Windings (1-2) and (3-4) are intended to be operated at ground potential.

Closest recommended mounting centers are 3.75 inches by 4.38 inches.

Used initially in J87289AL4 Carrier Power Supply.

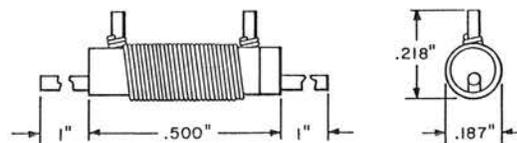

1542A-49 and -50

Consists of an inductor and five screw type terminals assembled on a base of insulating material and equipped with a 101A type cover. 1542A-49 is light olive gray. 1542A-50 is ivory.

Used to suppress radio broadcast interference in telephone sets where it is loud enough to be objectionable.

1564 Type

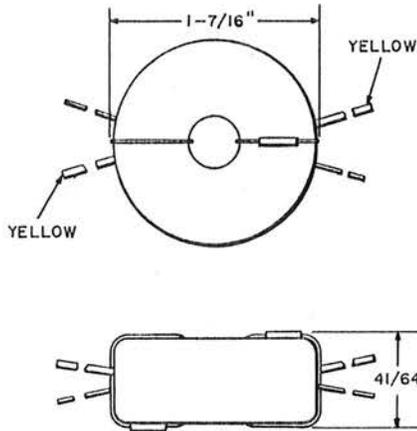

Each coil has a single layer winding on a solid core of insulating material. Equipped with tinned axial terminal leads. Winding is coated with an insulating material. Color coded on terminal 2 end of core.

For electrical characteristics, see table at end of inductor descriptions.

INDUCTORS

1574A and B

1574A: Consists of two windings on a permalloy core. Provided with terminal leads approximately 6 inches long.

Intended for use in bridged station loops to reduce transmission loss when one branch is idle.

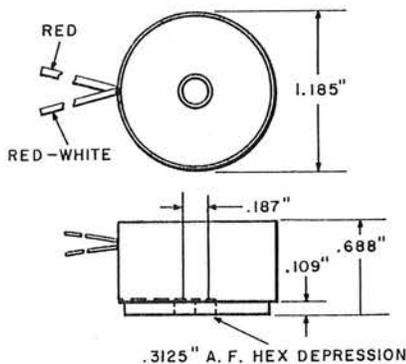

1574B: Consists of a 1574A Inductor and two KS-13490L1, 5600-ohm Resistors.

Arranged to mount in 172B, 178A, 500, 501, 550, 551, and 601A1 Coil Cases. Furnished only in coil cases.

Intended for use in station loop bridge lifting.

For electrical characteristics, see table at end of inductor descriptions.

1594A and B

Consists of a winding on a permalloy powder core and potted in a case of insulating material. Provided with flexible terminal leads approximately 8 inches long.

Inductance values are from 0.00200 henry to 2.23 henrys. The nominal inductance desired must be specified in the order to not more than three nor less than two significant figures.

Closest recommended mounting centers are 1.350 inches.

Code No.	Inductance Tolerance
1594A	±2 percent
1594B	±1 percent

For electrical characteristics, see table at end of inductor descriptions.

1595 Type

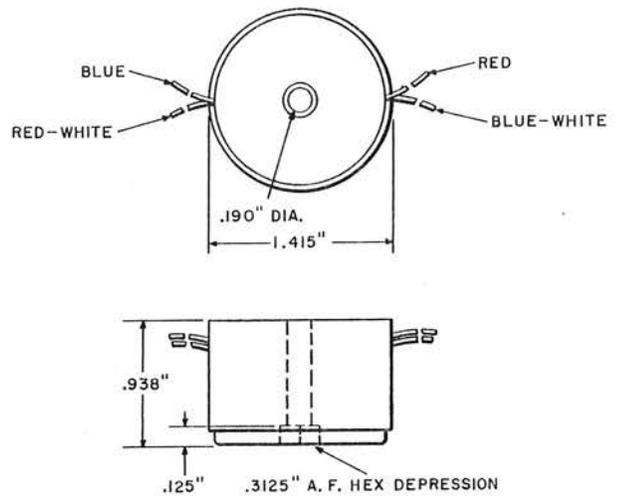

Fig. 1

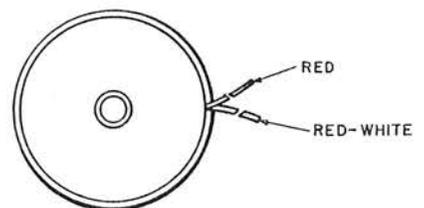

Fig. 2
(Otherwise same as Fig. 1)

INDUCTORS

1595 Type (Continued)

Consists of windings on a permalloy powder core and potted in a case of insulating material. Provided with flexible terminal leads approximately 8 inches long.

Closest recommended mounting centers are 1.576 inches.

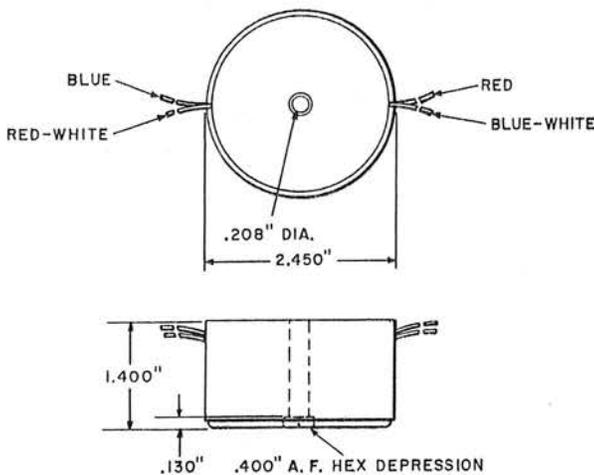

1595A, B, and C: Inductance values are from 0.0100 henry to 10.5 henrys. The nominal inductance desired must be specified in the order to not more than three nor less than two significant figures.

1595D and E: Inductance values are from 0.0100 to 17.3 henrys.

Code No.	Fig. No.	Inductance Tolerance (Percent)
1595A	1	±2
1595B	1	±1
1595C	2	±1
1595D	1	±2
1595E	1	±1

For electrical characteristics, see table at end of inductor descriptions.

1596A

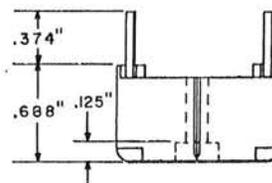

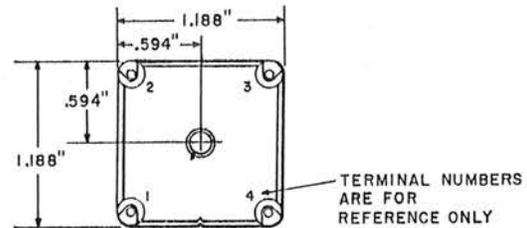

Consists of windings on a permalloy powder core and potted in a case of insulating material. Provided with flexible terminal leads approximately 8 inches long.

The closest recommended mounting centers are 2-3/4 inches.

Inductance values are from 0.0600 henry to 25.5 henrys. The inductance tolerance is ±2 percent. The nominal inductance desired must be specified in the order to not more than three nor less than two significant figures.

For electrical characteristics, see table at end of inductor descriptions.

1622 Type

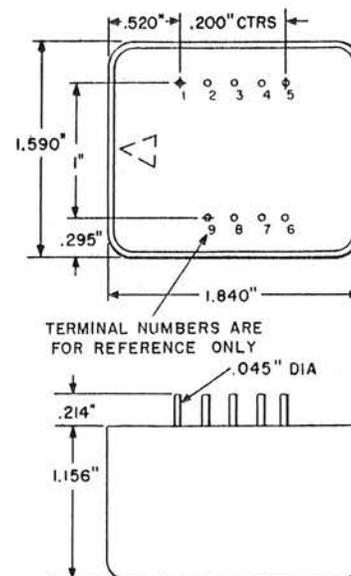

Consists of a winding or windings on a permalloy powder core and potted in a case of insulating material. Closest recommended mounting centers are 1.200 inches by 1.200 inches.

The inductance tolerance is ±1 percent with the exception of 1622J which is ±1.5 percent.

For electrical characteristics, see table at end of inductor descriptions.

1626A

Consists of windings on a permalloy core, potted in a metal can.

INDUCTORS

Arranged to mount on printed wiring boards. The closest recommended mounting centers are 1.688 inches by 1.938 inches.

Used to operate over the voice frequency range.

For electrical characteristics, see the following table.

*In ordering number 149M type inductors for new equipment, no reference should be made to groups. Inductors will be shipped in pairs whenever number ordered makes it possible. In ordering inductors for replacements, group letter of inductor desired should be specified.

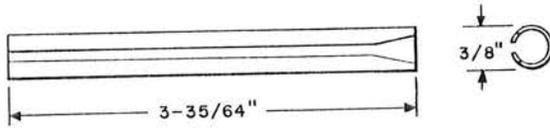

Group (Letter Stamped on Case)	Effective Inductance Range (Henrys)
A	6.60 to 6.77
B	6.78 to 6.95
C	6.96 to 7.12
D	7.13 to 7.30
E	7.31 to 7.47
F	7.48 to 7.65
G	7.66 to 7.82
H	7.83 to 8.00

**Value must be specified in the order.

- (a) Height is .281 inch.
- (b) These inductors have a duolateral winding.
Diameter of winding is .210, .265, .280, .260, .280, and .210, respectively.
- (c) Inductance and resistance values apply across terminals 1 and 4 with terminals 2 and 3 connected together.

INSULATORS

102A

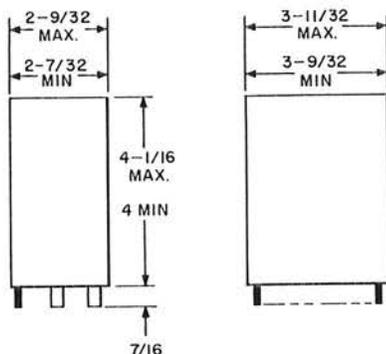

Tube made of insulating material arranged to fit over the side posts of number 18 and 19 type resistors. Intended to insulate resistors from mounting plate covers or adjacent apparatus.

Comcode: 100 272 103

INTERRUPTERS

KS-15900L1

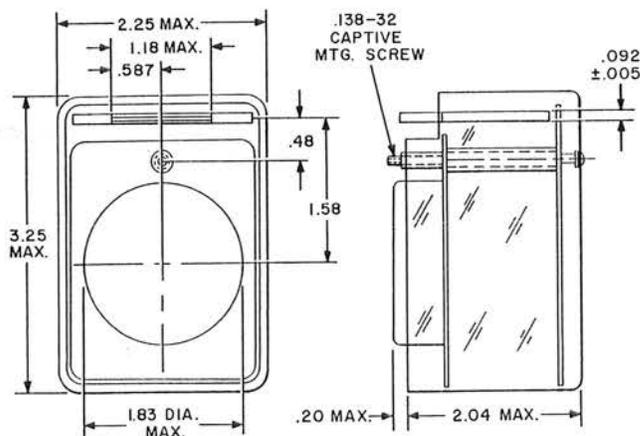

The KS-15900L1 Interrupter is an electro-mechanical plug-in device enclosed in a protective transparent case. Consists of rotating cams driven by a slow speed synchronous ac motor. The cams are designed to operate leaf springs which are equipped with electrical contacts to provide specific timing intervals. The motor is rated at 10 volts, 60 Hz, 3 watts. One set of cams is driven at a speed of 15 rpm and the other set at a speed of 60 rpm. The contact springs are of beryllium copper or phosphor bronze. The contacts have a rectangular configuration of the crossbar type with laminated contact materials. Ferrous parts have a zinc or cadmium plate finish. The complete unit operates satisfactorily under any ambient conditions within the temperature range of 10° to 50° C and a relative humidity from 40 to 90 percent.

Used as a signaling device in 1A1 and 1A2 Key Telephone Systems.

Comcode: 996 222 048

KS-19175L1

The KS-19175L1 Interrupter is an ac motor driven spring and cam type interrupter having five sets of contacts with various interrupting intervals. It consists of

a frame on which are mounted the interrupting springs operated by nylon cams which are driven through gearing by a small synchronous type motor. The unit is enclosed in a transparent plastic cover and is provided with a double-sided printed circuit board that may be plugged into the circuit with which it is to be associated. The motor is rated at 10 volts, 60 Hz, 3 watts. The two cam shafts operate at 60 and 15 rpm respectively. Contact springs are of beryllium copper or phosphor bronze. The interrupter contacts have a rectangular configuration of the crossbar type with laminated contact materials. Ferrous parts have a zinc or cadmium plate finish. The complete unit is designed to operate satisfactorily under any ambient conditions within the temperature range of 10° to 50° C and a relative humidity from 40 to 90 percent.

Used as a signaling device in 1A2 Key Telephone Systems.

Comcode: 996 222 162

KS-19384L2

The physical characteristics of the KS-19384L2 Interrupter are the same as the KS-15900 Interrupter.

The KS-19384L2 Interrupter is an electro-mechanical plug-in device enclosed in a protective transparent case. Consists of rotating cams driven by a slow speed synchronous ac motor. The cams are designed to operate leaf springs which are equipped with contacts to provide specific timing intervals. An inverter, mounted within the interrupter, converts 24 volts dc to 60 Hz ac to operate the ac motor. One set of cams is driven at a speed of 15 rpm and the other set at a speed of 60 rpm. The contact springs are made of beryllium copper or phosphor bronze. The contacts have a rectangular configuration of the crossbar type with laminated contact materials. Ferrous parts have zinc or cadmium plate finish. The complete unit shall operate satisfactorily under any ambient conditions within the temperature range of 10° to 50° C and a relative humidity from 40 to 90 percent. Used as a signaling device in battery powered key telephone systems.

Comcode: 996 249 454

KS-19385L2

The physical characteristics of the KS-19385L2 Interrupter are the same as the KS-19175L1 Interrupter.

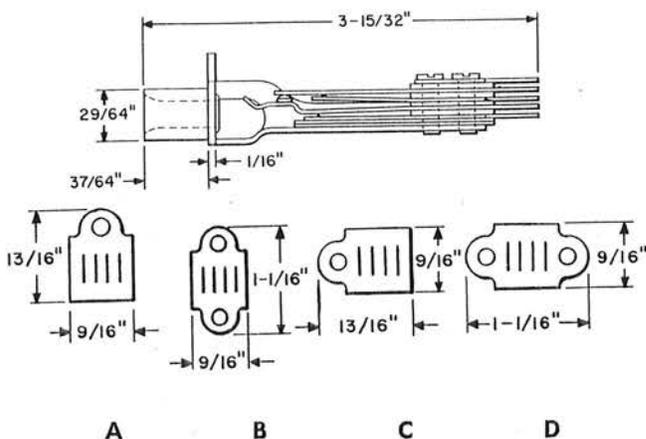

The KS-19385L2 Interrupter is an electro-mechanical, single-unit plug-in device enclosed in a transparent case. Consists of rotating cams driven by a slow speed synchronous ac motor to operate five sets of contacts with various interrupting intervals. The plug-in device is the circuit panel termination of the printed wiring board. An inverter mounted within the interrupter frame converts 24 volts dc to 60 Hz ac to energize the motor. The complete unit is designed to operate satisfactorily under any ambient conditions within the temperature range of 10° to 50° C and a relative humidity from 40 to 90 percent. Contact springs are of beryllium copper or phosphor bronze. The interrupter contacts have a rectangular configuration of the crossbar type with laminated contact materials. Ferrous parts have a zinc or cadmium plate finish.

Will mate with 907B Connector and is used to provide signaling for 1A Key Telephone Systems.

Comcode: 996 249 462

JACKS

Singly Mounted

Single mounted, electrically welded frame type jacks are to be mounted with springs in vertical plane as indicated in Figs. A, B, C, and D. The letters A, B, C, and D used in code numbers of the jacks indicate number of mounting lugs and their arrangement with respect to the plane of the springs. Figs. A, B, C, and D illustrate the four arrangements of lugs and springs as indicated in code numbers by the letters A, B, C, and D, respectively.

Mounting screws are furnished.

Following is a list of singly mounted jacks. The list indicates the number of springs, length, and the mounting centers. The spring combinations following the list are keyed to the respective code numbers.

*Used with number 1, 144, 151, 153, 209, 241, 289, 305, 312, 324, 327, 328, and 347.
 **Used with number 150, 184B, 202, 213, 262B, 310, 320B, 331A, 338, and 349 type plugs.
 (a) Terminal of tip spring is arranged to accommodate two 16B and S gauge wires.
 (b) Same as 218A Jack except with nickel sleeve.
 (c) Same as 217A Jack except with silver nickel sleeve.
 (d) Normally closed contacts are not designed for use in talking circuits.
 (e) Same as 239A except equipped with a silver nickel sleeve.
 (f) Same as 223C except it is equipped with mechanically wrapped terminals.
 (g) Same as 223A except has wire-wrap terminals.
 (h) Same as 240A except has wire-wrap terminals.
 (i) Same as 241A and 241C, respectively, except have wire-wrap terminals.

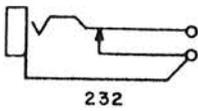

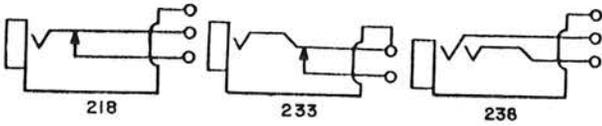

JACKS Singly Mounted

Spring Combinations

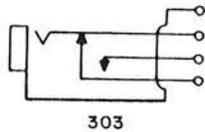

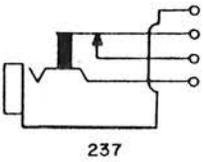

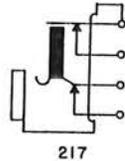

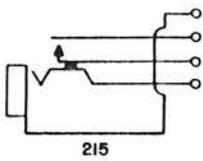

One Spring

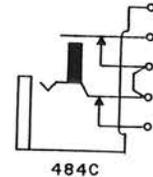

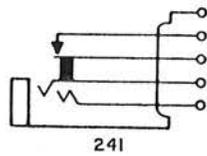

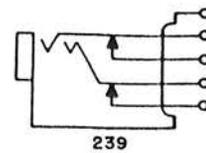

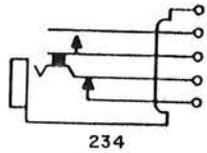

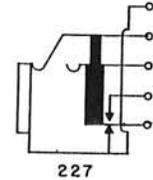

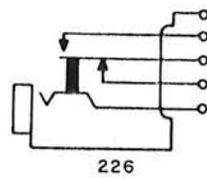

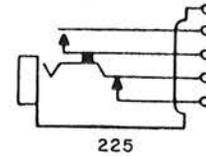

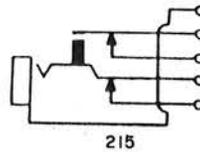

Two Springs

Three Springs

Four Springs

JACKS
Singly Mounted

477 Type

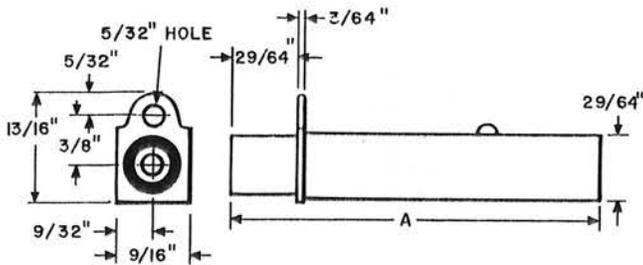

Fig. 1

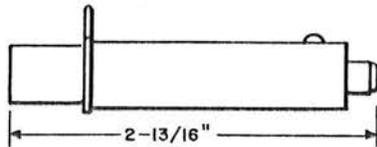

Fig. 2

Each consists of a coaxial type jack arranged for solderless shield connection to the connecting cable by means of a sleeve which is furnished loose. Tested at 2000 volts ac and provides impedance match for 75 ohm coaxial cable up to 100 mc.

Arranged for 358A and similar type plugs.

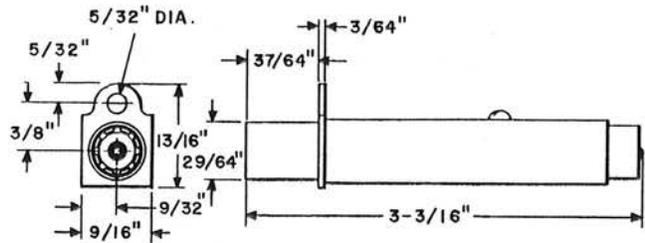

One mounting screw is furnished.

477A: Body is in fixed position in frame. Used in radio systems.

477B and C: Body rotates freely in frame thus facilitating alignment of cable. Used in carrier telephone systems.

Code No.	Comcode	Fig. No.	Dimension A (Inches)
477A	100 277 441	1	2-29/32
477B	100 277 458	1	3-1/8
477C	100 277 466	2	—

486A

A singly mounted jack, having coaxially arranged inner and outer contacts which are mounted in a tubular metal frame. Contains a 75 ohm deposited carbon rod resistance mounted coaxially with the outer housing and connected across the coaxial members.

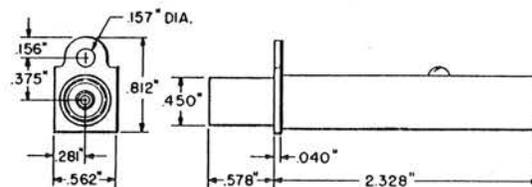

Arranged for 358A or similar type plug but not for cord or coaxial cable connections.

One round head machine screw is furnished for mounting.

For use in radio relay systems and as a termination jack in coaxial circuits.

Comcode: 100 277 607

542A

A coaxial type jack arranged for solderless shield connection to a connecting cable by means of a sleeve which is furnished loose. Tested at 2000 volts ac.

Arranged for use with 358A or similar type plug.

Mounting screws are furnished.

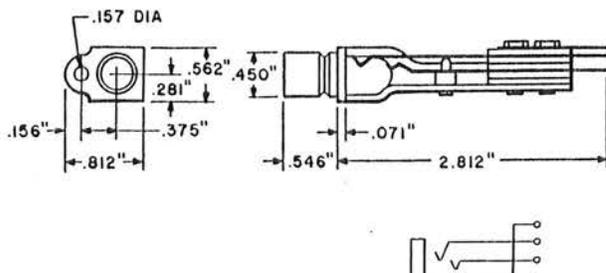

Intended for use on multiplex bay of toll system.

Comcode: 100 278 183

JACKS

Singly Mounted

544A

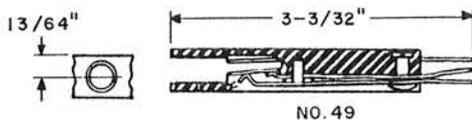

Provided with a feature for minimizing the possibility of shorting the tip and ring springs when plug is inserted. Arranged for number 310 or similar type plugs.

Intended to mount with springs in vertical plane and provided with a mounting screw.

For use in digital data system.
Comcode: 100 278 209

Strip Mounted

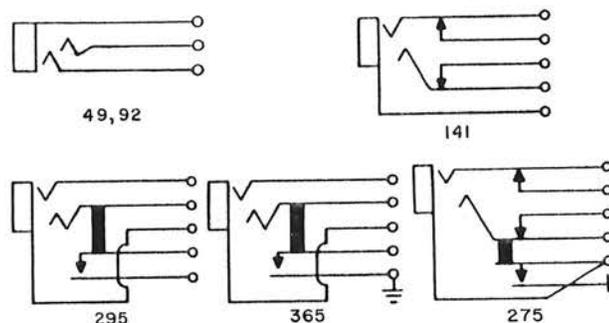

These jacks are assembled in associated jack mountings and are not furnished separately.

Following is a list of strip mounted jacks. The list indicates the number of springs, length, and mounting centers. The spring combinations following the list are keyed to the respective code numbers.

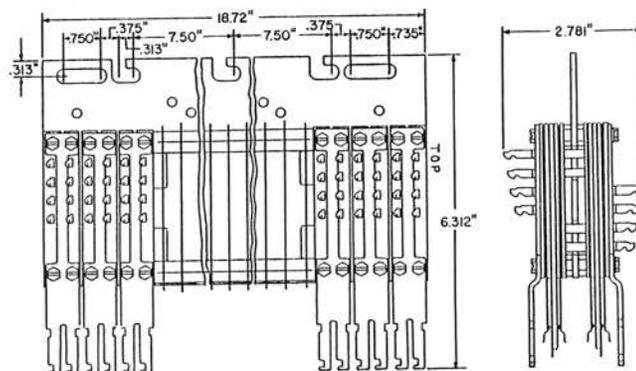

Code No.	Comcode	No. of Springs	Length (In.)	Used with Jack Mounting Code No.	No. Per Strip
* 49	100 273 481	2	3-5/32	114	20
	100 273 572			141	10
	100 273 606			142	10
	100 273 556			168	20

	100 276 328	4	3-1/2	112	20
*365	100 276 559			136	10

*Used with number 310 type plugs.
**Used with number 245, 277B, 309, 322, and 371B type plugs.

Spring Combination Numbers

444C

This jack is used in central offices located in areas where incoming circuits are underground and do not require heat coil and block protection. Cable capacity is 100 pair. Jack provides a ready means of opening lines and trunks for test purposes.

JACKS

444C (Continued)

Arranged for use with 301A and B and 302A Plugs.
 Intended for use with 301A type connector.
 Comcode: 100 277 052

465B, C, and E

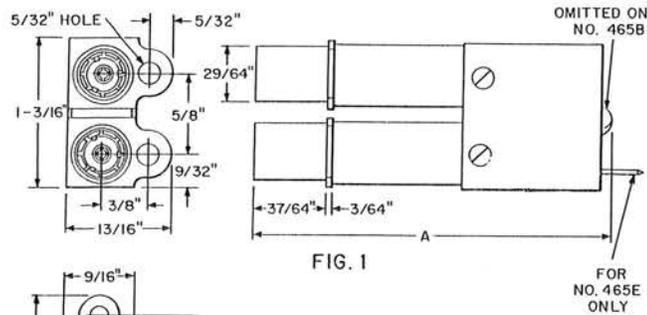

FIG. 1

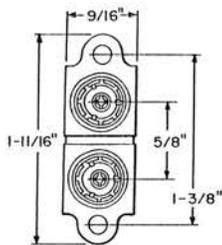

FIG. 2
 OTHERWISE SAME
 AS FIG. 1

Consists of a pair of coaxial jacks held rigidly in a metal cover. Each jack has an inner contact held in a tubular shield which is the outer contact. The outer contacts of the two jacks are connected together electrically. Jacks are arranged for number 185 and 230A Jack Mountings. Two screws are provided for mounting.

465B and C: For use with the number 337 or similar type plug and KS-8086 shielded cable or number 724 Cable in carrier telephone system.

465E: Equipped with a terminal in the uncovered cable opening and a KS-15712L12 shield connector is shipped loose.

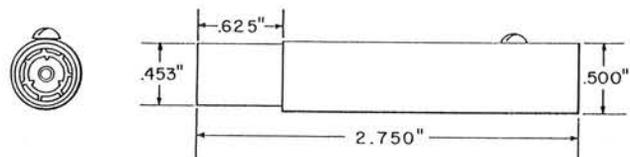

For use with 761A cable in L Carrier and L Multiplex Systems.

Note: The 465C and E have cable entrance holes on the same axis as the individual jack fingers while 465B has one cable entrance hole on the same axis as one of the jack fingers, and the other cable entrance hole at an angle of 45 degrees to the axis of the other jack finger as shown.

Code No.	Comcode	Fig. No.	Dimension A (Inches)	Test Voltage (AC)
465B	100 277 250	1	2.875	2000
(a) 465C	100 277 268	2	2.875	2000
(a) 465E	100 841 287	2	3.190	2000

(a) Furnished with mounting lugs positioned as in Fig. 2. Can also be obtained with mounting lugs positioned as in Fig. 1 when specified in the order.

466B

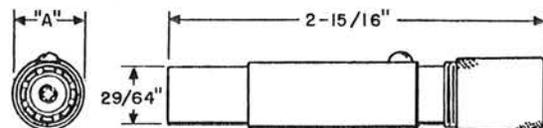

A portable patching jack having coaxially arranged inner and outer contacts. Tested at 1000 and 2000 volts ac.

Used with KS-8086 or number 724 cable and with 337A and B and 342A and B Plugs in the type L Carrier Telephone System.

Comcode: 100 277 284

479A and B

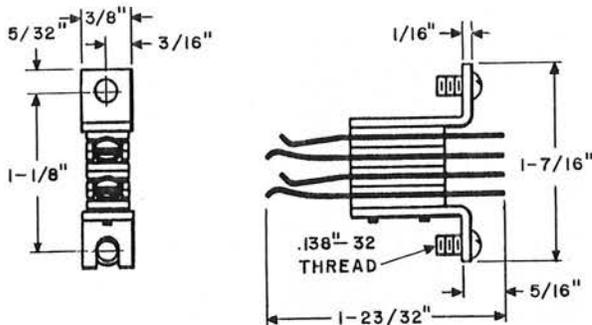

Coaxial type jacks. The right end, as viewed in the illustration, has an inner contact for a spring connection to the inner conductor of a .270 inch and .375 inch coaxial cable, respectively, and a gland nut for clamping to the outer conductor of the coaxial cable.

Used with number 337 type plugs for making temporary patches in coaxial units in the field.

Code No.	Comcode	Test Voltage (AC)	Dimension A (Inches)
479A	100 277 482	2000	9/16
479B	100 277 490	2000	11/16

JACKS

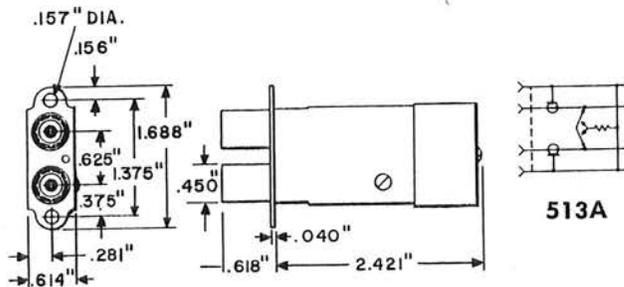

506A

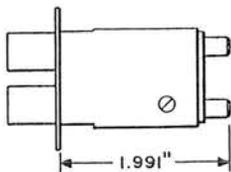

Consists of two metal brackets between which are mounted two pairs of contact springs insulated from each other. Will mount on 0.625 inch horizontal centers.

Arranged for 240A Plug for use with selector and connector shelf equipment in step-by-step telephone systems.
Comcode: 100 277 912

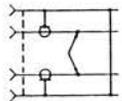

513 Type

513A and B

513C

513B and C

513A: Twin type jack arranged for mounting in number 230 or 231 type jack mountings and connecting to two 728A Cables by means of sleeves. Sleeves and mounting screws provided. Equipped with cable guard.
Intended for use in radio systems.
Comcode: 100 287 035

513B: Same as 513A except resistor is omitted.

Comcode: 100 278 043

513C: Same as 513A except resistor, sleeves, and cable guard are omitted.

Comcode: 100 278 050

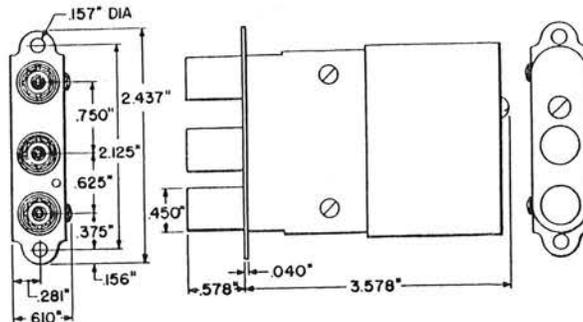

513F: Same as 513A except arranged to accept one number 724 or 728 Cable on one side and one 730A Cable on the other side.

Comcode: 101 149 987

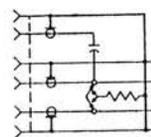

513G: Same as 513A except is arranged to accept two 730A Cables, and the cable terminals have an inside diameter of 0.152 inch and an outside diameter of 0.185 inch.

Comcode: 101 205 177

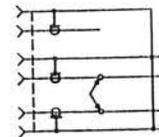

514 Type

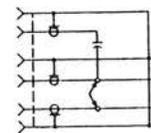

514A and B

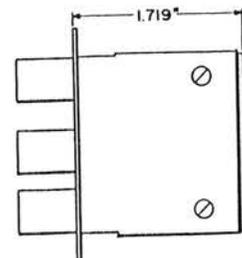

514A

514C

514B

514C

JACKS

514 Type (Continued)

Upper finger serves as a monitoring jack. One end of each jack finger is arranged for use with 358A or similar type plugs. Other end of two lower fingers is arranged for solderless shield connection to two 728A Cables by means of sleeves which are furnished as loose parts with the jacks.

514A: Triple coaxial type jack arranged for 728A Cables by means of sleeves. Sleeves and mounting screws are provided. Equipped with cover.

Intended for use with radio systems.

Comcode: 100 278 068

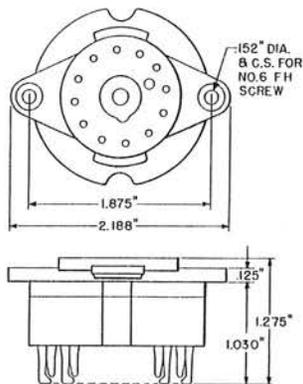

514B: Same as 514A except resistor is omitted.

Comcode: 100 278 076

514C: Same as 514A except resistor, capacitor, sleeves, and cover are omitted.

Comcode: 100 278 084

541A Type

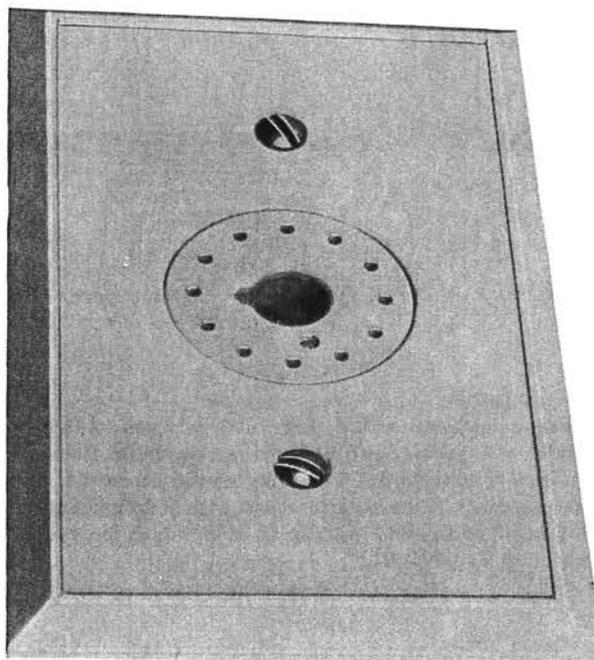

A flush-type jack consisting of a block of insulating material containing 12 contacts having clip-type terminals. Each clip terminal permits the connection of two insulated wires in multiple without removal of conductor insulation. Associated 504A type plug can be inserted in one position only.

Used with portable telephone sets having two to twelve conductor mounting cords. Forms a part of number 547 type jacks, and can be mounted on a 63A Bracket with a 16A type face plate.

Code No.	Comcode	Color
541A-49	100 278 159	Light olive gray
541A-50	100 278 167	Ivory
541A-54	100 278 175	Brown

547BW

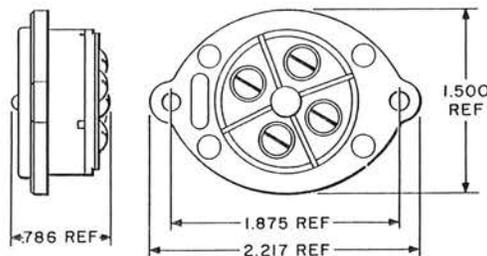

Consists of a 541A Jack, a 43B Bracket, and a flush type cover plate arranged for mounting in a standard electrical outlet box. The associated 504A Plug can be inserted in one position only. Overall dimensions of the 547B are 4.500 inches long by 2.750 inches wide by 1.384 inches deep.

Used with portable telephone sets having from two to twelve conductor mounting cords.

Code No.	Comcode	Color
547BW-49	101 336 196	Light olive gray
547BW-50	101 336 204	Ivory
547BW-54	101 336 212	Brown

548 Type

JACKS

A flush-type jack consisting of a block of plastic insulating material containing four intermeshed coil spring contacts.

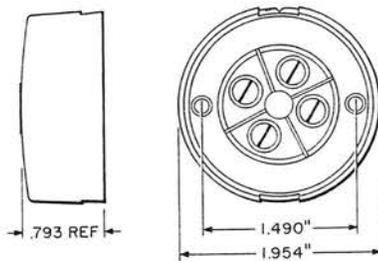

Two self-tapping screws are furnished for mounting.

The associated 505A type plug can be inserted in one position only.

Intended to be mounted in the woodwork at stations for use with portable telephone sets having 2, 3, or 4 conductor mounting cords.

Code No.	Comcode	Color
548A-49	100 278 290	Light olive gray
548A-50	100 278 308	Ivory
548A-54	100 278 316	Brown

549AW-49 and 549AW-50

A nonflush type consisting of a block of plastic insulating material containing four intermeshed coil spring contacts.

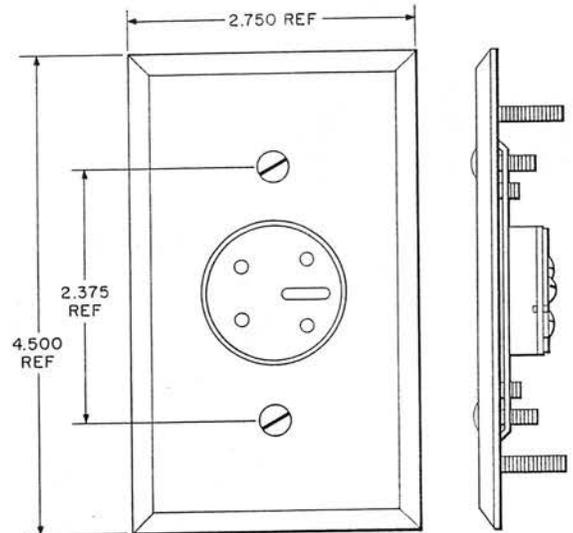

Two wood screws are provided for mounting.

The associated 505A type plug can be inserted in one position only.

For use with portable telephone sets having 2, 3, or 4 conductor mounting cords.

Code No.	Comcode	Color
549AW-49	101 205 185	Light olive gray
549AW-50	101 205 193	Ivory

550 Type

Consists of a 548A type jack, a 43A Bracket, and a flush-type cover plate arranged for mounting in an electrical outlet box.

Mounting screws are furnished.

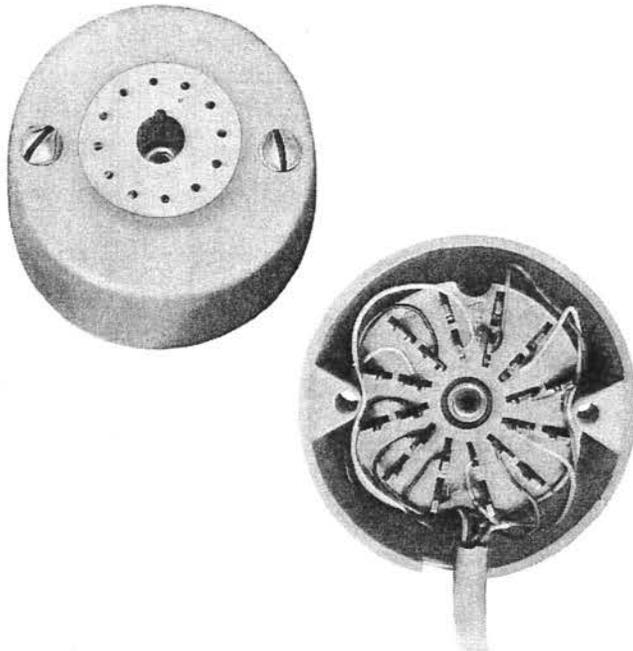

The associated 505A type plug can be inserted in one position only.

Intended for use with portable telephone sets having 2, 3, or 4 conductor mounting cords.

Code No.	Comcode	Color
550A-49	100 278 340	Light olive gray
550A-50	100 278 357	Ivory
550A-54	100 278 365	Brown

JACKS

551AW Type

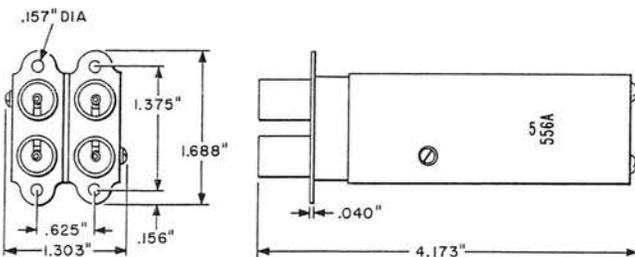

Nonflush-type jack consisting of a block of insulating material containing twelve spring contacts equipped with quick contact terminals. The associated 504A Plug can be inserted in one position only. Overall dimensions are 1.345 inches high by 2.540 inches in diameter. Two wood screws are provided for mounting.

Used with portable telephone sets having from two to twelve conductor mounting cords.

Code No.	Comcode	Color
551AW-49	101 336 220	Light olive gray
551AW-50	101 336 238	Ivory

556 Type

556A: Consists of two number 513-type twin coaxial jacks. One end is arranged for use with 358A or similar type plugs. The other end is arranged for use with 754E Cables. Each jack is equipped with a 62 ohm resistor and with a cable guard. Mounting screws are shipped loose.

Comcode: 100 841 295

556B: Same as 556A except one P-188130 ferrule for a 754E Cable is omitted and replaced by a P-484676 terminal to accommodate a 760A Cable. Arranged for one 754E and one 760A Cable.

Comcode 100 845 767

556C: Same as 556A except is arranged for one 754 Cable and two 730 Cables. Also equipped with two Sealectro terminals to be used for adding networks.

Comcode: 101 361 095

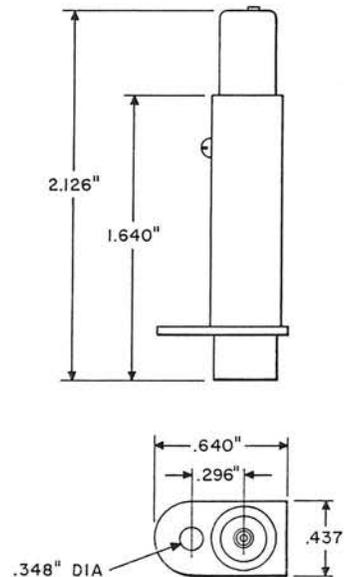

556D: Same as 556A except arranged for one 754 Cable, two 730A Cables, and one 728 or 724 Cable.

Comcode: 101 361 103

556A and B used initially in the TD Radio System.

556C and D used initially in the A2AT Transmission System.

570A

A coaxial-type jack having coaxially arranged inner and outer contacts. Single jack arranged for use with 440A and similar type plugs. Mounting screw is furnished.

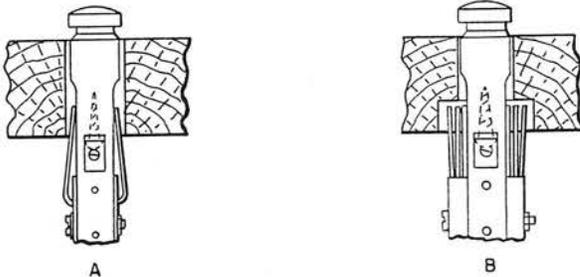

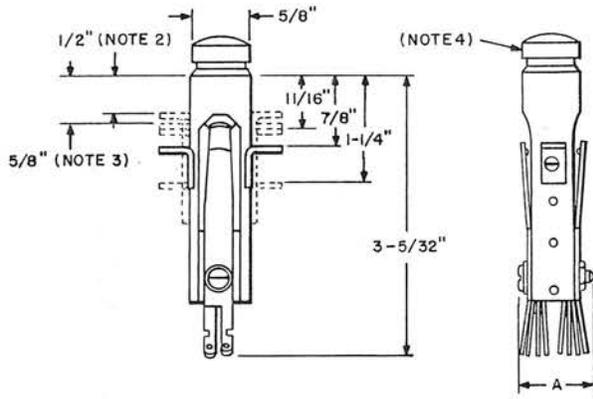

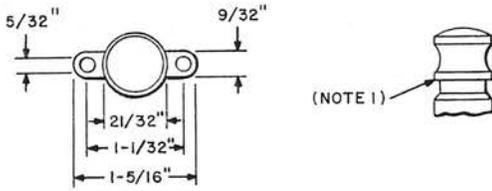

Not arranged for connection to a coaxial cable. Intended as a terminating jack. Has a 75 ohm resistor connected internally from the center contact to the shell.

Closest recommended mounting centers are .500 inch side by side.

Used initially in Toll Systems-Mastergroup Multiplex.
Comcode: 101 283 398

KEYS

92 Type

- NOTES:
 1. PLUNGER USED WITH LOCKING COMBINATIONS.
 2. FOR 92Y AND AE ONLY.
 3. OPTIONAL FOR 92A, B, AND AC ONLY.
 4. PLUNGER USED WITH NON-LOCKING COMBINATION.

(a) Not equipped with a terminal plate or wiring.

(b) Equipped with six lamp sockets arranged for 51A or 52A Lamps.

(c) Equipped with an auxiliary spring combination consisting of a pair of normally closed contacts which is actuated by the operation of any locking or releasing plunger.

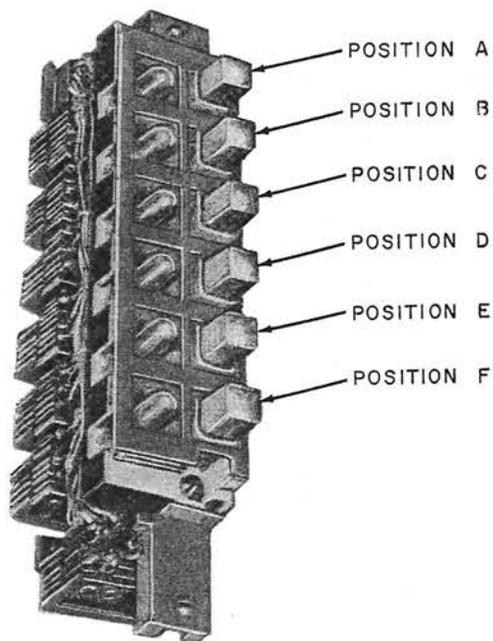

(d) May be operated simultaneously with any position.

(e) Nonlocking plungers will release locked plungers.

(f) When depressing any button in positions B through F, the contacts operated by that button will make before any locked plunger releases.

KEYS

598 and 599 Type

Mechanically locking keys consisting of plunger-operated spring combinations as indicated in table, and a common chaining switch, except where indicated by footnote, having three sets of break contacts wired to a KS-16672L3 Connector except where indicated by footnote. The buttons are of the illuminated type. Overall dimensions are approximately 6.594 inches long by 1.250 inches wide by 3.125 inches deep.

The spring combinations which are operated by the action of the individual buttons are locking, nonlocking, releasing, or turn-locking as indicated in table. Those designated as "Pickup" are furnished arranged for Pickup (Locking), but by removal of a screw pin from the plunger can be converted to Signal (Nonlocking) in which

condition, operation of the button does not operate the chaining switch, does not release any operated pickup button, and therefore can be used for signaling. Operation of any locking button releases any locked button and operates the chaining switch. Operation of any two or more locking buttons simultaneously is prevented by means of a lockout feature as indicated by footnote.

598A, B, C, E and F: Each button operates three sets of make contacts.

598D: Buttons in positions A, D, E, and F operate three sets of make contacts and buttons in positions B and C operate two sets of transfer contacts.

598G and H: Each button operates two sets of transfer contacts.

598J: Buttons in positions A and B operate two sets of transfer contacts. Buttons in positions C, D, E, and F operate three sets of make contacts.

599A and C: Buttons in positions A through E operate three sets of make contacts, and button in position F operates two sets of transfer contacts.

599B: Same as 599A except button in position A operates a set of break contacts and two sets of transfer contacts.

599E: Buttons in positions A, C, and E operate three sets of make contacts, and button in position F operates two sets of transfer contacts.

599F: Buttons in positions A and C operate three sets of make contacts and button in position F operates two sets of transfer contacts.

599G: Buttons in positions A, B, and C operate three sets of make contacts. Buttons in positions D, E, and F operate two sets of transfer contacts.

599H: Buttons in positions A, B, C, and D operate three sets of make contacts. Buttons in positions E and F operate two sets of transfer contacts.

- (a) Equipped with six 51A Lamps, one each in positions A, B, and C for illuminating, and one each in positions D, E, and F for spares.
- (b) Button in position E is transparent red and is nonreleasing and button in position D is nonreleasing.
- (c) Equipped with six 51A Lamps, one in each position.
- (d) Arranged to accommodate six 51A or six 52A Lamps, one in each position. The use of 52A Lamps must be limited to operating conditions that preclude excessive heat build-up from lamp operation.
- (e) Chaining switch is omitted.
- (f) The operation of any plunger will release any previously locked-down plunger.
- (g) Lock out feature is omitted.
- (h) Terminates in a KS-16672L5 Connector.

- (a) Operation of the transparent red hold button releases any locked button and provides a holding function on circuits so equipped.
- (b) Equipped with six 51A Lamps, one in each position.
- (c) As furnished, button in position A cannot be depressed. Removing the blocking detail from the button assembly will enable this button to be depressed, thereby releasing any locked buttons.
- (d) Arranged to accommodate six 51A or six 52A Lamps, one in each position. The use of 52A Lamps must be limited to operating conditions that preclude excessive heat build-up from lamp operation.
- (e) Equipped with a red button in position A and F and a green button in position C.
- (f) Equipped with three 51A Lamps, one each in positions A, C, and E.
- (g) Equipped with two 51A Lamps one each in positions A and C.
- (h) Operation of the transparent red button in position F releases any locked button.
- (j) Equipped with three 51A Lamps, one each in positions A, B, and C.
- (k) Equipped with an amber button in position D and a green button in position E.
- (l) Terminates in a KS-16672L4 Connector.
- (m) Operation of the transparent red or green hold buttons releases any locked button and provides a holding function.

KEYS

613B

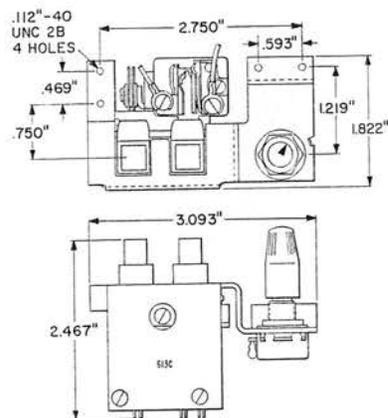

Consists of two push button operated spring combinations and a potentiometer assembled on a metal bracket. Equipped with a 51A Lamp for illuminating the plunger adjacent to the potentiometer. Terminals are approximately 18 inches long.

Mounting screws and a clear plastic window assembly are furnished.

For use in customized installations of 3B Speakerphone Set.

Comcode: 100 288 471

613C

Consists of a two button ON-OFF Key with square buttons and a potentiometer assembled to a bracket for panel mounting. A clear plastic window and four .112-40 by 1/2 inch long FHM screws are shipped loose. The ON key is equipped with a 51A Lamp; and the key, potentiometer, and lamp are equipped with 18 inch spade-tipped leads.

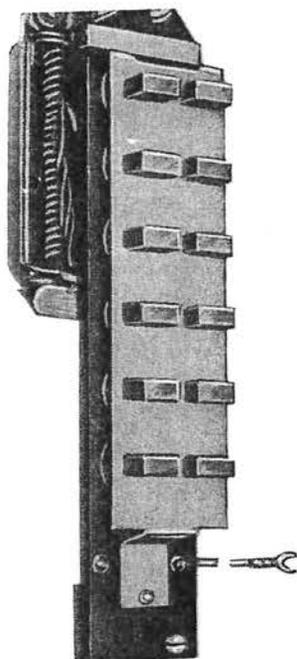

The assembly is designed to mount on a 1/4 inch thick panel. For mounting on panels of less than 1/4 inch thickness, four spacers will be required.

Used in 3B Speakerphone System installations employing modular telephone units.

Comcode: 101 150 050

KEYS

617A

Consists of twelve nonlocking plunger-operated spring combinations, a connector, and two ground strips assembled on a mounting. The ground strips are located under the two rows of spring combinations and are connected by means of a removable strip. An 8-inch long flexible lead, terminated in a cord tip arranged for a number 4, 5 or 6 screw, is connected to the ground strips. Overall dimensions are approximately 6-5/8 inches long by 1-1/4 inches wide by 2-7/8 inches deep.

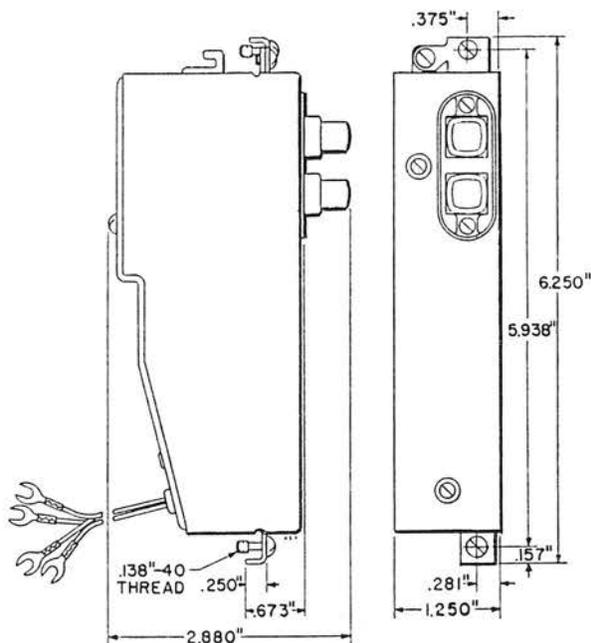

Each spring combination has a pair of make contacts. One contact of each pair is connected to one of the ground strips. The other contact of each pair is connected to a terminal on the connector.

A designation strip (shipped loose) is provided.

Forms part of the number 630 to 639 type telephone sets, and is arranged to mount interchangeably with a number 598 or 599 type key, or a 105BW Apparatus Blank.

Comcode: 100 288 513

621A and 622A

621A: Consists of a push button operated nonlocking spring combination and a push button operated release mechanism assembled on a metal bracket and provided with a black metal cover. The release push button located on top is clear and self-restoring. When depressed mechanically, operates a release arm which is arranged to actuate the pivot bar of an interlocked field of associated 598A keys which releases all locked buttons. The signal push button is amber and operates a set of make before break contacts. Equipped with 9-inch long terminal leads with cord tips arranged for number 4, 5, or 6 screws. Arranged to mount in 423AW2 and 424AW2 Key Mountings.

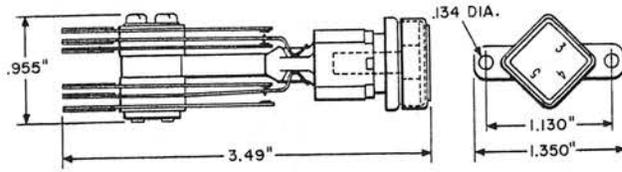

Comcode: 100 288 638

622A: Same as 621A except that it contains a 24 volt dc electromagnetic mechanical booster associated with the release push button. The booster reduces the push button pressure required to operate larger field of associated 598A Keys. Equipped with four 9-inch, two 12-inch, and two 13-inch long terminal leads. Arranged to mount in 423AW2 and 424AW2 Key Mountings.

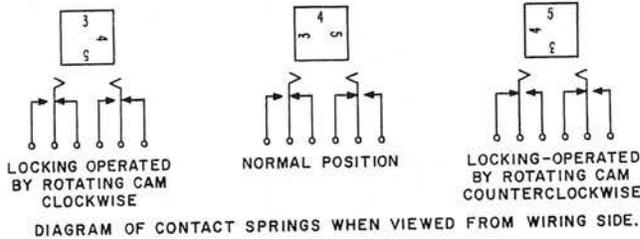

Comcode: 100 288 646

KEYS

625A Type

POSITION OF KEY FACE WHEN VIEWED FROM FRONT

A turn button type key equipped with a square button plunger having a red transparent top and a designation strip.

Turning the button clockwise operates one set of transfer springs. Turning the button counterclockwise operates the other set of transfer springs.

Terminals are arranged for mechanically wrapped connections.

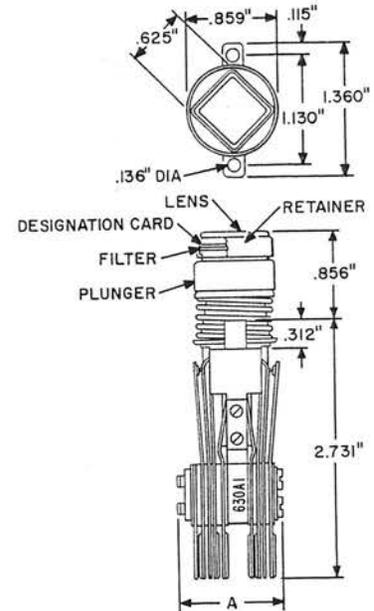

Arranged to mount on one inch horizontal or vertical centers with mounting holes 45 degrees from the horizontal.

The Keys are coded so that color of plunger and retainer is indicated by the last number in the code as indicated below.

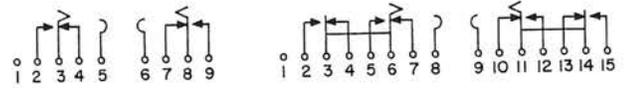

Code No.	Comcode	Color
625A1	101 150 332	Beige
625A2	101 150 340	Gray
625A3	101 150 357	Green

The 625A1 Key replaces the 625A Key.

Each is a push-to-lock, push-to-unlock key, provided with contacts of No. 1 metal, unless otherwise noted in the table, and terminals arranged for mechanically wrapped connections.

They are equipped with a square-button plunger and retainer having a clear plastic lens. A green, red or yellow lens may be obtained when specified in the order.

The keys are arranged to accommodate a KS-20221 Designation Card, which is not furnished and must be ordered separately. They are also arranged for but not equipped with an A3, B2, or M1 Lamp for button illumination.

As an added feature, if a colored signal is required when the lamp is on, an amber, green, or red filter for insertion under the designation card may be specified in the order. This is generally recommended for white keys only.

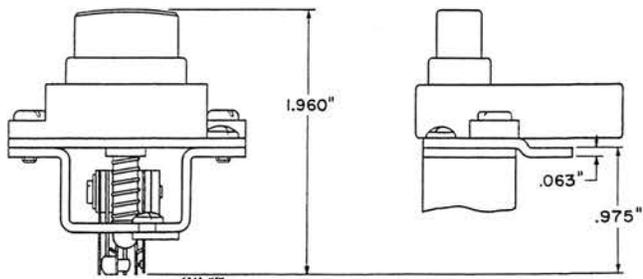

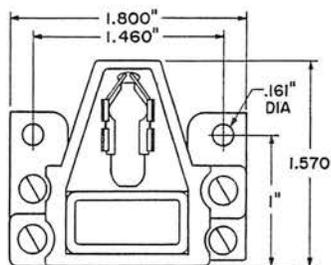

These keys are arranged to mount on a 0.312 inch key shelf equipped with a 0.062 inch mask, or any other mounting surface totaling 0.375 inch thickness. Mounting screws are provided.

The closest recommended horizontal and vertical mounting centers with mounting holes 45 degrees from horizontal are 1.125 inches for 630F1, F4, H1, and P4, and 1.00 inch for 630A1, A2, A3, A4, B1, B4, C1, C4, D1, D2, D3, E1, J1, K1, N4, R1, R2, R3, T1, T4, U1, and W4. When 630C1, C4, and N4 are mounted in two or more rows horizontally or vertically, the closest recommended mounting centers in either the horizontal or vertical directions are 1.125 inches, and 1.00 inch in the perpendicular direction.

- (d) The "X" and "Y" sequence does not apply to 630N4.
- (e) Three make contacts on one side are momentary.

634A and B

KEYS

Non-locking illuminated push-button type key assembled on a metal bracket. Depressing the button operates two sets of break contacts and one set of make contacts. All contacts are of number 2 metal (palladium).

Equipped with a 51A Lamp.

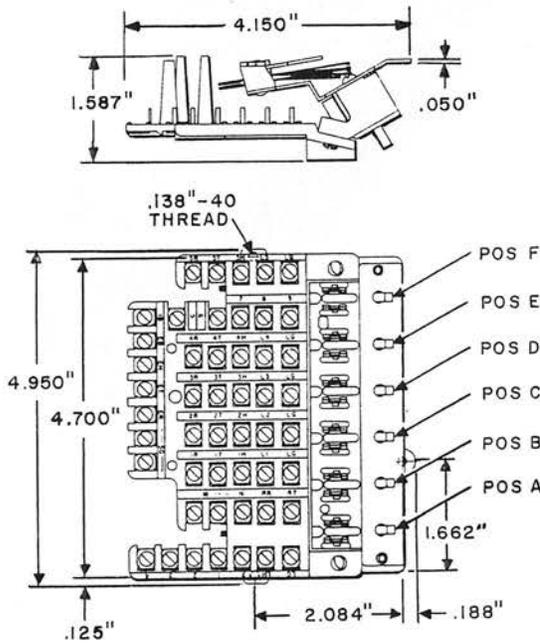

634A: Has a green plastic button.

Comcode: 100 289 016

634B: Has a red plastic button.

Comcode: 101 220 739

636A and B

Mechanically locking keys consisting of six spring combinations which are plunger operated and wired to a terminal strip.

Contact springs which are operated by the action of the plungers are locking or releasing as indicated. Keys having positions designated as "Pickup or Signal (Convertible)" are furnished with the positions arranged and wired for Pickup (Locking) but by removal of a screw pin from the plunger and a change in the wiring at the terminal strip, the position can be converted in the field to Signal (Nonlocking). Releasing plungers, which are nonlocking, and locking plungers will release any plunger that is locked. Operation of any two or more locking plungers simultaneously is prevented by means of a lock-out feature.

Equipped with six lamp sockets arranged for 51A Lamps, which are not furnished. Buttons required for use with plungers are furnished as part of the associated apparatus.

636A: Plunger in position A operates one set of transfer contacts. Plungers in positions B through F operate three sets of make contacts.

For use in 564HLW, 565HKW, and 1564HLW type telephone sets.

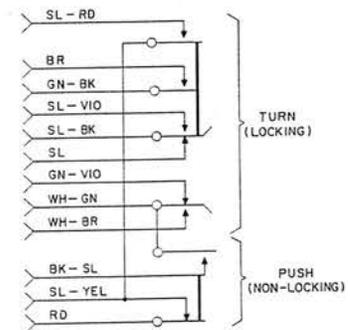

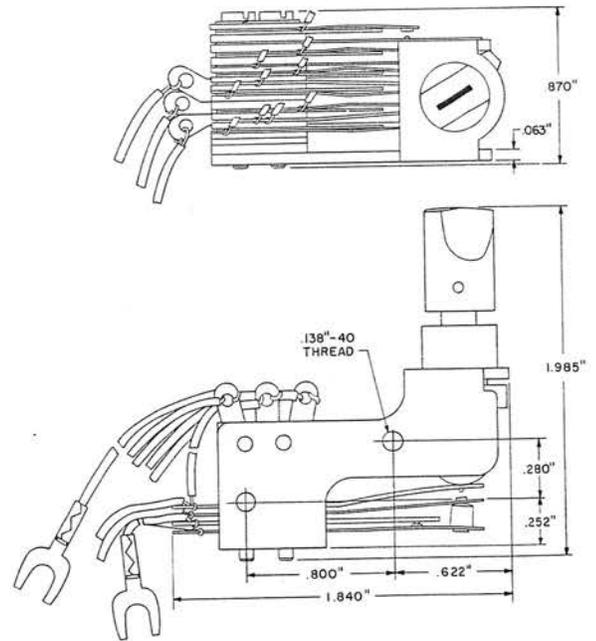

636B: Plungers in positions A through F operate three sets of make contacts.

For use in 565GKW and 1565GKW type telephone sets.

Code No.	Comcode	Positions (Spring Combinations)					
		A	B	C	D	E	F

H/R—Hold (Releasing)
P/L—Pickup (Locking)
PS/C—Pickup or Signaling (Convertible)

637A

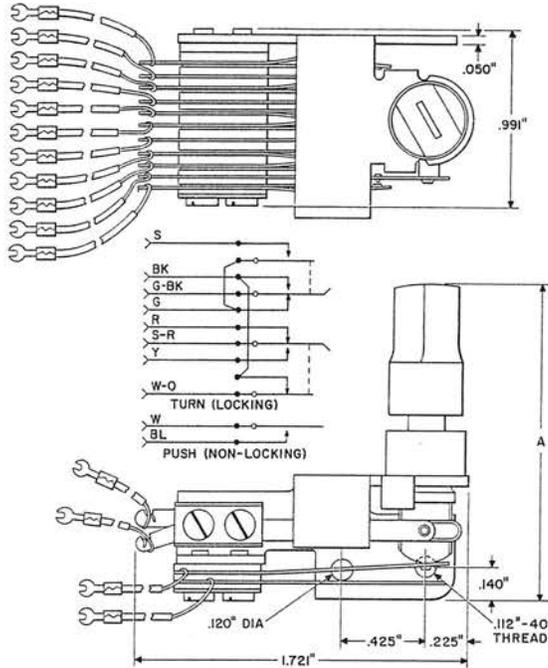

The 637A Key is a combination turn and push button type key assembled on a metal bracket. Equipped with terminal leads from 3-1/4 to 7 inches long having cord tips that are arranged for number 4, 5, and 6 screws. Turning the button clockwise will operate all contacts in the TURN (LOCKING) position as indicated in the schematic. Push button can be operated when the turn button is in either position. Equipped with a clear plastic button with a black line which indicates the position of the turn button.

Comcode: 100 289 099

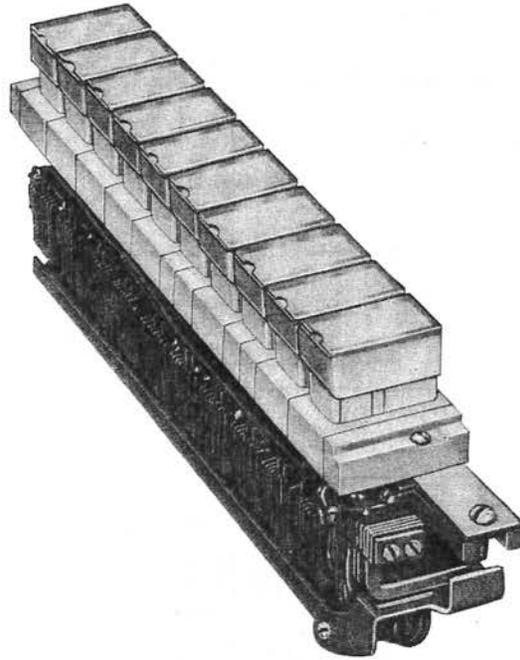

Used in the 514BW and 563HBW Telephone sets.

KEYS

638C and D

645 Type

638C: A combination turn and push button type key consisting of a single plunger and two separate sets of non-bifurcated spring combinations mounted on a metal bracket. The turn button operates two transfers, a break and a make contact (locking) and the push button operates one set of make contacts (nonlocking).

The push button may be operated in either position of the turn button. Equipped with a clear plastic knob having a black line which indicates the position of the turn button.

Equipped with terminal leads from 3.25 inches to 7.0 inches long having cord tips that are arranged for number 4, 5, or 6 screws. Spade tipped leads are soldered to the terminals.

638D: Same as 638C except that the knob is 0.125 inch longer.

Code No.	Comcode	Dimension "A" (Inches)
638C	101 092 443	1.226
638D	101 092 450	1.351

The 638C and D were used initially in the 713B and 1713B telephone sets, respectively.

Consists of ten illuminated push buttons in a die-cast frame. Overall dimensions are approximately 9.065 inches long by 3.248 inches high by 1.250 inches wide. All buttons are hinged to allow the button to be swung upward to facilitate changing of designation strips. The designation strips are assembled into a clear window which is slotted on the side away from the hinged side. The window is of clear plastic and is illuminated by a 53A Lamp which is contained by spring clips in the lamp block. The buttons are assembled to the plungers of the key by a press fit which allows removal of the button for lamp replacement. Contacts from the contact spring assemblies and lamp block are wired to a 50-contact KS-16672L1 Connector mounted to the key.

645A: Has nonlocking buttons in all positions. No two buttons may be operated simultaneously. Each button operates a spring contact assembly of one make sequence. The key is also equipped with a chaining switch of one make and one break sequence.

Comcode: 100 289 198

645B: Has locking buttons in the first five positions. Each of these five buttons will release any other locked button but no two of these five buttons may be locked simultaneously. Each of these five buttons operated a spring contact assembly of three makes.

Comcode: 100 289 206

KEYS

645C: Same as 645A except the buttons equipped with snap-on caps which may be removed to permit replacement of the 53A Lamps.

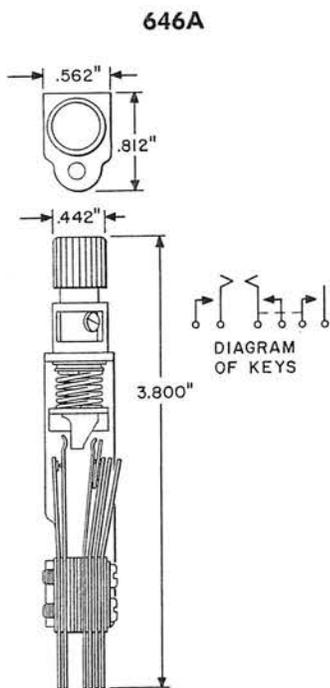

Comcode: 101 395 051

645D: Same as 645B except the buttons in positions 1 through 5 are locking-releasing type and the hold button in position 10 is a nonlocking-releasing type and the buttons are equipped with snap-on caps which may be removed to permit replacement of the 53A Lamps.

Comcode: 101 395 069

The buttons in positions 6 through 9 are nonlocking and nonreleasing and may be operated simultaneously with each other and also with any other button in positions 1 through 5. The tenth position performs the holding function of these pickup lines associated with the first five positions.

For use with the Nurse's Console in the 3A Communication System (Hospital Interphone).

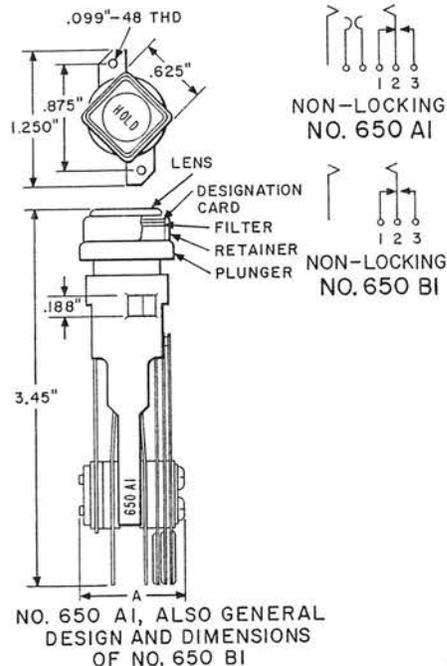

Combination push and turn button key. Pushing button in operates two make contacts, nonlocking. Turning the button operates one make contact, locking.

Horizontal mounting centers are 0.750 inch.

Used initially in the 395A Key Mounting in the number 300 Switching System.

Comcode: 101 153 658

650A1 and B1

NO. 650 A1, ALSO GENERAL DESIGN AND DIMENSIONS OF NO. 650 B1

650A1: A nonlocking push button key. Equipped with a square-button plunger and retainer having a clear plastic lens. May be obtained with a green, red, or yellow lens when specified in the order. Contacts are of number 1 metal. Dimension A is 0.991 inch.

Arranged to accommodate a KS-20221 Designation Card, which is not furnished and must be ordered separately.

As an added feature, if a colored signal is required only when the lamp is on, an amber, green, or red filter may be specified in the order for insertion under the designation card. This is generally recommended for white keys only.

Arranged for but not equipped with an A3, B2, or M1 Lamp for button illumination.

Terminals are arranged for mechanically wrapped connections.

Arranged to mount on a 0.312 inch key shelf equipped with a 0.062 inch mask, or any other mounting surface totaling 0.375 inch thickness, on one inch horizontal or vertical centers with mounting holes 45 degrees from horizontal. Mounting screws are furnished.

Comcode: 101 153 732

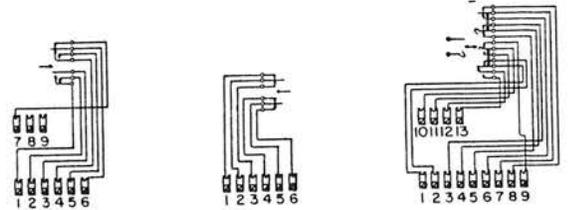

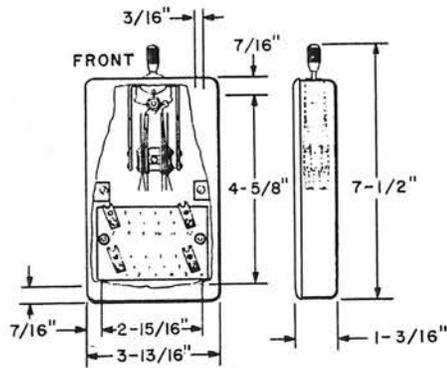

650B1: Same as 650A1 except it is not arranged for a lamp. Dimension A is 0.917 inch.

Comcode: 101 153 740

These keys are used in the 608D PBX.

(j) Equipped with heavy contacts.
(k) Must be made on customer order basis and should be ordered only in cases where no other apparatus will meet requirements.

KEYS

6021DN-3

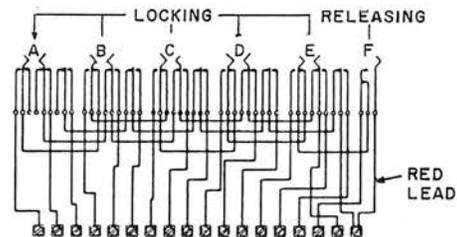

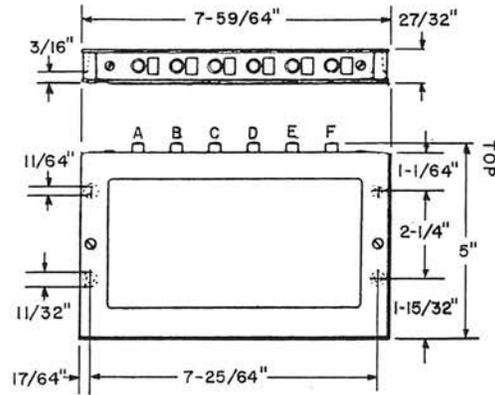

Consists of a key unit and a terminal strip enclosed in a black metal box. The contact springs are strapped to the terminal strip for outside connection. The keys are equipped with black push buttons. The box may be reversed with respect to the key assembly to permit mounting on either the right or left side of a desk or table. The cover is provided with two holes for cable entrance and is attached to the box with screws.

The locking buttons, when depressed, release any locked button and remain locked in the operated position. The releasing push buttons, when depressed, release any locked button and return to normal position. The nonlocking push buttons, when depressed, do not release any locked button and return to normal position after depressing.

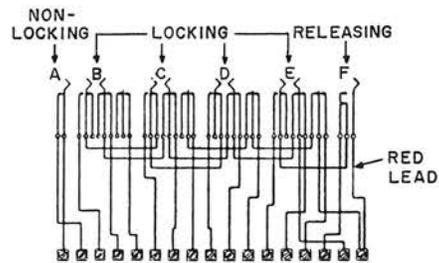

A designation card frame is provided above each button and a set of designation cards is furnished.

Comcode: 100 290 238

6027 Type

6027DA-3

6027DB-3

Consists of a key unit and a terminal strip enclosed in a black metal box. The contact springs are strapped to the terminal strip for outside connection. The keys are equipped with six black push buttons.

The box may be reversed with respect to the key unit in order to permit mounting on either the right or left side of a desk or table. The cover has two holes for cable entrance and is attached to the box with screws.

KEYS

6027 Type (Continued)

The locking push buttons, when depressed, release any locked button and remain locked in the operated position. The releasing buttons, when depressed, release any locked button and return to normal position. The nonlocking push button, when depressed, does not release any locked buttons and returns to normal position. A designation card frame is provided for each button and a set of designation cards is furnished.

Code No.	Comcode	Features (a)
6027DA-3	100 290 295	PPPPPH
6027DB-3	100 290 303	SPPPPH

(a) Arranged for pickup (P), signal (S), and hold (H), as indicated.

For use in the 1A1 Key Telephone System. The red lead (see illustration) should be removed when used with the 1A1 Key Telephone System.

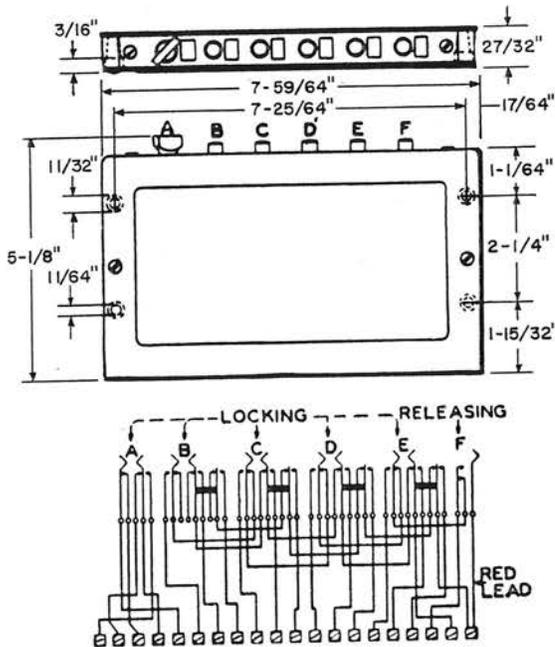

The locking push buttons, when depressed, release any locked button and remain locked in the operated position. The releasing push buttons, when depressed, release any locked button and return to normal position. The nonlocking push buttons, when depressed, do not release any locked buttons and return to normal position. The turn button neither releases nor is released by any other button. A designation card frame is provided for each button and a set of designation cards is furnished.

This key has one cutoff key (C), four pickup keys (P), and one hold key (H) (CPPPPH).

For use in 1A1 Key Telephone Systems. The red lead (see illustration) should be removed when used with the 1A1 Key Telephone System.

Comcode: 100 290 345

6028DA-3

Consists of a key unit and a terminal strip enclosed in a black metal box. The contact springs are strapped to the terminal strip for outside connection. The keys are equipped with five black push buttons and one black turn button.

The box may be reversed with respect to the key assembly in order to permit mounting on either the right or left side of a desk or table. The cover is provided with two holes for cable entrance and is fastened to the box with screws.

KEYS

6040 and 6041 Type

Consist primarily of a 589 and a 636 type key enclosed in a black or colored housing of insulating material with a cord of matching or harmonizing color. The 6041 type keys are the same as the 6040 type except that they are not equipped with cords.

The overall dimensions for these keys are 5-13/64 inches wide by 5-3/8 inches deep by 2-21/64 inches high.

The keys are arranged for hold (H), pickup (P), release (R), signal (S), cutoff (C), and local (L) as indicated in the following tables. Spring combinations enclosed in () may be connected for signaling and pickup, respectively, in the field. Pickup (P) and local (L) positions are equipped with 51A Lamps. Designation cards are not furnished.

Intended for use with desk, wall, and hang up type telephone sets to provide illuminated key switching similar to that of the number 564 type telephone sets.

6050 and 6051 Type

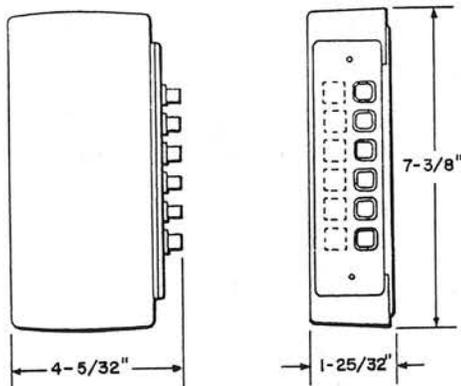

Fig. 1

The 6050 and 6051 type keys consist of a key mounting equipped with 598 or 599 type keys as indicated. They are furnished in the colors indicated below and are provided with five face mats colored cream white, blue, gold, green, and silver for use under the face plate to provide a choice of color contrasts.

These keys are furnished with key buttons on the right side of the key mounting but the buttons can be changed in the field to the left side, if desired.

The keys are arranged for hold (H), pickup (P), and cutoff (C) as indicated in the table.

The 6050 and 6051 type keys are arranged for, but not equipped with, the A25A and A50A type connector cables, respectively.

KITS

Artificial Cable

1A

The 1A Artificial Cable Kit is a series of networks in small cases made of a strong gray plastic, all the same size and shape, but with distinguishing labels. The size of each case is 4.355 inches long by 2.750 inches wide by 1.750 inches deep. The cases are fitted with plugs and jacks so that they may be pinned directly in tandem, without cords. The kit consists of the following networks:

Qty	Network	Qty	Network
15	4096B	4	4096R
10	4096C	6	4096T
6	4096D	6	4096U
4	4096E	4	4096W
6	4096G	4	4096Y
6	4096H	6	4096AB
4	4096J	6	4096AC
4	4096K	4	4096AD
6	4096M	4	4096AE
6	4096N	16	4096AH
4	4096P		

Sixteen 4096AH Networks (88 mh loading coils) are provided for loading purposes. 4096A, F, L, S and AA networks are available for simulating 6000 feet, 3000 feet, 1500 feet, 750 feet, and 250 feet, respectively, of 0.066uf/mile number 19AWG cable, but must be ordered separately. In addition, 4096AF Network (22 mh loading coil) and 4096AG Network (44 mh loading coil) are available for loading purposes but must be ordered separately.

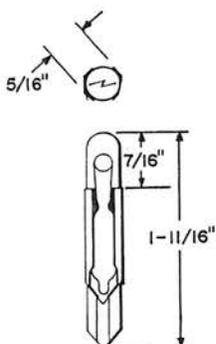

Used to simulate cable characteristics of high capacitance number 19, 22, 24, and 26 AWG cable in various lengths as indicated in table.

Comcode: 100 857 481

Simulated length of cable	Quantity of each type network gauge of 0.083 uf/mile cable			
	19AWG	22AWG	24AWG	26AWG
6000 feet	15-4096B	10-4096C	6-4096D	4-4096E
3000 feet	6-4096G	6-4096H	4-4096J	4-4096K

(a) Arranged to mount in 130B Electron Tube Socket.

(b) Arranged to mount in 143B Electron Tube Socket.

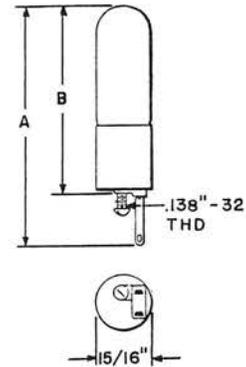

LAMPS

Resistance

12 Type

13 Type

Tungsten filament lamps having a medium screw base.

Tungsten filament lamps with a molded base having two soldering terminals. Will mount on relay mounting plates on 1-inch centers and on mounting plates drilled or punched for E, R, or U-type relays.

Dimensions A and B for 13P are 3-7/8 inches and 3 inches, respectively. Dimensions A and B for all other codes are 4-3/16 inches and 3-5/16 inches, respectively.

13A through 13L are electrically equivalent to the corresponding code of the number 12 type.

LOUDSPEAKERS

760AW Type

Consists of a permanent magnet dynamic loud speaker mounted on a metal base having a plastic housing, with cord of same color furnished. Has a nominal impedance

of 23 ohms at a frequency of 1000 Hz, and an approximate dc resistance of 19 ohms, both exclusive of the cord.

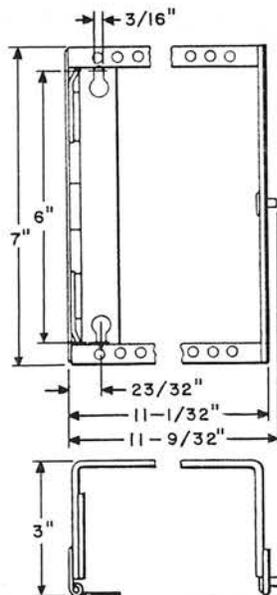

For use in the 3B Speakerphone System.

MOUNTINGS

Apparatus

15A

16C

Metal framework arranged for mounting some 200 type key telephone units. Can also mount bent bracket type key telephone units by using P-37B204 Brackets. Brackets must be ordered separately.

Arranged to mount on a wall or on a 173A Backboard so the hinged mounting surface allows the framework to swing open, which permits access to front and rear of key telephone units. Two 15A Apparatus Mountings can be mounted on a 173A Backboard and protected with a 116A Cover.

For use in the 1A1 Key Telephone System.
Comcode: 100 321 306

A metal framework assembled on a metal backboard, hinged to permit access to front and rear of apparatus when assembled on this mounting. Provided with six cable rings, six blocks, and screws for mounting the cable rings and blocks.

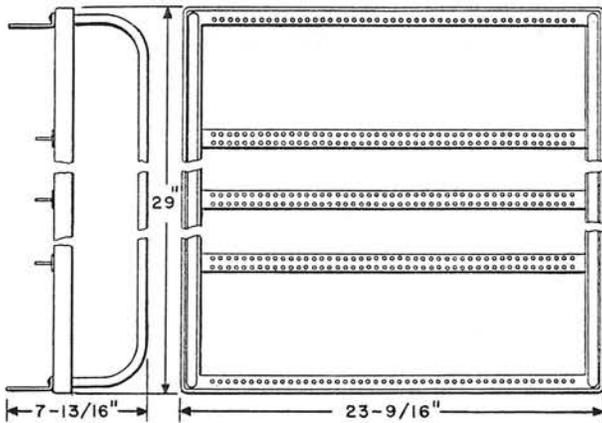

Arranged to mount 200 type key telephone units or bent bracket type units by using P-37B204 Brackets, which must be ordered separately. Can also mount 19-inch mounting plates with the aid of P-36B209 Adapters, which must be ordered separately, and 23-inch mounting plates up to a total height of 13 inches. For wall or floor mounting.

For use with a 117A Cover in the 1A1 Key Telephone System.
Comcode: 100 321 322

MOUNTINGS

Apparatus

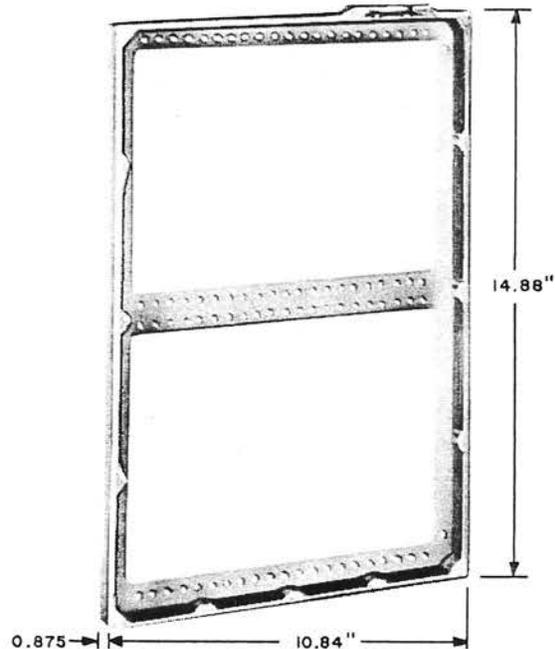

26A

Metal frame arranged to mount four rows of 200 type key telephone units or similar type units or 12 mounting plates, 2 inches high and 23 inches long, or a combination of units and plates. Can be modified to hold 13 mounting plates by removing two of the horizontal T-section mounting bars. Four supports and eight screws are furnished. Two of these supports are assembled in the top and two in the bottom to protect the terminals in the key telephone units.

Comcode: 100 321 447

31B

Die cast metal framework arranged for mounting a 230B Key Telephone Unit in each of two rows, or number 200 type key telephone units in each row up to a total width of 9-3/16 inches.

Mounts a 177A Backboard by means of a P-15C309 Bracket and a P-15C308 Hinged Bracket which permits access to front and rear. Mounting brackets must be ordered separately. May be protected by 116A Cover.

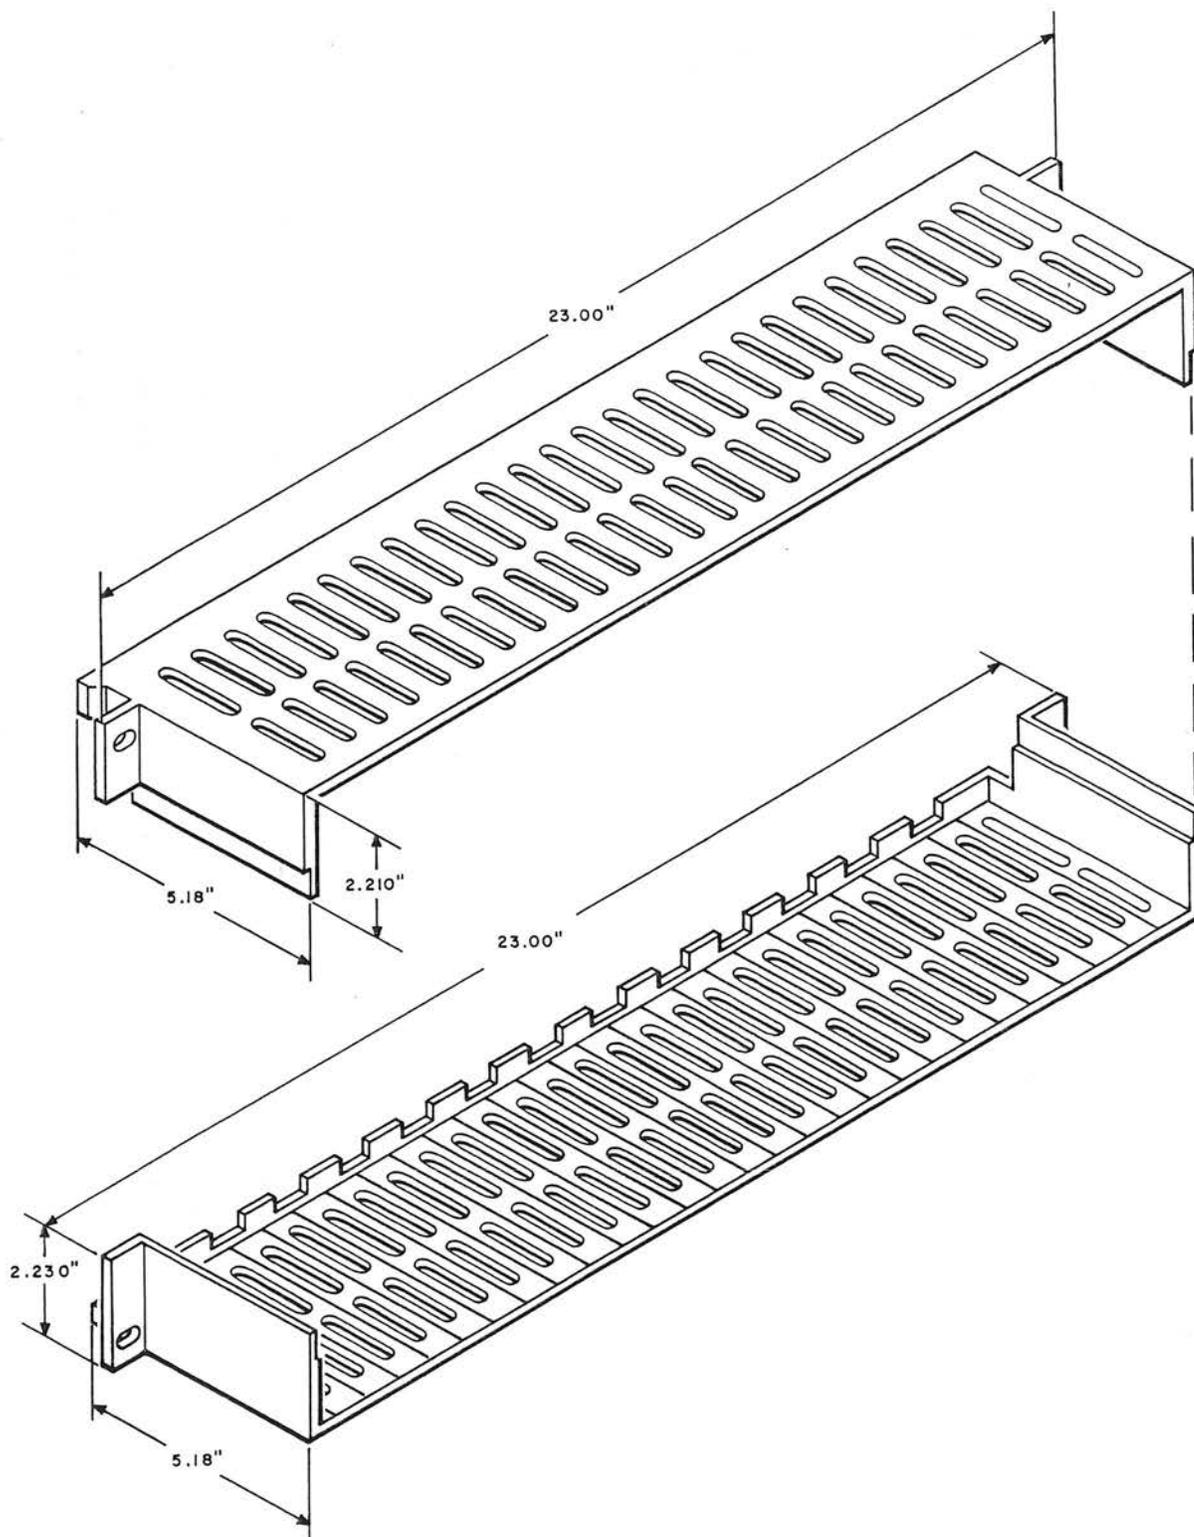

Forms a part of the number 300, 301, and 302 type key service units.

Comcode: 100 321 504

MOUNTINGS

Apparatus

57A

APPARATUS

MOUNTINGS

Apparatus

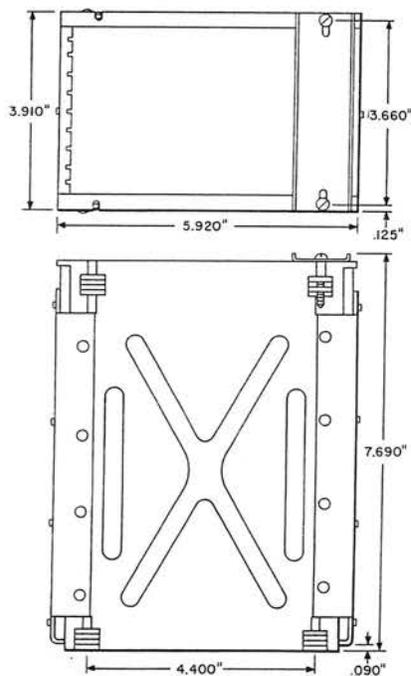

57A (Continued)

Consists of two cast metal frames, a top mounting, and a bottom mounting assembled to accommodate fourteen printed wiring cards with dimension of 5.3 inches by 3.5 inches by 1.5 inches.

Used in number 584 type panels in the 1A2 Key Telephone System.

Comcode: 101 230 878

61A

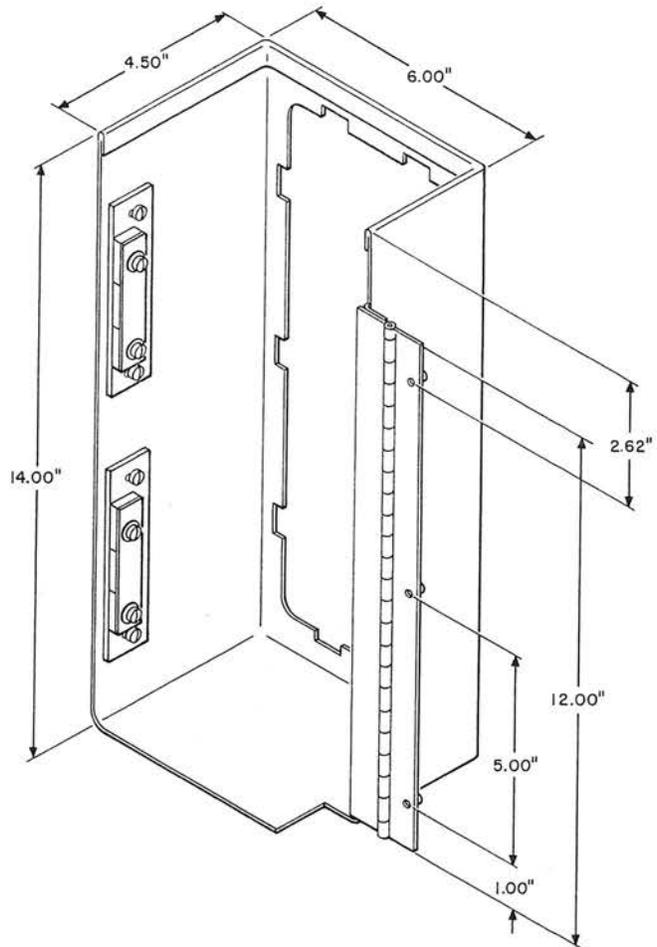

Consists essentially of a 0.63 inch thick steel plate having a 289A zinc plated finish. Has two stamped end plates and two formed grid supports with plastic grids. Arranged for mounting on a 6.00 inch mounting plate and on 4.010 inch horizontal mounting centers. Will accommodate one to five 927A Connectors and printed wiring boards. Four number 6 self tapping screws are provided for mounting.

Used initially with Data Auxiliary Sets 811CW1 and 816BW1.

Comcode: 101 237 071

66A

A corrosive resistant steel apparatus mounting having an oxford gray (-52) finish. Equipped with a piano type hinge to allow the mounting to swing away from the surface on which it is mounted.

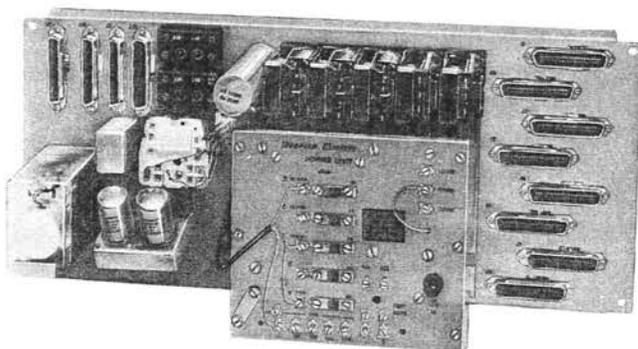

Used initially to mount the 223BW-52 Hand Telephone Set to a number 28 type teletypewriter.

Comcode: 101 202 448

MOUNTINGS

Data

4A1

Consists of a power unit, an interrupter, relays, connectors, and pigtail components mounted on a panel. Arranged for relay rack mounting by four 0.32 inch by 0.25 inch holes located on 22.312 inch by 9.00 inch centers.

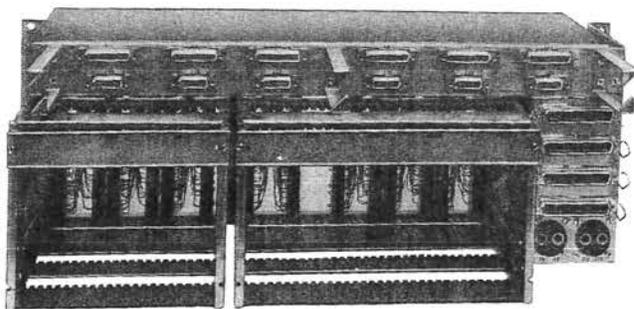

Overall dimensions are approximately 23.00 inches long by 9.96 inches high by 8.01 inches deep.

Functions as a distribution and control panel which interconnects a mixture of up to eight Data Mountings 5A1 and/or 6A1, Data Auxiliary Set 804L, telephone lines, and a remotely located console control position when used.

Used initially at NASA Huntsville multiple data set installation.

Comcode: 101 214 302

5A1

Consists of a 58A Apparatus Mounting, a 59B Apparatus Mounting, 927B Connectors, KS-16786L4 Connectors, KS-19078L1 and L2 Connectors; and 225A Jacks mounted and wired on a panel. Arranged for relay rack mounting by four 0.32 inch by 0.26 inch holes located on 22.312 inch by 7.00 inch centers.

Overall dimensions are approximately 23.00 inches long by 7.96 inches high by 8.90 inches deep.

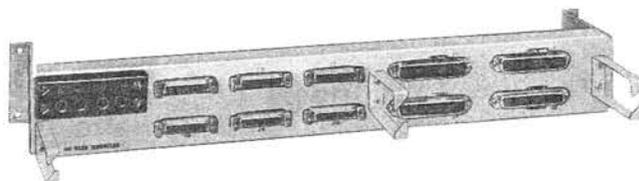

Provides four-wire line control functions for up to six switched network data sets with or without associated data auxiliary sets 801CW type in a multiple data set system. Each data set may be controlled from either of two telephone unit positions.

One AR195 Circuit Pack for each data set associated with the data mounting and one AR196 Circuit Pack for every three data sets associated with it are required but must be ordered separately.

Used initially in the NASA Huntsville multiple data set installation.

Comcode: 101 214 310

6A1

Consists of four KS-16786L4 Connectors, six KS-19087L2 Connectors, and four 631C Jacks mounted and wired on a panel. Arranged for relay rack mounting by four 0.32 inch by 0.26 inch holes located on 22.312 inch by 2.00 inch centers.

Overall dimensions are approximately 23.00 inches long by 2.96 inches high by 7.59 inches deep.

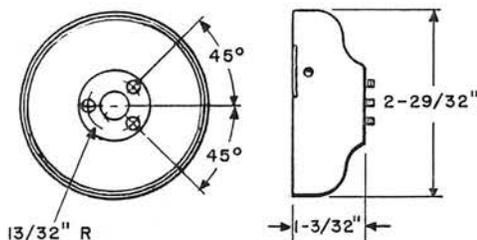

Used initially in NASA Huntsville multiple data set installation.

Comcode: 101 214 328

MOUNTINGS

Dial

30A

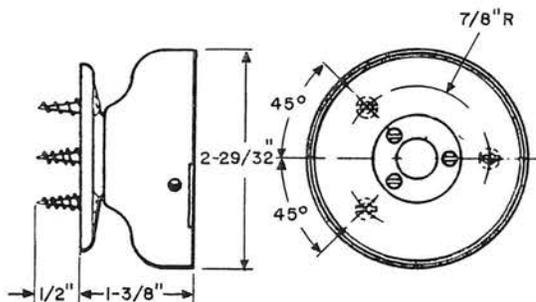

Consists of a black finished metal mounting for mounting on residence system sets and similar apparatus. Mounting screws are furnished.

Used in conjunction with number 52 type dial adapter for mounting number 6 type dials.

Comcode: 100 321 793

32A

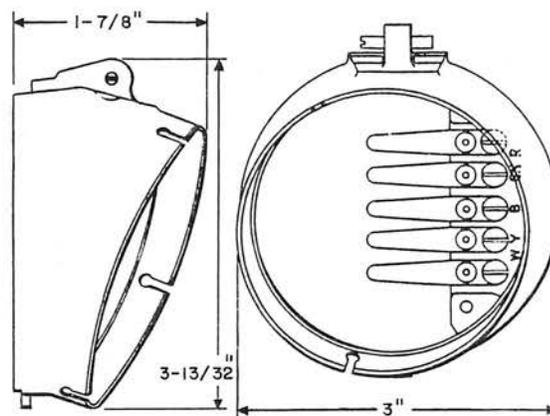

Consists of the 30A Dial Mounting provided with a black finished base for mounting dial in a vertical position on local test desk and PBX switchboards. Mounting screws are furnished.

Used in conjunction with number 52 type dial adapters for mounting number 6 type dials.

Comcode: 100 321 801

34D

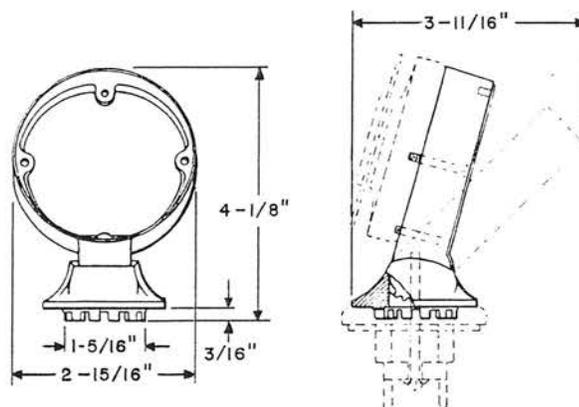

Black finished metal detachable dial mounting for use in conjunction with 25B Connecting Block and 52D Dial Adapter for mounting 5E type dials.

Provided with a locking screw to prevent removal without the use of a tool. Mounting screws and a dust shield are furnished.

Used on toll test boards and telegraph service boards which have slanting plug shelves.

Comcode: 100 321 819

43A Type

Mounts number 6 type dials. Has a removable cover plate providing access to the dial terminals. The connections from the dial to the hand set mounting pass through the inside of the base.

For use with G type hand set mountings and is arranged to mount at various angles with respect to the vertical

MOUNTINGS

Dial

43A Type (Continued)

in steps of 15 degrees up to a maximum of 45 degrees. Screws and washers are furnished for mounting the dial and dial mounting.

Code No.	Comcode	Color
43A-3	100 321 868	Black

43A-61	100 321 942	Light gray

44B-45: Same as 44B-3 Dial Mounting except color is gray green.

Comcode: 100 321 983

44C-3: Same as 44B-3 Dial Mounting except terminal is marked BK instead of GN. Arranged to mount 6A, 6C, 6D, 6G, 6H, 6M, 6N, or 6R type dials.

Comcode: 100 321 991

44D-3: Same as 44B-3 Dial Mounting except is provided with six contact springs and six screw terminals. Arranged to mount 6J, 6K, or 6L type dials. 59D Dial Adapter is required, but is not furnished and must be ordered separately. Fig. 2 shows 44D.

Comcode: 100 322 007

44 Type

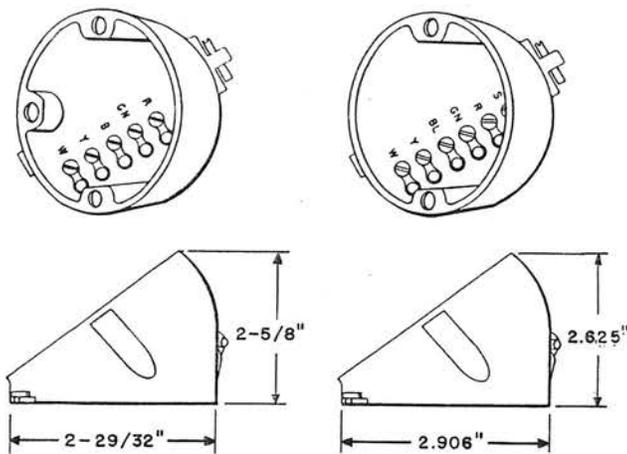

Fig. 1

Fig. 2

44B-3: Consists of black plastic frame provided with five contact springs, five screw terminals, and a 59B Dial Adapter. The springs are so positioned as to make contact with the contact points of number 25 type connecting blocks. A locking stud is provided for securing the dial mounting to the connecting block. Dials can be mounted at an angle of approximately 37 degrees from the horizontal. Arranged to mount 6E, 6F, or 6P type dials. Fig. 1 shows 44B.

Comcode: 100 321 967

44B-43: Same as 44B-3 Dial Mounting except utilizes 59C Dial Adapter. Color is gray beige.

Comcode: 100 321 975

50B and 50C Type

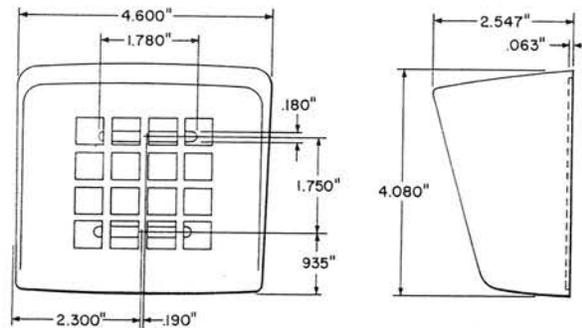

Fig. 1

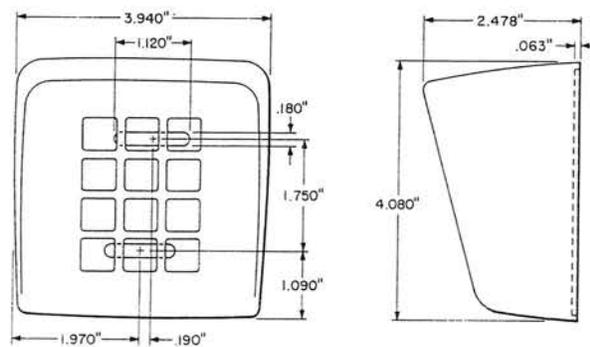

Fig. 2

50B Type: Consist of a metal bracket for mounting a 66D3A dial and a housing that snaps on over the bracket. Provided with a card retainer and a screw for securing the housing to the bracket.

Initial use: PBX Switchboard.

MOUNTINGS

Dial

50C Type: Consist of a metal base arranged for mounting a 35H3A Dial, and a housing that snaps on over the base. Provided with a card retainer, and a screw for securing the housing to the base.

Initial use: PBX Switchboard.

Code	Comcode	Fig. No.	Color

50C-43	101 365 906	2	Gray beige

6000D

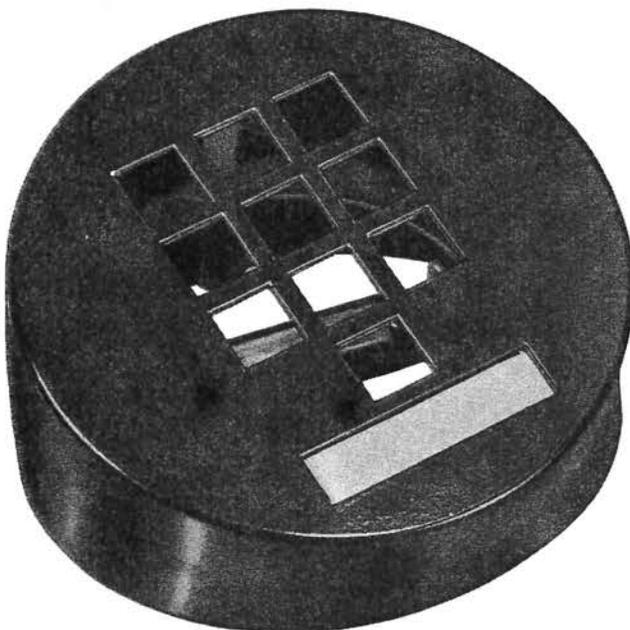

Consists of 34D Dial Mounting, 25B Connecting Block, and D5AH Cord. Used in conjunction with 52D Dial Adapter for mounting 6E type dials.

Arranged to mount on a switchboard keyshelf or other horizontal surface. Provided with a locking screw to prevent removal without the use of a tool.

For use on toll test boards and telegraph service boards which have slanting plug shelves.

Comcode: 100 322 098

51A Type

Consists of a molded plastic housing, a dial adapter, and a connecting block for terminating the dial leads. Overall dimensions are approximately 4.500 inches in diameter by 3.275 inches high.

Arranged for mounting the number 25 type, ten-button TOUCH-TONE dials at an angle of 24 degrees on special installation of telephone station apparatus.

Provided with mounting screws and screws for mounting the dial.

Code No.	Comcode	Color
51A-3	100 840 685	Black
51A-58	100 840 693	White

6044B-3, 6044B-43, and 6044C-3

6044B-3: Consists of 44B-3 Dial Mounting, 25B Connecting Block, and D5AH Cord. For mounting number 6E, 6F, or 6P type dials on telephone switchboards and at order turret positions, at an angle of approximately 37 degrees from horizontal. Color is black.

Comcode: 100 322 114

6044B-43: Same as 6044B-3 Dial Mounting except 44B-43 Dial Mounting is required. Color is gray beige.

Comcode: 100 322 122

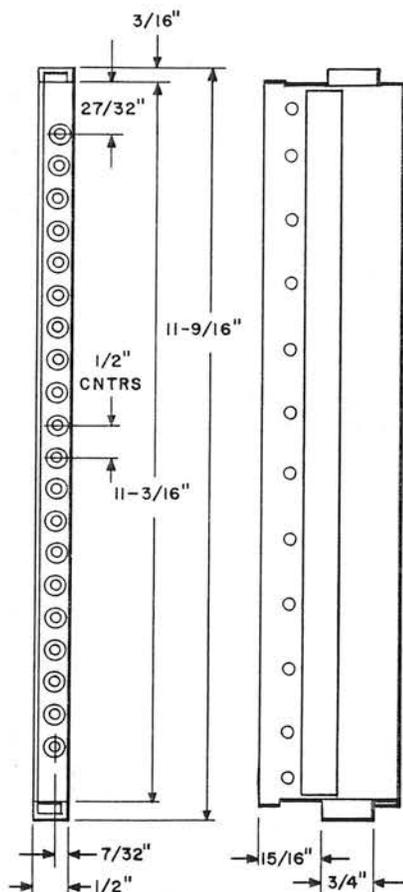

6044C-3: Same as 6044B-3 Dial Mounting except arranged to mount number 6A, 6C, 6D, 6G, 6H, 6M, 6N, or 6R type dials. Consists of 44C-3 Dial Mountings, 25C Connecting Block, and D5AJ Cord.

Comcode: 100 322 148

MOUNTINGS

Jack

112

Metal mounting with a hard rubber face that will accommodate 20 jacks. Furnished unnumbered unless otherwise specified on order. The lower edge is grooved, and spotted unless specified.

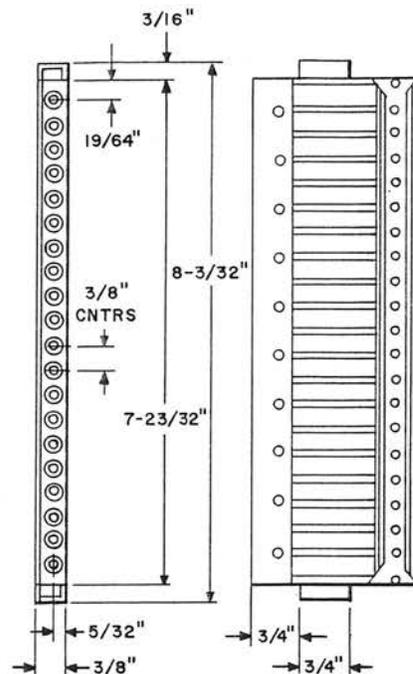

Will mount with number 59 type jack spacer, 137B Lamp Socket Mounting, and number 50 and 51 type designation strips.

For use with number 138 or 141 Jacks.

Comcode: 100 323 047

100 323 054 Numbered per order

113

Metal mounting with a hard rubber face that will accommodate 20 jacks. Furnished unnumbered unless otherwise specified on order. The lower edge is grooved, and spotted unless otherwise specified.

Will mount with number 12 Jack Spacer, number 118 Lamp Socket Mounting, and number 6, 13, and 14 type designation strips.

For use with number 92 Jacks.

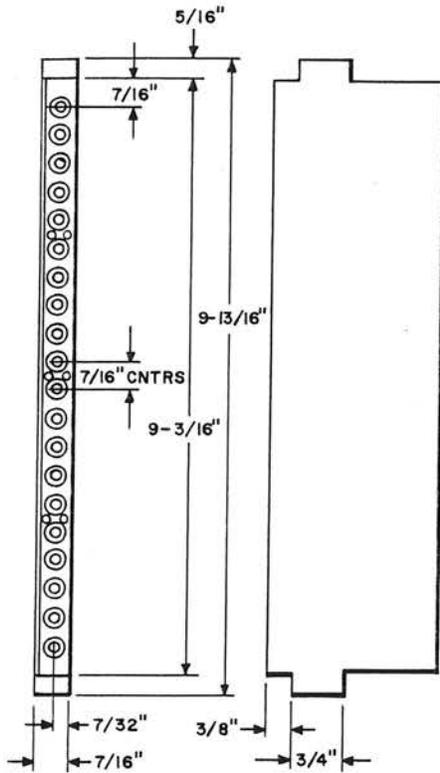

Comcode: 100 323 062

100 323 070 Numbered per order

MOUNTINGS

Jack

114

Hard rubber mounting that will accommodate 20 jacks. Furnished unnumbered unless otherwise specified on order. The lower edge is grooved, and spotted unless otherwise specified.

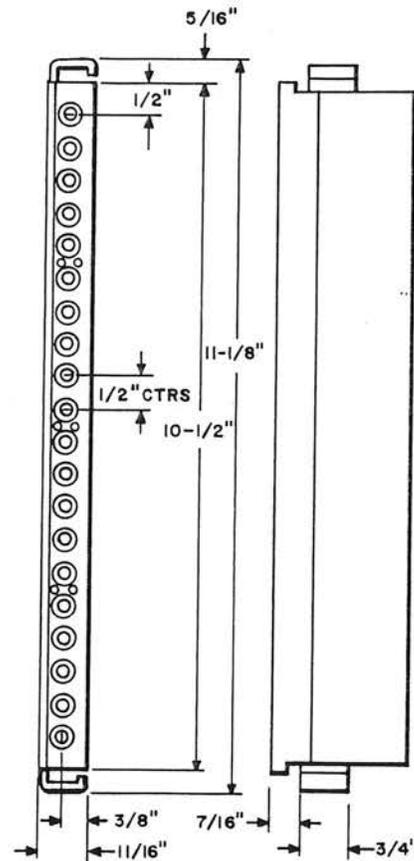

Will mount with number 1 type jack spaces, number 102 Lamp Socket Mounting, and number 1, 2, and 7 type designation strips.

For use with number 49 jacks.

Comcode: 100 323 088

100 323 096 Numbered per order

115

Metal mounting with a hard rubber face that will accommodate 20 jacks. Furnished unnumbered unless otherwise specified on order. The lower edge is grooved and spotted unless otherwise specified.

Will mount with number 27 type jack spaces and number 123 Lamp Socket Mounting.

For use with number 141 Jack.

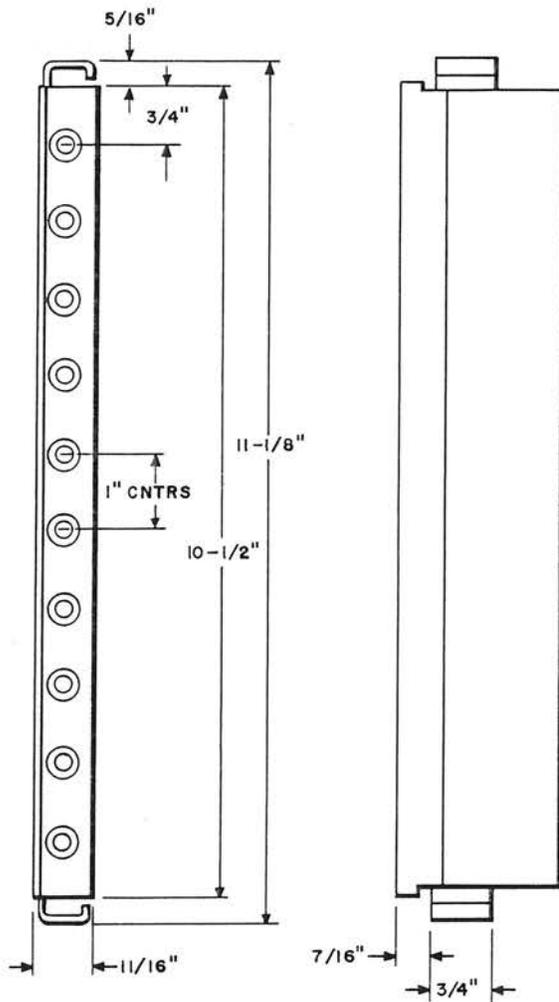

Comcode: 100 323 104

100 323 112 Numbered per order

MOUNTINGS

Jack

116

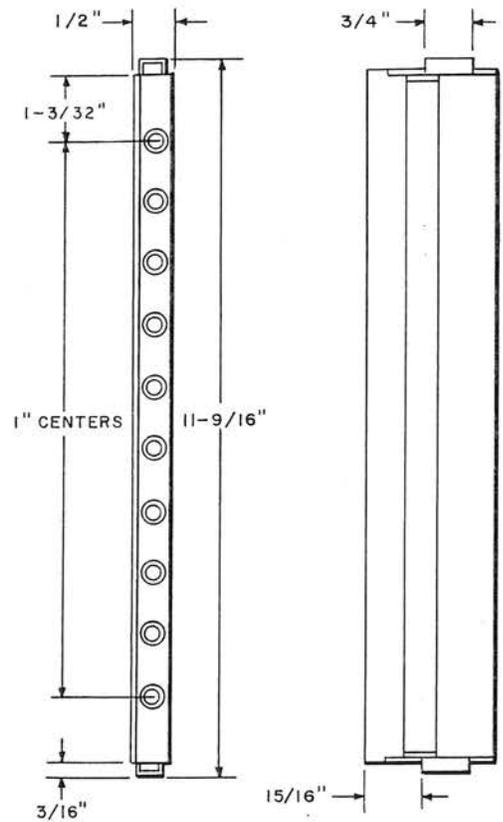

Metal mounting with a face of insulating material that will accommodate 10 jacks. Furnished only on orders for jacks and unnumbered unless otherwise specified. Not furnished partially equipped with jacks. The lower edge is grooved.

Will mount with number 27 type jack spaces and number 125 Lamp Socket Mounting.

For use with number 141, 275, 295, 308, 347, 362, 365, and 378 Jacks.

Comcode: 100 323 120
100 323 138 Numbered per order

136

Metal mounting with a face of insulating material that will accommodate 10 jacks. Furnished only on orders for jacks and unnumbered unless otherwise specified on orders. Not furnished partially equipped with jacks. The lower edge is grooved.

Will mount with number 59 type jack spacer, 136C Lamp Socket Mounting, and number 51 and 55 type designation strips.

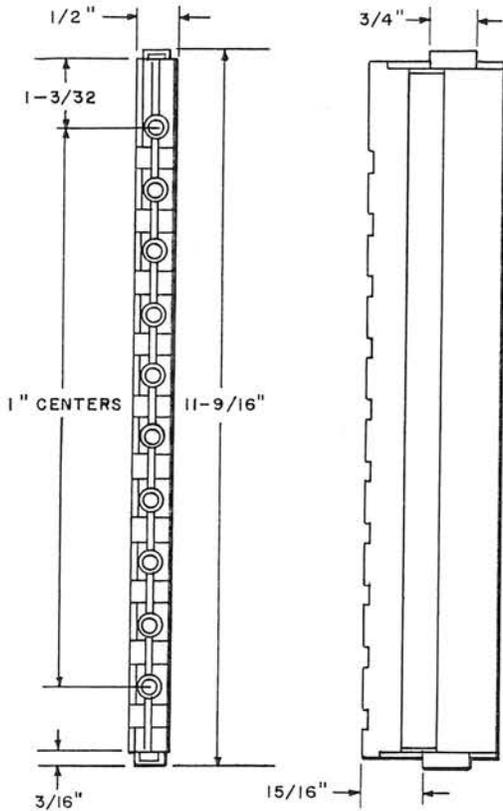

For use with number 138, 141, 275, 295, 308, 347, 362, 365, and 378 Jacks.

Comcode: 100 323 286
100 323 294 Numbered per order

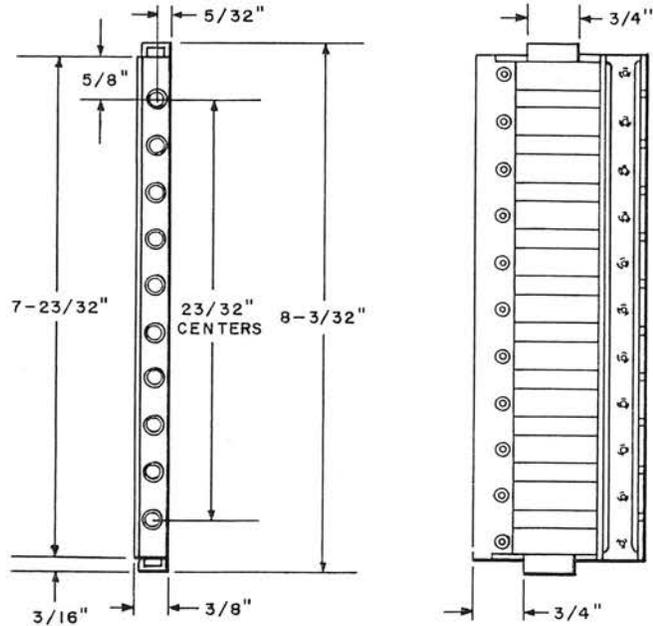

MOUNTINGS

Jack

137

138

Same as number 136 Jack Mounting except is arranged for 5B Number Plate.

Comcode: 100 323 302

Metal mounting with a hard rubber face that will accommodate 10 jacks. Furnished only on orders for jacks and unnumbered unless otherwise specified. Not furnished partially equipped with jacks. The lower edge is grooved.

Will mount with number 12 type jack spaces, number 111, 134, 141, and 142 Lamp Socket Mountings, and number 6, 13, and 54 type designation strips.

For use with number 92 Jack.

Comcode: 100 323 310

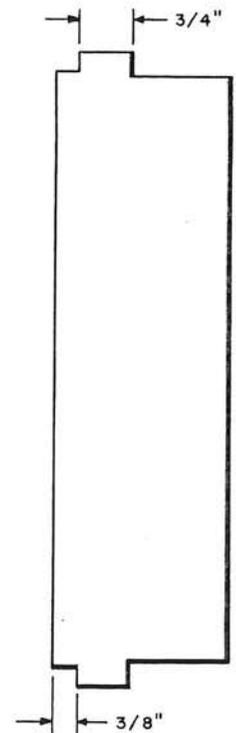

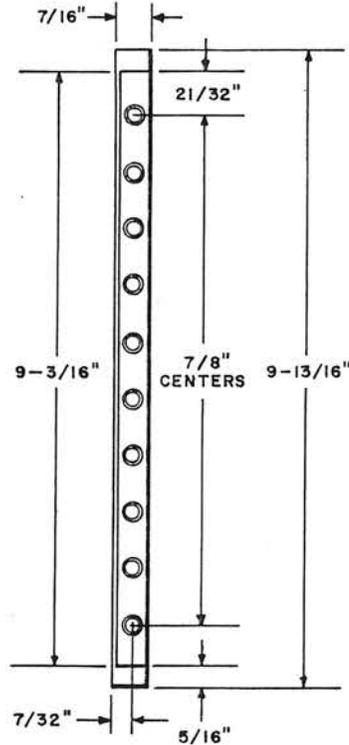

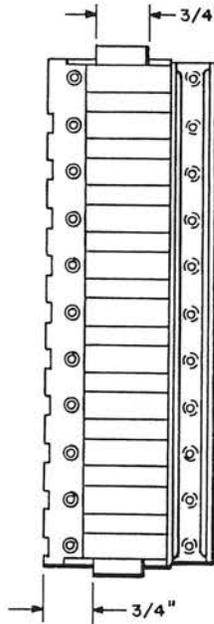

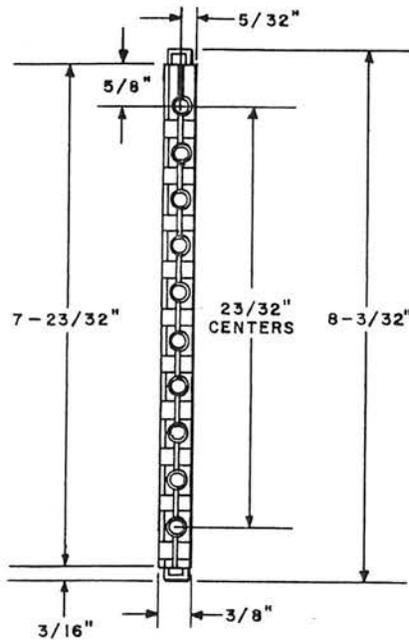

100 323 328 Numbered per order

MOUNTINGS

Jack

139

141

Same as number 138 Jack Mounting except arranged for number 30 and 60 type number plates. Furnished only on orders for jacks or keys, and not furnished partially equipped with jacks or keys.

For use with 490C Key.
Comcode: 100 323 336
101 229 946 E/W 10-92 Jack, 10 per strip unnumbered

Hard rubber mounting that will accommodate 10 jacks. Furnished only on orders for jacks and unnumbered unless otherwise specified. Not furnished partially equipped with jacks. The lower edge is grooved.

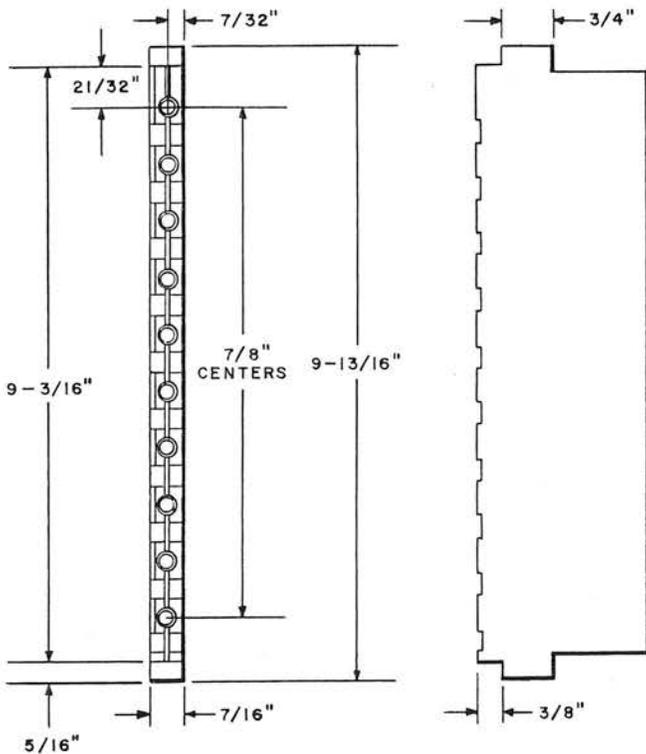

Will mount with number 1 type jack spaces, number 101 and 122 Lamp Socket Mountings, and number 1, 2, 7, and 56 types designation strips.

For use with number 49 or 50 Jacks.
Comcode: 100 323 344
100 323 351 Numbered per order

MOUNTINGS

Jack

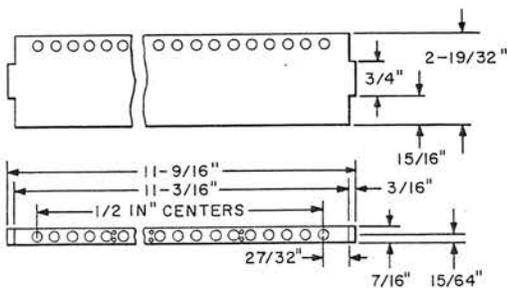

142

Same as number 141 Jack Mounting except is arranged for number 31, 32, and 59 type number plates.

Comcode: 100 323 369

168

Hard rubber mounting that will accommodate 20 jacks. Furnished only on orders for jacks and unnumbered unless otherwise specified. Not furnished partially equipped with jacks. The lower edge of face is grooved and spotted.

Will mount with number 159 type jack spacer, 137B Lamp Socket Mounting, and number 50, 51A, and 55 type designation strips.

For use with number 49 Jack.

Comcode: 100 323 575

100 323 583 Numbered per order

184, 185, and 185B

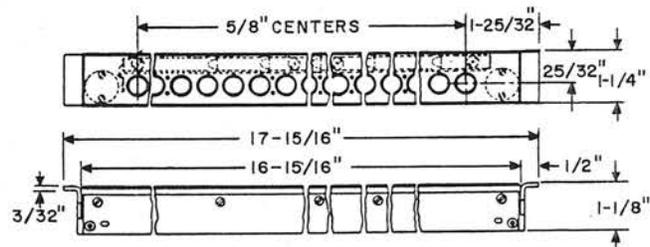

Fig. 1

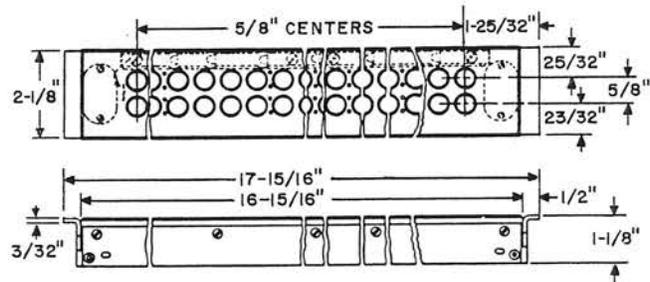

Fig. 2

Consist of a strip of black insulating material reinforced by metal strips at the sides, and equipped with metal mounting lugs at the ends. Furnished unnumbered unless otherwise specified on order.

Arranged to mount on relay racks by means of number 25 Jack Fastener with number 62 or 63 type jack spacer.

For use with number 218 Jack or similar type.

MOUNTINGS

Jack

184: Arranged for, but not equipped with, unless specified on order, one 90A Designation Strip, and two 23D Number Plates. Engraving for the 23 Number Plate must be specified on the order. Will accommodate 24 jacks. Fig. 1 shows number 184.

Comcode: 100 323 674

100 323 682 E/W 90A Designation Strip and 23D Number Plate.

100 323 690 Numbered per order

185: Arranged for, but not equipped with unless specified on order, one 90A Designation Strip, and two 127A Number Plates. Engraving for 127A Number Plate must be specified on order. Order must specify the figure numbers and also the numbers of lines on which characters are to be engraved. Will accommodate 48 jacks. Fig. 2 shows number 185 type.

Comcode: 100 323 708

100 323 716 E/W 90A Designation Strip and 127 Number Plate.

100 323 724 Numbered per order

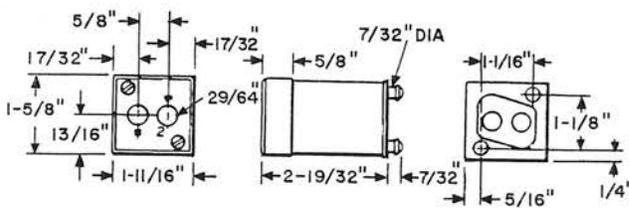

185B: Same as number 185 Jack Mounting, except arranged for two 90A Designation Strips, one above the jack position 27 and one below the jack position 28.

Comcode: 100 323 732

100 323 740 E/W 90A Designation Strip

100 323 757 Numbered per order

213A

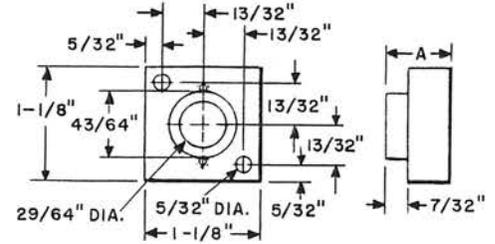

Metal box with a face of insulating material that will accommodate two jacks.

Will mount on relay mounting plate with 1-3/4 inch horizontal and vertical mounting centers.

For use with 223A, 242C, and 360C Jacks or similar type.

Comcode: 100 324 383

214A and B

Mounting of black insulating material that will mount one jack on a 7/32-inch thick metal mounting plate or panel. Mounting screws are furnished.

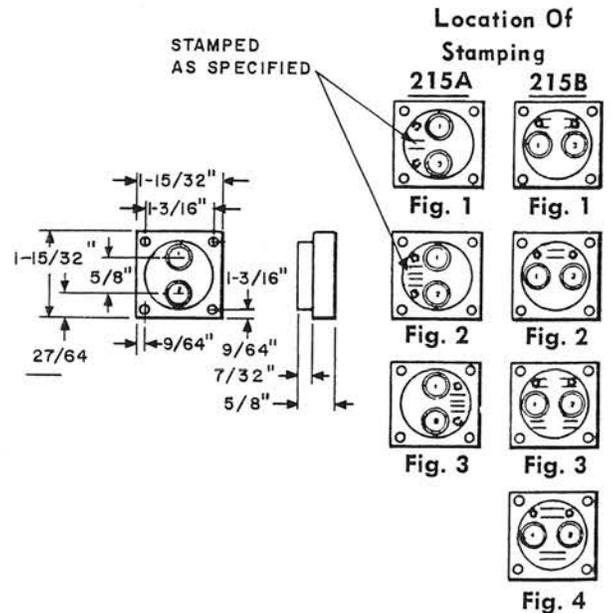

214A: Dimension A is 5/8 inch. For use with 223A Jack or similar type.

Comcode: 100 324 391

214B: Dimension A is 1/2 inch. For use with the miscellaneous circuit in common systems and with 249A Jack or similar type.

Comcode: 100 324 409

215 Type

Mounting of black insulating material that will accommodate two jacks.

MOUNTINGS

Jack

215 Type (Continued)

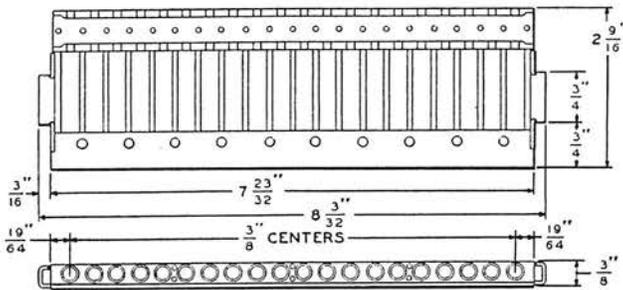

215A: Can be obtained with one or two lines of stamping of one, two, or three characters each in the positions shown in illustration when specified on order. Arranged for 215C Jack or similar type.

Comcode: 100 324 417

215B: Can be obtained with stamping in the positions shown in illustration when specified on order. Arranged for 223A Jack or similar type.

Comcode: 100 324 433

228A and B

Consist of a metal mounting plate with a face of black insulating material and mounting, insulating, and clamping strips. Arranged to accommodate 20 jacks. Furnished only on orders for jacks and unnumbered unless otherwise specified. Not furnished partially equipped with jacks.

For use with number 92 Jack.

228A: When equipped with jacks, the sleeve terminals will be strapped and grounded to the mounting plate. For use in taking liner out of service in the toll test boards.

Comcode: 100 324 557
100 324 565 Numbered per order

228B: When equipped with jacks, the ring terminals will be strapped and grounded to the mounting plate. For use in the outgoing trunk test frame and jack bay equipment in the toll switching systems.

Comcode: 100 324 573
100 324 581 Numbered per order

230 Type

Key

423AW, 424AW, 425AW, and 426AW Type

A metal framework arranged to mount keys or apparatus blanks. Will mount a 63A Connecting Block for use with 621A or 622A Key, and a 64A Connecting Block for use with each group of five number 598 or 599 type keys. Provided with a clear plastic face plate as indicated in table with five face mats colored silver, gold, blue, green, and cream white for use under the face plate to provide a choice of color contrast, and a snap on bezel for retaining the face plate and a mat. Furnished with insulator for converting pickup positions from locking to nonlocking, and a pivot bar for interlock between keys. Provided with a knockout on both ends of rear surface, and one grommet for cable entrance. Surface for mounting keys or apparatus blanks is hinged to permit access to wiring side.

Used for custom installation of the 1A1 and 6A Key Telephone Systems equipped with 236A Key Telephone Units for line concentrator service where large fields of recess mounted keys are required.

(a) Or 105B Apparatus Blanks.

MOUNTINGS

Protector

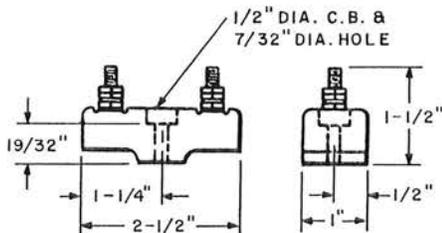

94A

Consists of a porcelain base equipped with clips for mounting 60A Fuses, and having a binding post for one pair of wires. Together with 106C Protector will mount two 60A Fuses.

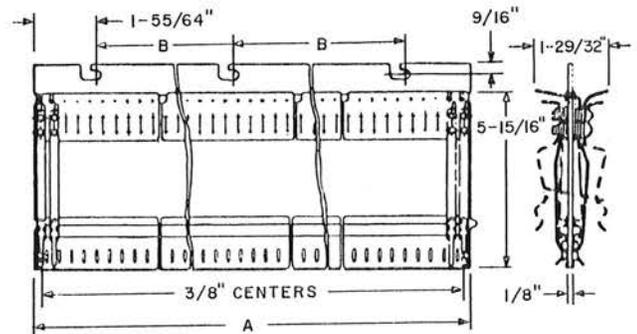

For use in connection with 106C Protector for sneak current protection. Also forms a part of 1094C Protector.
Comcode: 100 329 440

94B

Consists of a porcelain base having a binding post for one pair of wires. Forms part of 1094C Protector.
Comcode: 100 329 457

C50, C52, E50, and E52

C50 and C52: Consists of a metal plate equipped with springs for holding number 28 and 29 Protector Blocks and 76A Heat Coils. The protector blocks and heat coils do not form a part of the protector mounting. Arranged for pairs of wires as indicated below. Part of C50A and C52A Protectors respectively. Mounting screws are furnished. For use on main distributing frames.

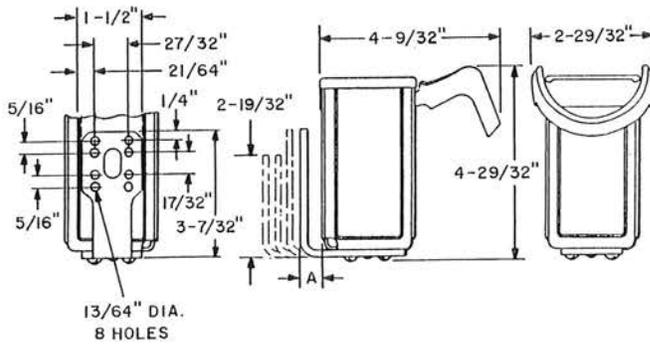

E50 and E52: Same as C50 and C52 Protector Mountings, except not equipped with springs for holding heat coils and soldering terminals are multiplied to those on right. Mounting screws are furnished. For use in terminating toll cable circuits in conjunction with test boards where heat coil protection is not required.

Code No.	Comcode	Dimensions (Inches)		Number of Pairs of Wires

E52	100 329 531	19-15/32	7-7/8	52

MOUNTINGS

Hand Set

G Type

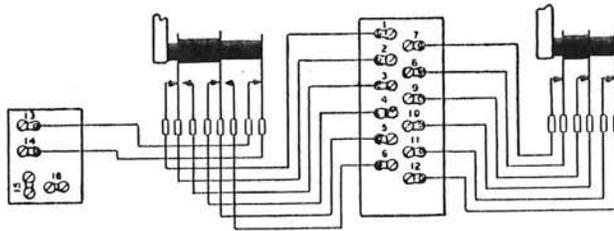

Hand set mountings equipped with a bracket designed to permit adjustment of the mounting to various lengths of desk top overhang. The bracket also permits the mounting to be secured for the hand set to hang at either side or in front of the mounting. Dimension A is adjustable to four lengths: 17/32 inch, 27/32 inch, 1-5/32 inches, and 1-15/32 inches.

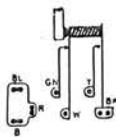

Finished in colors indicated below except switch hooks are finished in chromium.

- G5W-3: General purpose use.
- G6W-3: Part of number 211 type telephone sets.
- G7W-3: & -61: Part of number 212 type telephone sets.
- G8W-3: Part of number 211 Hand Telephone Set.

G7W-3

G8W-3

NETWORKS

425D

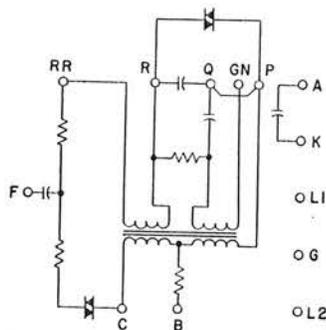

Consists of a transformer, capacitors, resistors, and varistors potted in a metal case. Terminal screws are shipped loose.

Used to provide the transmission circuit elements, including the sidetone balancing network, for an anti-side-tone telephone set. Also provides transmission equalization for varying loop lengths. Includes a ringing capacitor, dial radio interference suppression filter, and terminal plate.

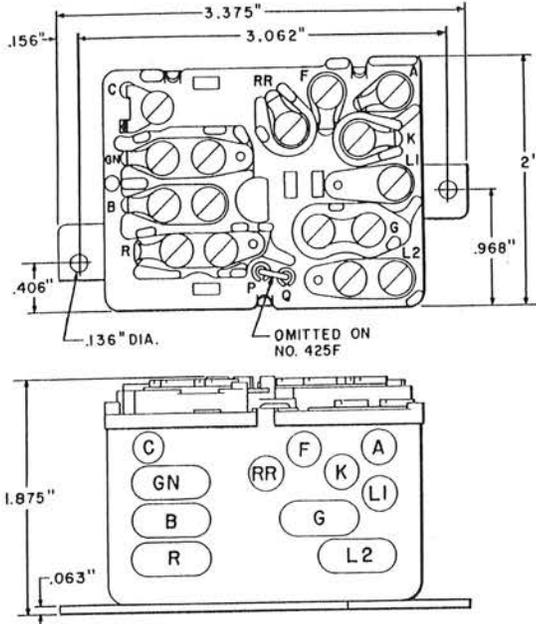

Forms a part of number 636CW, 638CW, and 639CW type telephone sets.

Comcode: 100 335 215

NETWORKS

425E, F, and J

Consists of apparatus potted in a metal case. Terminal screws are shipped loose. Includes a ringing capacitor, dial radio interference suppression filter, and connecting block.

425E: Contains a transformer, capacitors, resistors, and varistors. Used to provide the transmission circuit elements, including the sidetone balancing network, for an anti-sidetone telephone set. Also provides transmission equalization for varying loop lengths. For use on 568HFW-3 Telephone Set.

Comcode: 100 335 223

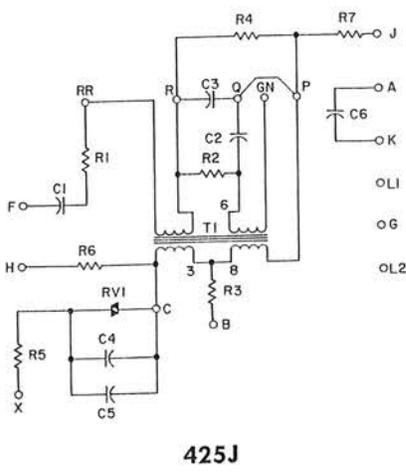

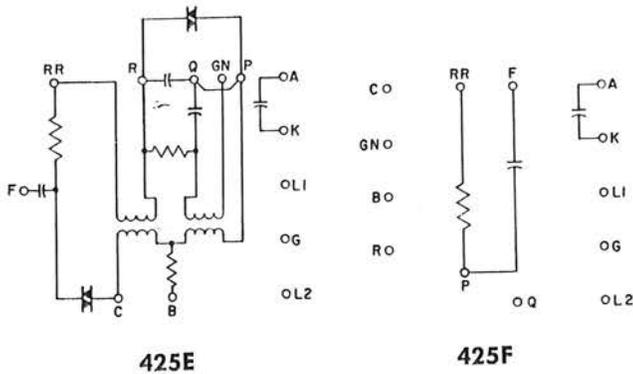

425F: Contains two capacitors and a resistor. For use on 691AW-3 Subscriber Set.

Comcode: 100 335 231

425J: Same as 425E Network except that equalizing varistors are replaced with resistor strap options for speech equalization. A strapping option for use with TOUCH-TONE dials is added to the network assembly for dial mode equalization.

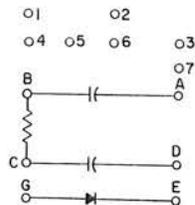

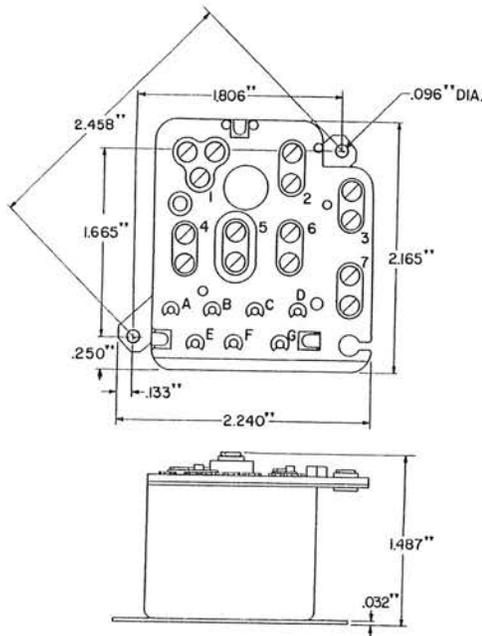

This network is intended to be a substitution for 425E Network in high radio frequency interference locations. It provides transmission circuit elements for an anti-sidetone telephone set with strapping options for loop equalization of speech and dial signals, a ringing capacitor, and terminal plate. Consists of a transformer, varistor, capacitors, and resistors potted in a metal housing.

Comcode: 101 205 276

NETWORKS

498A

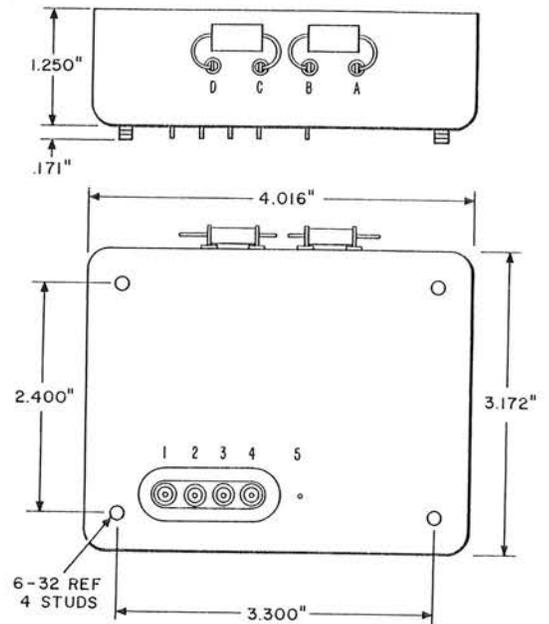

Consists of capacitors, a diode, and a resistor assembled on a terminal plate and potted in a metal case.

Provides circuit elements for both chime and ringer operation.

Forms a part of the F1A Ringer.

Comcode: 100 338 722

4148A

Consists of two tuned circuits, each consisting of a toroidal inductor on a permalloy powder core and one or more polystyrene capacitors potted in a hermetically sealed metal can. Provided with a terminal for grounding the can and four hermetically sealed terminals on the bottom of the can for use on printed wiring boards. May come equipped with trimming capacitors mounted on four hermetically sealed auxiliary terminals located on the side of the can.

With 0.18 volt applied between terminals 1 and 2 with terminal 1 and case grounded, the nominal series resonant frequency is 1200 Hz and the maximum effective resistance is 157 ohms.

With 0.18 volt applied between terminals 3 and 4 with terminal 4 and case grounded, the nominal parallel resonant frequency is 1200 Hz and the maximum conductance is 57.2 micromhos.

Closest recommended mounting centers are 4.093 by 3.500 inches.

Initially used in Data Sets 207A, B, and C.

Comcode: 101 588 135

PADS

1A, 1C, and 1D

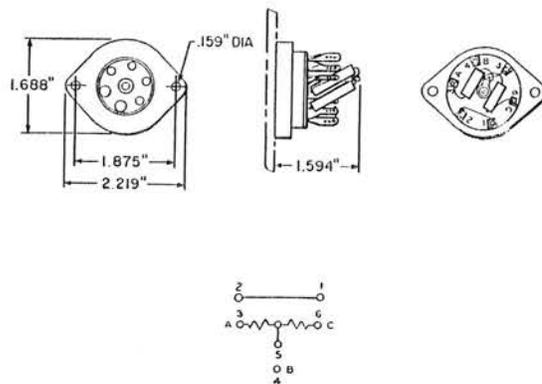

Fig. 1

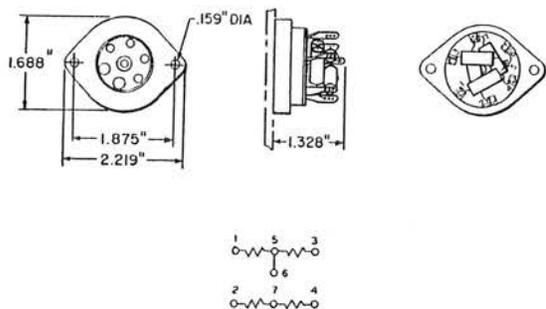

Fig. 2

Consist of an electron tube socket arranged for a number 89 type resistor, and several resistors assembled on the back and wired to the socket terminals.

Will mount on the back of a panel drilled to receive a plug from the front. The recommended mounting centers are 1-3/4 inches by 1-3/4 inches.

For use as 600 ohm constant resistance adjustable pads for gain control or other purposes.

1A: Equipped with two 590 ohm 145C Resistors. For use in unbalanced circuits. See Fig. 1.

Comcode: 100 356 948

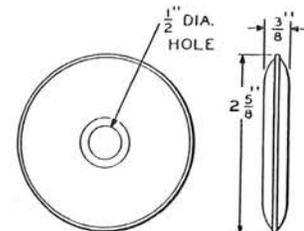

1C: Equipped with four 301 ohms 234N Resistors. For use in balanced circuits. See Fig. 2.

Comcode: 100 356 955

1D: Same as 1C Pad except strap between terminals 5 and 6 is omitted. For use in 22A Testboard.

Comcode: 101 323 080

101A

Disposable paper pad intended for use, when required, on the receivers and head sets to provide a comfortable fit. The side of the pad that contacts the ear is covered with six layers of absorbent tissue, five of which may be removed one at a time when the tissue becomes soiled.

A 104B Adapter is required in place of the receiver cap on each number 52 type head telephone set with which the pad is used.

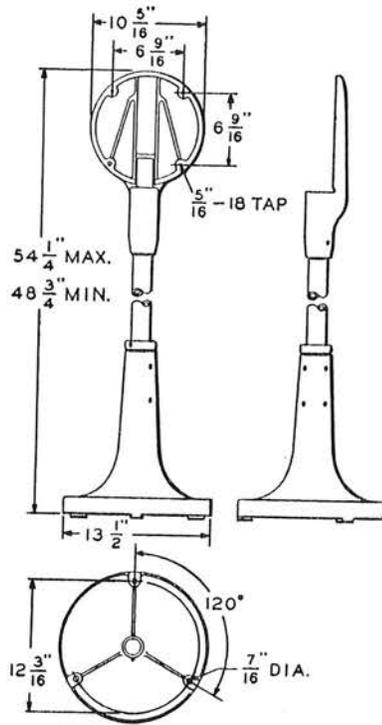

A 567A Tool is required for attaching pads to the adapter but the tool and adapter are not furnished with the pads and must be ordered separately.

Pads may be obtained only in packages of 25 each.

Comcode: 100 367 432

PEDESTALS

5A

Intended to mount a number 320 type telephone set. The height is adjustable within the limits indicated on the illustration. Black finish. Bolts are furnished for mounting the telephone set to the pedestal.

Comcode: 100 367 655

Clear nonglare plastic face plates each containing openings to accommodate a dial, key buttons and/or a transmitter, and switch knobs when specified, on associated telephone sets or consoles.

Provided with three face mats colored silver, gold and a coordinated color as indicated in the table, corresponding to the color of the associated apparatus, unless otherwise specified.

The mats contain openings corresponding to those on the face plates, openings for illumination from lamp sockets, and markings shown on illustration.

Arranged for insertion into snap-on bezels which are part of the associated apparatus.

Used with 618BW, 630DW, 632CW, 634DW, 636CW, and 638CW type telephone sets and 14AW1 and 14AW3 Telephone Consoles.

Arranged for insertion into snap-on bezels which are part of the associated apparatus.

Used in the 14AW5 and 14AW6 Telephone Consoles.

Clear plastic, nonglare type face plates, each containing openings to accommodate a dial and key buttons on associated telephone sets.

Provided with three face mats colored silver, gold, and one having the color corresponding to the dash number of the face plate. The mats are for use under the face plate to provide a choice of color contrast with the telephone sets.

Arranged for insertion into snap-on bezels which are part of the associated apparatus.

Used in the 15AW5 and 15AW6 Telephone Consoles.

Mounting

150A, 150B, and 150C

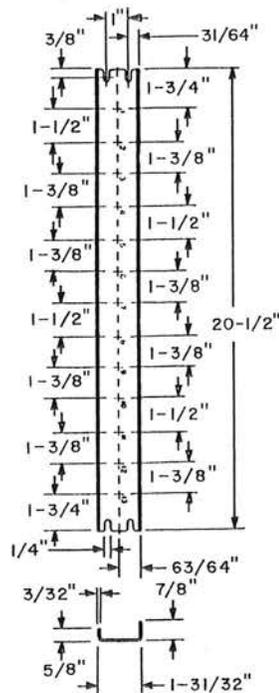

Fig. 1

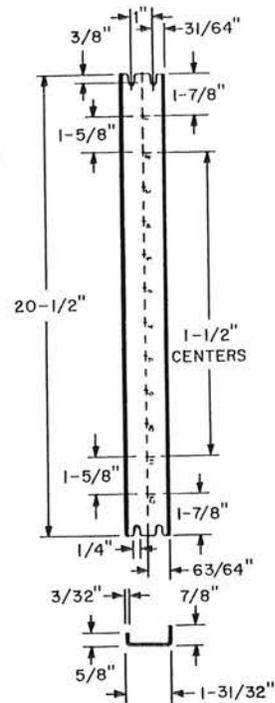

Fig. 3

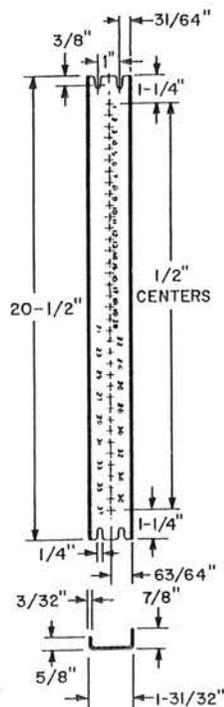

Fig. 2

Metal plates used to mount relays, resistors, and other apparatus. Orders must contain information for all positions, stating what apparatus or drilling is required for each and which, if any, shall be undrilled.

Screws must be ordered separately and of a length to suit local conditions.

150A and C: Drilled to mount U-type relays as indicated in table on centers as shown and having not more than two winding terminals at either the top or bottom.

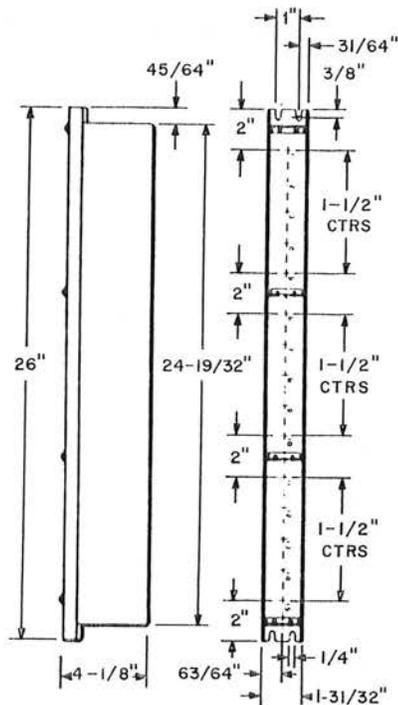

150B: Intended to mount 37 resistors or capacitors.

Code No.	Comcode	Fig. No.	Relays per Plate

PLATES

Mounting

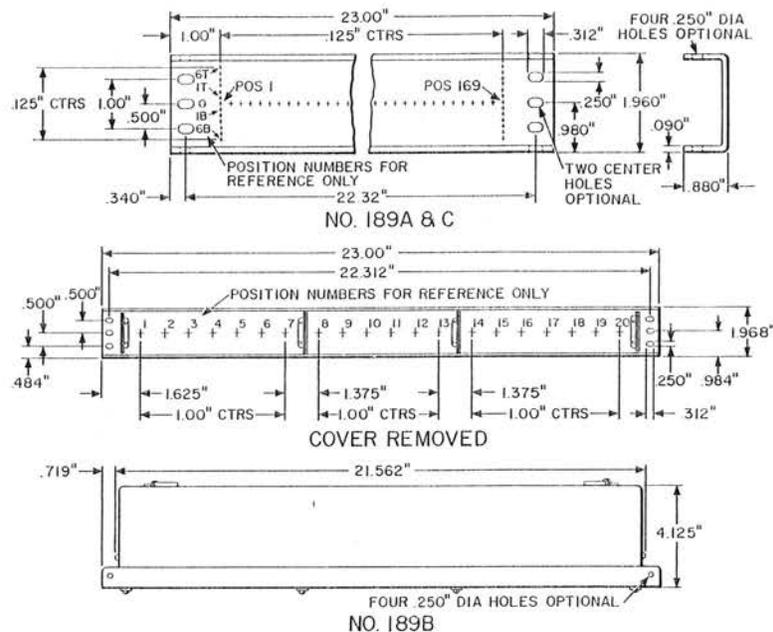

153E

Metal plate drilled to mount 15 U- or Y-type relays on centers as shown with the U-type relay having no more than three winding terminals at either the top or bottom and the Y-type having no more than two winding terminals at either the top or bottom.

Comcode: 100 370 998

189A, B, and C

Channel type metal plates.

189A: Has 2197 positions on 0.125 inch centers. Arranged in 13 rows of 169 positions each. The plate has a zinc finish. Number 50 type mounting plate covers may be used on this mounting plate.

Used initially in mounting apparatus in the number 5 crossbar dial telephone systems.

Orders must contain information regarding which positions shall be drilled and stating what apparatus or drilling is required for these positions. Positions not mentioned in the order will not be drilled.

Comcode: 100 371 707

189B: Drilled to mount 20 "E" or "R" type relays. The plate has a zinc finish.

Used initially on miscellaneous relay rack units in step-by-step dial telephone systems.

Comcode: 100 371 988

189C: Same as 189A except has a gray enameled finish. Used initially in all systems.

Comcode: 101 153 161

PLATES

Mounting

ED-69143-70, Groups 1 and 2

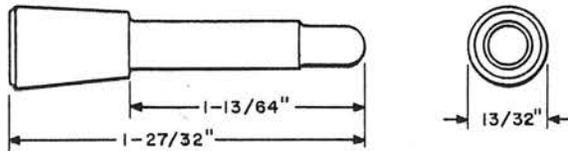

Steel bars 3/16-inch thick by 5/8-inch wide. Each (Group 1 and Group 2) consists of an upper and lower bar differing only in the location of the mounting slots in ends of each bar. Each bar has six slanted mounting surfaces 1-1/16 inch by 5/8-inch in groups of two (three sets) 2-5/8 inch between each group. Six .190-32 NF-1 tapped holes are provided for mounting angle-bracket type key telephone units on 23-inch relay racks in 4, 11, 18, 26, and 45-plate apparatus cabinets. Four mounting screws .216-24 x 3/8 inch are furnished. Overall length is 19 inches for Group 1 and 23 inches for Group 2.

Code No.	Comcode
ED-69143-70, Group 1	600 003 297
ED-69143-70, Group 2	600 017 222

PLUGS

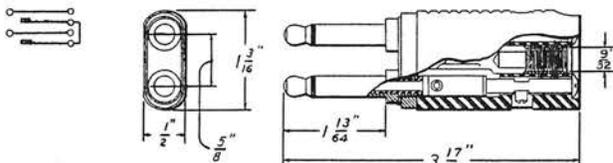

165 Type

Dummy plug made of insulating material. May be used with jacks that take number 47, 116, or similar type plugs. Designed for switchboard cutover work and for use at test boards.

Code No.	Comcode	Color	Replaces
165C	100 394 923	Black	—
165E	101 437 317	White	—
165F	101 437 309	Red	165D

241 Type

Twin plugs with the fingers mounted in a brass frame which serves as a common connection for the two plug sleeves.

241A: Black plug having fingers with brass tips.

Comcode: 100 395 235

241B: Red plug having fingers with brass tips.

Comcode: 100 395 243

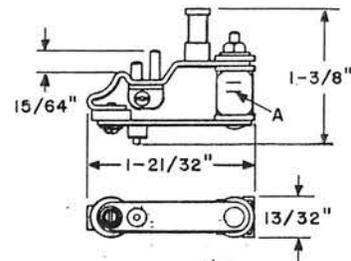

241D: Black plug having fingers with silver tips.

Comcode: 100 395 268

Arranged for tip and sleeve cord connections with P1H, R2ET, P2T, S3F, P2AA, W2S, W2BP, P3J, P3N, and P4AD Cords.

For use with number 99, 215, 297, and similar type jacks.

252A and B

Intended for use with the W4AG and W4P Cords as test plugs in connection with the protectors of main distributing frames of manual and dial offices.

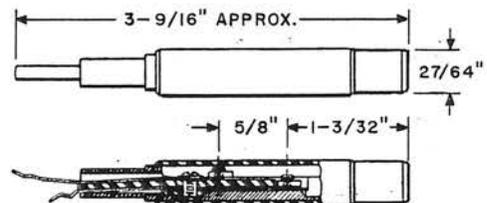

252A: Has T stamped on both sides located at A, as indicated on the illustration.

Comcode: 100 395 359

252B: Has R stamped on both sides located at A, as indicated on the illustration.

Comcode: 100 395 367

257A and B

257A: Arranged for jacks with tip springs on the right.

Comcode: 100 395 375

257B: Arranged for jacks with tip springs on the left.

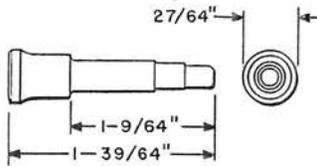

Comcode: 100 395 383

A white line on the shell indicates side of plug to be uppermost when making test.

Used as test plugs to function with number 141 Jack.

PLUGS

258 Type

Flexible, twin double conductor plugs with black shells. Constructed so that there is sufficient play between the plug bodies to take up any variation between the jack centers and arranged so that each plug body may be turned 90 degrees in the shell to present a new surface for wear. Equipped with a bracket for cord stay.

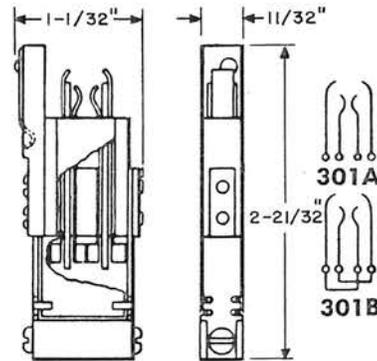

Used with 223A Jack plus a 168A Adapter.
Comcode: 100 395 664

Dummy plugs made of colored insulating material.

Code No.	Comcode	Color	Replaces
258C	100 395 391	Black	—
258E	100 395 417	White	—
258F	101 437 911	Bright red	258D
258G	101 634 574	Bright green	—

Intended to use with jacks that take number 310 or similar type plugs.

301A and B

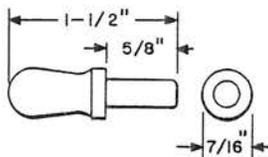

301A: A test plug with contacts insulated from each other. Provided with sleeve and spring for holding the plug in position in jack. Can be used on right or left side of jack. Engages with number 444 or 452 type jack. Used with P2BK and W4AL Cords.

Comcode: 100 395 714

301B: Same as 301A except that alternate terminals are strapped. Used primarily in reversing the tip and ring side of a line at number 444 type jack on main distributing frames.

Comcode: 100 395 722

261A

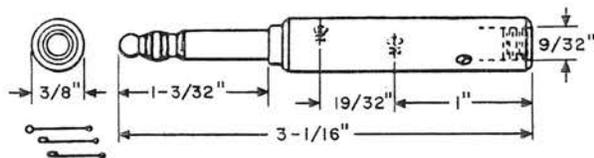

A dummy plug of insulating material. May be used with jacks that take number 310 or similar type plugs.

Used with jack in multiple practice drills.

Comcode: 100 395 425

309

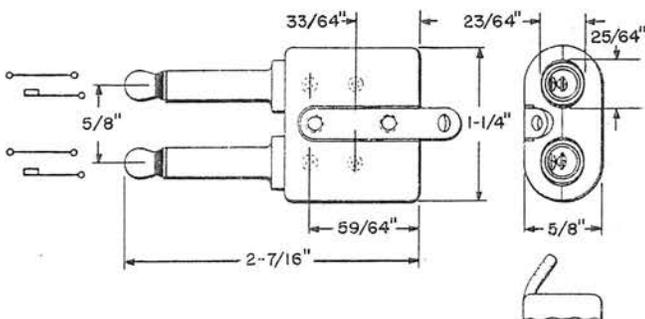

A three-conductor plug with a red shell. Equipped with a long shell which covers the cord end of the plug body to provide additional insulation.

Used with number 92, 229, 246, 248, 249, 292, 323, and 445 Jacks.

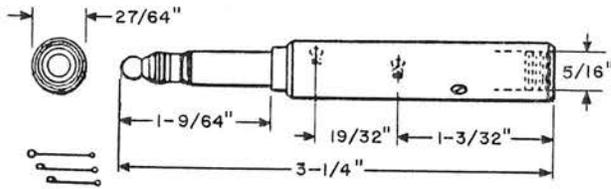

Comcode: 100 998 830 E/W Red Shell
101 021 475 E/W Black Shell
101 021 483 E/W Gray Shell

289B

PLUGS

310

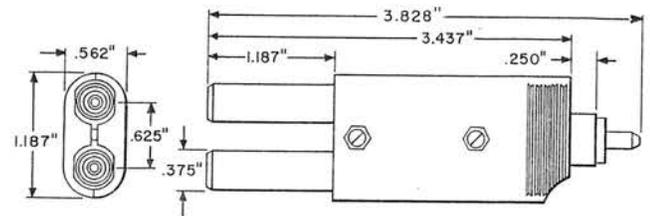

A three-conductor plug equipped with a long shell which covers the cord end of the plug body to provide additional insulation.

Used with number 49, 50, 70, 138, 141, 238, 245, 267, 275, 280, 284, 285, 289, 290, 291, 293, 295, 308, 324, 326, 347, 359, 360, 362, 363, 365, 372, 382, 387, and 446 Jacks.

Comcode: 101 352 078 E/W Red Shell
 100 960 780 E/W Black Shell
 100 960 798 E/W Gray Shell
 100 960 806 E/W Green Shell

345C

Flexible, twin coaxial type plugs.

Consists of a pair of coaxial plug fingers assembled in a metal shell with means for connecting cable. The two outer contacts of the fingers are electrically connected together and to the shell. The two inner contacts of the fingers are insulated from each other and from the shell.

Arranged for mating with two adjacent number 464 or similar type jacks mounted on 5/8 inch centers.

A KS-15712L12 shield connector is shipped loose.

Used with 761A Cable in L Carrier and L Multiplex Systems.

Comcode: 100 396 357

319C and D

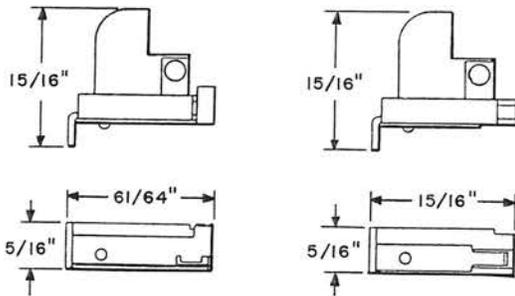

Fig. 1

Fig. 2

319C: Dummy plug of brown insulating material with a metal guide which is provided with a spring for locking the plug in place. See Fig. 1.

Comcode: 100 395 938

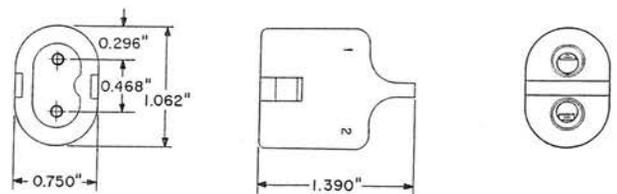

319D: Dummy plug is nonlocking and the plug body is black. See Fig. 2.

Comcode: 100 395 946

Both plugs are designed so that the jack springs may be tested with a test pick while the plug is in place. Intended for use in opening lines to be temporarily disconnected from service.

Used with number 444 type jack.

346A

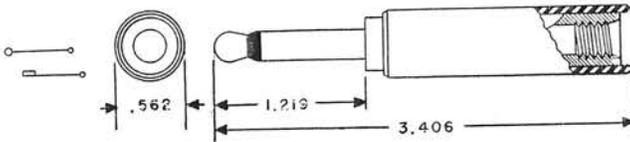

Polarized plug consisting of a black, molded body equipped with two pin type contacts which mate with the No. 471A jack. Each contact is designed to accommodate a No. 130 or similar cord tip, and set screws are provided for holding the cord tie and has two notches to provide partial locking with the springs of the jack.

Intended for use in the 1014AW Hand Set.

Comcode: 100 396 365

PLUGS

347C and D

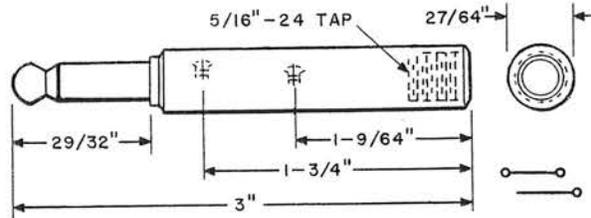

Each is a two-conductor plug with a 0.250 inch nominal diameter of finger. Equipped with a long shell which covers the cord end of the plug body to provide additional insulation.

Used initially with number 99 and similar type jacks.

Code No.	Comcode	Color of Shell	Replaces
347C	101 335 123	Red	347A
347D	101 335 131	Black	347B

359A

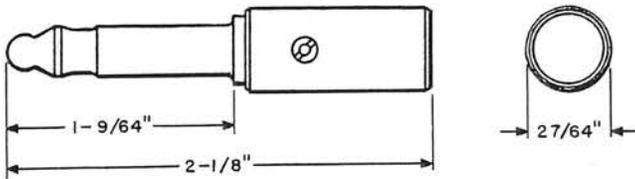

Two-conductor plug with a red shell. Arranged so that the sleeve of the plug makes contact with the sleeve of the associated jack, and the tip of the plug makes contact with the ring spring of the jack. No contact is made with the tip spring of the jack.

Intended for use in telegraph service board.

Used with the 141 or similar type jacks.

Comcode: 100 396 589

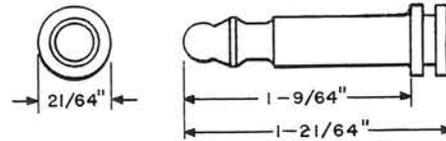

349A

Solid metal finger plug. For use with number 49 and similar type jacks.

Comcode: 100 396 407 E/W Red Shell
100 396 415 E/W Green Shell

375A

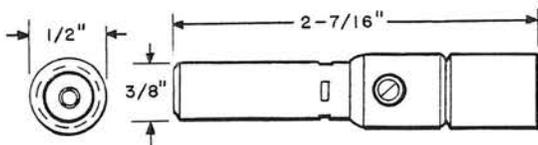

Solid metal finger plug. Short circuits tip, ring, and sleeve of number 49 jacks. Body is grooved to accommodate a number 274 Tool.

Intended for use in outgoing trunk test boards to make busy spare or unused trunks.

Comcode: 100 396 787

358A

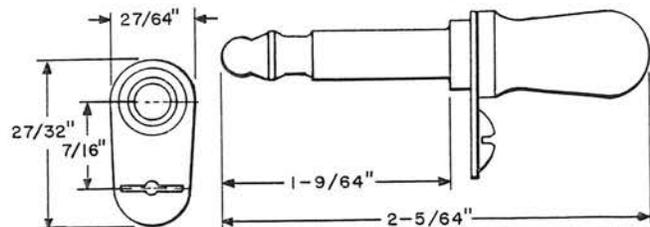

Coaxial type plug arranged for solderless shield connection to the connecting cable by means of a sleeve which is furnished as a loose part. It will provide a good impedance match for 75-ohm coaxial cable up to 100 megacycles. Tested on 2000 volts ac.

Arranged for 477A, 478A, or similar type jacks.

Comcode: 100 396 563

376A

PLUGS

Solid metal finger plug with black insulated handle. Short circuits tip, ring, and sleeve of number 49 Jacks. Equipped with small shield which obscures light from lamp.

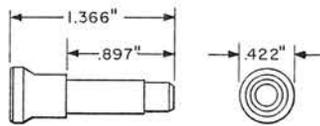

Used at the panel sender make busy frame for holding sender busy and shielding a lamp while correcting trouble in panel office.

Comcode: 100 396 795

Code No.	Comcode	Color
(a) 396A-3	100 397 033	Black

(c) 396A-61	100 397 074	Light gray

- (a) Forms a part of 52H and J Head Telephone Sets.
- (b) Forms a part of G3CR-50 Hand Set.
- (c) Form part of the G3L type hand set.

394A, B, and C

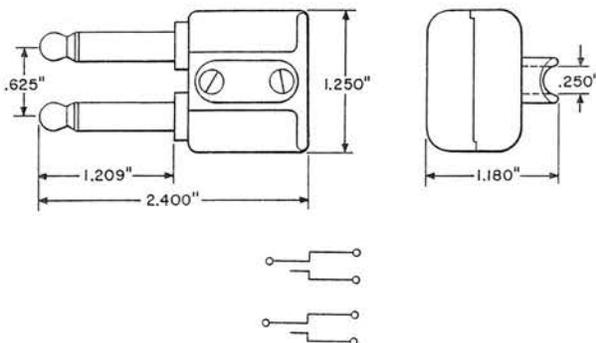

NO. 394A

ALSO GENERAL DESIGN AND DIMENSION OF NO. 394 B AND C)

Dummy plugs of insulating material. Used with jacks that take number 310 or similar type lugs. Will open the ring spring only of the jack.

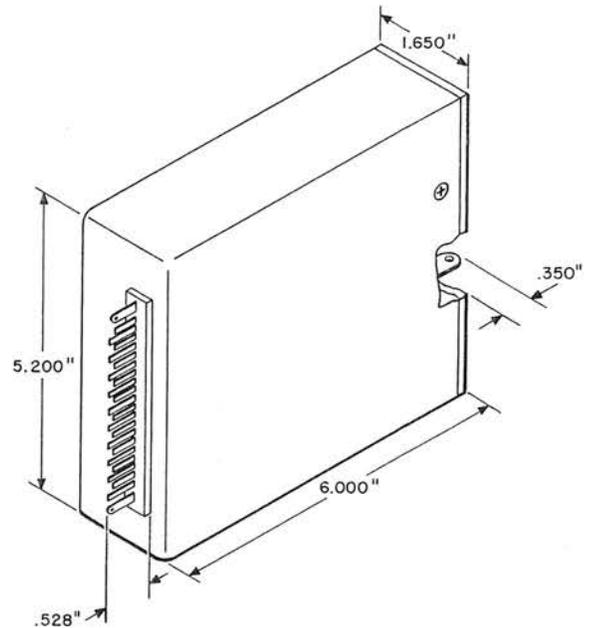

Code No.	Comcode	Color
394A	100 397 017	Black
394B	101 623 023	White
394C	101 623 015	Bright red

396A

A twin, two conductor plug having a shell of insulating material. Arranged for an H4CU or L4BL Cord. Used with number 364 and similar type jacks.

437A

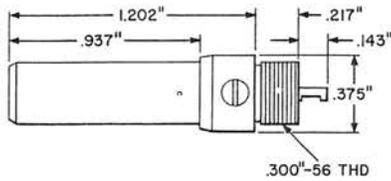

Consists of wire strapping mounted on a printed wiring board and assembled into a metal can. Terminated in a 503A plug.

Used in place of a number 1 type terminating set when four-wire to four-wire facility is required on either the J98615AK or J98615AN shelf. Arranged to be removed from a mounting panel by a 602D tool.

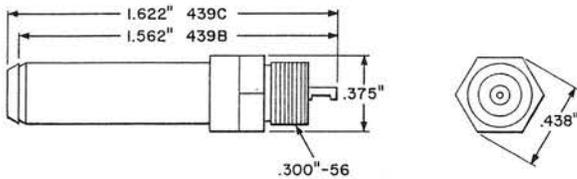

Comcode: 100 397 512

PLUGS

439A, B, and C

NO. 439A

NO. 439B AND C

439A: A single coaxial plug consisting of a metal cylindrical body having a metal contact finger assembled concentrically with the body by means of an insulator for connection to a jack at one end. The body, with the contact finger, is assembled to a metal shell. The shell is chromium plated for identification purposes while the body and contact are gold plated.

Insulated metal parts shall be capable of withstanding a 2000 volt ac breakdown test.

Used initially in the Mastergroup Multiplex, L4 Coaxial System.

Comcode: 100 846 153

439B: Same as 439A Plug except plug body and shell are machined in one piece and it is provided with a hexagonal shoulder to permit a wrench to hold plug when tightening nut.

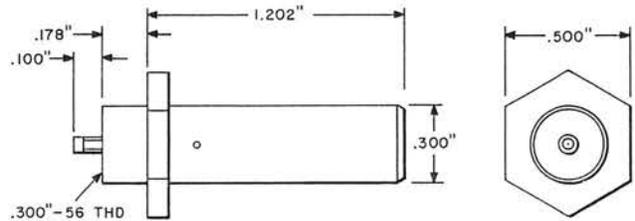

Comcode: 101 383 685

439C: Same as 439B Plug except a teflon bushing is assembled in the front end of the body. Used for plug-in equipment. The teflon bushing acts to align associated jack contacts.

Comcode: 101 383 693

439B and C: Used initially in the 3A Wire Line Entrance Link.

441B

A single coaxial type, 75 ohm, hermetically sealed plug consisting of a metal cylindrical body having a metal contact finger assembled concentrically with the body by means of an insulator for connection to the associated jack at one end. The body, with the contact finger, is assembled to a gold plated metal shell which is positioned so that a portion of the body is exposed. The exposed portion is threaded for assembly to associated apparatus.

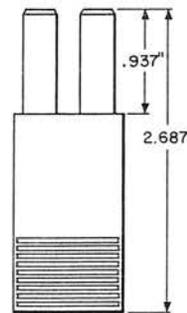

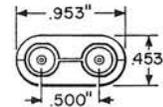

Mates with a 558A Jack.

Insulated metal parts are capable of withstanding a 1500 volt ac breakdown test.

Used initially in the L4 Coaxial System.

Comcode: 101 164 887

443A

Consists of a pair of coaxial plug fingers mounted in a metal shell. The flexible twin coaxial plugs are connected to the inner and outer gold plated contacts, respectively, of the other finger and are not arranged for cord connection.

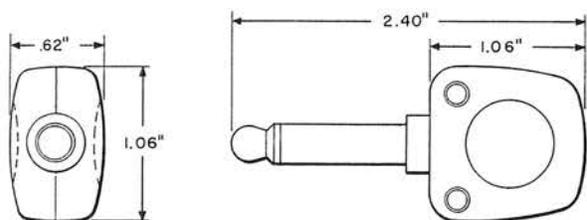

Mates with two 560A Jacks.

Used initially in the L4 Mastergroup Multiplex.

Comcode: 101 108 843

PLUGS

444A

Consists of a two-conductor plug and has a shell of insulating material. Arranged for an M2ER type cord and used with 517A and similar type jacks.

Available in the colors listed below.

Code No.	Comcode	Color
444A-51	101 413 532	Green
444A-58	101 164 911	White
444A-60	101 164 929	Light beige
444A-61	101 164 937	Light gray

Used with an AE type telephone base in the 3A Communications System.

The following terminals are strapped together using 26 gauge "BU" type wire:

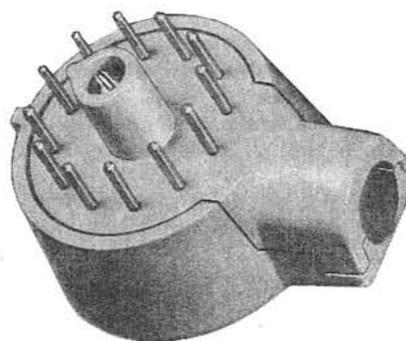

1 and 2	13 and 14
5 and 6	17 and 18
9 and 10	21 and 22

Overall dimensions are 3.036 inches long by 1.775 inches high by 0.616 inch wide.

Used with Data Mounting 6A1.

Comcode: 101 215 663

504AW Type

Consists of a block of insulating material containing 12 terminals and a removable cap. Each terminal is equipped with a spring connector which permits friction contact with number 134 or equivalent cord tips. Has a slotted guide for guiding the cord tips into the spring connectors.

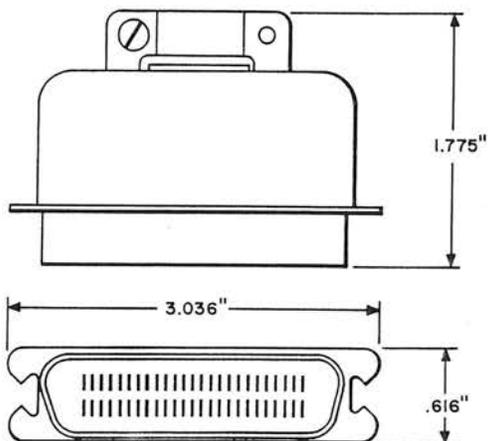

Arranged to be inserted into 541A or 547B Jacks in one position only.

Overall dimensions are 2.038 inches long by 1.638 inches wide by 1.310 inches deep.

Used with portable telephone sets having two to twelve conductor mounting cords.

Code No.	Comcode	Color

504A W-60	101 336 642	Light beige
504A W-61	101 336 659	Light gray

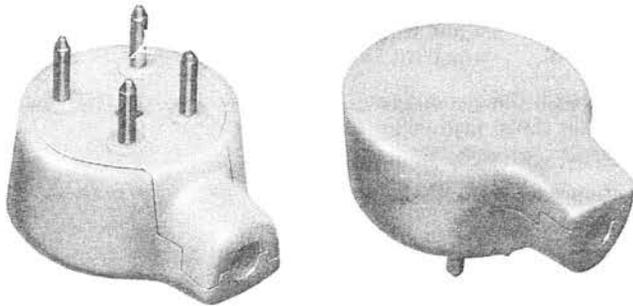

450A

Consists of a rectangular block of insulating material equipped with 50 gold plated contacts assembled in a front and back metal shell which is equipped with a cable clamp located on the rear of the shell. Polarized to ensure proper mating with locking connectors. Intended for a maximum of 200 operations in a temperature range of +60° to 120°F. (Nonoperating temperature range of -40° to +160°F.) Maximum operating voltages are 125 volts ac and 56 volts dc.

PLUGS

505AW

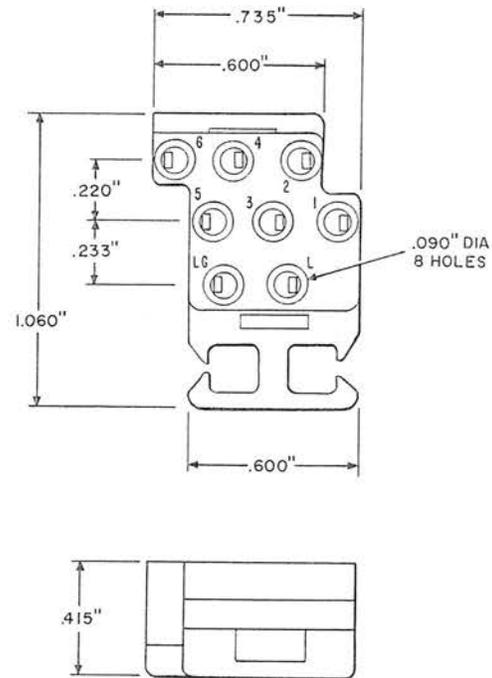

A four contact plug having a plastic shell. Equipped with a cord fastener which holds the cord in place while the spade tips are being connected and also anchors the mounting cord in the assembled plug. Used with portable telephone sets having 2, 3, and 4 conductor mounting cords.

Overall dimensions are approximately 2.038 inches long by 1.638 inches wide by 1.314 inches high including the terminal pins.

Designed to be inserted into associated 493A, 548A, 549A or 550A type jacks in one position only.

Code No.	Comcode	Color
505AW-3	101 211 472	Black
505AW-51	101 211 480	Green

505AW-60	101 211 399	Light beige
505AW-61	101 211 407	Light gray

508 Type

Each is a molded terminal plug of insulating material arranged for assembly of up to eight blade type cord tipped conductors required for connections to individual buttons of key telephone sets.

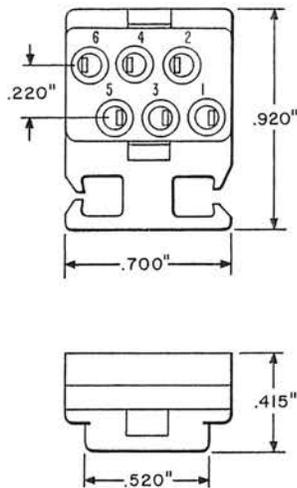

Used to facilitate easy interchangeability of connections to each of the button positions in key telephone sets.

Available in the following colors.

Code No.	Comcode	Color
508A	101 377 984	Aqua blue
508B	101 413 201	Orange
508C	101 413 219	Moss green

508L	101 413 292	Rose pink

PLUGS

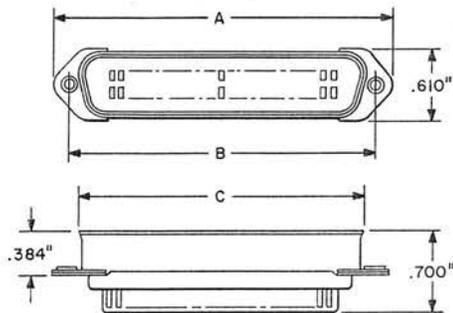

509A

Molded chaining plug of light beige insulating material arranged for assembly of up to six blade type cord tipped conductors required for connections in multi-key telephone sets.

Comcode: 101 389 278

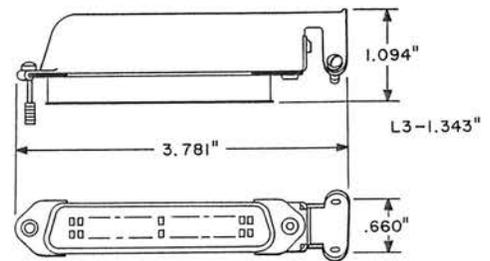

KS-16671L1 and L2

Consists of a molded block of insulating material equipped with gold plated contacts assembled in a front and back metal shell. They are polarized to insure proper mating with their receptacles. They will withstand a maximum of 200 operations operating in a temperature range of +60° F to +120° F (nonoperating temperature range of -40° F to +160° F). Maximum operating voltages are 125 ac and 56 dc.

List No.	Comcode	No. of Con-tacts	Dimensions (Inches)			Mating Connector

2	995 192 770	14	1.75	1.417	—	KS-16672L2

KS-16689L1 through L6

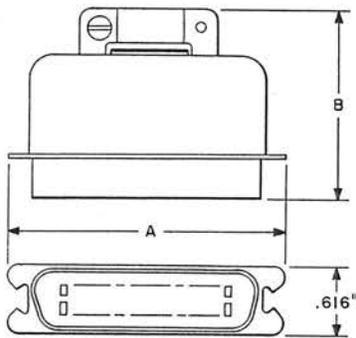

Consists of KS-16671 Plugs equipped with metal hoods. The plugs are polarized to insure proper mating with connectors. L1 and L3 are provided with a hood which accommodates a 0.410 inch and a 0.530 inch diameter cable, respectively, and a locking screw for securing the plug to the connector. L2 is provided with a hood which accommodates a 0.410 inch diameter cable but has no locking screw. L4, L5, and L6 are the same as L1 except that certain terminals are omitted and L6 is provided with an insulating liner. The plugs are designed for a maximum of 200 operations. The operating temperature range is from +60° F to +120° F (nonoperating temperature range of -40° F to +160° F). Maximum operating voltages are 125 ac and 56 dc.

PLUGS

KS-16785L1 through L9

Consists of a rectangular block of insulating material equipped with gold plated contacts assembled in a front and back metal shell which is equipped with a cable clamp. The plugs are polarized to insure proper mating with locking connectors. The cable clamp is located on the rear of the shell for all plugs except the L9, where it is located on the side. These plugs are intended for a maximum of 200 operations in a temperature range of +60° F to +120° F (nonoperating temperature range of -40° F to +160° F). Maximum operating voltages are 125 ac and 56 dc.

POWER PLANTS

J86731 101G

Power plants which provide packaged small capacity ringing and low voltage ac and unregulated dc power supplies without battery reserve.

Most of the various options of these power plants are mounted in small light olive gray cabinets with removable covers and with an ac input cord and plug to be inserted into a building outlet.

These plants are used for supplying the required power for 1A1 and 6A Key Telephone Systems or small PBX.

J86731B-2 List 1, A, B, C, and NP1(101G): A wall mounted power plant 9 inches high by 8-1/4 inches wide by 5-1/4 inches deep. It has the following features and electrical characteristics.

Comcode: 600 016 679

INPUT

Volts	Hertz	Watts	Supply
111-123±5%	60	250	AC 60 Hz

OUTPUT

Voltage Range	Resistance Load Range	Ampere
10 to 11	No load to 0.59 ohms (425-51A Lamps)	17

J86731C-2 List 1, B, D, F and NP1 (101G): May be mounted on a relay rack or in an apparatus cabinet. Dimensions are 7 inches high by 9-1/8 inches wide and it extends 4-1/2 inches in front of mounting. It has the following features and electrical characteristics:

Comcode: 600 018 089

INPUT

Volts	Hertz	Watts	Supply
111-123	60	25	20 Hz ringing

OUTPUT

Voltage Range	Resistance Load Range	Ampere
75 to 105	1 to 8 high impedance ringers or 1 to 6 high impedance ringers with condensers	0.05 With 0.5 PF load lagging

J86731C-2 List 2, A, E, C, G, and NP 2 (101G): A wall mounted power plant 9 inches high by 8-1/4 inches wide by 5-1/4 inches deep. It has the same features and electrical characteristics as the J86731-2 List 1 (101G).

Comcode: 600 018 071

J86731D-3 List 1, A, B and NP (101G): May be mounted on a relay rack or in an apparatus cabinet. Dimensions are 7 inches high by 9 inches wide and it extends 4-1/2 inches in front of mounting. It has the same features and electrical characteristics as the J86731A-4 List 6 (101G).

Comcode: 600 016 687

POWER PLANTS

J86736A-2 List 1, A, B, C, D and NP1, 101H

Power plant which provides filtered 20 volts dc and 10 and 18 volt, 60 Hz ac supplies without battery reserve. The unregulated filtered dc is supplied by a semiconductor rectifier and the ac supplies are obtained from a secondary winding on the rectifier transformer for buzzers and lamps.

The power plant has a light olive gray finish and is 7-15/32 inches high by 6-29/32 inches wide by 3-3/8 inches deep. An ac input cord and plug is provided to be inserted into a building outlet.

If backboard is required, order KS-5796L7 Backboard and four P-110911 Screws.

Used for supplying power for small key telephone systems.

Comcode: 600 017 230

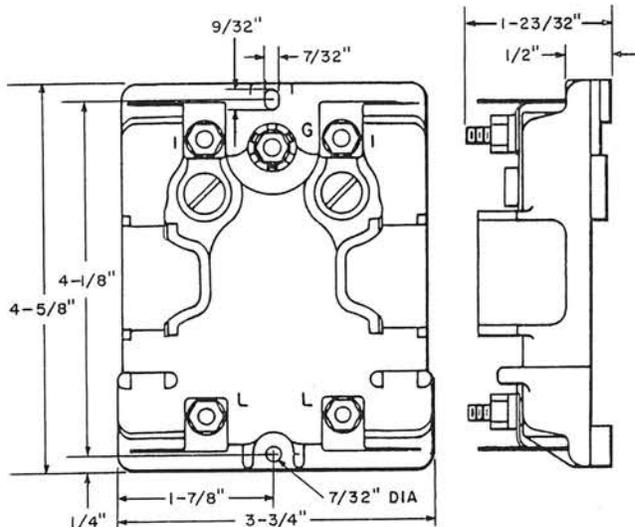

INPUT			
Volts	Cycles	Watts	Supply
105 to 125	60	11	DC TALK AC 60 Hz

OUTPUT (a)		
Voltage Range	Resistance Load Range (Ohms)	Nominal Ampere
14 to 26	140 to 1000	0.150
8.75 to 11	110 to 220	0.09
16 to 21	200 to 410	0.09

(a) The dc load may be supplied simultaneously with either the 10 or 18 volt, 60 cycle load. A total of approximately 0.09 amp may be taken from the 10 or 18 volt winding and, in addition, it is satisfactory to operate, intermittently, a 7AW Buzzer. The dc voltage at no load and 125 volt ac input will be approximately 27 volts.

PROTECTORS

106C

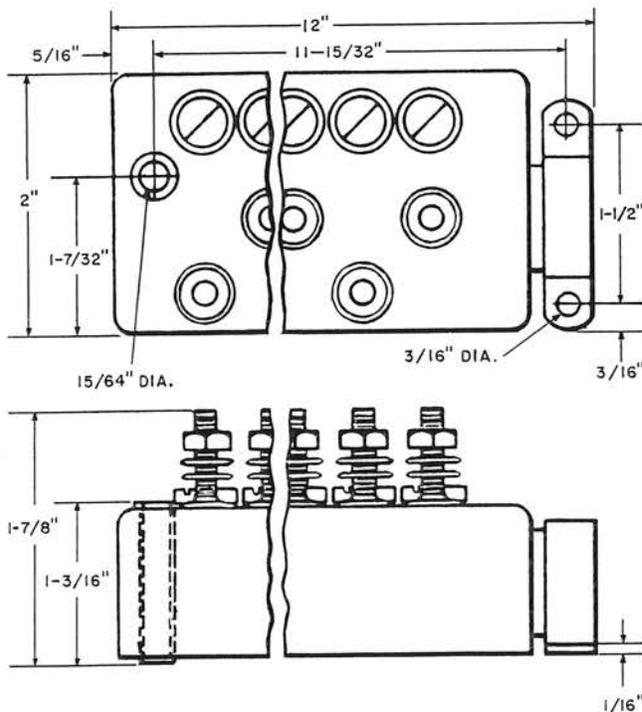

Base of insulating material equipped with two 2A1A Protector Units. Spring assembly, with sufficient current carrying capacity, is included in protector well and makes fuseless operation possible.

Provides high potential and abnormal current protection for one pair of wires.

Comcode: 100 399 799

112A

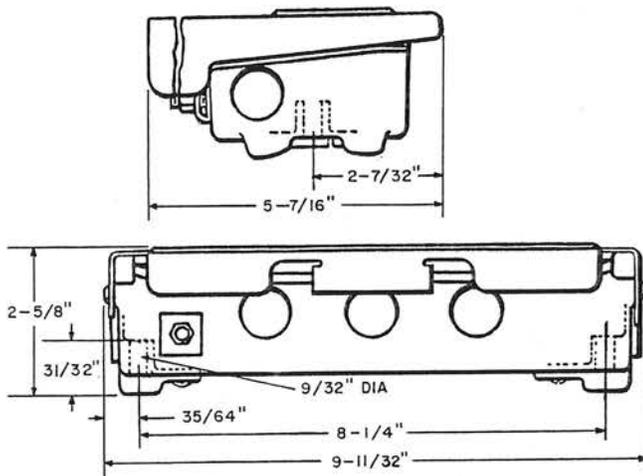

Molded terminal block containing twenty 2A1A Protector Units and binding posts. Screws and lockwashers are provided for mounting.

Used in pole mounted cabinets to provide protection for repeater equipment.

Comcode: 100 399 823

116C

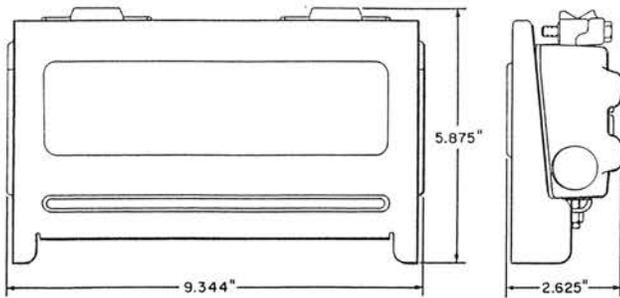

Consists of a cast metal housing having a hinged metal cover and containing twelve 2A1A Protector Units, six pairs of terminals, and two terminals for ringing ground connections. Also equipped with a clamp for connecting a ground wire to the housing to provide protector ground. Can be mounted on poles, crossarms, or walls by means of screws which are not furnished.

Used for protection for six pair multiple drop wire.

Comcode: 100 399 898

PROTECTORS

116D3B-6

Consists of a cast metal housing having a hinged metal cover and containing a 57A2B-6 Connecting Block. Also equipped with a clamp for connecting a ground wire to the housing to provide protector ground.

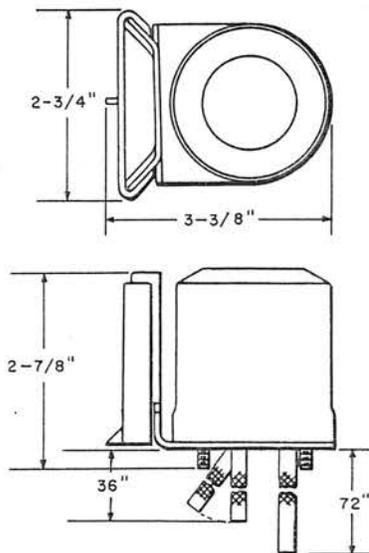

Can be mounted directly on the support wire of multiple line wire by suspension from strand. Knockouts are provided in the housing for pole or crossarm mounting.

Used to provide protection for six pair multiple line wire along an exposed run at points where drop wire is connected to multiple line wire if the station is highly exposed to lightning and at the junction of multiple line wire with open wire lines.

Replaces 116D2B-6 Protector.

Comcode 101 233 161

118A and B

Each consists of three carbon electrodes, having .020 inch gaps, mounted on a porcelain base and enclosed in a metal case.

One electrode is to be connected to ground and the other two to the line. Protector mounts on a pole or crossarm.

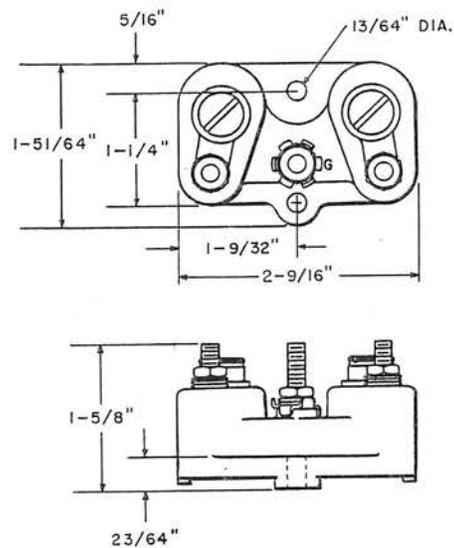

118A: Has number 8 AWG insulated wire leads and is used with open wire lines on joint use poles or as lightning protection for one pair of conductors having high dielectric insulation such as U Bridle Wire.

Comcode: 100 399 930

118B: Has number 14 AWG insulated wire leads and is used with drop wire and C Rural Wire.

Comcode: 100 399 948

123A1A and 1B

123A1A: Consists of a base of insulating material equipped with two 2B1A Protector Units and provides protection up to 500 volts.

Comcode: 100 399 997

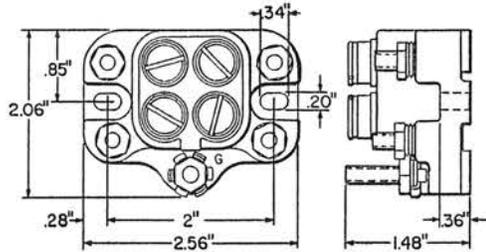

123A1B: Same as 123A1A except equipped with two 2B1B Protector Units and provides protection up to 800 volts.

Comcode: 100 400 001

Used to provide high potential (and abnormal current) protection for one pair of wires.

PROTECTORS

128A1A-2

Consists of a base of molding material equipped with four 2B1A Protector Units.

Used to provide 500 volt (and abnormal current) protection for two pairs of wires.

Comcode: 100 400 076

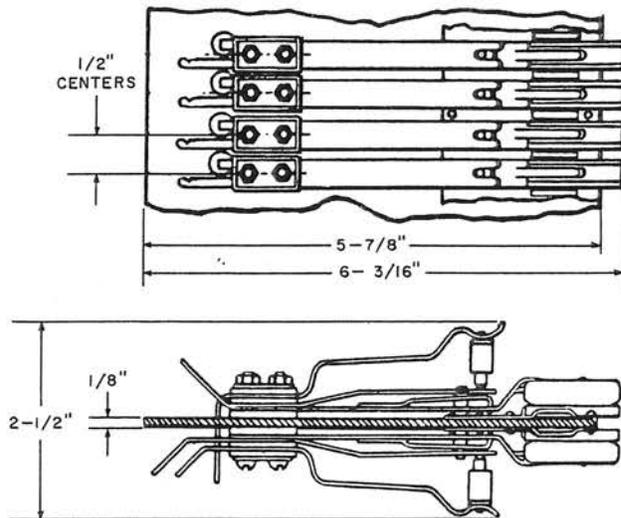

1293CW

Consists of a 106C Protector assembled in a 93CW Protector Mounting. Overall dimensions are approximately 7-1/2 inches high by 5-3/8 inches wide by 2-3/4 inches deep.

For use as a station protector where fused protection is needed and it is necessary to install the protector outside. Provides protection for one pair of wires.

Comcode: 100 400 241

1268A and B

Consist of one protector mounting, four protector blocks, and two heat coils. Mount on B-type main distributing frames or may be mounted on walls with 736A Mounting Plate, which is not furnished and must be ordered separately.

1268A: Furnished only in strips of 20 protectors.

Comcode: 100 400 191

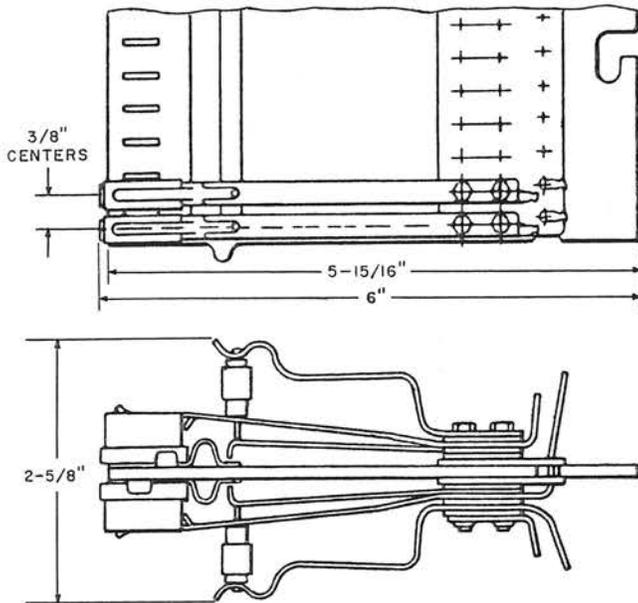

1268B: Furnished only in strips of 2B protectors.

Comcode: 100 400 209

Used to provide high potential and sneak current arrester for one pair of wires.

PROTECTORS

C50A and C52A

For use on main distributing frames. Overall length is 18-23/32 inches for the C50A and 19-15/32 inches for the C52A.

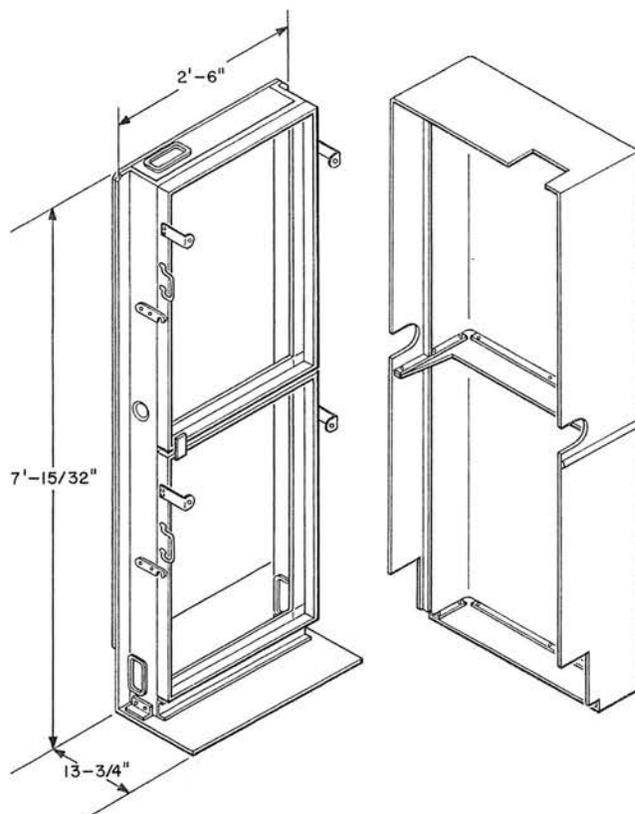

Heat coils and protector blocks are furnished as loose parts.

Code No.	Comcode	Number of Pairs of Wires Accommodated	Protector Mounting	Consist of Protector Blocks		Qty. 76A Heat Coils

RACKS

Wall Relay

ED-69463-50

A station systems wall relay rack with two gates for ready access to mounted apparatus arranged for mounting forty 1-3/4 inch mounting plates 19 or 23 inches long or thirty-four 2 inch mounting plates 23 inches long. Optional mounting materials consist of Groups 2, 3, 4, and 5. The groups required as described below must be specified on the order.

Group	Description
1	One relay rack. Comcode: 600 003 339
2	Material required to mount twenty 1-3/4 inch by 19 inch mounting plates and twenty B-type terminal strips on one gate. Comcode: 600 016 182
3	Material required to mount BL type terminal strips on ED-69463-50 Group 1 framework. Comcode: 600 016 190
4	Material required to mount sixteen 1-3/4 inch by 19 inch mounting plates and sixteen B-type terminal strips on one gate. Comcode: 600 016 208
5	Material required to mount seventeen 2-inch by 23-inch mounting plates on one gate. Comcode: 600 003 347
6 and NP	One wall rack cover. Comcode: 600 016 216

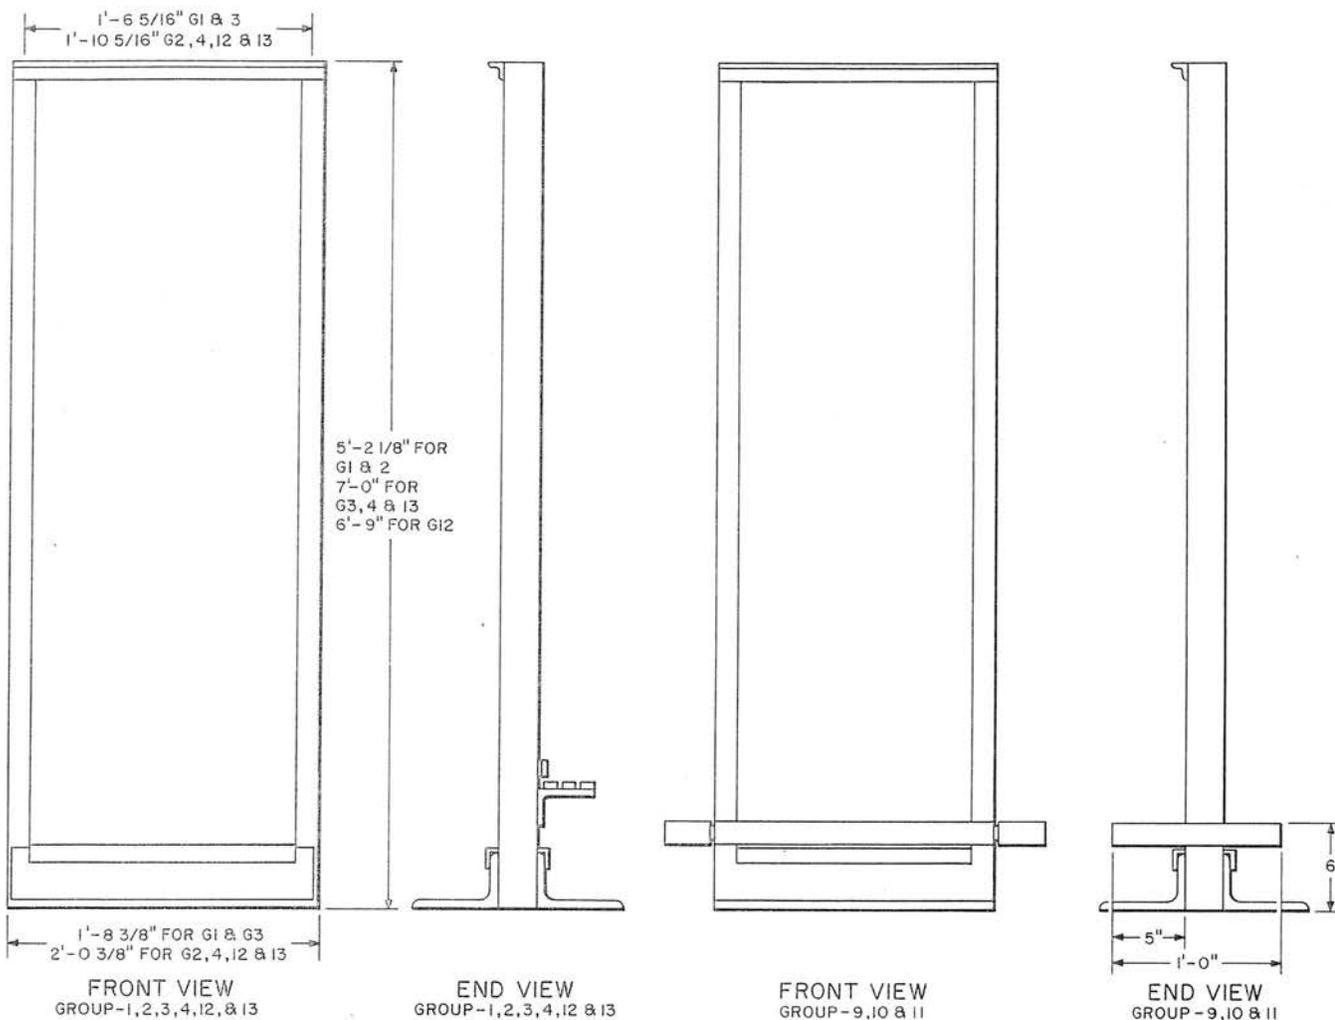

If required the following material should be ordered separately.

- 9—13A Distributing Rings
- 8—13B Distributing Rings
- 3—ED-91786-70 Group 2 Fuse Panels
- 68—P-160643 R.H.W. Screws
- 6—P-160798 R.H.W. Screws

RACKS

Relay

ED-90370-73

A floor-supported common systems channel type relay rack arranged for mounting 19-inch or 23-inch by 1-3/4 inch mounting plates or 23-inch by 2-inch mounting plates. Consists of Groups 1, 2, 3, 4, 9, 10, 11, 12, and 13. The groups required as described below must be specified on the order.

Group	Description
1	One bay 5 feet 2-1/8 inches high arranged for thirty-one 1-3/4 inch by 19 inch mounting plates, without guard rails. Comcode: 600 017 248
2	One bay 5 feet 2-1/8 inches high arranged for thirty-one 1-3/4 inch by 23 inch mounting plates, without guard rails. Comcode: 600 017 255

Group	Description
3	One bay 7 feet high arranged for forty-three 1-3/4 inch by 19 inch mounting plates, without guard rails. Comcode: 600 017 263
4	One bay 7 feet high arranged for forty-three 1-3/4 inch by 23 inch mounting plates, without guard rails. Comcode: 600 017 271
9(a)	One set of ladder guard rails for a 19-inch bay. Comcode: 600 017 289
10(a)	One set of ladder guard rails for a 23-inch bay. Comcode: 600 017 297
11(b)	One set of guard rail ends. Comcode: 600 017 305

Group **Description**

12 One bay 6 feet 9 inches high arranged for forty-one 1-3/4 inch by 23 inch mounting plates, without guard rails.

Comcode: 600 017 313

13 One bay 7 feet high arranged for thirty-seven 2 inch by 23 inch mounting plates, without guard rails.

Comcode: 600 017 321

- (a) Ordered only when bays are lined up with 8 foot 8 inch or 11 foot 6 inch bays.
- (b) For isolated lineups having ladder guard rails.

If required the following material should be ordered separately.

ED-90674-70 Group 24. Cable rack support at top of frame.

ED-65457-30. Details to insulate framework from local ground.

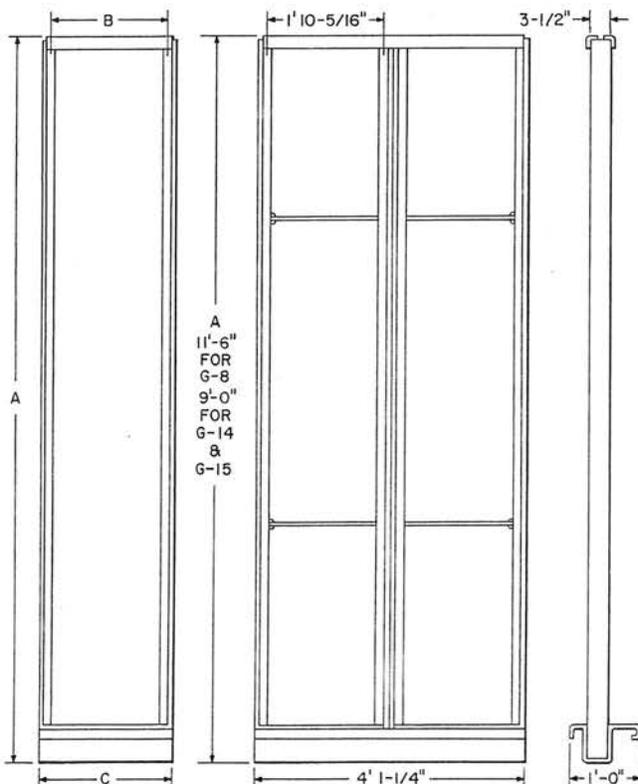

ED-90484-72 Group 25 or 26. Ground bar connections.

ED-90674-70 Group 10 or 11. Cable rack assembly.

ED-90674-70. Cable brackets.

ED-90335-70. Fuse panel adapters and equipment guard.

ED-90672-70

A common systems channel-type relay rack with floor angle and detachable guard rails. Groups 1 through 6 and 28 and 29 cover the various relay racks. Groups 7 through 16 and 19 through 27 are optional details which must be ordered as required. The groups required as described below must be specified on the order.

RECEIVERS

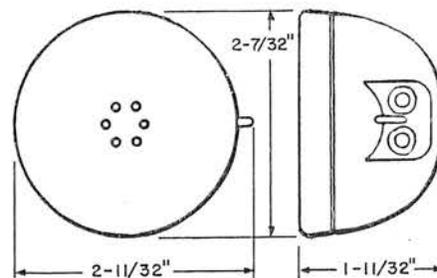

509

Watch case type receiver having a nickel plated metal case and a hard rubber cap. Resistance is approximately 1100 ohms.

Comcode: 100 400 647

723A

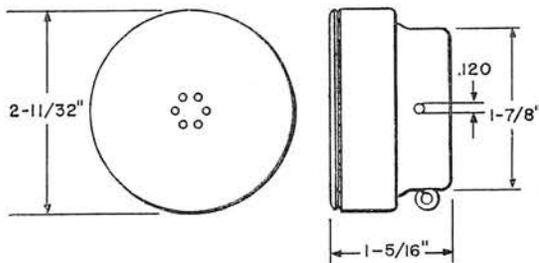

Consists of 12A Receiver Holder and HC3 Receiver Unit which will accommodate cords with number 130 Cord Tips.

Used with 15B and C type head band.

Comcode: 100 400 761

101 226 017 E/W 15F Head band.

716 Type

716A: Consists of HA1 Receiver Unit assembled in 11A Receiver Holder which has phenol plastic cap and case having terminal and cording facilities.

Comcode: 100 400 662

716B: Similar to 716A except includes HA2 Receiver Unit.

Comcode: 100 400 670

716C: Similar to 716A except includes HA4 Receiver Unit.

Comcode: 100 400 688

716D: Consists of 716A Receiver equipped with 11A Head Band.

Comcode: 100 400 696

716E: Consists of 716B Receiver equipped with 11A Head Band.

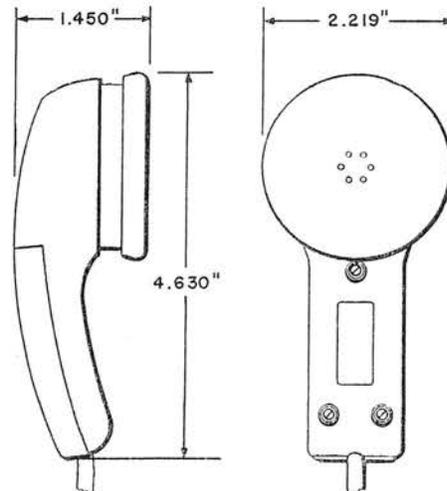

Comcode: 100 400 704

716F: Consists of 11A Receiver Holder, HA3 Receiver Unit, and 11A Head Band.

Comcode: 100 400 712

Note: 15E Head Band will mount two 716A, 716B, or 716C Receivers.

731AW-51

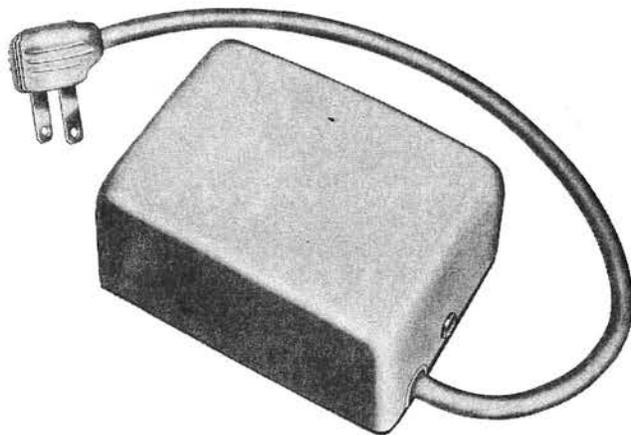

Consists of a moss green thermoplastic receiver handle and cap equipped with an HC3 Receiver Unit and R2FL-51 Cord.

Used with the 689AW, BW, CW, DW, and EW Subscriber Sets.

Comcode: 100 400 910

RECTIFIERS

J87202A2 L1, D and NP

This rectifier is a compact unit designed to convert 117 volts, ± 10 volts, 60 Hz ac to +11 volts, 0.0750 amp and +25 volts, 0.045 amp dc. The rectifier includes a step-down transformer and a full wave semiconductor rectifier and is equipped with a 12 inch power cord, wall plate, plate mounting screws, and a light olive gray cast zinc cover. Overall dimensions are 3-3/4 inches long by 2 inches high by 2-3/4 inches deep. A 110-volt, 60 Hz ac outlet must be provided. Rectifier maintenance is limited to replacement of blown fuses.

Used with number 106 type loudspeaker sets.

RELAYS

Flat Type

Efficiency of Operation: Each relay requires minimum current consistent with conditions under which operated. Conditions cover contact pressures necessary during operation and in nonoperative position; speed or time of operation; requirements as to high or low impedance which position in circuit makes necessary. High efficiency attained through careful choice of materials and correct proportioning of parts.

Permanent and Easy Adjustments: Spring contacts and armature air gaps are at front end of relay; clearly visible while being adjusted when in place on mountings. Adjustments are permanent over long periods of service, being maintained under widely varied conditions of heat, cold, and humidity.

Insulation of Contact Springs: Phenol Fiber used has high dielectric strength of hard rubber; not affected by heat, moisture or deterioration like rubber.

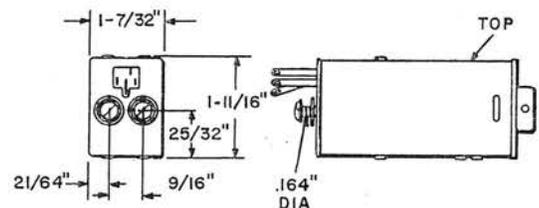

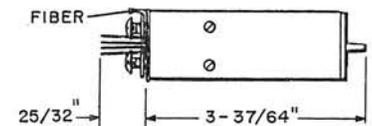

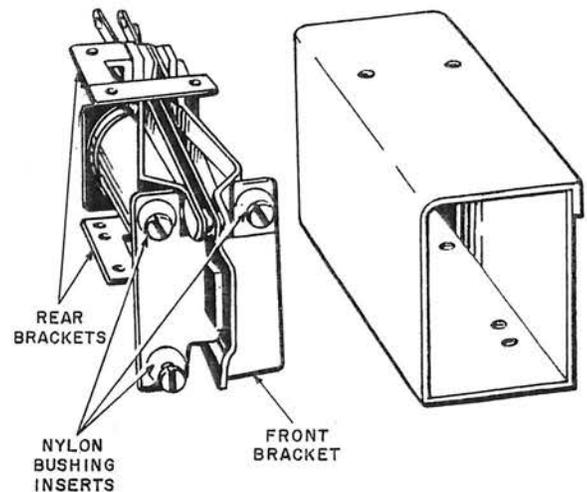

Self-Cleaning Contacts: Mounted so that surfaces in vertical plane and dust does not settle on contacts. Maintenance reduced. Difficulties due to poor contacts avoided.

Durability of Parts: Magnetic parts are chromium plated. Special alloys used are best material electrically for parts in which utilized; mechanically strong materials from which small parts having great strength may be made. Spoolheads of phenol fiber. Windings highly insulated. Windings will carry continuously without injury, currents greater than required for operation.

Small Size and Ease of Mounting: Compact in design; light in weight; occupy small amount of space. Terminals are all at one end, conveniently arranged for making soldered connections. Insulated from their mountings. Fastened in place with two screws. Stability and ruggedness when mounted reduces maintenance costs.

Armature Suspension: Flat, reed type spring used secures continuous and unvarying magnetic path between armature and core. By selection of suitable springs, extremely sensitive relays are obtained with this type construction.

B-Type

B-type relays differ from E- and H-types in that they are provided with a micrometer screw adjustment feature which permits extremely accurate adjustments to be made. Individual covers are provided and each has a removable cap which may be placed in position without affecting the adjustment of the relay. Relays are supplied dust and crosstalk proof. When crosstalk shielding is not required, dust-proof covers are supplied.

Mount on 1-1/4 inch horizontal and 1-3/4 inch vertical centers.

Used as supervising relays in switchboard cord circuits and other places where sensitive, highly efficient, reliable relay is required. When used as a series supervisory relay, transmission loss is very low. The relay has superior flashing ability and will operate in a line having as high as 1000 ohms resistance. Use of a supervisory relay of the B-type secures operating advantages which are obtained through sensitive adjustment, small operating current, low transmission loss, and reduced maintenance.

RELAYS

B1154(e)(f)	100 420 009	P1, P2 (parallel)	25 each (k)	.0098(a)(c)	.0045(a)(c)

(a) Through inner winding shunted by secondary and tertiary windings in series. Also operates on .020 ampere through inner winding shunted by tertiary only and terminals of secondary short circuited.

(b) Plus or minus 10 percent.

(c) After a soak.

(d) After a soak of .150 ampere.

(e) Equipped with heavy contacts.

(f) Equipped with flexible front and rear contact springs.

(g) Through primary and quaternary in multiple, and secondary and tertiary in multiple, in series aiding.

(h) After a soak of .006 ampere.

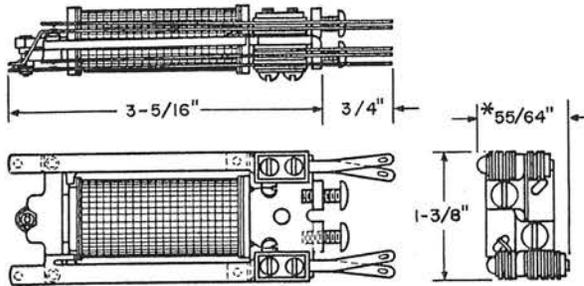

(j) Through primary P1.

(k) Plus or minus 15 percent.

RELAYS

Flat Type

E-Type

Heavy duty all-purpose telephone relays. Designed for two sets of contact springs; may be duplicates or differ in contact arrangement. Make it possible in many cases to use one where two or more of another style would be required.

Mounted on either drilled or punched type mounting plates. Relays are provided with common dust-proof metal covers on 1-3/4 inch vertical and 3/4 or 1 inch horizontal centers (depends upon number of contact springs). When individual dust-proof cover for each relay is desired, E1 Relay Cover should be specified. Relay will then mount on 1-1/4 inch horizontal and 1-3/4 inch vertical centers.

*This dimension varies according to the number of contact springs and winding terminals on the individual relays.

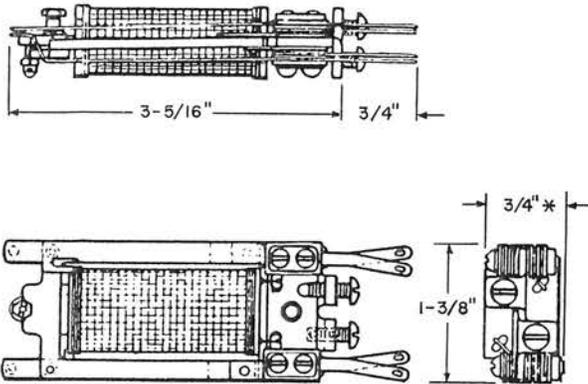

The following are representative types:

Code No.	Comcode	Pri	Sec	Windings		Operate (Amp)	Release (Amp)	
				Rated Res (Ohms)	Sec Non-Ind			
E5	100 420 355	—	—	—	—	1000	.008	.003

E931	100 424 373	—	—	—	—	750	.012	—

RELAYS

Flat Type

F-Type

Mount on either channel or flat type mounting plates with common or individual dust-proof covers as required. Insulated from mounting plate. When not equipped with individual covers, will mount on 1-3/4 inch vertical centers, and 3/4 inch or 1 inch horizontal centers.

When individual dust-proof covers are required for each relay the E1 Relay Cover should be specified. In these instances the relay will mount on 1-1/4 inch horizontal centers and 1-3/4 inch vertical centers.

The following are representative types:

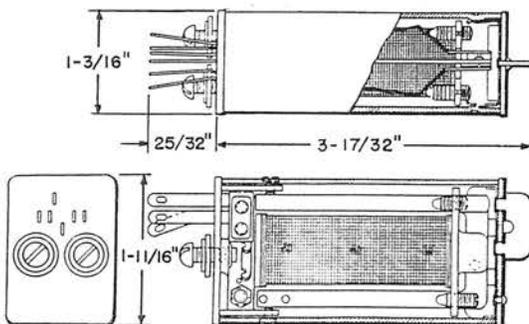

Code No.	Comcode	Windings	Rated Res (Ohms)	Operate (Amp)	Release (Amp)
F9	100 432 392	Single	850	.028(a)	.018(a)
F17	100 432 459	Single	1475	.014	.0093
F21	100 432 467	Single	1475	(b)	

*This dimension varies according to the number of contact springs and winding terminals on the individual relays.

Similar to E-type except they are slow releasing due to a winding of bare copper wire over the core and are equipped with adjustable armature stop pin to regulate time of release.

- (a) After operated by a current of .047 amp, will remain operating for at least .1 second and will release open circuits within .5 second.
- (b) With a current of .028 amp will operate and hold on pulses which are .10 second closed and .120 second or on circuit and will operate and release on pulses which are .1 second closed and .35 second open.

G-Type

Similar to the B-type relays except they have higher impedance at talking frequencies due to laminated construction of cores. Each relay is equipped with cross-talk proof shell with removable cap.

Mount on 1-1/4-inch horizontal and 1-3/4-inch vertical centers. Insulated from mounting plate.

The following are representative types:

Code No.	Comcode	Pri	Sec	Windings		Operate (Amp)	Release (Amp)
				Single	Parallel		
G1	100 432 475	75	75	—	—	.0078(a)	.005(a)

		—	3500	—	—	.0025(e)	—
G90(c)	100 433 028	—	—	—	11.5 ea(b)	.0211(a)(d)	.0122(a)(d)

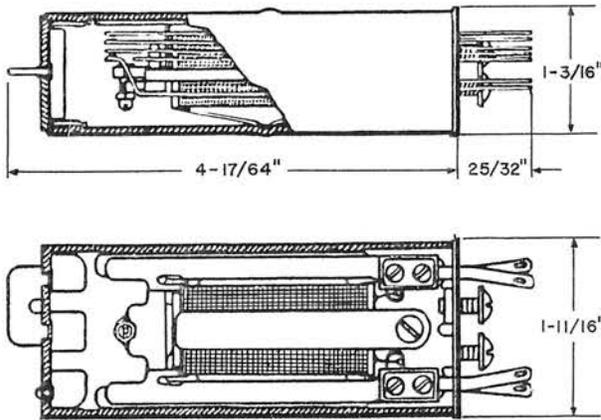

- (a) Through both windings in series aiding.
- (b) Plus or minus 10 percent.
- (c) Equipped with a flexible front contact spring.

- (d) After a soak of .150 amp.
- (e) After a soak of .038 amp through primary winding.

RELAYS

Flat Type

H-Type

Similar to E-type except they have increased impedance at talking frequencies due to laminated core. Equipped with E2 (crosstalk proof) Relay Covers.

Mount on 1-3/4 inch vertical and 1-1/4 inch horizontal centers. Insulated from mounting plate.

The following are representative types:

Code No.	Comcode	Winding	Rated Res (Ohms)	Operate (Amp)	Re-lease (Amp)
H1	100 433 259	Single	120	.015	—
H19(b)	100 433 358	Primary	250	.026(a)	.007(a)
		Secondary	260	—	—
H50	100 433 549	Single	165	.022	—
H100	100 433 846	Primary	300	.021(a)	—
		Secondary	300	—	—
H125(d)	100 434 059	Primary	215(c)	.0295(a)	—
		Secondary	175(c)	—	—

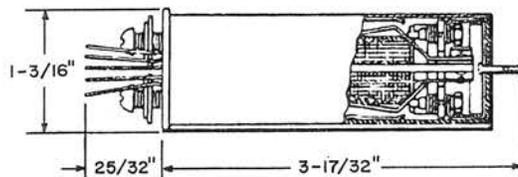

(a) Through both windings in series aiding.

(b) Has .010 inch armature stop pins.

(c) Plus or minus 10 percent.

(d) Primary is wound over and under secondary winding to obtain an impedance balance.

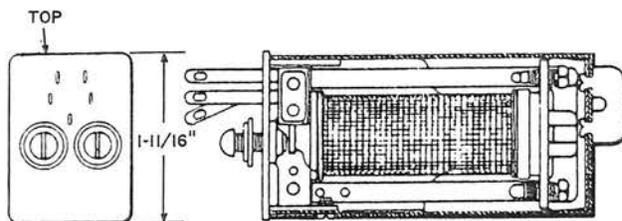

J-Type

Used with 16 to 20 Hz alternating current. Otherwise similar to B-type relays but have different core, spool-head, and adjusting plate characteristics. Each relay has metal dust-proof cover and removable cap.

Mounts on 1-1/4 inch horizontal and 1-3/4 inch vertical centers. Insulated from mounting plate.

See the following page for representative types:

		—	3120	—	—	.0041	.0042	.0034

- (a) Operating and non-operating values apply at ringing frequencies of from 16 to 20 cycles.
- (b) Equipped with a flexible front contact spring.
- (c) Equipped with heavy contacts.
- (d) Plus or minus 10 percent.

- (e) Equipped with flexible front and back contact springs.
- (f) Equipped with heavy front contacts.
- (g) Equipped with a pendulum type (weighted) flexible front contact spring.
- (h) Equipped with palladium contacts.

R-Type

Similar to E-type except core, although having same cross-sectional area, is elliptical shaped. Greater winding space and shorter length of turn than on E-type.

Mount on drilled mounting plates on 1-3/4 inch vertical and 1-inch horizontal centers. Mount also on punched mounting plates. Insulated from mounting plate.

When individual cover is required, specify R1 or R2 Relay Covers whose closest horizontal mounting centers are 1-1/4 inch and 1-3/8 inch, respectively, and 1-3/4 inch vertical. R3 Relay Cover is crosstalk proof and has 1-3/8 inch horizontal and 1-3/4 inch vertical mounting centers.

*This dimension varies according to the number of contact springs and winding terminals on the individual relays.

- (c) Individual cover is U5.

RELAYS

Flat Type

EA-Type

*This dimension varies according to the number of contact springs and winding terminals on the individual relays.

Similar to E-type except have a cellulose acetate filled coil. Armature and core are made from magnetic iron. Contacts are tensioned to minimum 17 grams. Have armature stop discs .009 to .014 inch high. Provided with special terminals arranged to facilitate strapping. Resistance values are held to within 10 percent. Closest recommended horizontal mounting centers are 1 inch and closest recommended vertical centers are 1-3/4 inches. No provision is made for individual relay covers. Relays are insulated from the mounting plate. Air gap at the armature hinge is bridged by a magnetic shunt.

(a) Has .002 to .005 inch high armature stop discs.
 (b) Contacts are tensioned to minimum 9 grams.
 (c) Has .005 to .007 inch high armature stop pins.
 (d) Slow acting relay having a short-circuited sleeve over core.

(e) Plus or minus 5 percent.
 (f) Plus 5 percent.
 (g) Equipped with heavy contacts of palladium.
 (h) All terminals are arranged for mechanically wrapped connections.

RELAYS

Wire Spring Type

AF Type

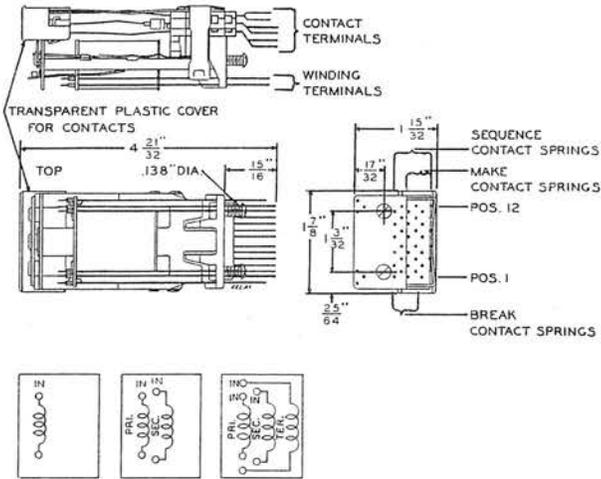

Fig. 1 Fig. 2 Fig. 3

General purpose wire spring relays for normal spring loads. Have two or three parallel rows of wire contact springs, each row molded into an individual base. The wire springs are tensioned during manufacture and are positioned by a fixed card and a moving card. The fixed card is attached to the relay frame and the moving card is actuated by the armature. Relays having two rows of

springs contain only make or break contacts. Relays having three rows of springs contain both make and break contacts. Moving contact springs are arranged in pairs to provide twin contacts, each moving wire having bar contacts with a gold overlay. All terminals are arranged for mechanically wrapped connections.

On some of these relays, the movement of the armature causes one group of contact pairs to make (or break) before a second group of contact pairs make (or break) and the second group of contact pairs to make (or break) before a third group of contact pairs make (or break). ("Group" as used herein should be interpreted to mean one or more.) Those groups of contact pairs which make (or break) last are called "ordinary" contacts, those which make (or break) prior to "ordinary" contacts are called "early" contacts and those which make (or break) prior to "early" contacts are called "preliminary" contacts. Some relays may have only "ordinary" contacts, others may have "ordinary," "early" and "preliminary" contacts.

Current values specified are readjust values. Circuit test values are 105 percent of the operate and hold values and 95 percent of non-operate and release values.

Construction of the relays is such that insulating bushings are not required in the associated mounting plate.

Inductive windings do not vary more than ±10 percent and non-inductive windings more than ±5 percent from their rated resistance value unless otherwise indicated.

Can be obtained equipped with a 4B Clip, a P-19A890 Flexible Mounting, and a P-19A146 Cross-talk Shield when specified in order.

Will mount on 1-5/8 inch horizontal and 2 inch vertical centers, and, when located adjacent to similar relays, will mount on 1-1/2 inch horizontal centers. Relays equipped with a P-19A146 Cross-talk Shield will mount on 1-3/4 inch horizontal centers.

RELAYS

Wire Spring Type

General purpose wire spring relays for sensitive, marginal, or heavier springs loads.

Each has two or three parallel rows of wire contact springs, each row molded into an individual base. The wire springs are tensioned during manufacture and are positioned by a fixed card and a moving card. The fixed card is attached to the relay frame and the moving card is actuated by the armature. Relays having two rows of springs contain only make or break contacts. Relays having three rows of springs contain both make and break contacts. Moving contact springs are arranged in pairs to provide twin contacts, each moving wire having bar contacts with a gold overlay. All terminals are arranged for mechanically wrapped connections.

On some of these relays, the movement of the armature causes one group of contact pairs to make (or break) before a second group of contact pairs make (or break) and the second group of contact pairs to make (or break) before a third group of contact pairs make (or break). ("Group" as used herein shall be interpreted to mean one or more.) Those groups of contact pairs which make (or break) last are called "ordinary" contacts, those which make (or break) prior to "ordinary" contacts are called "early" contacts and those which make (or break) prior to "early" contacts are called "preliminary" contacts. Some relays may have only "ordinary" contacts, others may have "ordinary," "early" and "preliminary" contacts.

Current values specified are readjust values. Circuit test values are 105 percent of the operate and hold values and 95 percent of the non-operate and release values.

Construction of the relays is such that insulating bushings are not required in the associated mounting plate.

Inductive windings do not vary more than ± 10 percent and non-inductive windings more than ± 5 percent from their rated resistance value unless otherwise indicated.

All types except AJ200 and AJ700 series can be obtained equipped with a 4B Clip, a P-19A890 Flexible Mounting, and a P-19A146 Cross-talk Shield when specified in the order.

Will mount on 2-inch vertical centers. All relays, except AJ200 and AJ700 series, will mount on 1-5/8 inch horizontal centers and when mounted adjacent to similar relays will mount on 1-1/2 inch horizontal centers. The closest recommended mounting centers for the AJ200 and the AJ700 are 2-1/2 inches. Closer centers down to 1-3/4 inches may be used but may result in congested wiring.

Relays equipped with a P-19A416 Cross-Talk Shield will mount on 1-3/4 inch horizontal centers. Codes in the AJ500 and AJ700 series have long life features.

RELAYS

Wire Spring Type

AK Type

The AK type relays are generally the same as the AF type, except they are designed to mount interchangeably with the AF type and there are two independent relay units. To effect a space saving, they may be used as a substitute for two AF type relays, each of which has a single winding coil and five or less sets of contacts.

Can be obtained equipped with a 4B Clip when specified in the order.

Will mount on 1-5/8 inch horizontal and 2 inch vertical centers, unless otherwise indicated by footnote. When located adjacent to similar relays, will mount on 1-1/2 inch horizontal centers.

RELAYS

Miniature Flat Spring Type

MA Type

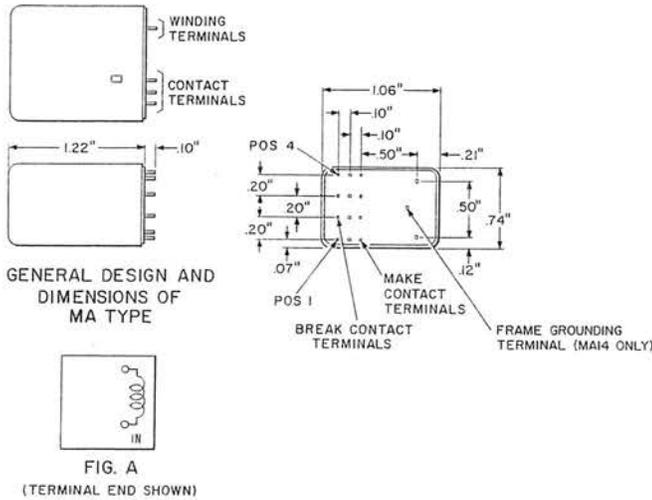

Fig. 1

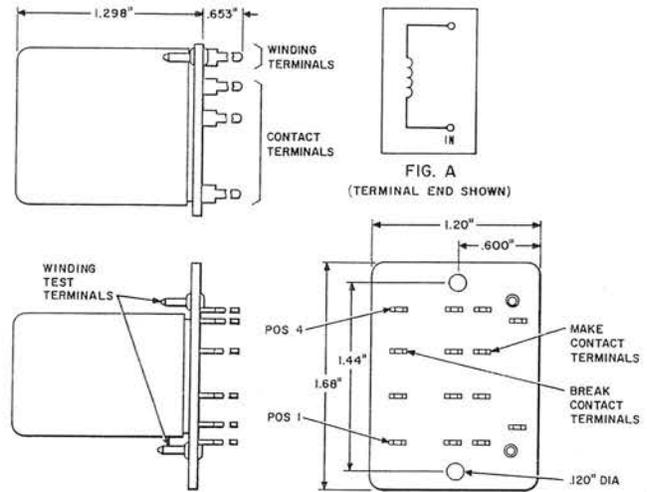

Fig. 3

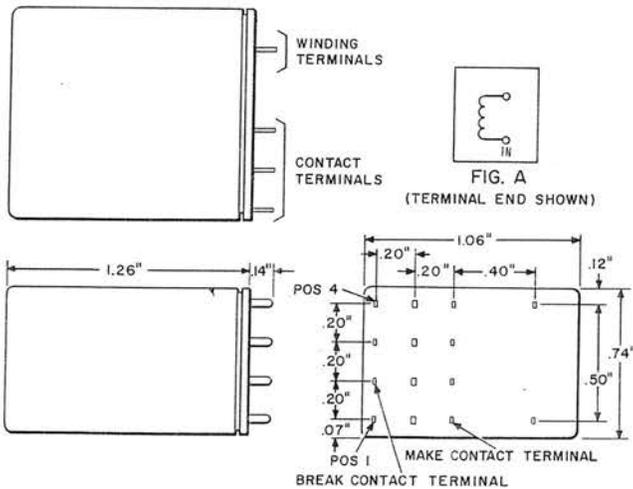

Fig. 2

MA1, MA3 thru MA16, MA19 thru MA22 & 27: Miniature card-operated flat spring relays arranged to mount on printed wiring boards. Terminal cross-sections are 0.025 inch square and 0.030 inch by 0.006 inch. Each has two or three parallel rows of flat contact springs. Relays having two rows of springs contain only make or break contacts. Relays having three rows of springs contain both make and break contacts. Stationary contact springs have bar type contacts of number 2 metal. Moving contact springs are arranged in pairs to provide twin contacts. Each moving spring has bar contacts of number 2 metal with a good overlay.

On some of these relays, the movement of the armature causes one group of contact pairs to make (or break) before a second group of contact pairs makes (or breaks). ("Group" as used herein should be interpreted to mean one or more). Those groups of contact pairs which make (or break) last are called "ordinary" contacts and those which make (or break) prior to "ordinary" contacts are called "early" contacts. Some relays may have only "ordinary" contacts and others may have both "ordinary" and "early" contacts. In the following table, the contacts of a relay are identified by a "Spring Combination Number" which is referred to in connection with a description of the relays. Spring combination numbers from 1 to 49 are assigned to single-stage (short travel) relays and 100 to 199 to two-stage (intermediate travel) relays.

Current values specified are readjust values. Circuit test values are 105 percent of the operate and hold values and 95 percent of the nonoperate and release values.

On new or repaired relays, inductive windings do not vary more than plus or minus 5 percent from their rated resistance value unless otherwise indicated by footnote.

RELAYS

Miniature Flat Spring Type

Will mount on 1.1 inch horizontal and 0.8 inch vertical centers.

MA1A and MA3A thru MA13A & MA23A: Consists of MA1 and MA3 through MA13 relays, respectively, equipped with an insulated plate adapter arranged for increased spacing and length of the relay terminals. Will mount on 1.1 inch horizontal and 1.05 inch vertical centers.

MA1C, MA3C thru MA13C and MA15C: Consists of MA1, MA3 through MA13, and MA15 relays, respectively, equipped with an insulator having solderless wrapped terminals. Also winding test terminals have been added on the apparatus side. Arranged to mount on 2 inch channel type mounting plates. Will mount on 1.25 inch horizontal and 1.75 inch vertical centers.

RELAYS

Miniature Flat Spring Type

MB Type (Continued)

MB1 thru MB14 and MB16 thru MB18: Miniature card-operated flat spring relays arranged to mount on printed wiring boards. Terminal cross sections are 0.25 inch square and 0.030 inch by 0.006 inch. Have two or three parallel rows of flat contact springs. Relays having two rows of springs contain only make or break contacts. Relays having three rows of springs contain both make and break contacts. Stationary contact springs have bar type contacts of number 2 metal. Moving contact springs are arranged in pairs to provide twin contacts. Each moving spring has bar contacts of number 2 metal with a gold overlay.

On some of these relays, the movement of the armature causes one group of contact pairs to make (or break) before a second group of contacts make (or break). ("Group" as used herein should be interpreted to mean one or more). These groups of contact pairs which make (or break) last are called "ordinary" contacts and those which make (or break) prior to "ordinary" contacts are called "early" contacts. Some relays may have only "ordinary" contacts, and others may have both "ordinary" and "early" contacts. In the following table, the contacts of a relay are identified by a "Spring Combination Number" which is referred to in connection with a description of the relays. Spring com-

bination numbers from 50 to 99 are assigned to single-stage (short travel), and 200 and up to two-stage (intermediate travel) relays.

Current values specified are readjust values. Circuit test values are 105 percent of the operate and hold values and 95 percent of the nonoperate and release values.

On new or repaired relays, inductive windings do not vary more than plus or minus 5 percent from their rated resistance value unless otherwise indicated by footnote.

Will mount on 1.1 inch horizontal and 1.05 inch vertical centers.

MB1A thru MB8A, MB10A and MB12A: Same as MB1 through MB8, MB10 and MB12, respectively, except they are equipped with an insulated adapter arranged for increased spacing and length of relay terminals.

MB1D thru MB10D and MB12D thru MB14D: Same as MB1 through MB10 and MB12 through MB14, respectively, except they are equipped with an insulated adapter provided with solderless wrapped terminals and are intended for general purpose use on 2-inch channel-type mounting plates. Will mount on 1.250 inch horizontal and 1.750 inch vertical centers.

(b) Same as MB1 except provided with a frame grounding terminal.

RELAYS

Polarized Type

209 Type

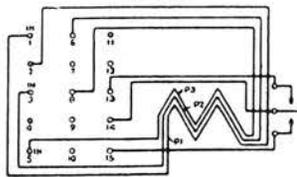

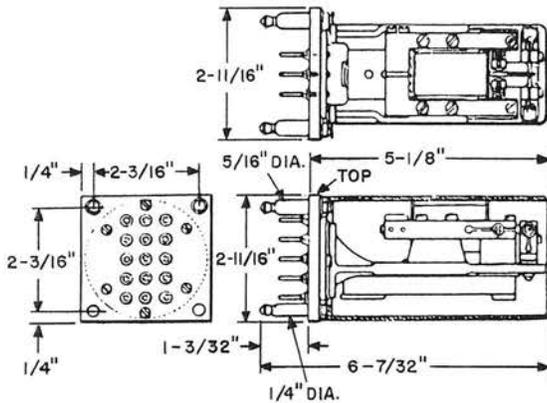

Fig. 1

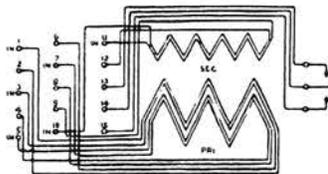

Fig. 2

Highly sensitive polarized relays equipped with reed type armatures and dust-proof covers.

Mount on number 823, 824, or similar mounting plates through medium of 18A Connecting Blocks. Insulated from mounting plates. Mount mechanically on 2-3/4 inch vertical and horizontal centers; but due to sensitiveness to magnetic interference with respect to other relays or other magnetic apparatus, mounting centers should be given special consideration in each case. 18A Connecting Block must be ordered separately. Schematic for 209FD is shown in Fig. 1 and 209FG is shown in Fig. 2.

Used in telegraph circuits.

Code No.	Comcode	Primary Each	No. of Windings	Resistance (Ohms)		Operate (Amp) Minimum

- (a) Through each one of the three parallel windings.
- (b) Equipped with extra heavy contacts on armature.
- (c) Through 4 primary windings in series aiding.

RELAYS

Polarized Type

314A and B Type

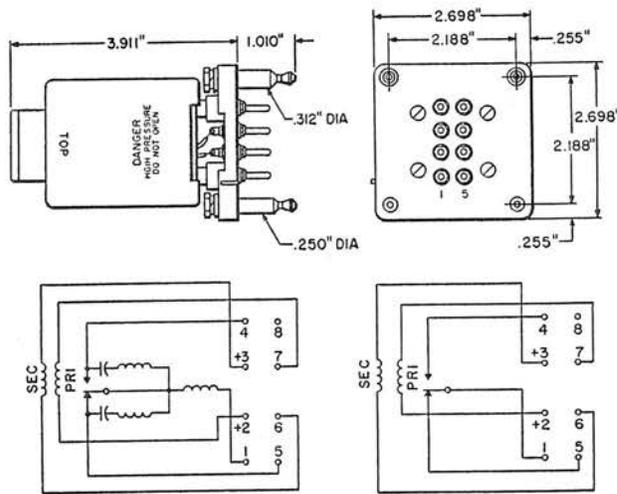

Fig. 1

Fig. 2

Plug-in type latching relay consisting of a switch (having biasing permanent magnets) within a coil, and capacitors and inductors potted in a metal can and assembled on a base of insulating material. Switch provides a transfer consisting of one back contact, one front contact, and a swinger which are continuously coated with mercury and enclosed in an atmosphere of hydrogen in a sealed glass tube. At all practical operating rates, there will be a period during the transfer in either direction when all switch contacts will be electrically open. This transfer interval is at least .04 millisecond.

Relay does not vary more than ± 10 percent from the rated resistance.

Positive potential should be connected as indicated.

Can be operated in a horizontal position (with the orientation mark at the top) or in a vertical position (with the handle at the top). Closest recommended mounting centers are 2-3/4 inches. Arranged to mount on a number 823, 884, or similar type mounting plate by means of an 18B Connecting Block which must be ordered separately.

314A has built-in contact protection and is used on all carrier telegraph systems for send and receiving positions. 314B is not provided with contact protection and is used on carrier telegraph systems for send positions only.

Code No.	Comcode	Fig. No.	Winding	Rated Resistance (Ohms)	Test Current Flow Values (Milliamperes DC)

(a) In series aiding.

(b) With current applied between terminals 2 and 6 with terminals 3 and 7 strapped.

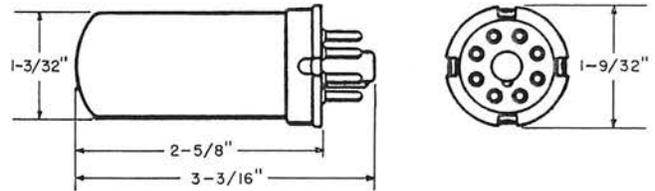

RELAYS

Nonadjustable Type

275 and 276 Type

NOTE: CONTACTS AND LEADS SHIELDED FROM COIL .

275 Type

Dimensions of 276 type are the same as 275 type except for the length which is 3-21/32 inches.

Each consists of a switch within a solenoidal coil contained in a metal electron tube shell equipped with a small wafer octal base. The switch provides a transfer consisting of two front contacts, two back contacts, and a single swinger which are continuously coated with mercury and enclosed in an atmosphere of hydrogen in a sealed glass tube. At all practical operating rates there will be a period during the transfer in either direction when all switch contacts will be electrically connected or bunched. This bunching interval is not expected to exceed one millisecond.

Relays do not vary more than ± 10 percent from the rated resistance unless otherwise indicated by footnote.

Positive potential should be connected as indicated.

Should be mounted in a vertical position or within 30 degrees of the vertical.

- (a) After soak.
- (b) Plus or minus 15 percent.
- (c) Has special requirements.
- (d) A 60 cps. 18.5 volt rms sinusoidal voltage applied to the winding will cause the armature to transfer from one pair of contacts to the other pair of contacts, and then return to the original contacts 60 times a second, with approximately equal time of dwell on the front and back contacts.
- (e) Switch is electrostatically shielded.
- (f) Plus or minus 5 percent.

323A

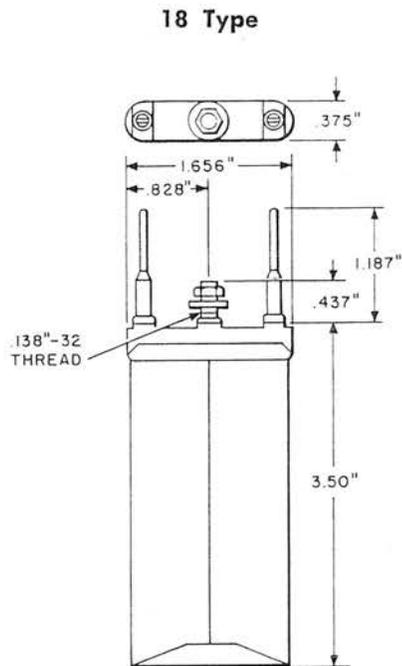

A nonadjustable relay consisting of a mercury wetted, sealed contact, having biasing permanent magnets housed within a solenoidal coil contained in a rectangular metal case. The sealed contacts provide two makes from a common swinger which are continuously coated with mercury and enclosed in an atmosphere of hydrogen in a sealed glass tube. It is a single winding relay having a rated resistance of 1650 ohms $\pm 10\%$. Has the following test current flow values in ma dc:

Soak	Operate (a)	Hold	Release
24.0	7.5 (b)	3.5	3.5

- (a) After soak.
- (b) With current applied between terminals 1 and 4, with terminal 1 positive.

It is arranged for mounting on printed wiring boards. Used for lamp power in 1A2 Key Telephone System. Comcode: 100 414 903

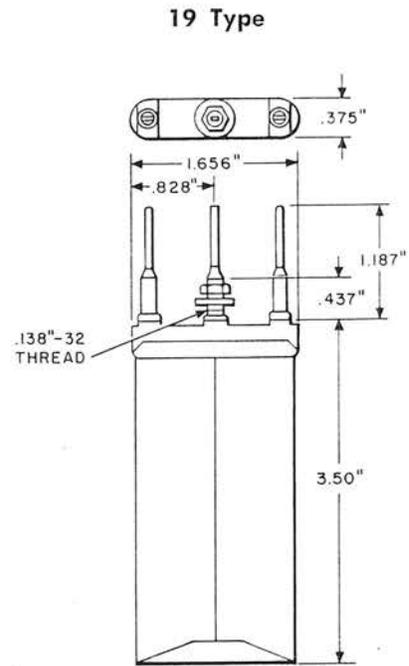

RESISTORS

Single winding resistor. Winding is wound on a non-magnetic metal core. Resistor has a cover of insulating material. Terminals are tinned and arranged for mechanically wrapped connections.

May be obtained in varying resistance values from 0.3 ohm to 10,000 ohms having a tolerance of ± 5 percent. Tolerances of ± 0.1 of 1 percent, ± 0.25 percent, ± 0.5 percent, 1 percent, 2 percent, and 3 percent are available on some values. Available resistance values and tolerances may be established by referring to the table of preferred resistor values found at the end of the resistor section.

The normal power rating is 5.1 watts at 150° F. For each degree F that the ambient temperature exceeds 150° F, the power rating decreases about 1 percent. Trouble power rating is 12 watts at 75° F. For each degree that the ambient temperature exceeds 75° F, the trouble power rating decreases about 1/2 percent.

Two winding resistor. Each winding is wound on a non-magnetic metal core. Has three terminals, the center terminal being common to both windings. Has a cover of insulating material. Terminals are tinned and are arranged for mechanically wrapped connections.

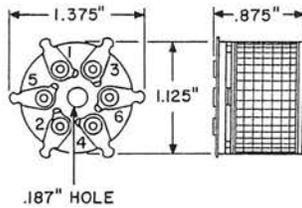

Closest recommended mounting centers are .4375 inch by 1.750 inches.

May be obtained in varying resistance values from 0.2 ohm in the low resistance section to 7560 ohms in the high resistance section having a tolerance of ± 5 percent. Tolerances of ± 0.1 of 1 percent, ± 0.25 percent, ± 0.5 percent, 1 percent, 2 percent, 4.2 percent, and 10 percent are available on some values. Available resistance values and tolerances may be established by referring to the table of preferred resistor values found at the end of the resistor section.

Normal total power rating distributed over the two resistor sections is 5.1 watts maximum at 150° F. For each degree F that the ambient temperature exceeds 150° F, the normal total power rating decreases approximately 1 percent. Trouble total power rating distributed over the two resistor sections is 12 watts at 75° F. For each degree that the ambient temperature exceeds 75° F, the trouble total power rating decreases approximately 1/2 percent.

RESISTORS

36 Type

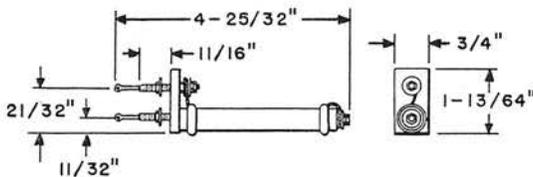

Consists of one or more windings noninductively wound on a spool having brass core and phenol fibre spoolhead.

Mounts by means of a screw which passes through the core. The mounting screws must be ordered separately. Closest recommended mounting centers are 1.625 inch.

The resistor has six terminals and from one to five different value resistances may be taken from one resistor. Resistors may be obtained in varying values from 10 ohms per section to 6500 per section. Tolerances of $\pm 1/4$ of 1 percent, $1/2$ of 1 percent, 1 percent, and 4 percent are available on some values. Available resistance values and tolerances may be established by referring to the table of preferred resistor values found at the end of the resistor section.

59 Type

Enameled porcelain type resistors capable of withstanding high temperatures.

Resistance values are held within limits of ± 5 percent except where indicated by footnote in table.

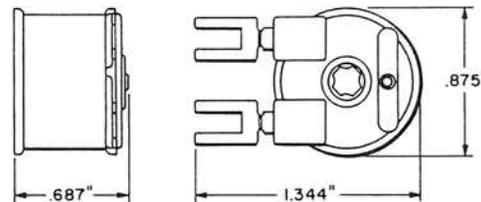

Arranged for mounting on mounting plates. Will mount on .875 inch horizontal centers and 1.3125 inch vertical centers. Except for horizontal centers, will mount on panels drilled for number 19 type resistors.

59Y	100 495 191	110.5(a)

(a) ± 1 percent.

63 Type

Noninductive resistors wound on a spool of insulating material. Terminals are arranged for mechanically wrapped connections.

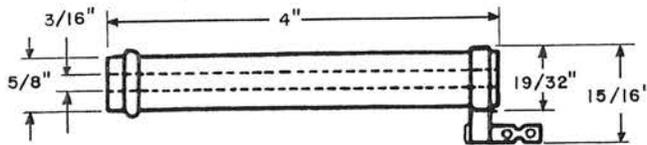

Arranged to mount by means of a number 6 screw through the core. The spool heads are formed so as to mesh with one another and thereby orient the terminals of adjacent resistors either in the same direction or in a diametrically opposite direction when mounted in multiple (stacked) on a single screw.

May be obtained in varying values from 3 ohms to 21,300 ohms with tolerance of ± 5 percent. Tolerances of ± 0.5 percent, ± 0.6 percent, ± 1 percent, ± 2 percent, and ± 2 ohms are available on some values. Available resistance values and tolerances may be established by referring to the table of preferred resistor values found at the end of the resistor section.

Power rating is 1 watt in free air and 2 watts when mounted singly on metal plates at an ambient temperature of 150° F. Maximum continuous operating temperature is 250° F.

RESISTORS

67 Type

Enameled porcelain type resistor capable of withstanding high temperatures.

Mounts on 3/4 inch centers of number 4 type resistor mounting. Each resistor has one soldering terminal and the other connection is made through the number 4 type resistor mounting.

Power rating is 22 watts at 25° C ambient temperature. Resistance values are held to within limits of ±5 percent, except where indicated by footnote in table.

(a) ± 1 percent.

89 Type

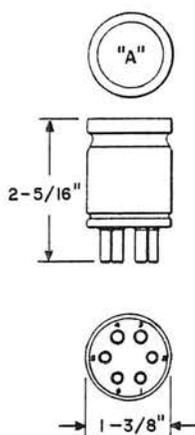

Fig. 1

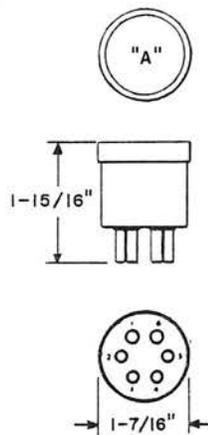

Fig. 2

Consists of resistor units potted in a base and connected to metal prongs unless otherwise noted in the footnotes in the tables.

Arranged to mount in a number 144 type electron tube socket.

- (a) Obtained only when associated with other resistors in miscellaneous pads and equalizers, in 600 ohm circuits.
- (b) Strapped.
- (c) Open.
- (d) Contains no resistor units.

- (a) Obtained when used in A2 video amplifier equipment in applications noted under "Type."
- (b) Contains no resistor units.
- (c) Has no attenuation stamping. Nominal resistance between terminals 3 and 5 is 1000 ohms, and between terminals 4 and 5 is 75 ohms.

RESISTORS

106 and 107 Type

Tubular type resistors having a low reactance. Suitable for use at high frequencies.

Power rating for 106A, B, and C is 0.25 watt at 150° F (66° C) ambient temperature. Power ratings for 107A and B at 150° F (66° C) ambient temperature are as follows: For resistance values up to 60 ohms, 0.25 watt; 60 to 14990 ohms, 0.375 watt; 15,000 to 29,990 ohms, 0.50 watt; 30,000 to 59,990 ohms, 0.75 watt; 60,000 to 89,990 ohms, 1.0 watt; 90,000 to 149,900 ohms, 0.75 watt; 150,000 to 250,000 ohms, 1.0 watt. For each degree F that the ambient exceeds 150° F, the power rating decreases 1 percent.

Equipped with tinned axial terminals by which they can be supported.

Can be obtained in resistance values within the ranges indicated in table. The nominal resistance value desired must be specified in the order.

Code No.	Resistance Tolerance Limits	Allowable Range of Res (Ohms)	Dimensions A B (Inches)	
106A	± 1%	0.4 to 30,000	1	.328
106B(a)	±.25%	3.0 to 30,000	1	.328
106C	±.10%	10.0 to 12,000	1	.328
107A(b)	± 1%	0.4 to 250,000	1.531	.518
107B(b)	±.25%	7.0 to 250,000	1.531	.518

- (a) Because of their relatively high temperature coefficient of resistance, resistors above 12,000 ohms are not recommended for general use.
- (b) Because of their relatively high temperature coefficient resistance, resistors above 90,000 ohms are not recommended for general use.

144 Type

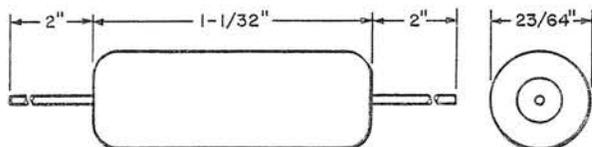

Fig. 1

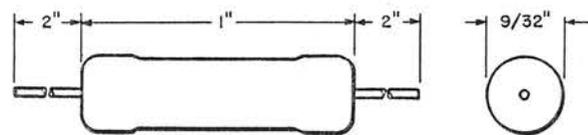

Fig. 2

Each consists of a ceramic core having a coating of deposited carbon. Provided with tinned axial leads.

Can be obtained in resistance values from 50 ohms to 5 megohms. The nominal resistance value desired must be specified in the order.

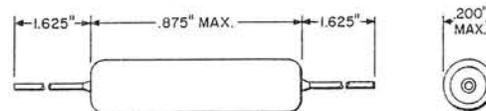

Power rating is 1 watt at 30° C (86° F) ambient temperature. For each degree C that the ambient exceeds 30° C, the power rating decreases about 1 percent. While under load at rated power, the resistance decreases about 2-1/2 percent in resistance value.

144A, B, and C: Have a baked enamel finish.

144E, F, and G: Have a baked enamel finish plus insulating sleeve which also provides protection against mechanical injury.

Code No.	Fig. No.	Resistance Tolerance Limits
144A	1	±1%
144B	1	±2%
144C	1	±5%
144E	2	±1%
144F	2	±2%
144G	2	±5%

145 Type

Each consists of a ceramic core having a coating of deposited carbon. Enclosed in a tube of insulating material and provided with tinned axial leads.

Power rating is 0.5 watt at 30° C (86° F) ambient temperature. For each degree C that the ambient exceeds 30° C, the power rating decreases about 1 percent. While under rated power, the resistance decreases about 2 percent in resistance value.

RESISTORS

145 Type (Continued)

Can be obtained only in the preferred resistance values listed in the table of preferred values, found at the end of the Resistors section, and within the tolerances specified by the appropriate suffix letter. Orders will be accepted for nonpreferred values, but the nominal value furnished and marked on the resistor will be the preferred value nearest the ordered value. The nominal value thus furnished will differ no more than 1 percent from whatever nonpreferred value is ordered.

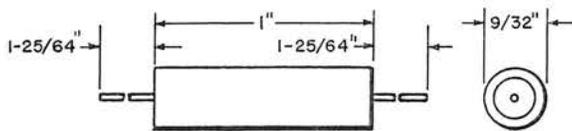

145A, B, and C: Can be obtained over the range of 1.00 ohm through 4.99 megohms.

145E: Can be obtained only over the range of 0.287 ohm through 6980 ohms.

In addition to the code number and suffix letter, the nominal resistance value must be specified in the order.

Code No.	Resistance Tolerance Limits
145A	$\pm(1\% + .01 \text{ ohm})$
145B	$\pm 2\%$
145C	$\pm 5\%$
145E	$\pm(.5\% + .002 \text{ ohm})$

146 Type

Consists of a porcelain core having a coating of deposited carbon. Enclosed in a hermetically sealed ceramic shell. Provided with tinned axial leads.

Can be obtained in resistance values within the ranges listed below. The nominal resistance value desired must be specified in the order.

Power rating is 1 watt at 30° C (86° F) ambient temperature except that the dc or 60 cycle rms continuous working voltage is 350 volts maximum. For each degree C that the ambient exceeds 30° C, the power rating decreases about 1 percent. While under load at rated power, the resistance decreases about 3 percent in resistance value.

Code No.	Resistance Tolerance Limits	Resistance Range
146A	$\pm(1\% + .01 \text{ ohm})$	1.0 ohm to 5.0 megohms
146B	$\pm 2\%$	1.0 ohm to 5.0 megohms
146C	$\pm 5\%$	1.0 ohm to 5.0 megohms
	$\pm .02 \text{ ohm}$	0.4 ohm to 3.999 ohms
146E	$\pm(1/2\% + .002 \text{ ohm})$	4.0 ohms to 20,000 ohms

147 Type

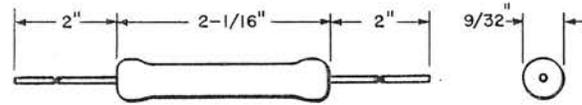

Fig. 1

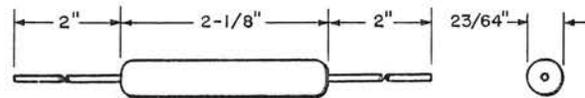

Fig. 2

Each consists of a ceramic core having a coating of deposited carbon. Provided with tinned axial leads.

Can be obtained in resistance values from 50 ohms to 50 megohms, except 147A and D which can be obtained in resistance values from 50 ohms to 30 megohms. The nominal resistance value desired must be specified in the order.

Power rating is 2 watts at 40° C (104° F) ambient temperature. For each degree C that the ambient exceeds 40° C, the power rating decreases about 1-1/4 percent. While under load at rated power, the resistance decreases about 2-1/2 percent in resistance value.

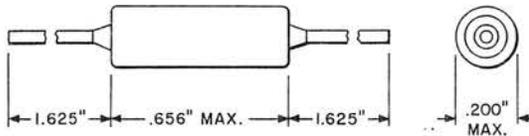

147A, B, and C: Have a baked enamel finish.

147D, E and F: Have a baked enamel finish plus insulating sleeve which also provides protection against mechanical injury.

Code No.	Fig. No.	Resistance Tolerance Limits
147A	1	$\pm 1\%$
147B	1	$\pm 2\%$
147C	1	$\pm 5\%$
147D	2	$\pm 1\%$
147E	2	$\pm 2\%$
147F	2	$\pm 5\%$

RESISTORS

221A

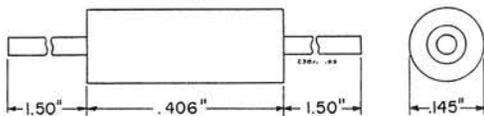

Consists of a ceramic core having a coating of deposited carbon and enclosed in a tube of insulating material. Tinned axial leads are provided.

May be obtained in resistance values from 1.0 ohm to 5 megohms having tolerance limits of \pm (1 percent + 0.1 ohm). The nominal resistance value desired must be specified in the order.

Power rating is 0.5 watt at 40° C (104° F) ambient temperature. For each degree C that the ambient exceeds 40° C, the power rating decreases 1-1/4 percent. While under load at rated power, the resistance decreases about 3 percent in resistance value. The continuous dc or rms sinusoidal voltage shall not exceed 350 volts. For resistance values in excess of 245,000 ohms, this limitation is controlling and constitutes a further limitation in power dissipation.

238A

Consists of a ceramic core having a coating of deposited carbon and encased in a moisture resistance epoxy shell. Provided with tinned axial leads.

Has a temperature coefficient of resistance of minus 0.03 percent plus 0.025 percent per degree C, and a power rating of 0.25 watt at 70 degrees C ambient temperature

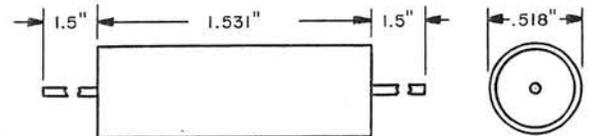

but not exceeding 250 volts dc or rms ac. When operated at ambient temperatures above 70 degrees C, the power rating is derated linearly to 0.125 watt at 125 degrees C and to zero power at 150 degrees C.

Can be obtained in resistance values over the range of 1.0 to 261,000 only in those nominal resistance values listed in the \pm 1 percent column in the table at the end of the resistor section. Initial tolerance limits are \pm (1% + 0.01 ohm). When operated within the above wattage and temperature rating, they are not expected to change downward by more than two percent nor upward by more than four percent in resistance value.

The code number and resistance value must be specified in the order.

Intended for general use where humid conditions may be encountered.

244A and 244B

Tubular type wire wound resistors, each consisting of a noninductive winding on a core of insulating material and covered with impregnated paper tubing. Provided with tinned axial leads.

These resistors have a positive temperature coefficient of resistance of 5200 \pm 300 parts per million per °C when referred to the resistance of 30°C. They have a power rating at 66°C (150° F) of 0.25 watt. For each degree that the ambient temperature exceeds 150°F, the power rating decreases 1 percent. These resistors are suitable for use at audio frequencies. The code number and resistance value must be specified on the order.

The 244A Resistor has a preferred resistance value of 1100 ohms with tolerance limits of \pm 1 percent. The 244B Resistor has a preferred resistance value of 2550 ohms with tolerance limits of \pm 2 percent.

Table of Preferred Resistor Values

The following information should be used only when referred to in this catalog for a specific type of resistor.

In order to keep the number of orders for odd values of resistance to a minimum and to facilitate manufacture and stocking of the above types of resistors, certain specific values have been chosen as preferred, having tolerance limits as indicated, and these values are shown below. It is recommended that resistance values be selected from this preferred list wherever possible. The table gives the first three significant figures only and the decimal point should be placed where required and/or zeros should be added as necessary, within the range specified for the desired code of resistor.

In the case of resistors for which the catalog states that they are available with tolerance limits closer than \pm 1%, it is recommended that nominal resistance values be chosen to agree with the figures in the \pm 1% column of the table where practicable. When necessary, four significant figures may be specified, wherever possible with the first three significant figures the same as those in the \pm 1% column of the table. In either case, the decimal point should be placed where required and/or zeros should be added as necessary, within the range specified for the desired code of resistor.

RESISTORS

12A, B, and C

RINGS
Distributing

12A, B, and C (Continued)

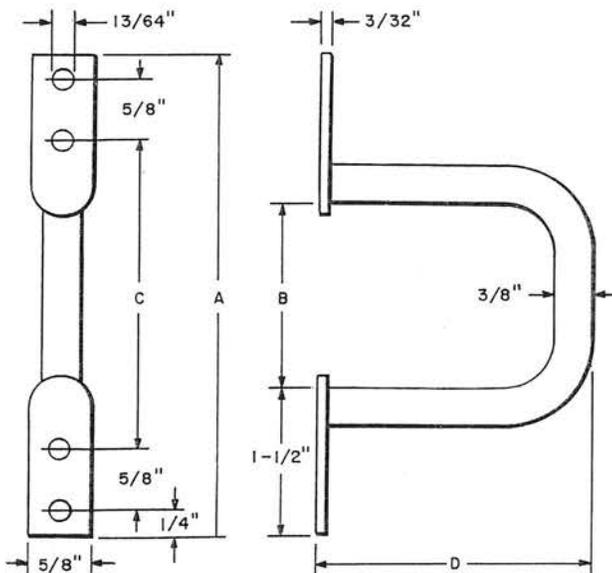

Metal rings having a gray enamel insulating finish.

May be obtained with a P-339722 Adapter for mounting the ring on a 3/8-inch thick transverse arm, when specified in the order.

Used for installing up to 400 pairs of textile insulated conductors from lead covered cables on main distributing frames.

Code No.	Comcode	Capacity (in Cable Pairs)	Dimensions (Inches)			
			A	B	C	D
12A	100 666 668	200	1-7/8	15/16	1-13/16	2-9/32
12B	100 666 676	400	2-3/4	1-3/8	2-1/4	3-5/32

13C	100 666 718	8-1/8	5-1/8	6-3/8	3-3/4

15A

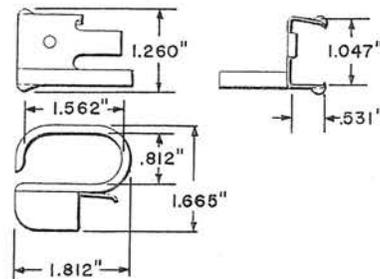

Metal rings having a gray enamel finish.

May be obtained with a P-339722 Adapter for mounting the ring on a 3/8-inch thick transverse arm when specified in the order.

Used to contain and distribute up to 200 pairs of insulated conductors of switchboard cables on the horizontal side of distributing frames using the manual toll and dial switching systems.

Comcode: 100 666 734

16A

Metal ring having a gray enamel finish.

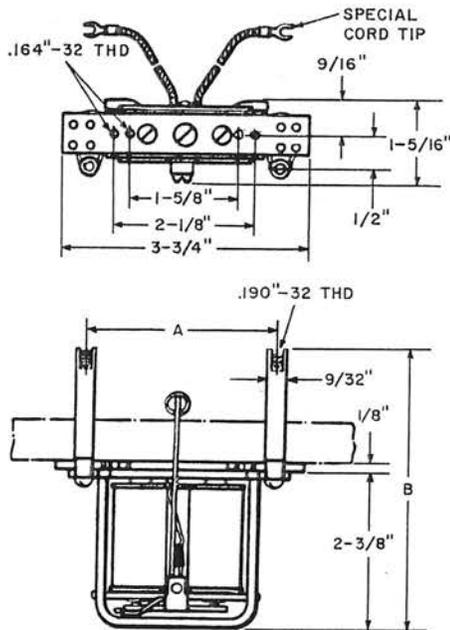

May be obtained with a P-339722 Adapter for mounting the ring on a 3/8-inch thick transverse arm when specified in the order.

Used to contain and distribute up to 100 pairs of insulated conductors on the vertical side of distributing frames using the manual, toll, and dial switching systems.

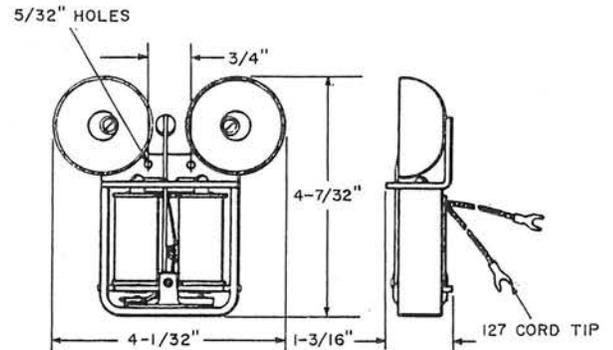

Comcode: 100 666 742

RINGERS

B1D and B1F Type

B1A1 Type

Provided with two coils having a total dc resistance of 4600 ohms \pm 10 percent. The 900 cps inductance of ringers having red stripes on the coil covers is minimum 9 henries, and the inductance of ringers not having red stripes on the coil covers is minimum 20 henries. Ringers are equipped with red and black leads each 7-1/2 inches long.

Arranged for mounting screws on 1-5/8 inch and 2-1/8 inch centers. Arranged for mounting 2-1/2 and 3 inch diameter gongs, respectively. Gongs and gong mounting screws are not furnished and must be ordered separately.

B1D Type: Has a cantilever type spring arranged for three settings and a stroke adjusting stop for adjusting the sound output.

Comcode: 100 666 155

B1F Type: Unbiased ringer with a feather type armature spring.

Comcode: 100 666 163

Used in subscriber sets.

The A dimension for the B1D is 2-7/8 inches and for the B1F is 3-3/8 inches. The B dimension for the B1D is 4-1/8 inches and for the B1F is 4-3/8 inches.

Biased type having a cantilever type biasing spring arranged for three settings and a stroke adjusting stop for adjusting the sound output. Equipped with 8-7/8 inch red lead and 6-7/8 inch black lead.

Provided with two coils having a total dc resistance of 4600 ohms \pm 10 percent. The 900 Hz inductance of ringers having red stripes on the coil covers is minimum 9 henries, and the inductance of ringers not having red stripes on the coil covers is minimum 20 henries.

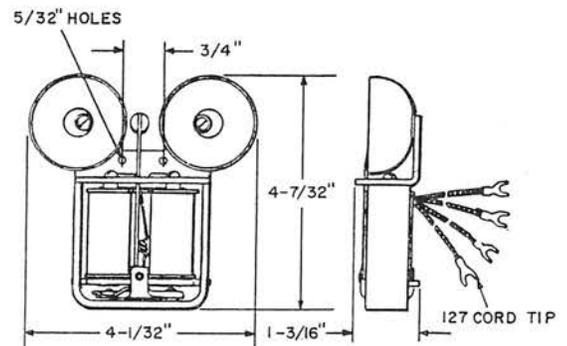

Used in telephone set mountings and in telephone sets.

Comcode: 100 666 189 E/W one 41A and one 41B Gong.

100 666 206 E/W one 40D and one 40E Gong.

100 666 197 E/W two 40C Gongs.

B2A1 Type

Unit type biased ringer having a cantilever type biasing spring arranged for three settings and a stroke adjusting stop for adjusting the sound output. The dc resistance between slate and black leads is 960 ohms \pm 10 percent, between red and slate-red leads is 3640 ohms \pm 10 percent, and between red and black leads with slate and slate-red

RINGERS

B2A Type (Continued)

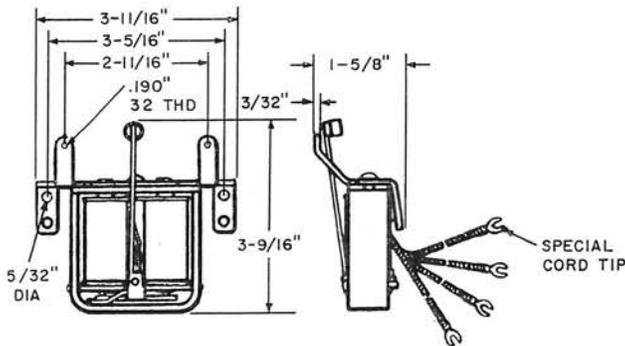

connected together is 4600 ohms ± 10 percent. The 900 cps inductance of ringer having red lines on coil covers is minimum 1.25 henries between slate and black leads and minimum 9 henries between red and black leads with slate and slate-red connected together. The inductance of ringers not having red lines on the coil covers is minimum 2.5 henries between slate and black leads and minimum 20 henries between red and black leads with slate-red connected together.

Equipped with 6-3/8 inch black lead, 6-3/8 inch slate-red lead, 5-1/2 inch slate lead, and 6 inch red lead.

Used in H- and J-type telephone set mountings.

Comcode: 100 666 213 E/W one 41A and one 41B Gongs.
 100 666 239 E/W one 40D and one 40E Gong.
 100 666 221 E/W two 40C Gongs.

B4A Type

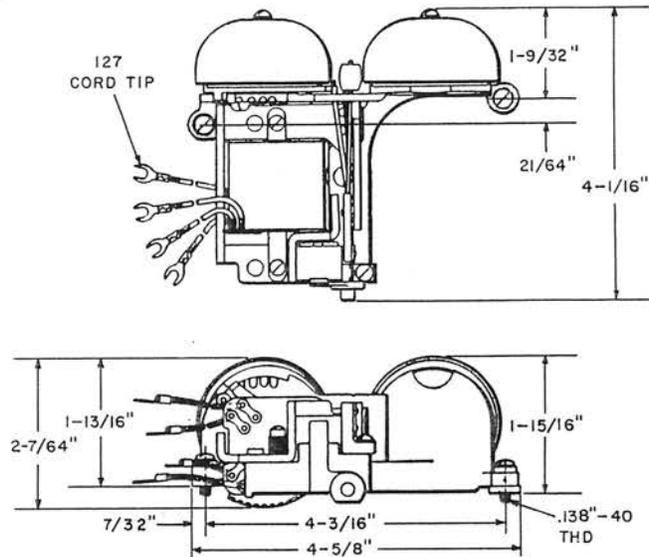

Unit type biased ringer having a cantilever type biasing spring arranged for three settings and a stroke adjusting stop for adjusting the sound output. The dc resistances between the red and yellow leads and the yellow and black leads are each 510 ohms ± 10 percent. All leads are 7-1/2 inches long.

Arranged for mounting two 2-5/16 inch diameter gongs such as the number 36 or 37 type. Gongs and gong mounting screws are not furnished and must be ordered separately.

Part of 584DG Subscriber Set.
 Comcode: 100 666 270

C4A Type

Biased ringer having a single coil with two windings. Inner winding is connected between the slate and the black leads, and the outer winding is connected between the red and the slate-red leads. The dc resistance between the slate and black leads is 1000 ohms ± 10 percent. The dc resistance between the red and black leads with the slate and slate-red leads connected together is approximately 3650 ohms, and the impedance with 2 volts, 400 cps across the red and black leads is minimum 85,000 ohms.

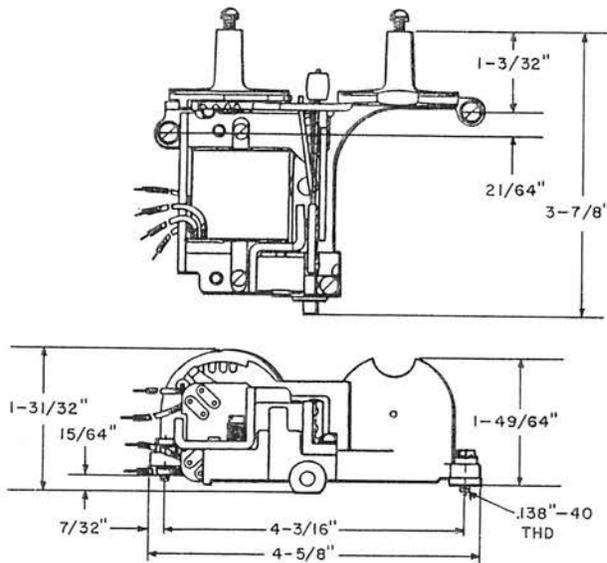

Equipped with 6 inch black lead, 7-3/4 inch slate lead, 7 inch red lead, and 7 inch slate-red lead. Also equipped with one 54A and one 55A Gong having internal resonators assembled under each gong. One gong is mounted on a movable cam which can be operated manually from outside the telephone set. This adjustment provides four levels of sound output at four different positions of the cam. A fifth position of the cam will permit an adjustment by an installer which will silence the ringer.

Used in 500, 501, 502, and similar type telephone sets and in four and six button telephone sets.

Comcode: 100 666 288

RINGERS

C5A Type

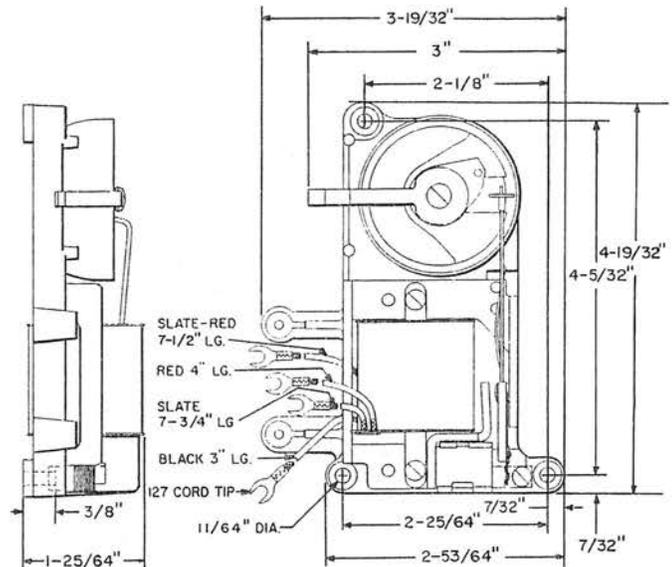

Biased ringer having a single coil with two windings. Inner winding is connected between the slate and the black leads, and the outer winding is connected between the red and red-white leads. The dc resistance between the slate and black leads is 1000 ohms ± 10 percent. The dc resistance between the red and black leads with the slate and red-white leads connected together is approximately 3650 ohms, and the impedance with 2 volts, 400 cps across the red and black leads is minimum 85,000 ohms.

Equipped with 7 inch black lead, 8-1/2 inch slate lead, 8 inch red lead, and a 7 inch red-white lead. Arranged for 52A through 59A Gongs which are not furnished and must be ordered separately. A movable cam is provided which can be operated manually to provide four levels of sound output at four different positions. A fifth position of the cam will permit adjustment by an installer which will silence the ringer.

Used in PBX and central office installations for alarm and signaling purposes.

Comcode: 100 666 296

D1C Type

Biased ringer having a single coil with two windings. Inner winding is connected between the slate and the black leads, and the outer winding is connected between the red and the slate-red leads. The dc resistance between slate and black leads is 1000 ohms ± 10 percent. The dc resistance between the red and the black leads, with the slate and slate-red leads connected together, is approximately 3650 ohms. The impedance across the red and black leads is minimum 97,000 ohms at 2 volts, 400 to 3000 cps, and 7500 ohms at 90 volts, 2 cps with a 0.45 uf capacitor in series.

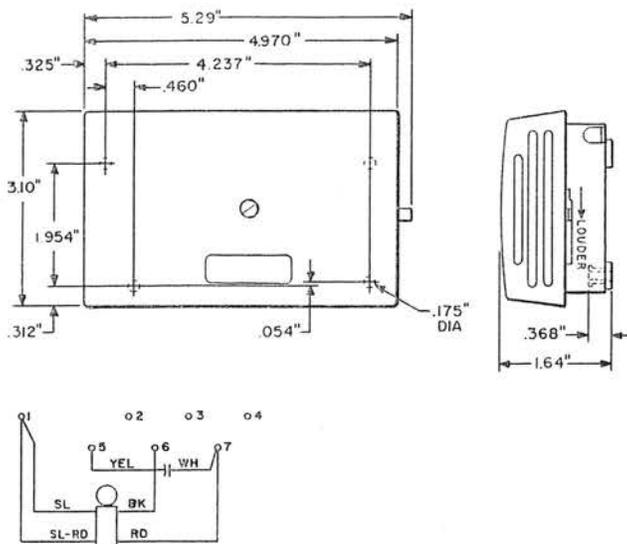

Equipped with 3 inch black lead, 7-3/4 inch slate lead, 4 inch red lead, and a 7-1/2 inch slate-red lead. Also equipped with a single gong with an internal resonator assembled under the gong and an external volume control which is continuously adjustable from loud to silent. Two legs provide support for an external terminal plate.

Used in 630DW and 632CW type telephone sets.

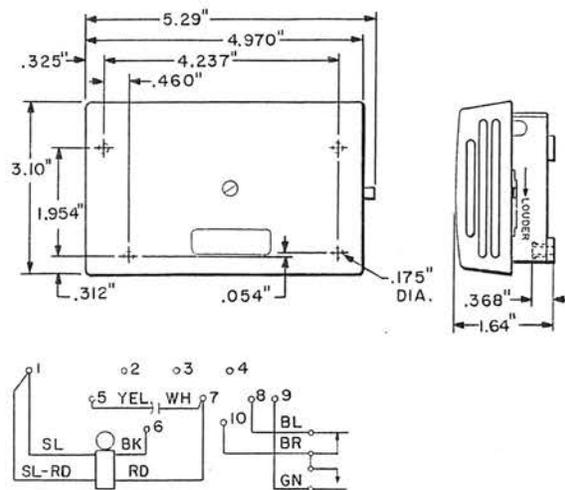

Comcode: 100 666 320

RINGERS

E1CW-49 and -50

E1DW-49 and -50

Biased ringers having a single coil with two windings. The inner winding is connected between terminals 1 and 6 and has a dc resistance of 1000 ohms \pm 10 percent. The outer winding is connected between terminals 1 and 7. The dc resistance between terminals 6 and 7 is approximately 3650 ohms. The impedance across terminals 6 and 7 is minimum 97,000 ohms at 2 volts, 400 to 3000 cps, and 7500 ohms at 90 volts, 20 cps with a 0.45 uf capacitor in series.

Equipped with a single gong having an internal resonator assembled under the gong and an external volume control which is continuously adjustable from loud to soft and can be arranged to be turned off. Volume control can be locked in the silent position by means of a small latch plate.

Contains a 548A Capacitor and a seven terminal connecting block which is intended to provide interconnection of the ringer, a dial-light transformer, a telephone set mounting cord, and the line. Metal base is gray-finished. The telephone set mounting cord can enter from either end, and the line cord can enter from either the bottom or rear.

Used as an auxiliary ringing signal and connecting block.

Code No.	Comcode	Cover Color
E1CW-49	100 666 395	Light olive gray
E1CW-50	100 666 403	Ivory

Biased ringers having a single coil with two windings, a 548A Capacitor, an interrupter switch assembly, and a ten-terminal connecting block. The inner winding is connected between terminals 1 and 6 and has a dc resistance of 1000 ohms \pm 10 percent. The outer winding is connected between terminals 1 and 7. The dc resistance between terminals 6 and 7 is approximately 3650 ohms. The impedance across terminals 6 and 7 is minimum 97,000 ohms at 2 volts, 400 to 3000 cps, and 7500 ohms at 90 volts, 20 cps, with 0.45 uf capacitor in series.

Equipped with a single gong having an internal resonator assembled under the gong and an external volume control which is continuously adjusted from loud to soft. One adjustment by an installer will permit the silencing of the ringer and another adjustment will lock the volume control in the silent position.

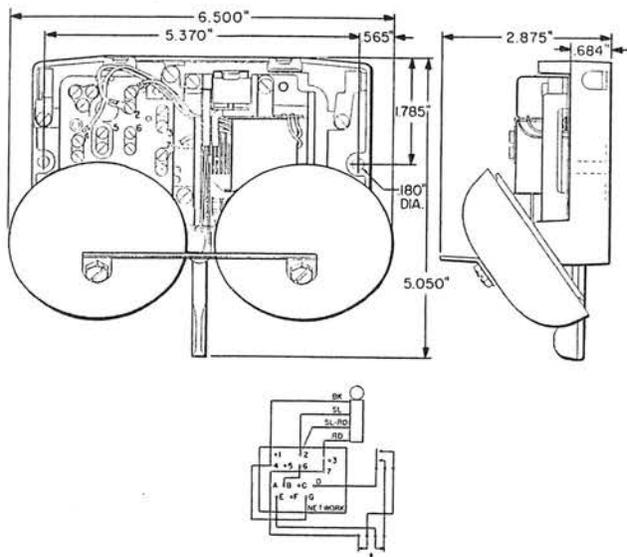

Equipped to provide for interconnection of the ringer, a dial-light transformer, a telephone set mounting cord, the line, and the interrupter switch assembly. The telephone set mounting cord can enter from either end, and the line cord can enter from either the bottom or rear. Metal base is gray-finished.

Used as an auxiliary ringing signal and connecting block.

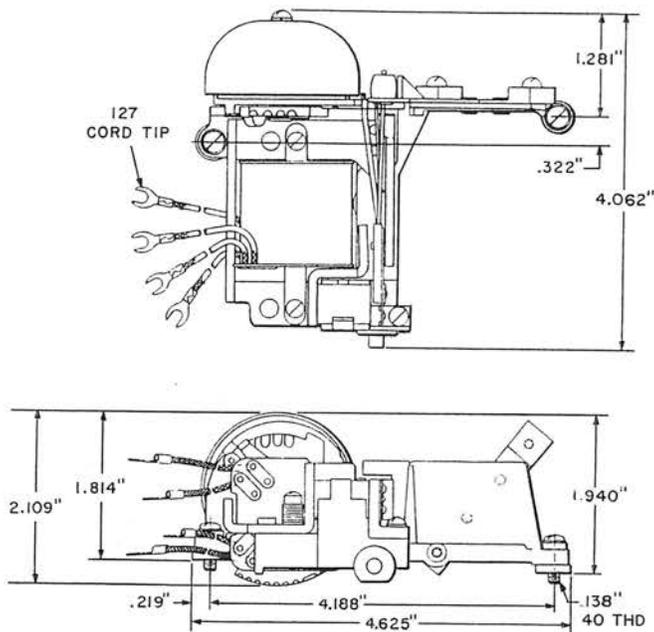

Code No.	Comcode	Cover Color
E1DW-49	100 666 411	Light olive gray
E1DW-50	100 666 429	Ivory

RINGERS

F1AW Type

H1A Type

Biased ringer having a single coil with two windings. Inner winding is connected between the slate and the black leads, and the outer winding is connected between the red and the slate-red leads. The dc resistance between slate and black leads is 1000 ohms ± 10 percent. The dc resistance between the red and black leads with the slate and slate-red leads connected together is approximately 3650 ohms, and the impedance with 2 volts, 400 cps across the red and black leads is minimum 85,000 ohms. The terminal plate of the network is also used as a connecting block to provide for interconnection of the ringer, a dial-light transformer, a telephone set mounting cord, and the line.

Equipped with one 26C and one 26D Gong, a 498A Network, and lever-type switch assembled on a gray metal base. The switch provides a loud ring, a low ring, or a bell-chime. The telephone set mounting cord can enter from the bottom or at either corner at the top of the base. The line cord may be brought in at the same location or at the rear. May be used with a 125AW Cover which is not furnished and must be ordered separately.

Used as a central ringer where several ringers may otherwise be required.

Comcode: 101 362 135

Biased ringer having a single coil with two windings. Inner winding is connected between the slate and the black leads, and the outer winding is connected between the red and the slate-red leads. The dc resistance between slate and black leads is 1000 ohms ± 10 percent. The dc resistance between the red and black leads with the slate and slate-red leads connected together is approximately 3650 ohms, and the impedance with 2 volts, 400 cps across the red and black leads is minimum 85,000 ohms.

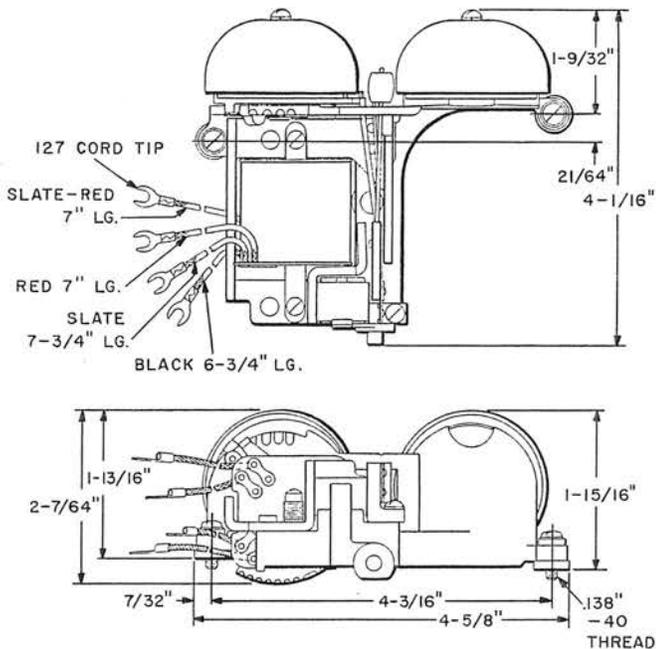

Equipped with a 54B Gong. A bumper is used in place of a second gong for dynamic stability. Provided with a bracket and screws for mounting a KS-8109L2 Buzzer which is not furnished and must be ordered separately.

Used on 565HRW and LDRW Telephone Sets.

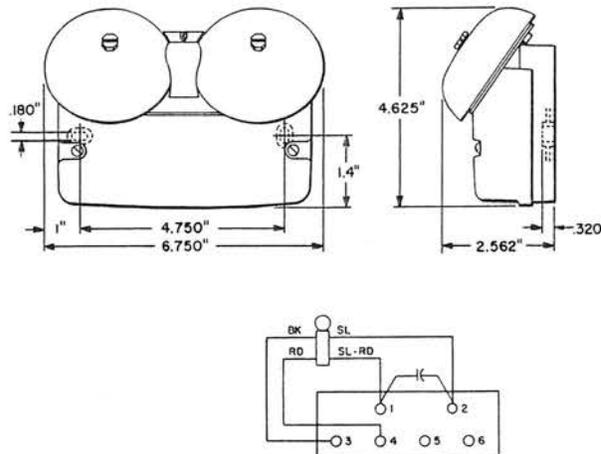

Comcode: 100 666 460

RINGERS

J1A Type

L1AW-49 Type

Biased ringer having a single coil with two windings. Inner winding is connected between the slate and the black leads, and the outer winding is connected between the red and the slate-red leads. The dc resistance between the slate and black leads is 1000 ohms \pm 10 percent. The dc resistance between the red and black leads with the slate and slate-red leads connected together is approximately 3650 ohms, and the impedance with 2 volts, 400 cps across the red and black leads is minimum 85,000 ohms.

Equipped with one 54A and one 55A Gong which are protected to minimize the effects of moisture and corrosion. Internal resonators are assembled under each gong. One gong is mounted on a movable cam which can be operated manually from outside the telephone set. This adjustment provides four levels of sound output at four different positions of the cam. A fifth position of the cam will permit an adjustment by an installer which will silence the ringer.

Used on 525AW and BW Telephone Sets.
Comcode: 100 666 478

Biased ringer having a single coil with two windings. Inner winding is connected between terminals 2 and 3 and has a dc resistance of 1000 ohms \pm 10 percent. The outer winding is connected between terminals 1 and 4. The dc resistance between terminals 3 and 4, with terminals 1 and 2 connected together, is approximately 3650 ohms. The impedance across terminals 3 and 4 is minimum 97,000 ohms at 2 volts, 400 to 3000 cps, and is 7,500 ohms at 90 volts, 20 cps with a 0.45 uf capacitor in series.

Equipped with a pair of gongs, each having an internal resonator assembled under the gong, a 548A Capacitor, and a terminal board. The metal base is light olive gray. The line cord may enter at the top, bottom, or rear of the base.

Arranged for mounting a 425A or 426A Electron Tube which is not furnished and must be ordered separately.

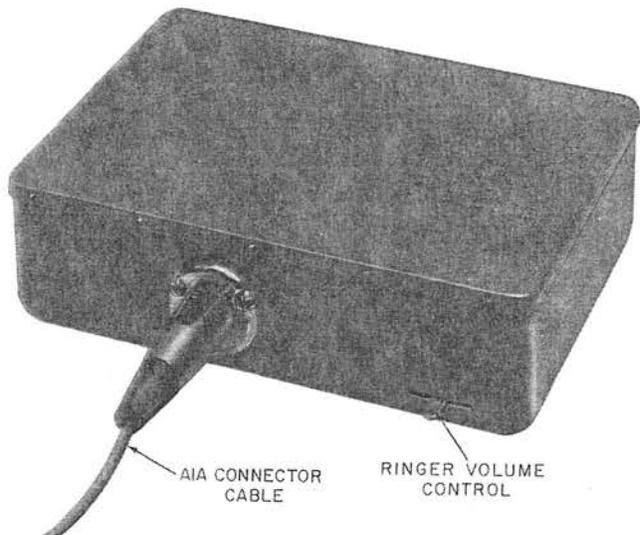

For outdoor use the ringer should be mounted in the 181AW-49 Backboard.

Used as auxiliary loud ringing signal and connecting block.

Comcode: 100 666 494

RINGERS

R1AW

Consists of a ringer assembly in a factory-sealed metal box. The ringer volume can be adjusted by an external control. Approximate overall dimensions are 8.155 inches long, 6.656 inches wide, and 2.312 inches deep.

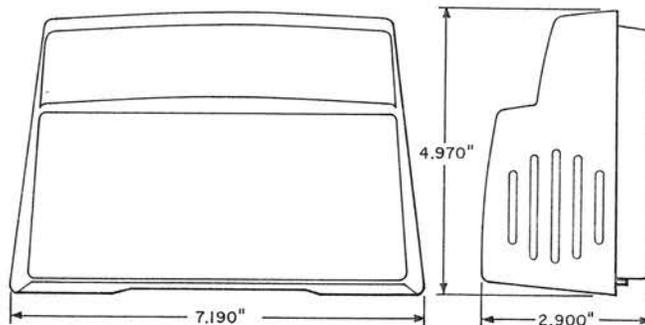

The ringer is supplied with a mounting plate having slots for the tabs on the rear of the ringer. This permits mounting the ringer on a vertical surface, such as a wall or side of a desk. When mounting on a metal surface, a suitable wooden backboard should be used under the mounting plate.

An AIA Connector Cable is furnished with the ringer. Since the connector cable is furnished in 50, 100, and 200 foot lengths, it is necessary to specify the length of the cable when ordering the ringer.

Intended solely for specially engineered lines — not for general telephone use.

- Comcode: 101 613 776 E/W 50 Ft Cable
- 101 613 784 E/W 100 Ft Cable
- 101 613 792 E/W 200 Ft Cable

S1A

Consists of component apparatus mounted on a gray plastic base, enclosed in a louvered plastic cover.

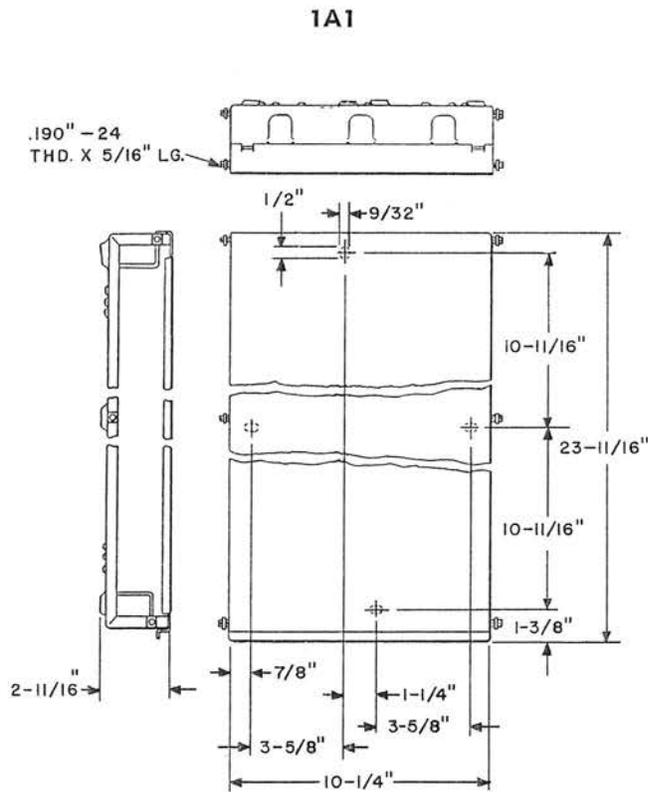

The signal consists of two equal amplitude frequency components at approximately 775 and 1550 Hz with higher frequency components attenuated by a side-branch resonator to reduce annoyance to persons with normal hearing. Equipped with a volume control switch which provides three settings — full volume, low volume, and off.

Arranged for bridged, two party flat or message rate, and automatic ticketing classes of services.

Used as auxiliary loud tone ringers.

Code	Comcode	Color of Cover
S1A-50	101 278 240	Ivory
S1A-63	101 390 847	Gold

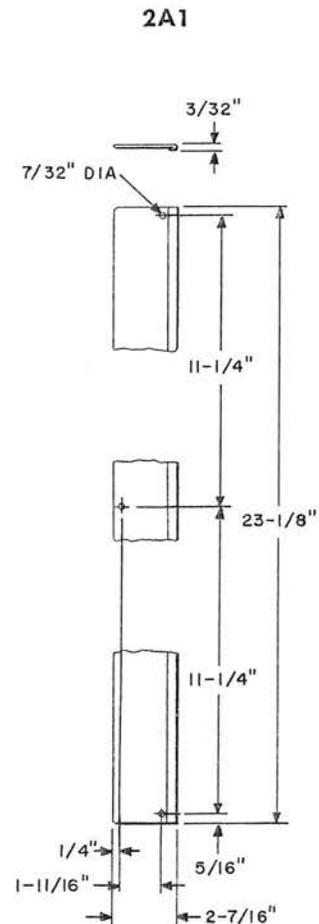

SECTIONS
Cable Terminal

Consists of a light olive gray enamel finished sheet metal intermediate section having open ends provided with a removable cover. Knockouts are provided in the top and bottom of the box for bringing in cables or wires. Eight screws for mounting terminal blocks and six screws and nuts for fastening sections together are furnished.

For use in indoor installations housing two 1A4A-10, two 1A4A-16, or one 1A4A-26 Terminal Block. Two 2A1 Cable Terminal Sections are required to close the ends of one or a group of 1A1 Cable Terminal Sections.

Comcode: 100 667 575

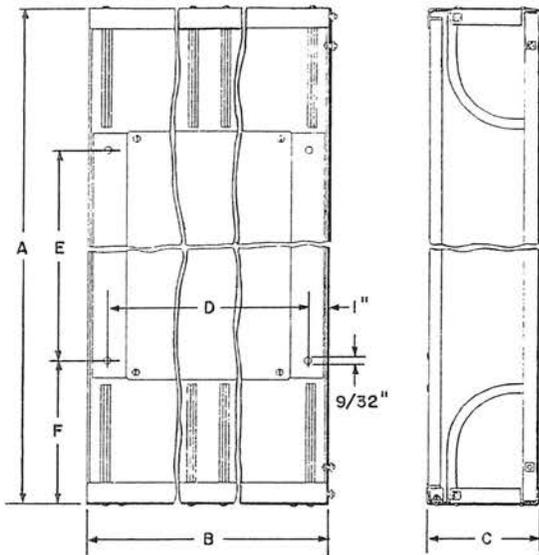

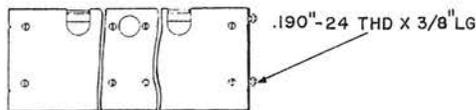

A light olive gray enamel finished sheet metal flat section arranged for closing the ends of one or a group of 1A1 Cable Terminal Sections.

Comcode: 100 667 583

SECTIONS

Cable Terminal

H-Type

Cover Removed

Each consists of a sheet metal intermediate section provided with a door. Finish is light olive gray enamel. The top and bottom details are interchangeable so that the detail which is slotted for the cable may be assembled at the top or bottom. Knockouts for wires are provided in these details. Screws for mounting terminal blocks and bolts and nuts for fastening sections together are furnished. Tie rods can be obtained when specified.

H102: Houses two 2A1-50 or 2A2-50 Terminal Blocks or two 82D Backboards or one 2A1-50 or 2A2-50 Terminal Block and one 82D Backboard. Two J102 Cable Terminal Sections are required to close ends of one or a group of H102 Cable Terminal Sections.

Comcode: 100 667 591

H202: Houses one or two 2A1-50 or 2A2-50, 2B1-75 or 2B2-75, and 2B1-100 or 2B2-100 Terminal Blocks or 82A Backboards. Two J202 Cable Terminal Sections are required to close ends of one or a group of H202 Cable Terminal Sections.

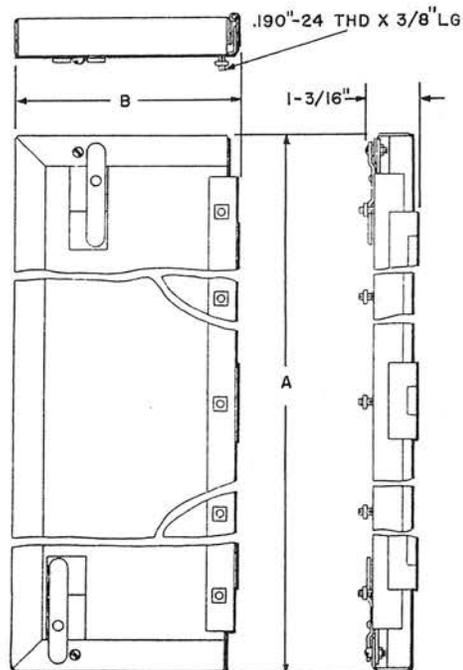

Comcode: 100 667 609

H303: Houses one 2B1-300 or 2B2-300 Terminal Block or one 82B Backboard. Two J303 Cable Terminal Sections are required to close ends of one or a group of H303 Cable Terminal Sections.

SECTIONS

Cable Terminal

K606

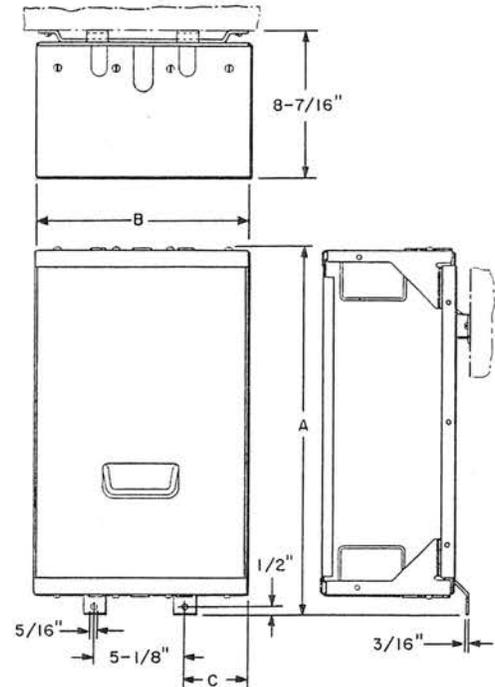

Consists of a metal framework for supporting binding post chambers and backboards. Provided with distributing rings and rods for supporting wires and facilities for attaching standard cable hooks. Sleeves, bolts, and nuts for fastening sections together and screws for mounting binding post chambers are furnished.

Used for supporting 2B1-300 or 2B2-300 Terminal Blocks or 82B Backboards. Two 82C Backboards are required to cover the ends of one or a group of K606 Cable Terminal Sections.

Comcode: 100 667 658

L and LA Type

Each consists of a sheet metal intermediate section and door which have a light olive gray finish. Knockouts are provided in top and bottom of details for bringing in cables or wires. Screws and washers for mounting terminal blocks or backboards, and screws and nuts for fastening sections together are furnished.

L16: For housing either one 1A4A-16 Terminal Block or one 83A Backboard. Two M16 Cable Terminal Sections are required to close the ends of one or a group of L16 Cable Terminal Sections.

L26: For housing either one 1A4A-16 and 1A4A-25 Terminal Block or one 83B Backboard. Two M26 Cable Terminal Sections are required to close the ends of one or a group of L26 Cable Terminal Sections.

L51: For housing either one 1A4A-25 or 1A4A-50 Terminal Block or one 83C Backboard. Two M51 Cable Terminal Sections are required to close the ends of one or a group of L51 Cable Terminal Sections.

LA26: For housing an 84A Backboard. Two M26 Cable Terminal Sections are required to close the ends of one or a group of LA26 Cable Terminal Sections.

SETS

Data

100 Series

Data sets within this series accept low-speed (maximum 300 bits per second) serialized dc signals from a business machine and convert these signals into frequency modulated tones for transmission over private line facilities. At the receiving station, the frequency modulated tones are converted back into dc signals which can be accepted by a business machine.

103AW1 and 103AW2

Data Set 103AW type is designed to simultaneously transmit and receive binary serial data on either half or full duplex at rates up to 300 bauds in DATA-PHONE service over the voice message switched network, or at rates up to 150 bauds in TWX service over teletypewriter exchange type facilities.

103AW1: For use with customer-provided terminal equipment on TWX.

Comcode: 101 165 561

103AW2: For use in DATA-PHONE service.

Comcode. 100 669 696

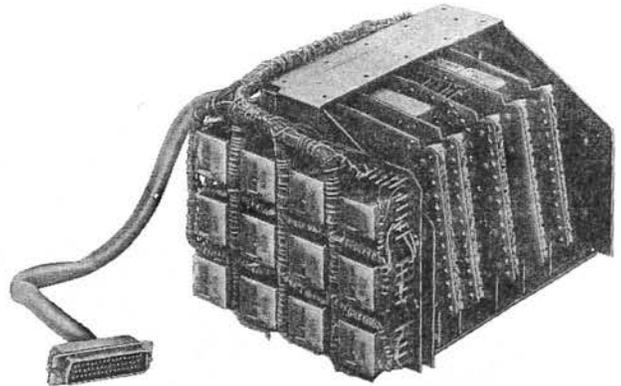

Overall dimensions are 11 inches wide by 11 inches deep by 5.500 inches high.

Data transmission is accomplished over two frequency shift channels. The frequency channel used by each station during a connection is determined by the station that originates the call.

FREQUENCIES

Station Mode	Signal Transmitted	Frequency (Hz)	
		Data Set 103AW1	Data Set 103AW2
Originating	f_1 mark (f_{1m})	1070	1270
	f_1 space (f_{1s})	1270	1070
Answering	f_2 mark (f_{2m})	2025	2225
	f_2 space (f_{2s})	2225	2025

103EW5

The Data Set 103EW5 is a full-duplex, phase modulated, serial data set which operates asynchronously at speeds up to 300 bauds. Meets EIA Standard RS-232A interface specification.

The set is dependent upon additional components for power and control functions. It requires two 18.0 volts and 0.25 ampere dc inputs to provide positive and negative potentials.

Optional selection of normal or inverted line frequency operation is provided.

The Data Set is 8.25 inches long by 6.375 inches wide by 4.75 inches high.

The transmitted frequency band is selected by the method of establishing the telephone connection. The following table summarizes the frequencies by mode of operation:

Mode	Freq. Band	Normal Freq. Hz		Inverted Freq. Hz	
		Mark	Space	Mark	Space
Originate	Trmt.	1270	1070	1070	1270
	Rcv.	2225	2025	2025	2225
Answer	Trmt.	2225	2025	2025	2225
	Rcv.	1270	1070	1070	1270

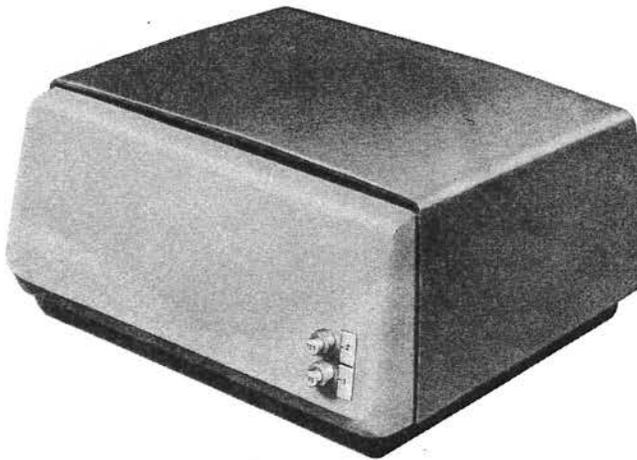

Used in conjunction with Model 37 teletypewriter for data service using switched facilities.

Comcode: 101 830 099

SETS

Data

103FW2

Operates on a private line facility. Full duplex on two-wire voice circuits operation can be achieved at any rate up to a maximum of 300 bits per second.

This set requires a 120 volt, 60 Hz, 15 watt ac power source for operation.

Has a two-tone gray cabinet with overall dimensions of 11 inches wide by 10.5 inches deep by 5.5 inches high. It weighs 16 pounds.

Comcode: 100 669 746

Features:

1. Meets EIA Standard RS-232A interface specification.
2. Local mode permits a check of the continuity of the interface cable, the interface connection, and the signal handling stages of the equipment adjacent to the interface without physically disconnecting the data set from this equipment.
3. Test mode electrically divorces the data set and the data processing terminal equipment and conditions the data set for remote testing from a Data Test Center.

Options:

Operation in the answer or originate mode. (Can be permanently placed in either of these modes but cannot be tested as both answer and originate station when strapped for external control.)

103GW1, GW2, GW3, and GW4

Each is a full-duplex, serial data set capable of operating at speeds up to 300 bauds and provides data service using the switched voice message network. Interface signals conform to EIA Specification RS-232B. It also includes an integrated telephone set.

Data Set 103GW type is designed to be compatible with Data Auxiliary Set 801AW type (Rotary Dialing) and Data Auxiliary Set 801CW type (TOUCH-TONE Dialing).

Used initially with remote computer input machines.

Consists of a light gray plastic housing which combines in a single desk-mounted housing, a 103EW5 Data Set, a 4010B Network, a 25A Power Supply, a G3AR-61 Hand Set, an M1A Ringer, a 635D2 Key Assembly, a speaker assembly, a terminal plug assembly, a card and arm assembly, a monitor amplifier, apparatus units, a D10P-61 Mounting Cord, and a three-wire power cord.

Data Set 103GW type is available with four different types of dialing features as indicated in the following table.

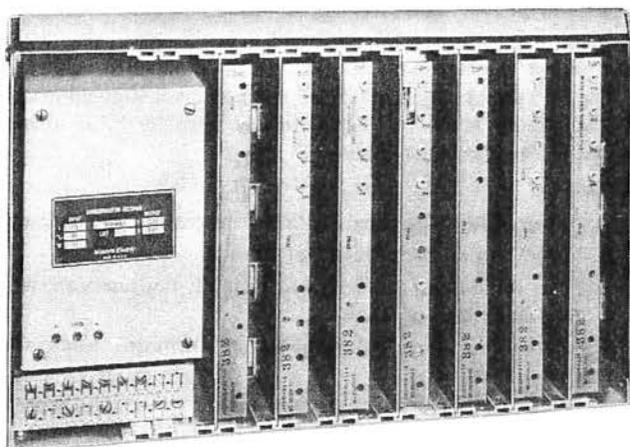

Data Set	Comcode	Type of Dial
103GW1	101 165 140	8C Rotary
103GW2	101 165 157	35B3 TOUCH-TONE
103GW3	101 165 165	8C Rotary and 41AWB Card Dialer*
103GW4	101 165 173	36D TOUCH-TONE and Card Dialer

*A 2075A Transformer is required to supply the necessary voltage for operating the 41A or B Dial.

SETS

Data

105CW1

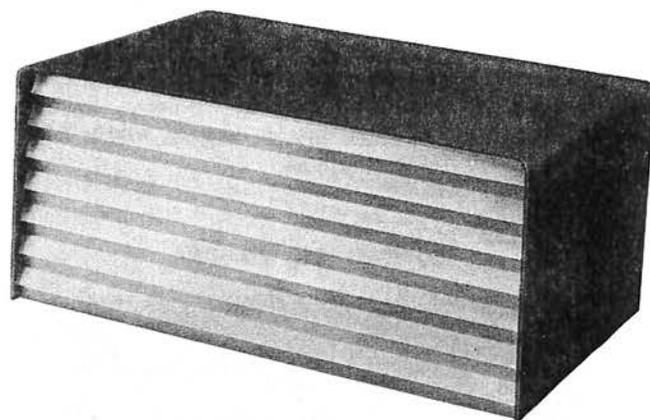

The Data Set 105CW1 is a frequency shift receiver and transmitter designed to convey teletypewriter information. Two frequency shift channels are used. The set operates at 100 words per minute. Intended for 8 level M35 Teletypewriter automatic send and receive operation. The set provides for alternate voice communication.

The set consists of resistors, capacitors, relays, diodes, and transistors mounted on 8 plug-in printed wiring boards. It is also provided with a J87240B-1 Rectifier Unit, an M3AY Cord, eight 908C Connectors, a KS-16671L1 Plug and a KS-16672L1 Connector. All parts are assembled in a rectangular metal case with overall dimensions of 23.796 inches wide by 9.063 inches high by 6.263 inches deep.

Used in number 307 Switching System.

Comcode: 100 669 761

109A1, 109A2, 109B1, and 109B2

Arranged for two-wire, half-duplex dc transmission of serial data up to 150 bits per second with less than 5 percent distortion over a maximum telephone loop of 2000 ohms.

Each consists of resistors, capacitors, diodes, transistors, and varistors mounted on a printed wiring board and terminated in printed wiring terminals.

Overall dimensions are 7.300 inches long by 1.370 inches wide by 5.550 inches high. Provided with a keying slot 0.287 inch wide by 0.620 inch deep to prevent being inserted into the wrong connector. The slot is located 1.587 inches from one end and 3.963 inches from the other end of the 5.550 inch dimension.

109A1: Converts voltage to current and current to voltage at local data stations. Used in conjunction with Data Set 109B1 at the data serving test center. Arranged to be used with Data Auxiliary Sets 820A1, 820B1, 820C1, and 820D1. Provided with lightning protection option. Used initially in number 1 ESS (ADF) and private line data service.

Comcode: 101 165 231

109A2: Same as 109A1 except does not have the lightning protection option.

Comcode: 101 165 249

109B1: Converts voltage to current and current to voltage at data serving test center. Used in conjunction with Data Set 109A1 at local data station. Arranged to be used with Data Auxiliary Set 811CW1. Provided with lightning protection option. Used initially in number 1 ESS and private line data service.

Comcode: 101 169 753

109B2: Same as 109B1 except does not have lightning protection option.

Comcode: 101 169 761

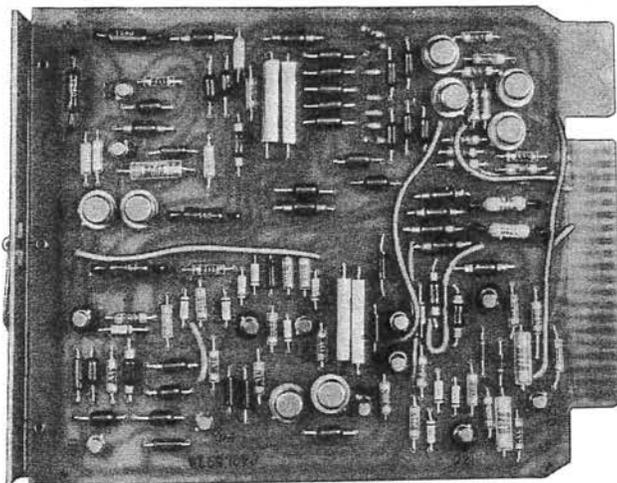

SETS

Data

200 Series

Data sets within this series accept medium-speed (maximum 2400 bits per second) serialized dc signals from a business machine and convert these signals into either frequency or phase modulated tones for transmission over DATA-PHONE service or private line voice facilities. At the receiving station, these frequency or phase modulated tones are converted back into dc signals which can be accepted by a business machine.

201AW3 and 201AW4

Provides full-duplex operation on a four-wire system. Each set transmits and receives, but not simultaneously, at an operating speed of 2,000 bits per second of both switched network and private lines. When the set transmits, the receiver portion monitors the transmitted data and provides local copy for the transmitting station. The receiver accepts the phase modulated carrier from the telephone line through its line circuit. Control signals from the receiver alert the business machine that data is forthcoming. The receiver converts the data signal modulation on the carrier to serial binary form and sends the data to the business machine. Data Auxiliary Set 804AW3 provides establishment of calls, voice communication, external control of data sets, and controls the type of voice for data transmission and 801AW6 provides automatic call origination under the control of a business machine. Data Auxiliary Sets 804AW3 and 801AW6 are not furnished and must be ordered separately.

Data Set 201AW3: An internally timed set and the clock signals necessary for operation of the transmitter are provided by internal circuits.

Comcode: 100 669 852

Data Set 201AW4: An externally timed set and the clock signals necessary for operation of the transmitter must be provided.

Comcode: 100 669 860

Each requires a 117 volt, 60 Hz, 17 watt ac power source for operation.

Has a two-tone gray cabinet with overall dimensions of 17.500 inches wide by 11.625 inches deep by 7.750 inches high. It weighs 35 pounds.

Features:

1. Meets EIA Standard RS-232A interface specification.
2. Echo suppressor disabling circuit.
3. Can be tested in a closed loop in conjunction with the business machine.
4. Alternate voice communication through associated telephone set.
5. New SYNC terminal which provides multiparty operations.

Options:

1. Internal or external timing for synchronous operation.
2. Two-wire (network or private line), four-wire (private line), or four-wire continuous carrier (private line).
3. Full or part time automatic answering (selective or permanent) when telephone set is provided for wiring option to bypass new SYNC terminal.

SETS

Data

201BW3 and 201BW4

Data Set 201BW3: Provides full-duplex operation on a four-wire system and is a four phase transmitter-receiver for transmission of serial data at 2400 bits per second (fixed rate) over the voice frequency band. It is provided with internal timing.

Comcode: 101 830 115

Data Set 201BW4: Same as 201BW3, except internal timing is omitted and external timing is required. Each requires a 117 volt, 60 Hz, 17 watt ac power source for operation.

Comcode: 101 830 123

These sets are similar in appearance to the 201AW3 and 201AW4.

Has a two-tone gray cabinet with overall dimensions of 17.500 inches wide by 11.625 inches deep by 7.750 inches high. It weighs 35 pounds. Requires 569NBW-61 Telephone Set which must be ordered separately.

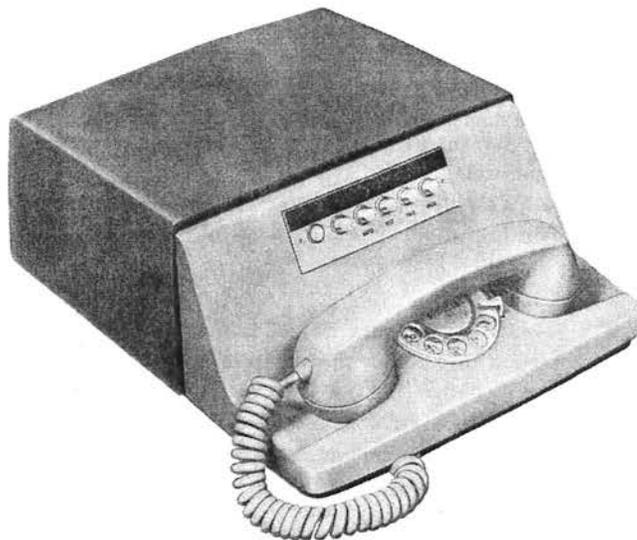

Features:

1. Meets EIA Standard RS-232A interface specification.
2. Echo suppressor disabling circuit.
3. Can be tested in a closed loop in conjunction with the business machine.
4. New SYNC terminal which provides multiparty operation.

Options:

1. Internal and external timing for synchronous operation.
2. Arranged for two-wire (private line), four-wire (private line), or four-wire continuous carrier (private line).
3. Full or part time automatic answer (selective or permanent) when telephone set is provided.
4. Wiring option to bypass new SYNC terminal if not desired.

202CW Type

Data Set 202CW5: An FM transmitting-receiving data terminal integrated with a telephone set in a single housing and provides normal point-to-point voice transmission and reception of serial digital information. Optional two- or four-wire operation is provided. The set operates at a speed of 1200 to 1800 bits per second. Each is equipped with a D6AA-61 Cord. When set is used on four-wire operation, a D34B-61 Cord is required and must be ordered separately.

Comcode: 101 623 387

Data Set 202CW6: Same as 202CW5 except it is equipped with a 1A1 Data Unit (on two-wire application) to furnish circuit assurance low-speed coordinating signals between business machines. The data unit is a reverse channel transceiver whose input and output appear on the interface of the data set.

Comcode: 101 623 262

Data Set 202CW7: Same as 202CW5 except it is equipped with a TOUCH-TONE dial.

Comcode: 101 830 131

Data Set 202CW8: Same as 202CW7 except it is equipped with a 1A1 Data Unit to provide simultaneous reverse channel transmission.

Comcode: 101 830 149

SETS

Data

202CW Type (Continued)

Each set requires a 117 volt, 60 Hz, 15 watt ac power source.

Data Auxiliary Set 801AW6 provides automatic call origination under control of the business machine. Data Auxiliary Set 801AW6 is not furnished and must be ordered separately.

Has a two-tone gray housing with overall dimensions of 11.0 inches wide by 15.0 inches long by 5.500 inches high. It weighs 16 pounds.

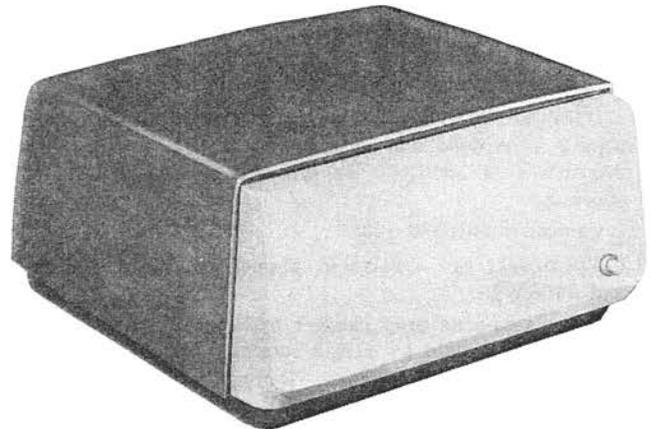

Features:

1. Meets EIA Standard RS-232A interface specification.
2. Remote test allows the set to be tested from a Data Test Center.
3. Echo suppressor disabling circuit.
4. Alternate voice communication.
5. Reverse channel, (202CW6 and 202CW8 only)

Options:

1. Manual and automatic answering (part time or permanent).
2. Arranged for two- or four-wire operation.
3. Wiring option provides contact closure-type signal on several of the interface leads to make the Data Set 202CW compatible with 202AW installations.
4. Full-duplex operation on four-wire system.
5. Three types of telephone switching:
 - Two-line DDD back up of four-wire private line.
 - One-line DDD back up of four-wire private line.
 - One-line DDD back up of two-wire private line.

202DW3 and 202DW4

202DW3: An FM transmitting-receiving data terminal providing normal point-to-point voice transmission and reception of serial digital information. Optional two- or four-wire operation is provided. The set operates at a speed of up to 1200 bits per second with DATA-PHONE service and up to 1800 bits per second with private line service. This set requires a 117 volt, 60 Hz, 15 watt ac power source.

Set is equipped with a D6AA-61 Cord. When set is used on four-wire operation, a D34B-61 Cord is required and must be ordered separately. Data transmission is permitted in two directions simultaneously (full duplex) on four-wire operation.

Comcode: 101 623 270

202DW4: Same as 202DW3 except equipped with a 1A1 Data Unit that provides a simultaneous line break or circuit assurance feature in the reverse direction of data transmission.

Comcode: 101 623 395

Has a two-tone gray cabinet with overall dimensions of 11.0 inches wide by 10.500 inches deep by 5.500 inches high. It weighs 16 pounds.

Compatible Auxiliary Sets:

- Data Auxiliary Set 801AW6
- Data Auxiliary Set 804AW3
- Data Auxiliary Set 804AW4

These data auxiliary sets must be ordered separately.

SETS

Data

Features:

1. Meets EIA Standard RS-232A interface specification.
2. Remote test allows the set to be tested from a Data Test Center.
3. Echo suppressor disabling circuit.
4. Alternate voice communication provided by 804A Data Auxiliary Set.
5. Reverse channel.

Options:

1. Manual or automatic answering (part time or permanent).
2. Available for two- or four-wire operation.
3. Wiring option provides contact closure-type signals on several of the interface leads to make the Data Set 202DW compatible with 202BW installations.
4. Full-duplex operation on four-wire system.
5. Three types of telephone line switching.

Two-line DDD back up of four-wire private line.

One-line DDD back up of four-wire private line.

One-line DDD back up of two-wire private line.

202EW Type

The 202EW type Data Set is an FM transmitting data terminal integrated with a rotary dial telephone set in a two-tone gray plastic housing. Provides normal point-to-point transmission of voice or of serial digital information at data transmission rates up to 1200 bauds on the switched network or up to 1800 bauds on some private line facilities. Designated for voltage signal interface.

202EW1: Has data capability only. Designed for either contact or voltage interface. The Key Unit built into the data set provides for talk, tone, data, and test modes of operation.

202EW2: Same as 202EW1 plus reverse channel.

202EW7: Same as 202EW1 plus automatic answer, EIA interface and remote test features.

202EW9: Combines the features of Data Sets 202EW2 and 202EW7.

The Data Sets 202EW10, 11, 12, and 13 are similar to the 202EW1, 2, 7, and 9, respectively, except for arrangement of TOUCH-TONE dialing instead of rotary dialing.

Power for Data Set 202EW1 is supplied through a D4BJ-61 cord over the Telephone loop from a central office battery. Data Sets 202EW2, 7 and 9 require a power rectifier and an external transformer and require an available source of 117 volts at 60 Hz.

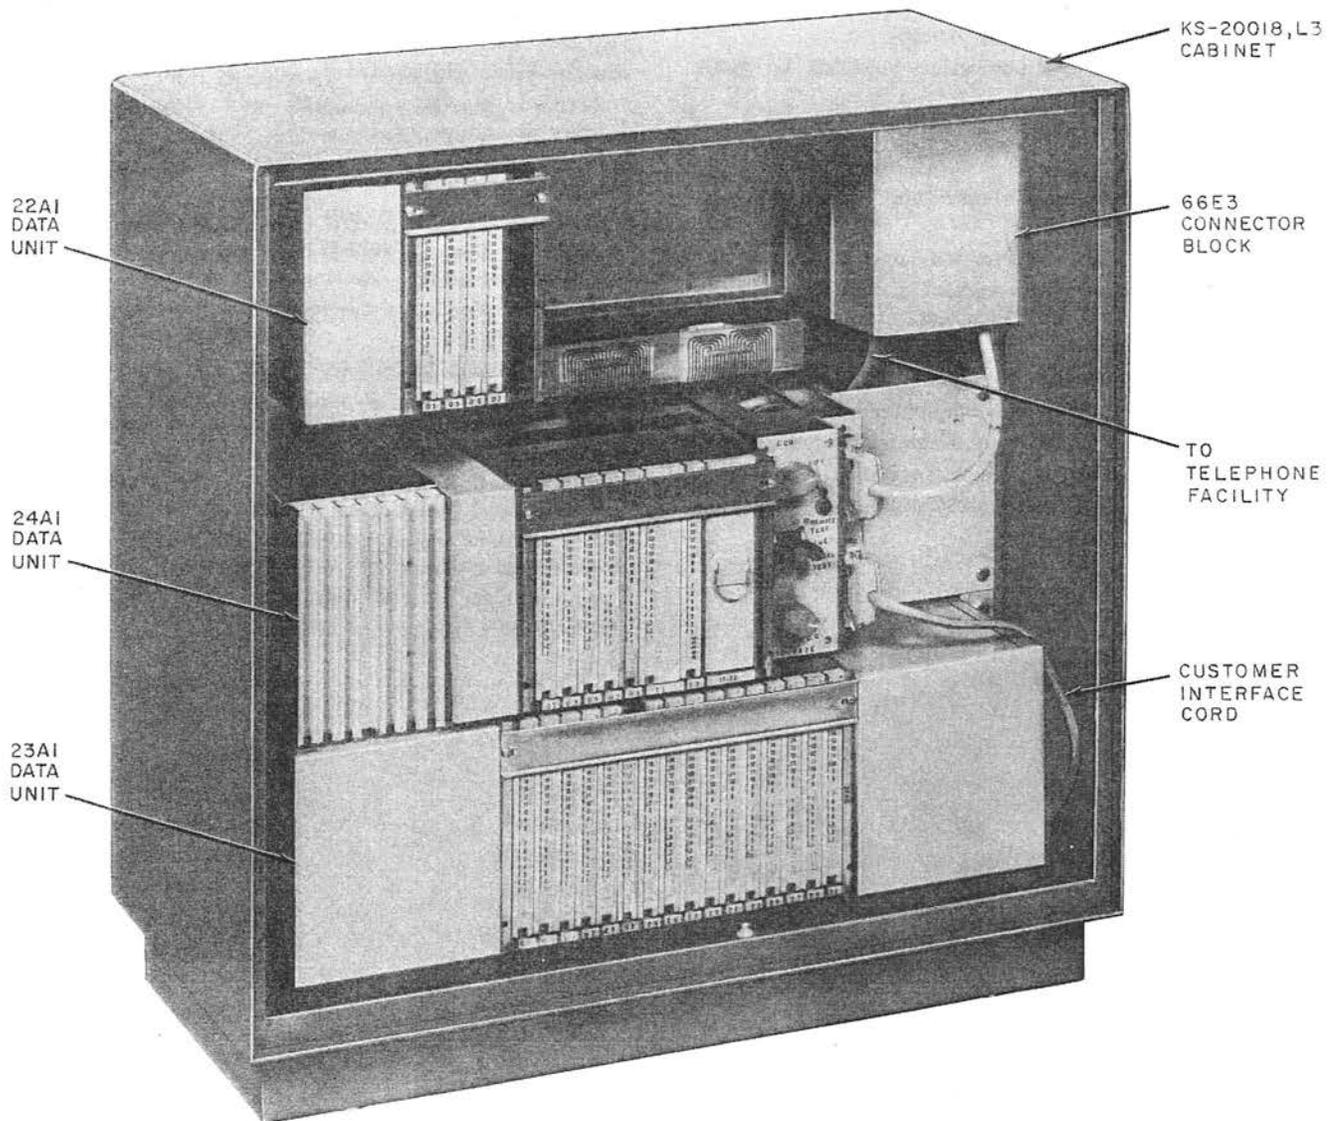

Approximate overall dimensions are 11.5 inches long by 9.0 inches wide by 4.5 inches high.

Code	Comcode

SETS

Data

203AW, BW, and CW

A Typical Data Set 203A-Type With Front Cover Removed

SETS

Data

Data Set 203 types are designed to transmit and/or receive digital data, with speed capability up to 7,200 b/s, over the switched network and 2- or 4-wire private line facilities. The data sets have the following basic design features:

- (a) Synchronous data transmission with transmitter bit timing supplied by the data set or by the customer, and receiver bit timing supplied only by the data set.
- (b) 2-, 4-, or 8-level amplitude modulation with suppressed carrier.
- (c) Vestigial sideband (VSB) line signal shaping.
- (d) Synchronous detection with upper and lower pilot tones transmitted near the edges of the VSB spectrum providing means for carrier recovery.
- (e) Automatic adaptive equalization.

The data sets may contain, as standard or in some cases optional equipment, a low-speed auxiliary transmitter/receiver. The auxiliary channel has the following design features:

- (a) Nonsynchronous data transmission up to 150 bits per second.
- (b) Binary frequency modulation with a MARK frequency of 450 Hz and a SPACE frequency of 375 Hz.
- (c) Frequency spectrum of 300 to 525 Hz which allows simultaneous operation with the high-speed channel over switched or 2-wire facilities.

The auxiliary channel feature is optionally provided with Data Set 203A, and always provided with Data Set 203B and 203C types. It is optional on 4-wire private line but must always be provided for operation over the switched network or 2-wire private line. When used in 4-wire circuit operation, the auxiliary channel is normally sent on-line in the same direction as the high-speed channel. In 2-wire operation, the auxiliary channel is normally used as a reverse channel.

Data Set 203A type, containing both a transmitter and receiver, will transmit and receive synchronous serial binary data at rates given in Table B. Internal components for this data set are Data Units 22A1, 23A1, and 24A1, equipped with optional circuit packs and networks.

Data Set 203B type is a transmitter only and is always provided with an auxiliary channel. Its transmitter features are identical in operation to those of the Data Set

203A type. Internal components for this data set are 22A1 and 24A1 Data Units equipped with optional circuit packs and networks.

Data Set 203C type is a receiver only and is always provided with an auxiliary channel. Its receiver features are identical in operation to those of the Data Set 203A type. Internal components for this data set are 23A1 and 24A1 Data Units equipped with optional circuit packs and networks.

The 24A1 Data Unit is equipped with a 41A Power Unit which provides the operating voltages required by Data Set 203 type components. A distributing system from the power unit to all data units provides connection to the regulated +4.5 vdc source and circuit ground. The power unit is also the source of both +18.5 vdc and -18.5 vdc which are distributed to the data units through the interface connectors at the rear of the 24A1 Data Unit. The 41A Power Unit requires operating voltages from an ac power input of 117 volts (± 10 percent) at a frequency between 47.5 and 63 Hz.

Voice capability service can be provided only through the optional Data Auxiliary Set 804A or 804M type.

Components of Data Set 203 types are designed to operate in an environmental temperature ranging from +40 to +120°F with a relative humidity between 20 and 95 percent.

SETS

Data

205BW2

A four-wire, full-duplex modem that uses synchronous four-phase modulation for transmission of serial binary data at 600, 1200 and 2400 bauds per second. Transmission is over voice frequency circuits using a suppressed 1800 Hz carrier frequency. Available options include regeneration, choice of continuous or switched carrier, automatic answer, internal or external clock and power supply.

The Data Set 205BW2 can be used in point-to-point private line or four-wire switched network configurations. For four-wire switched network operation, the 205BW2 associated with a Data Auxiliary Set 804M or a 5A-type Data Mounting Unit provides unattended answer operation. The 804M is intended for simple data set installations. The 5A-type Data Mounting is intended for multiple data installations.

Data Set 205BW2 can be used as a terminal data set or as part of a regenerative repeater. Two data sets, back-to-back, are required to make one regenerator.

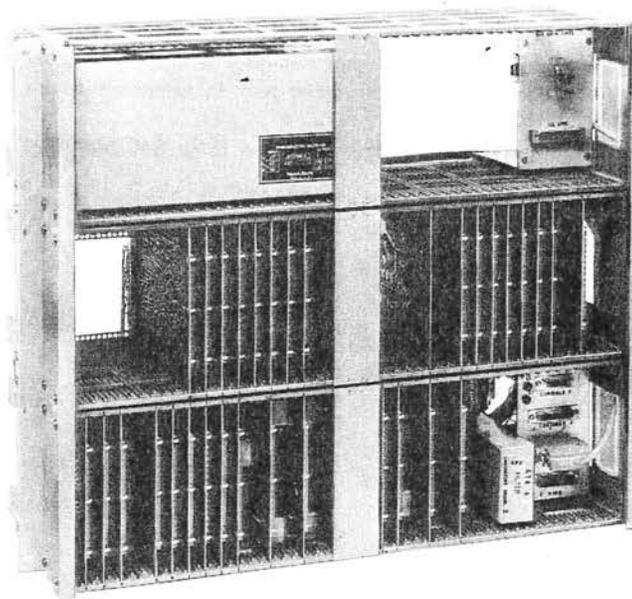

Meets EIA standard RS-232A or Military Standard 188B interface specifications.

The set can be powered either by a Data Auxiliary Set 819A-type or by a customer-provided dc supply. The 819A operates on 117 volts, 60 Hz.

Overall dimensions are 23 inches wide, 12 inches high and 9 inches deep and is designed to mount in a 23 inch relay rack.

Comcode: 101 205 599

205CW2

The Data Set 205CW2 is a four-phase modem designed to be used primarily as a terminal station for full period service on either two-wire or four-wire private lines.

It provides synchronous serial binary data transmission and reception capability at 2400 bps over telephone facilities. An optional serial binary data transmission capability at a 1200 bps rate is also provided. Transmit and receive clock signals at the selected rate are provided. The transmission rate, including the regenerative repeater mode of operation, is selected by proper control signals applied to the interface connections. The 2400 or 1200 bps transmission rate may be selected independently in each direction of transmission. The data set transmitter may be timed internally or externally.

All interface circuits, except four, meet EIA electrical specifications. Send Data, Receive Data, and Serial Clock Transmit and Serial Clock Receive Circuits meet the intent of Military Standard 188B. These four circuits are designed to generate (or accept in the case of the Send Data Circuit) waveforms with longer rise and fall than is permitted by EIA specifications. This reduces crosstalk between signaling lead by a significant amount.

The data set contains 34 circuit packs consisting of 12 types of specialized circuits and an oscillator required to provide the electronic functions of the set. It is also equipped with a power supply which provides all operating voltages instantaneously when connected to a 60 Hz power source.

April 1, 1970

TELEPHONE APPARATUS AND EQUIPMENT

SETS

Data

205CW2 (Continued)

The data set can transmit and receive simultaneously over a four-wire facility. Calls between stations are made on a full-duplex basis.

Overall dimensions are approximately 23 inches wide by 18 inches high by 8 inches deep and is arranged to be rack mounted.

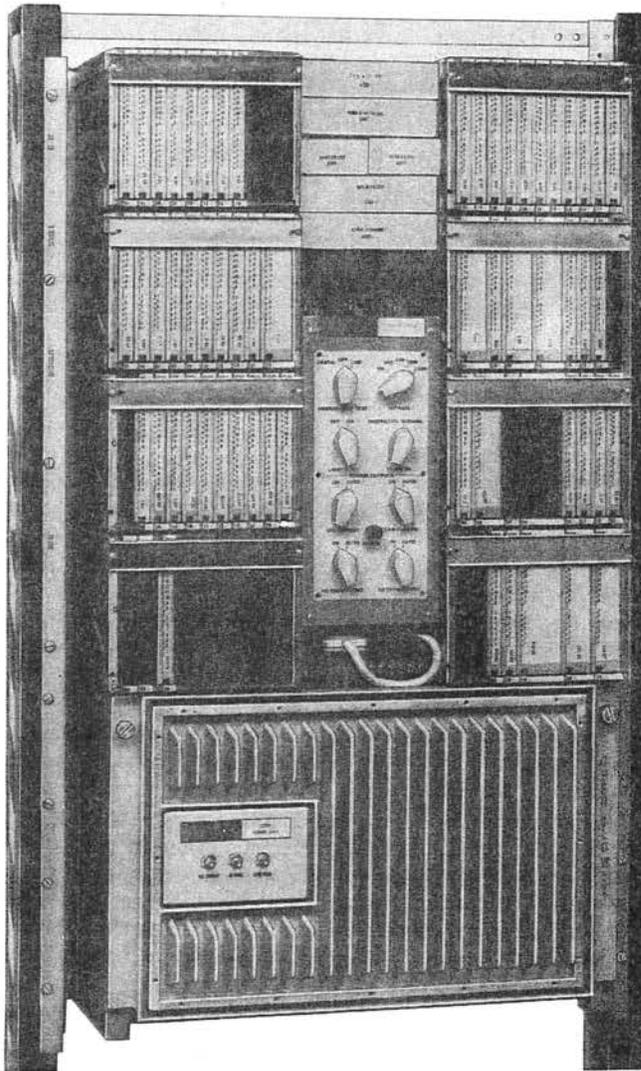

The Data Set 205CW2 replaces the Data Set 205AW1.

Comcode: 101 169 860

SETS

Data

207BW and CW

The Data Set 207 type consists of 16 interconnected and interrelated functional groups. The functions are accomplished using 61 circuit packs consisting of 23 different types of specialized circuits and, depending upon optional requirements, a 69A Oscillator to provide the electronic function of the data set.

Features:

1. Conforms to operating requirements of Mil-M-55408 (EL) "Modem, High Speed Wire Line".
2. Transmits and receives full-duplex digital data at 2400, 1200, 600, 300, and 150 bits per second.
3. Uses synchronous four-phase modulation techniques — line signaling rate is 1200 bauds.
4. Receiver uses differentially coherent detection.
5. Timing recovery achieved by phase correcting a stable clock to coincide with demodulated data crossings.
6. Compatible with CONUS AUTOVON data grade facilities.
7. Available as a data terminal or as an automatically switched regenerative repeater.
8. Available with or without a 30-minute clock.
9. Available with or without a radio frequency interference shield.
10. Contains a compatible signal sensor that performs data signal identification and timing synchronization within 0.2 second.
11. Contains transmit and receive signal and transition alarms.
12. Capable of accepting external timing.
13. Data and clock interface meets Military Standard 188B.
14. Remote test allows data set to be tested from a Data Test Center.

The Data Set 207BW type consists of the data set circuitry equipped with a 32B1 Power Unit to supply voltages, and a mounting frame. Arranged to mount on a standard 23-inch relay rack. Overall dimensions are 38.0 inches high by 23.0 inches wide by 10.5 inches deep.

207BW2: Intended to be used as a terminator. Self-timed and provides a 30-minute holdover.

Comcode:

207BW4: Intended to be used as a half-regenerator. Self-timed and provides a 30-minute holdover.

Comcode: 101 829 992

207BW5: Intended to be used as a terminator. Self-timed and provides a six-second holdover.

Comcode: 101 830 008

207BW6: Intended to be used as a regenerator. Self-timed and provides a six-second holdover.

Comcode: 101 830 016

The Data Set 207CW type is identical to the 207BW type except a radio frequency interference shield is provided and a 32A1 Power Unit is used. The 32A1 Power Unit is the same as the 32B1 except that the ac input power cord is not provided and wire mesh gaskets are incorporated to mate with the shield. Power supply input connections are made to pressure type solderless terminals.

Overall dimensions are 40.0 inches high by 23.0 inches wide by 13.0 inches deep.

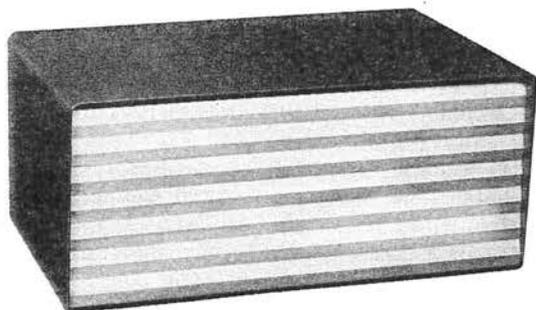

SETS

Data

300 Series

Data sets within this series accept high-speed (maximum of 250,000 bits per second) serialized dc signals from a business machine and convert these signals into phase modulated tones for transmission over private line facilities. At the receiving station, these phase modulated tones are converted back into dc signals which can be accepted by a business machine.

301BW2

This four-phase full-duplex transmitter-receiver for serial data transmits at 40,800 bits per second (fixed rate) over four-wire group band transmission facilities.

Similar to phase modulated 201BW type except for higher operating speed. Permits data transmission in two directions simultaneously (full duplex) on four-wire system by interconnecting two separate data sets.

Data Auxiliary Set 803AW2 should be used for testing Data Set 301BW2 and for loop around test of the baseband facilities from the wideband service bay. Data Auxiliary Set 803AW2 is not furnished and must be ordered separately.

This set requires a 117 volt, 60 Hz, 20 watt ac power source. Has a two-tone gray cabinet with overall dimensions of 17.0625 inches wide by 11.6875 inches deep by 7.750 inches high. It weighs 35.500 pounds.

Used on wideband private line facilities and with high speed tape to tape systems.

Comcode: 101 169 902

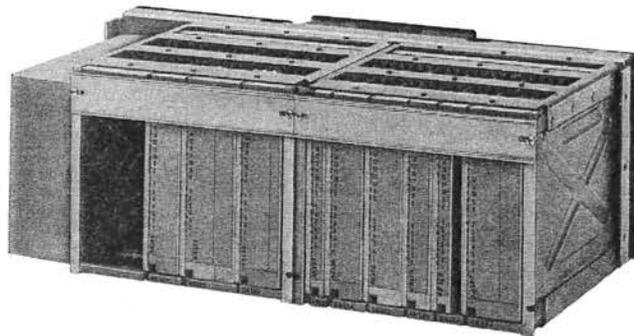

Features:

1. Meets EIA Standard RS-232A interface specification.
2. Can be tested in a closed loop in conjunction with the business machine.
3. Remote test allows data set to be tested from a Data Test Center.
4. Voice coordination channel.

Options:

1. Internal or external timing for synchronous operation.
2. Full or part time automatic answer.

303 Type

Provides for high speed, wideband serial binary data transmission at rates suitable for half-group, group, and supergroup facilities.

The basic data set is very flexible and by using combinations of five to nine circuit packs of the several available, features such as data bit rate, roll-off filter (50% or 100%), synchronous or nonsynchronous operation, internal or external timing with or without scrambler, and commercial or balanced interface are available.

Overall dimensions are 17.06 inches wide by 10.09 inches deep by 5.96 inches. Arranged for rack mounting using number 87 type brackets.

303BW Type: A baseband transceiver for use in half-group (19.2 Kbps) band data transmission on both point-to-point and multipoint private line service. May be used in a synchronous or nonsynchronous mode of operation and provides for transmission of binary signals from a variety of digital machines and of two-level signals from facsimile machines.

303CW Type: Same as 303BW type except is for use in group (50 Kbps) band data transmission.

303DW Type: Same as 303BW type except is for use in supergroup (230.4 Kbps) band data transmission.

303EW Type: Same as 303BW type except is for use in supergroup (200 Kbps) band data transmission.

303GW Type: Same as 303BW type except is for use in group (40.8 Kbps) band data transmission.

303HW Type: Same as 303BW type except provides 18.75 Kbps synchronous operation with regeneration in both directions.

Each of the above 303 types is separated into groups denoting the speed capability of each. These groups may be obtained with a variety of features and options as indicated below.

401AW1 L2

Due to the complex functions and extensive features and options of this data set, the above description is expressed in general terms. For additional information, it is suggested that the engineering personnel listed on page ii be contacted.

400 Series

Data sets within this series accept low to medium-speed (maximum 100 characters per second) parallel dc signals from a business machine and convert these signals into frequency modulated tones for transmission over private line voice facilities. At the receiving station, these frequency modulated tones are converted back into dc signals which can be accepted by the business machine. Data sets in this series generally find application in data gathering systems where many low cost transmitting stations send data to a centralized computer. In such applications the business machine (at the transmitting station) usually generates data in a parallel mode. Since equipment cost and not transmission efficiency is important in this application, it is usually cheaper to transmit in parallel and thus eliminate the cost of series/parallel conversion equipment at the transmitting and receiving locations.

This set is an integrated unit which combines a data transmitter, an answer-back amplifier, and a telephone set in one housing. It is a low speed (up to 20 characters per second) transmitter of data over a voice channel, normally the switch network. Transmits 10 numeric characters and 6 control signals. Synchronization of timing is not required.

This set is powered by the central office battery on the local telephone loop.

Has a two-tone gray housing with overall dimensions of 8.750 inches wide by 9 inches deep by 4.500 inches high. It weighs 6 pounds.

Comcode: 101 199 958

Features:

1. Meets EIA standard RS-232A interface specification.
2. Parallel transmission eliminates the cost of series/parallel conversion equipment.
3. Alternate voice communication.

SETS

Data

401EW Type

401HW3

Each is an integrated set which combines a data transmitter, audible answer-back circuits, remote test circuits, and a telephone set in one housing. It is a low speed parallel transmitter in one direction delivering 3 to 14 frequency tones having a possibility of 99 different alphanumeric characters at a rate of 20 characters per second. Synchronization of timing is not required.

Data Set 401EW2 incorporates provision for voice answer-back feature.

Comcode: 100 670 066

Data Set 401EW3 provides a special voice answer-back channel to permit use in digital inquiry voice answer-back service.

Comcode: 100 670 074

Data Set 401EW4 is the same as 401EW2 except it is equipped with an apparatus unit which provides a 12-button TOUCH-TONE dial, and the two test key buttons are square.

Comcode: 101 169 936

Data Set 401EW5 is the same as 401EW4 except for addition of a unit which provides a voice answer-back channel to permit use in digital inquiry-voice answer-back service.

Comcode: 101 169 944

Each set is powered by the central office.

Has a two-tone gray housing with overall dimensions of 8.750 inches wide by 9 inches deep by 4.500 inches high. It weighs 6 pounds.

Features:

1. Contact closure interface.
2. Parallel transmission eliminates the cost of series/parallel conversion equipment at the transmission end.
3. Alternate voice communication.
4. Remote test allows set to be tested from a Data Test Center.

A low-speed, parallel, multifrequency transmitter. The set is designed to transmit telemetry type data in one direction using 99 different alphanumeric characters. Operates at 20 characters per second but can be keyed in serial mode up to 200 bits per second. It is capable of transmitting three out of fifteen frequencies simultaneously and of automatically answering in response to 20 cycle ringing signals on either a loop or party line basis. Uses contact closure interface and is also available with EIA voltage interface.

It is enclosed in a cabinet which is 6 inches wide by 8 inches high by 3.188 inches deep having a gray enameled finish and is arranged to be wall mounted.

Replaces Data Set 401HW2.

Comcode: 101 207 496

SETS

Data

401JW Type

Features:

1. Contact closure interface.
2. Parallel transmission eliminates the cost of series/parallel conversion equipment at the receiving end.
3. Alternate voice communication.
4. Remote test allows set to be tested from a Data Test Center.
5. Pickup and hold feature for as many as three additional voice telephone lines in a 1A1 Key Telephone System.
6. When used with an automatic calling unit the receiving location can act as an originating station when polling outlying stations for data gathering purposes.

Options:

Manual or automatic answering.

Data Set 401JW2: An integrated unit which combines a three-out-of-fourteen multifrequency data receiver with a telephone set for accepting 99 different alphanumeric characters over the switch telephone network. Has an operating speed up to 20 characters per second. Provides half-duplex answer-back tone.

Comcode: 100 670 132

Data Set 401JW3: Provides a voice channel that allows audio transmission while in the data mode for use in digital inquiry voice-answer service.

Comcode: 100 670 140

Data Set 401JW4: Same as 401JW2 except is a TOUCH-TONE version

Comcode: 101 169 985

Data Set 401JW5: Same as 401JW3 except is a TOUCH-TONE version

Comcode: 101 169 993

Each requires a 117 volt, 60 Hz, 10 watt ac power source.

Has a two-tone gray housing with overall dimensions of 10.750 inches wide by 14.750 inches deep by 5.500 inches high. It weighs 16 pounds.

Compatible Auxiliary Sets:

Data Auxiliary Set 801AW6

The 801AW6 must be ordered separately.

SETS

Data

402CW Type

402CW1: This is an integrated unit which combines a telephone set and a transmitter component of a medium speed, binary, parallel data transmission system. Provides unattended answering, alternate voice transmission, and data transmission of any number of binary data levels up to 8 at any speed up to 75 characters per second. Also provides timing signals and a nonsimultaneous answer-back feature at a maximum operating speed of 20 two-bit characters per second.

Used in private line service over the switch telephone network or in leased line service.

Has two-tone gray housing with overall dimensions of 10.750 inches wide by 14.500 inches deep by 5.500 inches high. It weighs 20 pounds.

Comcode: 101 165 595

402CW2: Same as 402CW1 except contains a 1B1 Data Unit which provides a simultaneous line break or circuit assurance feature in the reverse direction simultaneously with forward data transmission.

Comcode: 101 623 569

402CW3: Same as 402CW1 except has TOUCH-TONE dial, and data control buttons are of the square type.

Comcode: 101 170 025

402CW4: Same as 402CW2 except has TOUCH-TONE dial, and data control buttons are of the square type.

Comcode: 101 170 033

Compatible Data Auxiliary Sets:

Data Auxiliary Set 801AW6.

The 801AW6 must be ordered separately.

Features:

1. Contact closure interface.
2. Nine channel transmitter, eight for data transmission and one for timing.
3. Echo suppressor disabling circuit.
4. Parallel transmission eliminates the cost of series/parallel conversion equipment at the transmission end.
5. Alternate voice communication.
6. Capable of receiving an answer-back signal from the receiving station.
7. Reverse channel.
8. Remote test allows data set to be tested from a Data Test Center.

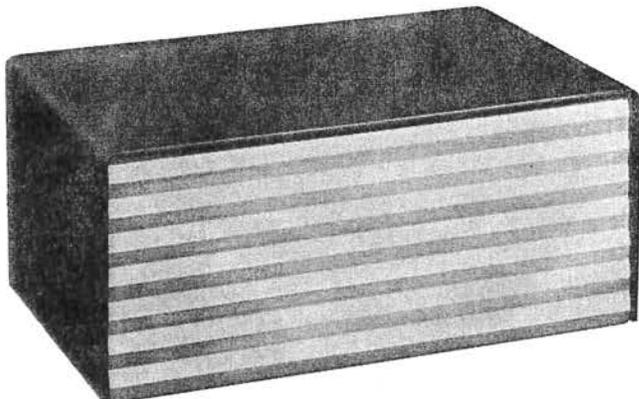

Options:

1. Manual or automatic answering.
2. Arranged for two- or four-wire operation.

SETS

Data

402DW3 and 402DW4

Data Set 402DW3: The receiver of a medium-speed, binary parallel data transmitter. Receives signals from the transmitting component of the system and delivers any number of binary data levels up to 8 at any speed up to 75 characters per second. Timing information is also received and delivered. A nonsimultaneous answer-back feature is provided at a maximum operating speed of 20 two-bit characters per second.

Comcode: 101 727 915

Data Set 402DW4: Contains a 2A1 Data Unit which provides a line break or circuit assurance feature in the reverse direction simultaneously with forward data transmission.

Comcode: 101 727 923

This set requires a 117 volt, 60 Hz, 26 watt ac power source.

Has a two-tone gray cabinet with overall dimensions of 17.500 inches wide by 11.625 inches deep by 7.750 inches high. It weighs 45 pounds.

Compatible Auxiliary Sets:

Data Auxiliary Set 802AW6

Data Auxiliary Set 801AW3

These data auxiliary sets must be ordered separately.

Features:

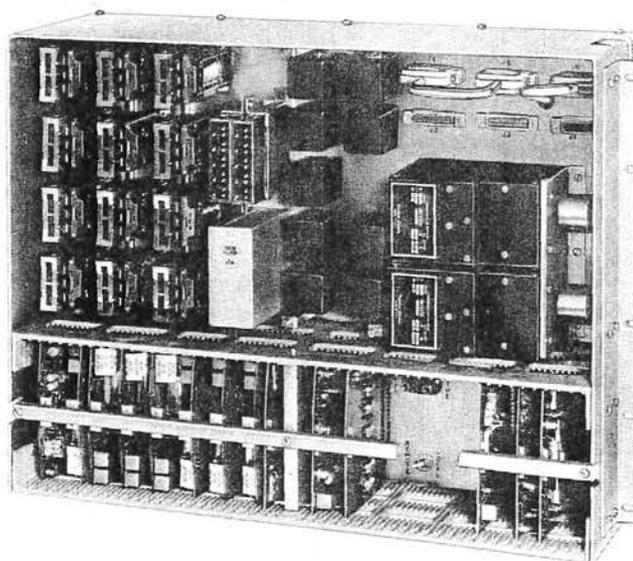

1. Contact closure interface.
2. Nine channel receiver, eight for data reception and one for timing.
3. Parallel transmission eliminates the cost of series/parallel conversion equipment at the receiving end.
4. Remote test allows data set to be tested from a Data Test Center.
5. Echo suppressor disabling circuit.
6. Alternate voice communication through Data Auxiliary Set 804AW3.

7. Capable of transmitting an answer-back signal to the transmitting station.

Options:

1. Manual or automatic answering.
2. Arranged for two- or four-wire operation.

404AW1

The Data Set 404AW1 is a low-speed parallel transmission transmitter and receiver unit.

It is used on four-wire private service systems to automatically transmit and receive TOUCH-TONE signals for dialing and control purposes. Transmits and receives a maximum of 16 characters at a rate of 10 characters per second. Remote test features are provided.

Consists of resistors, transistors, and diodes, etc., mounted on 14 plug-in printed wiring boards. The unit is terminated in five KS-19087L2 Connectors. Overall dimensions are 23 inches wide by 16.125 inches high by 6.875 inches deep. The set weighs 53 pounds.

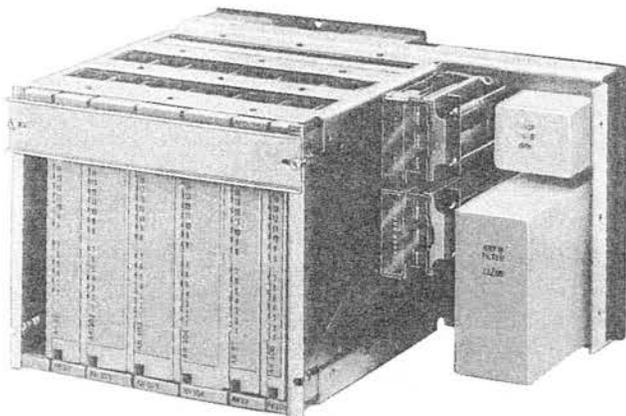

Used in the 307 Switching System.

Comcode: 100 670 272

SETS

Data

404BW1

A low-speed, non-integrated data set capable of full-duplex operation over a four-wire voice frequency circuit. It is designed for the transmission and reception of signals of a multifrequency 2-out-of-10 code format.

The data set provides a low-speed data coordination channel over voiceband private lines when used in a wide-band data station using Data Set 303 type.

Converts voltage interface signals having electrical characteristics which conform to EIA Standard RS-232B into tones for transmission and at the receiving end converts the tones back to voltage signals.

Power is derived from auxiliary equipment. The set may be used independently if a 26A Power Unit is provided. Operation of Data Set 404BW1 is controlled by auxiliary equipment (Data Auxiliary Set 806B type and Data Auxiliary Set 801A type).

The data set, which weighs approximately 17-1/2 pounds, has external dimensions of 10 inches long, 11 inches wide and 6 inches high.

Comcode: 101 170 140

600 Series

Data sets within this series are designed for connection between voice facilities and a narrow band analog unit such as a telewriting unit. These data sets transmit and receive data in handwritten or facsimile format.

601AW and 601BW Type

Each is an integrated unit which consists of a telephone set and a 589AA Key and other components housed in a two-tone gray housing with overall dimensions of 9 inches wide by 11.500 inches deep by 3.750 inches high. The set weighs 9.500 pounds.

601AW1: This set is a half-duplex nonsimultaneous basis transmitter-receiver for analog transmission over the voice frequency switched message network with frequencies of 2200 Hz for channel A and 1400 Hz for channel B.

Comcode: 101 727 931

601BW1: This set is a half-duplex nonsimultaneous basis transmitter-receiver for analog transmission over the voice frequency switched network with frequencies of 1300 Hz for channel A, 1050 Hz for channel B, and 800 Hz for Channel C.

Comcode: 101 165 603

601AW2: Same as 601AW1 except that TOUCH-TONE signalling is provided.

Comcode: 101 623 601

601BW2: Same as 601BW1 except that TOUCH-TONE signalling is provided.

Comcode: 101 829 836

SETS

Data

These sets require a 117 volt, 60 Hz, 2-1/2 watt ac power source and are used in conjunction with telewriter equipment.

Features:

1. Contact closure interface.
2. Remote test allows set to be tested from a Data Test Center.
3. Alternate voice communication.
4. Capable of transmitting an answer-back signal.

Options:

Manual or automatic answering.

602CW Type

The set is a medium-speed half-duplex transmitter-receiver with electrical coupling to a telephone circuit for analog transmission over the voice frequency switched message network. Remits transmission of facsimile data at 100 lines per minute with a resolution of up to 100 lines per inch. Provides for transmission of a frequency band spectrum ranging from 1500 to 2500 Hz which corresponds to voltage signals of 0 to 7 volts from the business machine. A secondary signal channel in parallel with main analog channel is provided for simultaneously transmitting control or synchronization between the transmitting and receiving data sets.

The Data Set 602CW1 is an integrated unit which consists of a telephone set and a 589A key and other components housed in a two-tone gray housing with overall dimensions of 11 inches wide by 15 inches deep by 5.500 inches high. The set weighs approximately 16 pounds.

Comcode: 101 170 215

The set requires a 117 volt, 60 Hz, 25 watt ac power source.

It is intended for transmission and reception of facsimile and medical signals.

The Data Set 602CW2 is the same as Data Set 602CW1 except it is equipped with a 1A1 Data Unit that provides a simultaneous line break circuit assurance feature in the reverse direction.

Comcode: 101 170 223

The Data Set 602CW3 is the same as 602CW1 except that TOUCH-TONE signalling is provided.

Comcode: 101 171 437

The Data Set 602CW4 is the same as 602CW2 except that TOUCH-TONE signalling is provided.

Comcode: 101 171 445

Compatible Auxiliary Set: Data Auxiliary Set 801AW6 which must be ordered separately.

Features:

1. Meets EIA Standard RS-232A interface specification.
2. Remote test allows set to be tested from a Data Test Center.
3. Alternate voice communications.
4. Pickup of spare lines.
5. Black, white, and shades of gray can be transmitted.

Options:

Manual or automatic answering.

SETS

Data

603AW1 and 603AW2

The Data Set 603AW1 is an integrated unit, combining a data transmitter, a reverse-channel receiver, a line control circuit, and a six button telephone set.

It provides a means for voiceband transmission of low frequency (0-100 Hz) analog signals that are originated by a business machine, primarily electrocardiograph equipment. It allows signaling from the data receiver during data transmission. The telephone subscriber set is used to establish data calls and may be used as a normal telephone.

The unit is equipped with a 900 ohm termination, a lamp-tone receiver indication and a 6 dbm output level. It may be equipped with a 600 ohm termination, a contact receiver indication, a 9 dbm, 3 dbm, or 0 dbm output level, if specified on the order.

Power is supplied by a 2012B Transformer which connects directly to a 117 volt, 60 Hz source. The power cord with the transformer attached is coded M2EP. A D6AA-61 Cord, 5.500 feet long, is supplied as the telephone cord.

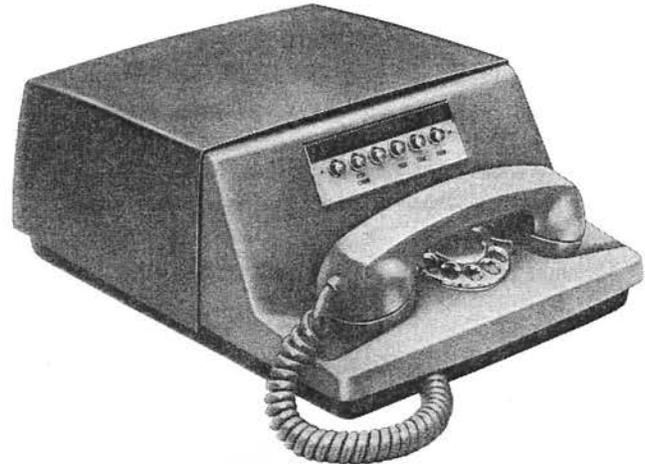

The set is housed in a two-tone gray plastic case 8.750 inches wide by 11.500 inches long by 3.500 inches high. It weighs approximately 10 pounds.

Comcode: 100 670 330

The 603AW2 is the same as the 603AW1 except it is equipped with a TOUCH-TONE dial.

Comcode: 101 171 460

603BW3 and 603BW4

The Data Set 603BW3 is a narrow-band, low-speed, analog receiver used for reception of signals (0-100 Hz) from a 603AW1 or 603DW1 transmitter.

A telephone hand set is provided for voice communications used to coordinate the receiver operation with the associated transmitter. Used primarily by the medical profession for the reception of electrocardiograph signals.

The set is designed for attended operation while receiving data, although unattended operation can be provided through optional wiring. The set generates both a circuit assurance signal (reverse channel) and an answer-back signal. The set requires 117 volt, 60 Hz ac power source.

The set is available with the following options.

- 600 ohm line termination
- 900 ohm line termination
- 0 db reverse channel power
- 3db reverse channel power
- 6 db reverse channel power
- 9 db reverse channel power
- Automatic answering
- Automatic answering (Key operation)
- Dial tone key

The Data Set 603BW3 is housed in a two-tone gray cabinet with overall dimensions of 11 inches wide by 14.625 inches deep by 5.500 inches high. It weighs approximately 18 pounds.

A KS-14532L16 Power Cord and a D6AA-61 Cord for the telephone set are furnished.

Comcode: 101 829 844

The Data Set 603BW4 is the same as 603BW3 except TOUCH-TONE version.

Comcode: 101 829 851

SETS

Data

603DW1

The Data Set 603DW1 is a battery-powered portable acoustically coupled medical analog transmitter primarily used for electrocardiograph transmission.

This set provides the electronic circuits necessary to convert the business machine analog voltage signal to a frequency modulated signal suitable for being transmitted over telephone lines. The audible FM signal is acoustically coupled into a telephone hand set for transmission.

The set is designed to accept an analog voltage signal (varying between +2.0 and -2.0 volts) from the business machine in the frequency range between 0 and 100 Hz. The input impedance is 100,000 ohms. Input signals are frequency modulated with a carrier at 1988 Hz. The transmitted signal has a peak frequency deviation of 262 Hz from the carrier frequency. Eight standard flashlight batteries, size D, are required to provide operating voltage. **The batteries are not furnished.**

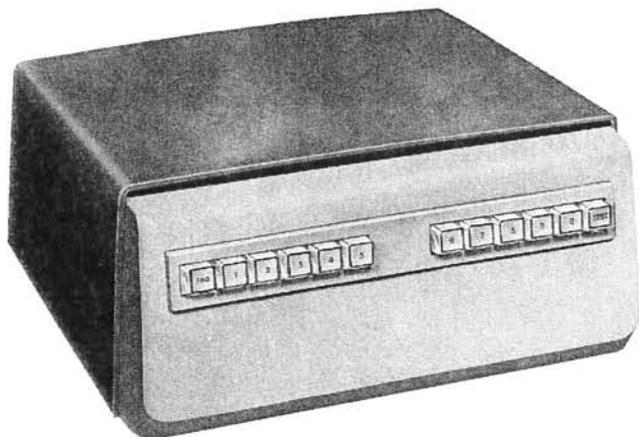

The data set is housed in a two-tone gray plastic case and weighs 6 pounds when equipped with batteries. Overall dimensions are 12.750 inches long by 8.500 inches wide by 4 inches high.

Comcode: 100 670 355

SETS

Auxiliary Data

801AW5 and 801AW6

These are any-number, dial pulse automatic calling units having two-tone gray, nonintegrated housings with overall dimensions of 10.750 inches wide by 10.500 inches deep by 5.500 inches high. Each weighs 16 pounds.

There are 12 translucent test buttons across the front which, when activated, duplicate signals that would normally be provided by the associated business machine. This action makes possible the testing of the data auxiliary set but cannot be used as an alternate mode to transmit data since it times out in 40 seconds and disconnects the data (telephone line).

The rear of the data auxiliary set contains a power cord connector, interface connector, and mounting cord.

A 10-foot, 3-conductor power cord (KS14532L16) and a 5-1/2 foot mounting cord (D10P-61) are furnished with the set. A plug-ended (M14C-61) cord is available and may be substituted for the D10P-61 when the associated data set requires it. However, it must be ordered separately.

These data auxiliary sets will operate over an ambient temperature range of 40° to 120° F and a relative humidity of 20 to 95 percent. They require approximately 15 watts of 117 volt, 60 Hz ac power from a local grounding type, three-wire outlet.

Contact closure or voltage interface is available as an installer's option.

Each set performs the following functions.

1. Obtains a central office line.
2. Signals an off-hook condition.
3. Recognizes the dial go-ahead signal.
4. Dials the number of the desired station.
5. Places associated data set in the data mode.
6. Transfers the telephone line to the data set upon receipt of an answer indication from the called station.

7. Terminates the call upon completion of business.

The set permits a business machine to automatically originate and control dc dial pulse calls to desired stations whose telephone numbers are stored in the memory of the business machine.

The telephone number is passed from the business machine to the set one digit at a time in the form of parallel four-bit binary signals.

Compatible Data Sets and Data Auxiliary Sets:

103AW	
103GW

801AW5	101 623 056
801AW6	101 623 155

SETS

Auxiliary Data

803AW2

Consists of a metal case with a dark gray textured vinyl finish, 7.250 inches wide by 8 inches high by 2.625 inches deep. It weighs 2.500 pounds. The cover has a hole for cable entrance.

Arranged for wall mounting by means of four number 10 screws which are not furnished.

Arranged for connecting test apparatus to a line only, or to a data set only, on either the transmit or receive side at locations where Data Sets 301BW1 are installed.

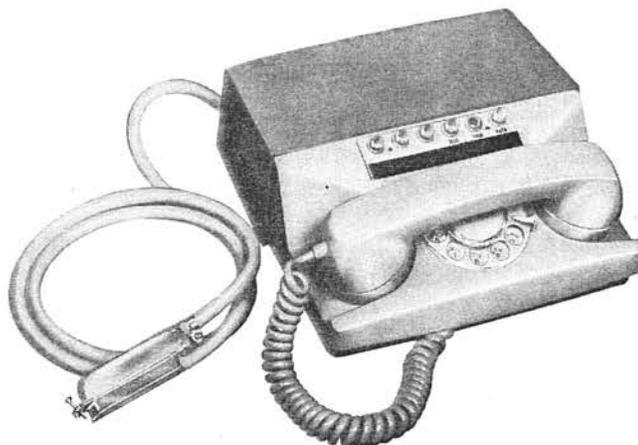

Permits the business machine to send to itself locally through the data set for test.

Provision is also made for monitoring data on either the transmit or receive side. The key when operated isolates a data set from the line, loops the transmit and receive sides, and connects the transmitter of the data set to the receiver through an appropriate pad.

Used in conjunction with Data Set 301BW1 in data systems to facilitate testing of data set and transmission line.

Comcode: 101 829 786

804AW Type

804AW1: Consists of a two-tone gray plastic housing, 8.750 inches wide by 8.750 inches deep by 3.500 inches high. It weighs 9 pounds.

When used with 402DW1 or similar data set receivers, it provides switching between the test talk and data modes and provides facilities for voice communication over the telephone lines and for automatic answering of data calls.

When used with automatic calling sets on ground start lines, it provides means for obtaining dial tone in the event of a local ac power failure in the automatic calling set.

Comcode: 100 670 538

804AW2: Same as 804AW1 except also contains a 4-wire relay to permit switching between 2 and 4-wire circuits under control of keys in a data auxiliary set.

Comcode: 100 670 546

804AW3 and 804AW4 Data Sets: Similar to the 804AW1 and 804AW2, respectively, except that TOUCH-TONE signalling is provided.

Comcodes: 101 171 536 and 101 171 544, respectively.

Each set is powered by the central office.

Features:

1. Alternate voice communication.
2. Remote test allows the set to be tested from a Data Test Center.

Options:

1. Manual or automatic answering.
2. Arranged for two- or four-wire operation.

Compatible Data Sets:

201AW Type, 202DW Type, 402DW Type.

SETS

Auxiliary Data

804BW1

Same as Data Set 804AW1 except can be strapped for data only for TWX service. Arranged to provide voice communication and transmission of data over the direct distance dialing network.

Used in conjunction with the Data Set 103AW1 in data systems.

Comcode: 100 670 553

806AW1, 806AW2, 806AW3

804GW1 and 804GW2

804GW1: Consists of a two-tone gray plastic housing containing an 11C Apparatus Unit, a 589T Key, three 52A Lamps, a D4BJ-61 Cord, an M14F Cord, and printed wiring boards containing component apparatus.

Arranged for use with Data Set 403EW1 to provide single line use. The unused keys are blocked and not equipped with lamps.

Overall dimensions are 8.60 inches deep by 8.30 inches wide by 4.30 inches high.

Comcode: 101 171 635

804GW2: Same as 804GW1 except it is equipped with an 11G Apparatus Unit which provides TOUCH-TONE signaling.

Comcode: 101 171 643

Replaces Data Sets 804CW1 and 804CW2, respectively.

The Data Auxiliary Set 806AW type housed in a gray wall mounted cabinet is 11 inches long by 7 inches wide by 4 inches high.

The set is designed to tie together the transmit and receive leads facilitating loop-back testing of the line facilities and the data station equipment. The set may be either locally or remotely controlled.

A 117 volt, 60 Hz ac power source is required. The following table shows the options and features that are or can be furnished for the data auxiliary sets.

	Option or Feature	806AW1	806AW2	806AW3
(V)	Line Loop-Back Conditioned for Wet Line	a	b	b
(W)	Line Loop-Back Conditioned for Dry Line	a	b	b
(Z)	Metallic Transmission Paths	a	b	b
(Y)	Repeat Coil on Receive Leg	b	b	b
(X)	Repeat Coil on Transmit Leg	b	b	b

806AW1	100 670 595
806AW2	100 670 603
806AW3	100 670 611

806BW2: Same as 806BW1 except a 10A2 Data Unit is used in lieu of the 10A1 Data Unit and a 2800 cycle detector is added to provide remote test capability.

Comcode: 101 171 700

806BW5: Same as 806BW2 except equipped with an interface adapter unit and provides customer interface facilities and local and remote testing capabilities as required for use with data set 301B type in wideband data service.

Comcode: 101 829 828

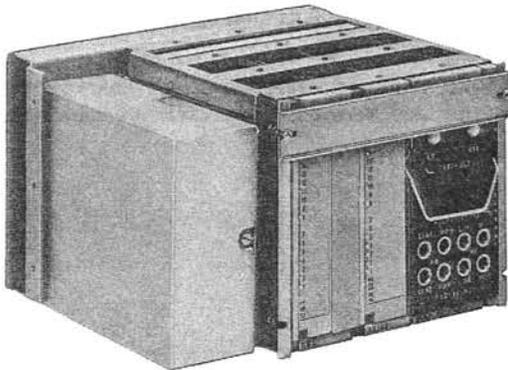

806BW6: Contains a 10A1 Data Unit and associated wiring to provide interconnection of a wideband Data Set 303 type and a four-wire wideband line. Provision for test access to lines, local test, and voiceband coordination channel.

Comcode: 101 829 810

806BW7: Same as 806BW6 except the Data Unit 10A1 is replaced by a Data Unit 10A2, and a 2800 cycle detector is added. This provides the additional feature of remote test capability.

Comcode: 101 829 802

806BW Type

Provides line interfacing, test features, and interconnection arrangements for the component units of wideband data stations using the Data Set 303 type.

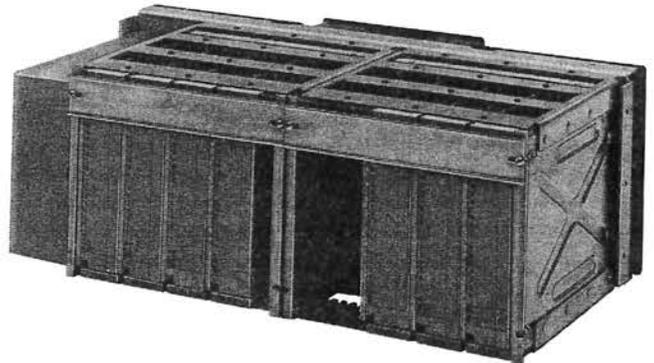

Each consists of a power unit, a data unit, and a terminal board assembly with a coordination channel adapter unit and/or a 2800 cycle detector as required for individual codes.

Overall dimensions are approximately 9.96 inches long by 5.96 inches high by 9.10 inches deep. Arranged for rack mounting.

806BW1: Contains a 10A1 Data Unit and associated wiring to provide interconnection of a Data Set number 303 type and a four-wire wideband line. Also provides a local test feature for looping both wideband and voiceband lines.

Comcode: 101 171 692

809BW1

Consists of a power unit, a relay, filters, equalizer, and circuit pack assemblies mounted on a metal mounting plate. Arranged for rack mounting.

A vestigial sideband transceiver which is used in conjunction with Data Set 303BW type to modulate the baseband output into a 28-44 kc frequency band for transmission over wideband facilities and to demodulate the received signal.

Overall dimensions are 17.06 inches long by 5.96 inches high by 10.09 inches deep.

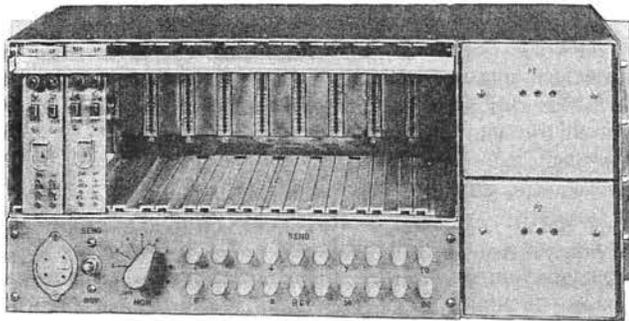

Used in Wideband Data Stations.

Comcode: 101 171 742

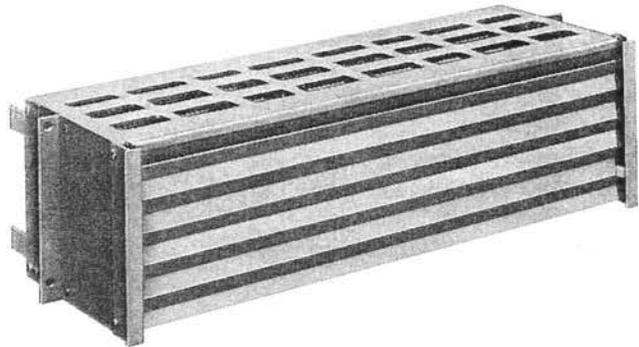

SETS

Auxiliary Data

816BW1

819AW Type

Designed for multiunit locations where more than one channel of VF telegraph carrier terminates. Each set will accommodate up to ten channels. Used in low speed data transmission up to ten 150 baud channel terminations.

Provides a visual carrier fail lamp alarm for each of the ten channels. In addition, provision has been made for an optional connection for a common alarm carrier failure lamp in the event that any one of the ten channels fails.

Designed to connect to the full-duplex send and receive legs of a number 130 type teletypewriter set on a four-wire basis.

Consists of ten 908C Connectors, a monitoring selector switch, a monitoring amplifier and jack, two J87215A1, List 1 Rectifiers, and a KS-16671, List 1 Plug.

A KS-14532, List 8, 3-conductor power cord, 10 feet long, is furnished with the set. A connecting cable will be required between the teletypewriter and the data auxiliary set such as an A25B Connector Cable. **This cable is not furnished and must be ordered separately.**

Overall dimensions are 23 inches wide by 9 inches high by 8.5 inches deep and weighs 37 pounds. Designed to be mounted on a 23 inch relay rack.

Comcode: 101 829 794

Each consists of a metal housing arranged to mount on a 23 inch wide rack, containing J87270A-1 rectifiers. Overall dimensions are 22.93 inches long by 6.105 inches high by 8.82 inches deep.

819AW1: Designed to operate on commercial power of 117 volts, 60 Hz, 58 watts, and provides +18.0 volts dc at 1.8 amps and -18.0 volts dc at 4.0 amps. Using one rectifier, provides power for one data set.

Comcode: 101 171 809

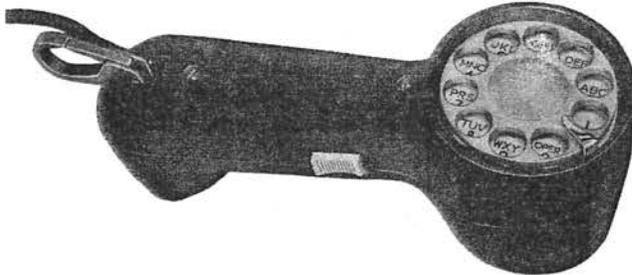

819AW2: Same as 819AW1 except has two rectifiers (116 watts) and provides power for two data sets.

Comcode: 101 171 817

SETS

Hand

1013AW and 1014AW

The principal application of these sets is for originating test calls on dial system apparatus for testing the switching, continuity, and talking features of the circuit. In the maintenance of the equipment, they may also be used for locating trouble in the various portions of the circuit.

1013AW: Consist of a T1 Transmitter Unit, and LA2 Receiver Unit, a locking and nonlocking switch for monitoring and talking, an 11A dial, a 2642A transformer, and a P-90D079 switch network assembly assembled in a blue plastic housing.

Furnished with an H2B Cord equipped with a 360A and 360B Tool and two KS-6278 connecting clips on the test end. A P-22F230 snap assembly is provided to facilitate carrying the handset on a belt.

Overall dimensions are approximately 10.075 inches long by 3.012 inches wide by 3.180 inches high.

Replaces the 1011B Hand Set.

Comcode: 101 365 963

1014AW: Same as 1013AW except parts are assembled in a yellow plastic housing and furnished with an H2C Cord equipped with a 346A Plug.

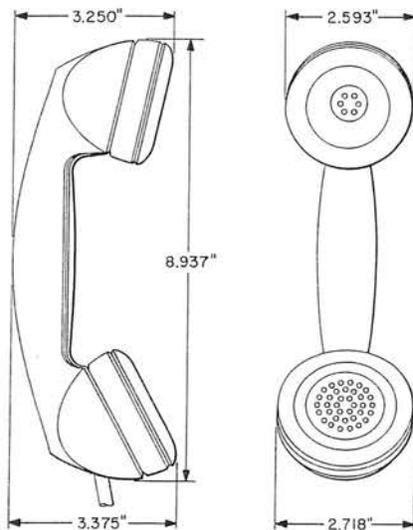

Replaces the 1011G Hand Set.

Comcode: 101 365 971

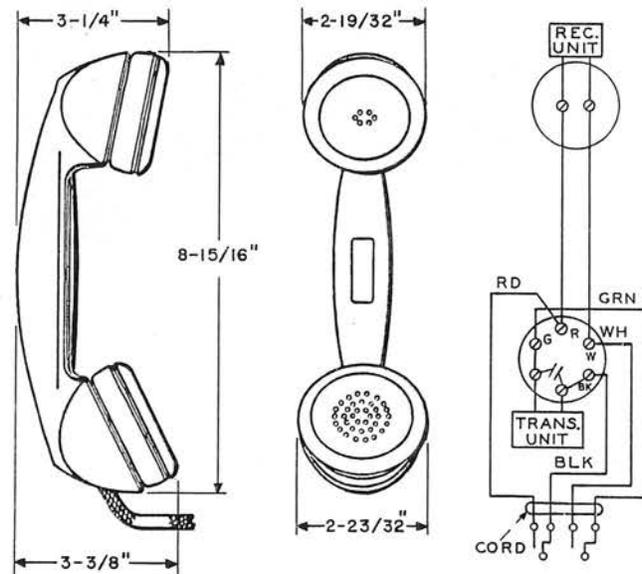

SETS

Hand

F1CW-3, F1EW-3, and F1GW-3

F2AW-3

Black finished hand sets consisting of an F1 Transmitter Unit and a LA3 Receiver Unit.

F1GW-3 may also be obtained with a 129F Capacitor connected across the transmitter unit terminals.

Black finished hand set consisting of an F1 Transmitter Unit, LA3 Receiver Unit, F2W-3 Hand Set Handle, and an H4CA-3 Cord with a 289B Plug.

Used in central offices and in PBX systems.

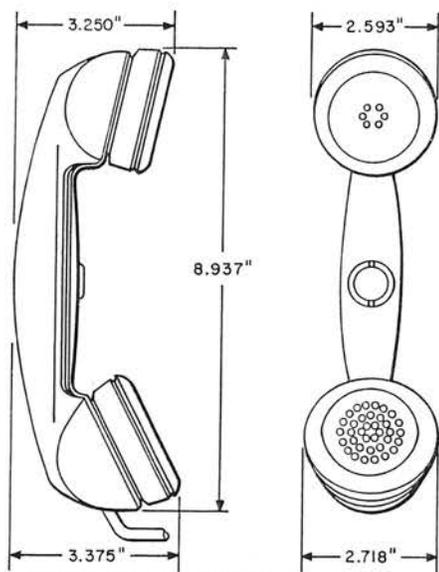

Comcode: 100 670 884

F3BW-3

F6ARW-3

Black plastic hand set constructed to confine any possible burning of explosive gases to the interior of the instrument and prevent the ignition of gases outside of the instrument. The set consists of K1 Transmitter Unit, HA7 Receiver Unit, F6W-3 Hand Set Handle, and H3AN-3 spring-type cord. May be obtained with a 9-foot cord when specified on order.

Used on 320ERW and FRW Telephone Sets in long loop service.

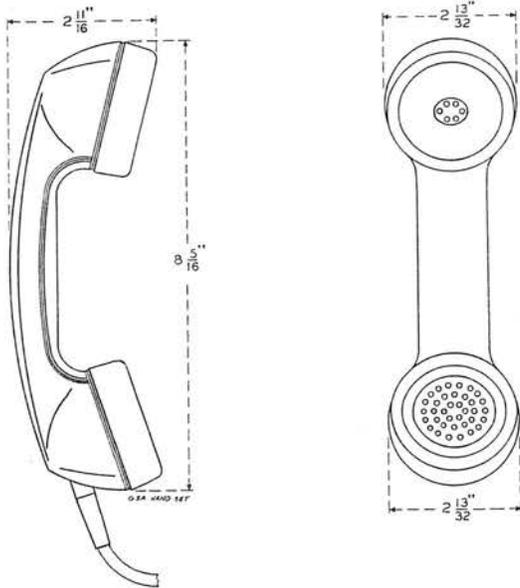

Comcode: 100 671 031 E/W 4 Ft Cord
101 727 949 E/W 9 Ft Cord

Black finished hand set consisting of F1 Transmitter Unit, LA3 Receiver Unit, H4BY-3 Cord, and 289B Plug. It is equipped with a push button switch in the handle. When the push button switch is depressed, the transmitter is connected into the circuit. May be obtained with a 13-foot cord when specified on order.

Used at telegraph positions of toll test boards where these positions are arranged for supervision of telegraph service.

Comcode: 101 092 781 E/W 12 Ft Cord
101 207 843 E/W 13 Ft Cord

SETS
Hand
G3-Type

The G3-type hand sets consist of a P-80J200 Handle, a P-80A200 Receiver Cap, a P-80A100 Transmitter Cap, a TI Transmitter Unit and the apparatus shown in the table.

(a) Cord is omitted.

(b) Equipped with a 396A Plug.

(c) Equipped with a 289A Plug.

G3A4W, G3A9W, and G3A13W-3, -50, -51, -53, -54, -56, -58, -60, and -61: Intended for use in the Telephone Set "Kit" Plan and with number 500, 501, and similar type telephone sets. The G3A4W-54 is not to be used in the Telephone Set "Kit" Plan.

G3KW-58 and -60: Used initially with the 750A-58 and 750B-60 Telephone Sets, respectively. These sets are not provided with a cord since they will be used with a cord reel.

G3LW-51, -58, -60, and -61: Used initially in station concentrator equipment.

G3YW-Type: Equipped with a 0.01 uf capacitor. Used initially in 2568 HUW Telephone Sets.

G3AAW-3: Used initially with number 525 type telephone sets.

G3ABW-3: Used initially in PBXs and order currents.

G3ACW-3: Used initially with number 570 type telephone sets.

G3BRW-53, -56, and -61: Used initially with 597ARW-53 Telephone Set, 596CRW-56 Telephone Set, and 112A key equipment, respectively.

G3CRW-50, -51, -58, -60, and -61: Used initially with 610BW1 and BW2 Telephone Sets.

G3CRW-52: Used initially with 756A PBX.

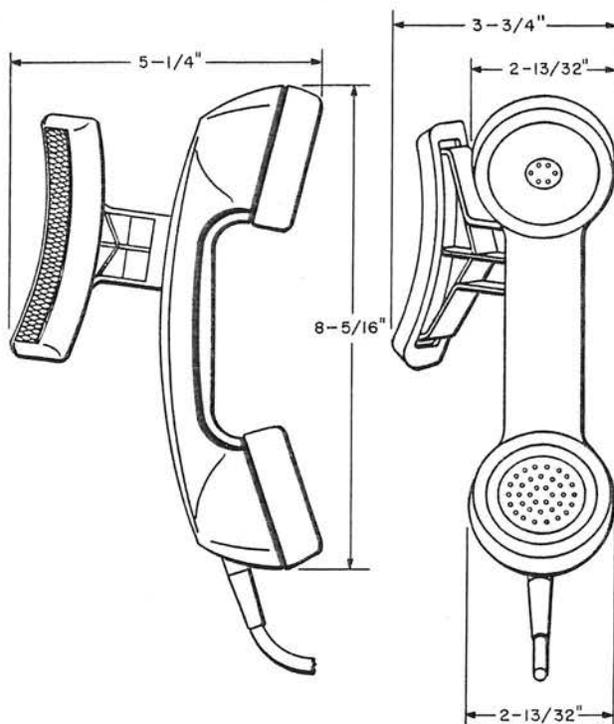

G3DRW-61: Used initially with 112A key equipment.

The G3BRW, CRW, and DRW Hand Sets are equipped with U4 Receiver Units for use in systems with higher (600 ohms) impedance.

SETS

Hand

G4BW

Consists of a T1 Transmitter Unit, a U3 Receiver Unit, and an H4CJ Cord. Equipped with a removable support having a removable pad for holding hand set on the shoulder. The shoulder support, which is shipped loose, may be assembled to the hand set for use on either the left or the right shoulder. The illustration shows the shoulder support assembled to the hand set for use on the left shoulder. Available in colors shown in the table.

Used where a hand set with a shoulder support is required.

G5ERW-type: Used initially with number 535-type telephone sets.

G5FRW-3: Used initially with Bendix MRT 9 Radio Pack Set.

G5GRW-3 and -61: Used initially with two- and four-wire private line stations.

G5GRW-51: Used initially in the Command Post Alerting Network.

G5GRW-56: Forms part of the number 606-type telephone sets.

G5HRW-3: Used initially with 102A Key Equipment at airports.

G5HRW-53: Used initially by the Strategic Air Command.

G5JRW-3: Used initially with the number 300 Switching System.

G5JRW-61: Used initially with 11A Alerting Systems.

G5KRW-type: Used initially with 2A Farm Interphone.

G5LRW-61: Used initially with 617A15-61 Telephone Set.

G5MRW-51: Used initially by the Command Post Alerting Network.

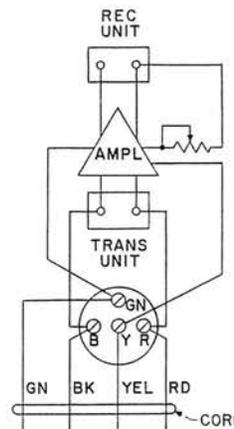

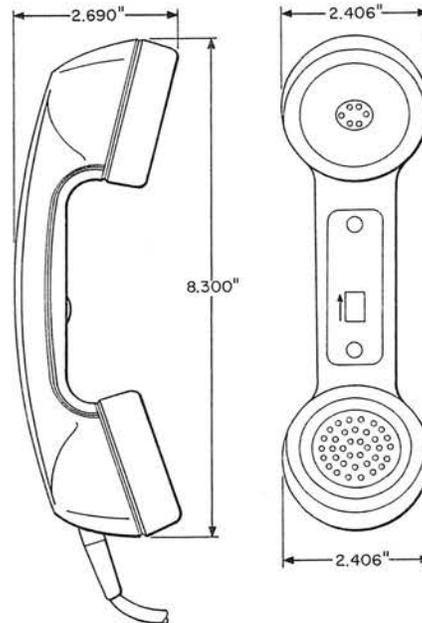

G5NRW-3: Used initially by Air Ground Base Stations.

G5PRW-51: Used initially with 625A1-51 Telephone Set.

G5RRW-3 and -53: Used initially with number 304 Switching Systems.

G5RRW-56 and -61: Used initially with 596-type telephone sets.

G6BW

Consists of a T1 Transmitter Unit, an H4CT type cord with a vinyl jacket corresponding in color to the handle. Also contains a single-stage transistor amplifier, with a polarity guard, assembled on a printed circuit board which is fastened to a P14A464 Receiver Unit inside the handle.

Provides receiver amplification for persons with impaired hearing. Has volume control mounted in the handle.

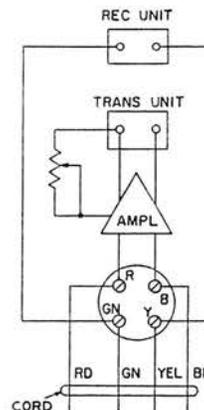

Available in colors shown in table.

G6BW-60	101 320 158	Light beige
G6BW-61	101 320 166	Light gray

Used with 300, 500, 600, and 700 type telephone sets. These hand sets are not furnished with telephone sets and must be ordered separately.

G7ARW

Consists of a T1 Transmitter Unit, a receiver unit, a polarity guard, and a H4CT spring-type cord. Provides transmit amplification for persons with inadequate speech volume; a control knob is mounted in the handle. Available in colors shown in the table.

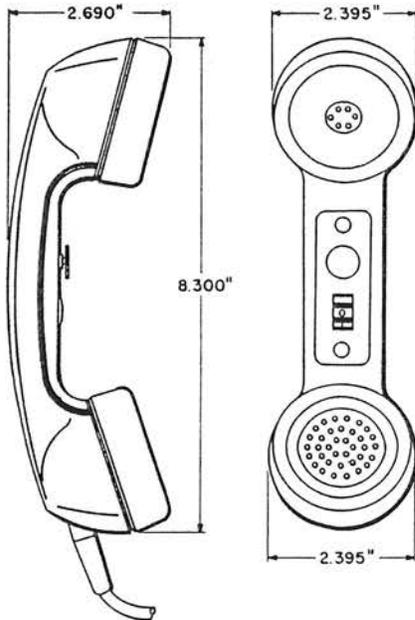

Code	Comcode	Color of Handle and Caps

G8BW-61	101 320 380	Light gray

Used with 500, 600, and 700 series telephone sets. These hand sets are not furnished with the telephone sets and must be ordered separately for conversion at time of installation.

G10AW and G10CW

Consists of a T1 Transmitter Unit, a receiver unit, a polarity guard, and a H4CT spring-type cord. Provides receive amplification at noisy locations. Equipped with a press-to-listen switch which when depressed reduces transmitter output and increases the gain of the receiver amplifier. A potentiometer equipped with knurled knob provides for adjustment of the receiver volume. A push button switch and a volume control knob are mounted in the handle. Available in colors shown in the table.

These plastic hand sets incorporate subminiature micro-switches which serve to provide normal paths through the transmitter and receiver when operated, but short out the transmitter and receiver and shunt the cord leads through resistors when unoperated.

Available in colors shown in the table.

(*) E/W 13 Foot Cord

These hand sets are not furnished with telephone sets and must be ordered separately for conversion at time of installation.

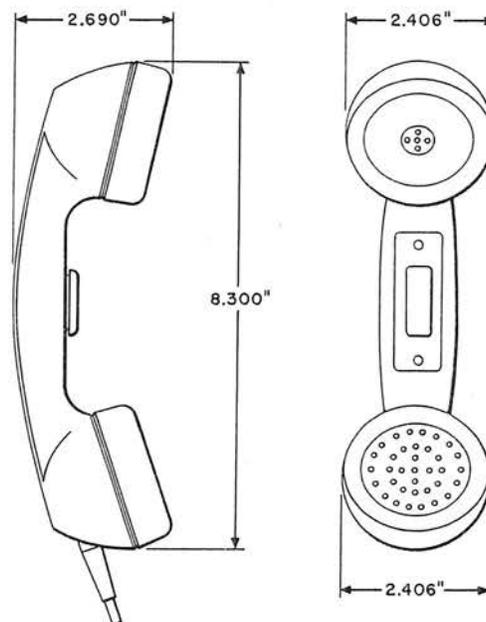

Intended solely for specially engineered lines—Not for general telephone use.

The G10AW type hand set has two push buttons, one to control the transmitter and one to control the receiver. The transmitter control has an additional switch to control an external relay. Equipped with an H6E type cord.

The G10CW is the same as the G10AW except an H6F type cord is used equipped with a number 425A Plug.

These hand sets are furnished with a four-foot cord; however they may be obtained in 13-foot lengths when specified in the order.

G10BW and G10DW

The G10BW is the same as the G10AW except has a single push bar to control both transmitter and receiver simultaneously.

The G10DW is the same as the G10BW except an H4DD type cord is used equipped with a number 396A Plug.

Intended solely for specially engineered lines—Not for general telephone use.

A dial-in-hand set consisting of two molded shells which contain the components listed below. The shells are held together by two screws which are concealed by the number card holder and dial light-seal plate.

- T1 Transmitter Unit
- LA1 Receiver Unit
- 10A Dial
- 53B Lamp
- 854A Network (Mounted on a flexible printed wiring board)

Overall dimensions of the set are 8.360 inches by 2.725 inches by 2.700 inches.

The set is equipped with a recall switch, used to release and regain a central office line in lieu of operating a line switch plunger, and is provided with a jack connector arranged to accept an H4DB or similar type cord up to five conductors. The cord must be ordered separately.

The hand telephone set, electrically, is a complete telephone except for ringer and switch hook functions.

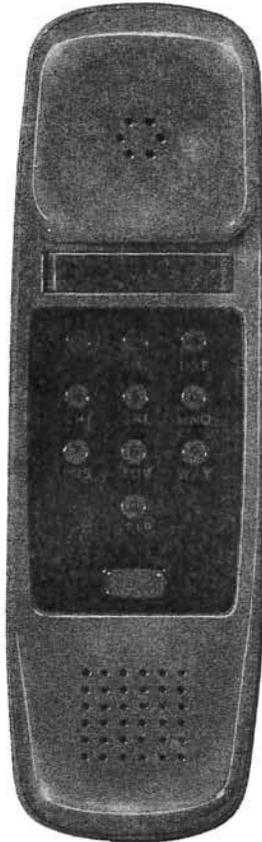

For use with AEW1, AEW2, ACW1, and ADW1 Telephone Bases, which are not furnished and must be ordered separately.

This set is a TOUCH-TONE version of the 220AW Hand Telephone Set. It is equipped with an 80A2A Dial and an 861A Network.

SETS

Head Telephone

52 Type

These head telephone sets consist of the following apparatus.

52EW: For use by cable splicers to test working pairs without causing interference.

52LW: For use by supervisors.

52MW: For use in special installations at airports.

52NW: For use by night operators.

52SW: For use by operators at switchboards, desks, and PBX positions.

52TW: For use on N, O, and ON type carrier systems.

52RRW: For use in the number 300 Switching System.

(a) In addition to the apparatus listed each set also contains a 10A receiver holder.

(b) Also includes a 29A connecting block and a KS-8010 switch.

(c) Also includes a 240A switch.

SETS

Head Telephone

A head telephone set with a fixed distance between the transmitter and receiver. It is provided with a handle so the set can be used as a hand set when the headband is not used. It consists of the following apparatus.

53BW: For use at military field switchboards or other communication locations requiring a rugged, nonadjustable head telephone set.

53NW: For use with number 107 type test centers.

53JRW: Used for order service in test centers.

53LRW: For use at FAA air route traffic control centers and control towers in attendants telephone and key circuit in the 102A Key Equipment.

53MRW: For use at air defense direction center installations.

53PRW: For use with 112A Key Equipment.

SETS

Loudspeaker

106A, 106B, 106C

106A: Consists of a loud speaker and amplifier assembled on a chassis within a metal housing 5.500 inches wide by 4.625 inches deep by 6.1875 inches high having a green finish. The knob on the right controls an ON-OFF switch and a gain control potentiometer. A 2Y Lamp behind a red jewel indicates the ON condition.

Arranged for desk mounting but can be arranged for panel mounting by removing the feet and housing and clamping the panel between the housing and the bezel. A hole in the rear of the housing is provided for cord or cable entrance.

A 48 volt dc power supply is required for operation. Can also operate from a 24 volt dc supply or from a J87202A2L1, D, and NP Rectifier connected to a 115 volt, 60 cps power source by removing the 2Y Lamp, replacing it with a 2T Lamp, and changing the terminal strappings. J87202A2L1, D, and NP and 2T Lamp, if required, must be ordered separately.

Intended for use in the number 300 Switching System for airline ground-to-air communication systems for the Federal Aviation Agency. **Comcode: 100 673 235**

106B: Same as 106A except contains an automatic output level control circuit and an output loudness control which is accessible only after removing the housing.

Comcode: 100 673 243

106C: Same as 106B except 10,000 ohm input gain control on front panel is replaced by a 25 ohm output loudness control and the 20 ohm screwdriver adjustment located on the side is omitted as the output loudness control.

Comcode: 100 673 250

107AW Type

Consists of a KS-16881L5 Loudspeaker and a two-stage transistorized amplifier mounted on a metal base enclosed in a plastic housing. The knob controls an ON-OFF switch and a volume control potentiometer. Overall dimensions are 5.750 inches wide by 4 inches high by 3.750 inches deep.

Operating power can be obtained from a number 2012B type transformer connected to a 120 volt ac, 60 cycle power supply or from the 18 volt ac terminal of a 101G Power Plant or number 19 or 20 Power Units. The cord connects the loudspeaker set to the telephone receiver circuit and the power source.

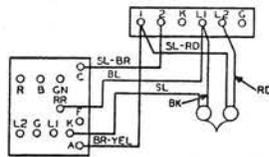

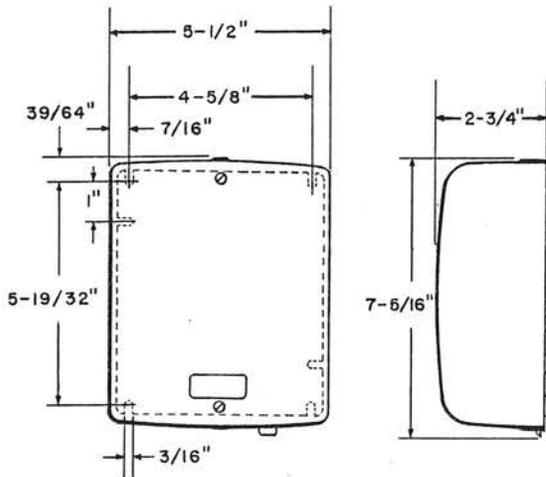

Used for projecting both sides of telephone conversations to a small group of people.

SETS

Subscriber

685AW Type

686AW-49

Common battery sets each having a terminal block and a metal base on which is mounted a C4A Ringer and a 425E Network. Provided with a plastic cover assembled to the base with machine screws.

Volume of ringer may be changed manually by means of an arm projecting from the underside of the cover. However, subscriber sets as furnished have the volume control arm locked in the loud position. The volume control arm can be made operative by removing the cover and changing the position of a rivet in the base plate. The ringer can be silenced by removing the cover and making a minor adjustment.

Used in manual and dial systems. Can be used for all common battery services except those party line stations where polarized selective ringing is involved. Particularly suitable in zones where transmission performance of 500 type telephone set of improved ringing characteristics of the C4A Ringer is required.

Code No.	Comcode	Color
685AW-3	100 673 615	Black
685AW-49	100 673 623	Light olive gray
685AW-51	101 308 096	Green
685AW-60	101 308 104	Light beige

Common battery set having a metal base on which are mounted a C4A Ringer, a 425B Network, a 426A Electron Tube, and a terminal block. Has a light olive gray plastic cover assembled to the base.

Volume of ringer may be changed manually by means of an arm projecting from the underside of the cover. However, subscriber set as furnished has the volume control arm locked in the loud position. The volume control arm can be made operative by removing the cover and changing the position of a rivet in the base plate. The ringer can be silenced by removing the cover and making a minor adjustment.

Furnished wired for use on negative ring and negative tip party lines but may be changed at time of installation for use on positive ring or positive tip party lines by removing the cover and rearranging the connections.

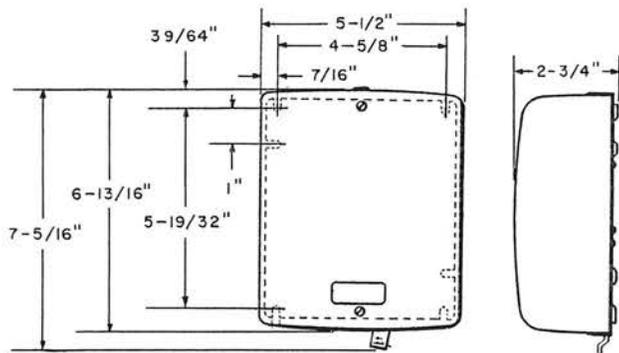

Used in manual or dial systems for four-party selective and eight-party semiselective services (polarized ringing lines). May also be used in certain cases for these services on common battery lines instead of local battery talking, common battery signaling sets, and the associated local battery.

Comcode: 100 673 649

SETS

Subscriber

687 and 688 Type

687CW-49: Similar to 687AW-49 except a 198C Capacitor is mounted on the metal base plate and the ringer is not furnished. The approximate overall dimensions are 5-1/2 inches wide by 6-13/16 inches high by 2-3/4 inches deep.

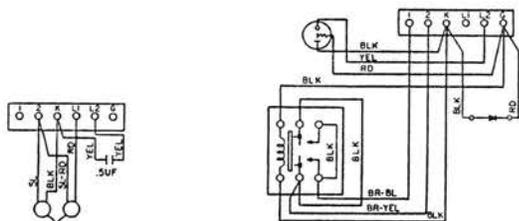

Comcode: 100 673 714

688CW-49: A common battery set having a metal base on which is mounted a C4A Ringer, a 425D Network, a KS-8109L2 Buzzer, a 266A Inductor, and a 241A Amplifier. The set is provided with a light olive gray cover assembled to the base. The circuit is arranged to minimize vulnerability of polarity guard to high line voltage surges.

Comcode: 100 673 771

Used with the 400 type key mountings in 1A1, 1A2, and 6A Key Telephone Systems.

689 Type

687AW

687BW

687AW-49: A common battery set having a terminal block and a metal base on which is mounted a C4A Ringer and a 548A Capacitor. The set has a light olive gray plastic cover assembled to the base.

Volume of ringer may be changed manually by means of an arm projecting from the underside of the cover. However, the set as furnished has the volume control arm locked in the loud position. The volume control arm can be made operative by removing the cover and changing the position of a rivet in the base plate. The ringer can be silenced by removing the cover and making a minor adjustment.

Comcode: 100 673 680

Used as an extension ringer.

687BW-49: Consists of a UA112 Relay, a 20A Varistor, and a 426A Electron Tube mounted on the metal base plate.

Comcode: 100 673 698

Used to provide auxiliary signal facilities in four-party selective and eight-party semiselective services.

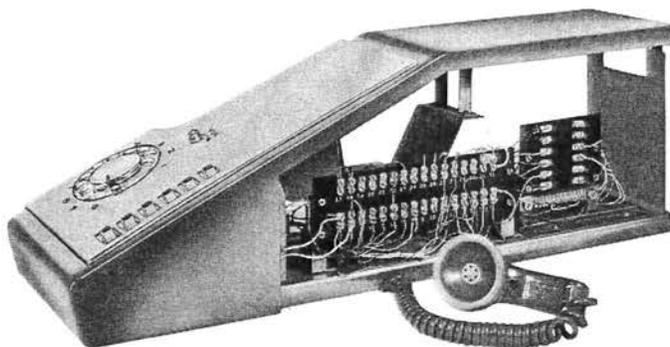

Fig. 1

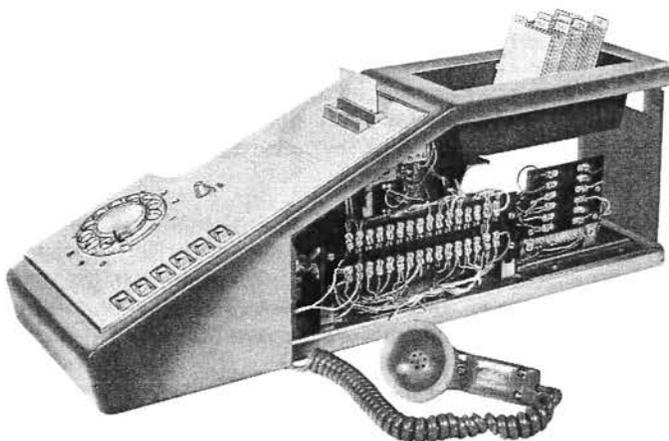

Fig. 2

SETS

Subscriber

The 689 type subscriber sets are not arranged for talking. The sets are enclosed in a gray plastic housing with overall dimensions of 5-5/16 inches wide by 22-1/4 inches deep by 7-1/8 inches high.

The set is arranged to mount on top of a Data Set J1D101A by means of two number .190 inch by 32 nuts assembled on brackets on the underside of the chassis.

Used initially with the J70147 Station Control Unit and Data Set J1D101A on the number 28 type teletypewriter.

689AW: Equipped with an 8C-58 Dial, a 731AW-51 Receiver, a D1D Ringer, a 61A Filter, a 548B Capacitor, and a 598D Key.

Comcode: 100 673 839

689BW: Same as 689AW except equipped with a D50G-61 Cord and an additional 598D Key equipped with five blocking rings. The P14E744 Designation Strip associated with the key adjacent to the dial is marked from top to bottom DIAL, BUZ RLS, RE ORD, SVC, PA and (*) and the P14E743 Designation Strip for the other key is marked from top to bottom LCL, TST, TWX, ORIG, CLR, and REV.

Comcode: 100 673 847

689CW: Same as 689AW except also contains a loudspeaker, a KS-16728L1 Amplifier, and external volume control and associated circuitry.

Comcode: 100 673 854

689DW: Same as 689AW except also is equipped with a 41A Dial and the top surface of the housing contains a single card storage pocket to accommodate two sets of P24E238 Dialing Cards (20 cards per set) plus a set of nine alphabetical index cards which are furnished.

Comcode: 100 673 862

689EW: Same as 689DW except also contains a loudspeaker, a KS-16728L1 Amplifier, an external volume control and associated circuitry.

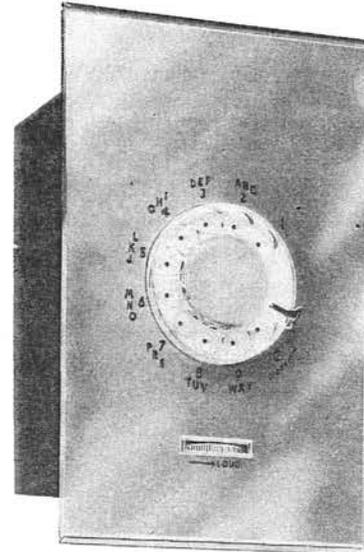

Comcode: 100 673 870

689AW, CW, DW, and EW: Provided with a P14E199 Designation Strip marked from top to bottom LOCAL, TEST, (*), ORIG, CLEAR, and ANS to indicate the function of the key buttons.

Fig. 1 is a 689CW, Fig. 2 is a 689EW.

*This button has no designation.

690CW1, CW2, and CW3

690CW1: Flush-mounted subscriber sets equipped with apparatus as indicated in table. Provided with a clear plastic face plate together with five face mats colored silver, gold, blue, green, and cream white to provide a choice of color contrasts, and a snap-on bezel for retaining the face plate and mat. The ringer volume control protrudes through the face plate. The buzzer provides a means for local signaling when required.

Overall dimensions are 7.100 inches wide by 4.080 inches deep by 9.952 inches high.

The circuit is arranged to minimize vulnerability of polarity guard to high line voltage surges.

Intended for use with a 400-type key mounting and a 52- or 53-type head telephone set.

690CW2: Same as the 690CW1 except it is not provided with a face plate or mats and is provided with a bracket which is used to secure the subscriber set to the key mounting. The key mountings and the subscriber sets use a common face plate. The face plates are a part of the key mountings.

Overall dimensions are 6.140 inches wide by 4.080 inches deep by 8.330 inches high.

Intended for use with the 420AW3 and 421AW3 Key Mountings.

690CW3: Same as the 690CW1 except that it is not provided with a face plate, mats, or dust pan and is provided with a top plate and brackets for mounting the set in the dust pan of a key mounting.

SETS

Subscriber

690CW1, CW2, and CW3 (Continued)

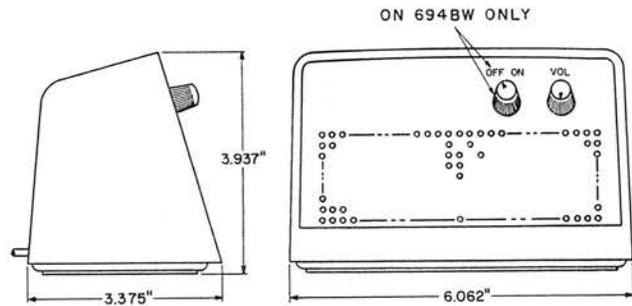

Overall dimensions are 6.140 inches wide by 4.073 inches high by 8.330 inches long.

Intended for use with the 423AW3, 424AW3, and 425AW3 Key Mountings.

(a) In addition to the apparatus listed, 690CW type also contains a KS-8109L2 Buzzer, and a C4A Ringer.

694AW and 694BW

694AW: Consists of a transistorized amplifier and two terminal strips assembled on a printed wiring board, a KS-16881L1 Loud Speaker, an AC1 Transmitter Unit, and a volume control all of which are mounted on a metal base and enclosed in a plastic housing. Provided with a D4BM Cord having the same color as the housing.

694BW: Same as 694AW except it has an ON-OFF switch to shut off the transmitter and loudspeaker.

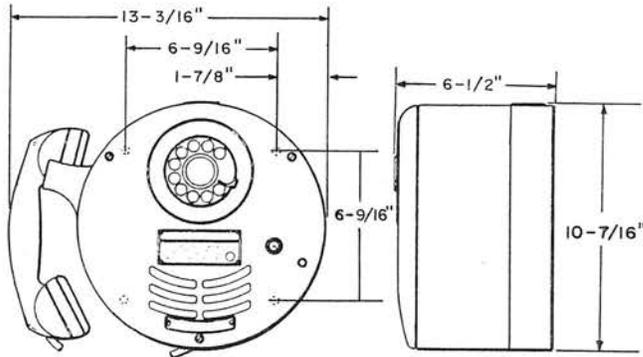

Used to provide hands-free listening and talking at each station of the 2A Communication System.

SETS

Telephone

320ERW and FRW

Used in hazardous locations, Class I, Group B, C, and D and Class II, E, F, G, atmospheres, as defined by the National Electrical Code of the National Board of Fire Underwriters. Sets are designed for security against ignition of surrounding atmosphere under all conditions of normal operation. All elements of apparatus which might produce a spark or an arc are completely enclosed. Necessary passages to outside are so designed that any flame due to explosion caused by sparking inside the set will be cooled to extinction and will not reach outside atmosphere. Each set is equipped with a 23A Lock.

Used in common battery systems for individual line, regular PBX extensions, and bridged stations. Normally employs bridged ringing but may be made suitable for grounded ringing by changing the termination of one ringer lead.

Dial set is equipped to suppress dialing induction into radio receiving sets.

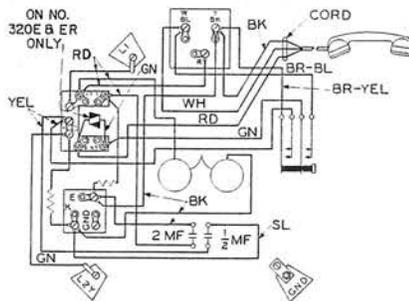

320ERW: Used in manual systems.

Comcode: 100 674 233

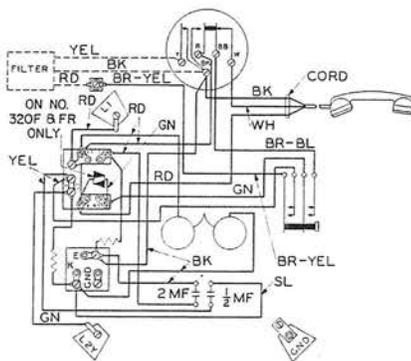

320FRW: Used in dial systems.

Comcode: 100 674 241

500, 501, and 502 Type

320ERW (Manual Service)

320FRW (Dial Service)

Common battery desk type that provides improved performance transmission, dialing, and ringing functions. These gains can be used either for extension of range of operations from central office or increased use of fine gauge cable conductors. Volume of the ringer may be varied in four steps. By removing the housing and making a minor adjustment, the ringer can be silenced.

Dial sets are arranged to suppress dialing induction into radio receiving sets.

Overall dimensions of each set are 8.313 inches wide by 9 inches deep by 4.932 inches high. Sets are available in colors shown in the table.

Each consists of a base, a housing, a cover, and a handset attached by flexible cord. Base is designed for wall or pedestal mounting. The 5A Pedestal, when required, must be ordered separately.

SETS

Telephone

500, 501, and 502 Type (Continued)

500ABW: Arranged for a single two-wire/four-wire line. The set comes wired to two-wire service but may be converted at installation to four-wire service. Arranged for but not equipped with a KS-8109L2 Buzzer which must be ordered separately if required. Intended for use in 1A1 and 1A2 Key Telephone Systems and 3B Speakerphone System, however it is intended for specially engineered lines. Not for general telephone use.

500ADW: Arranged for four-wire service and equipped with a switch hook arrangement which provides one spare transfer and two spare make contacts. The spare make contacts may be used for such purposes as controlling external relays or applying idle line circuit terminations. Arranged for but not equipped with a KS-8109L2 Buzzer which must be ordered separately if required.

Intended for individual use and for use in 1A1 and 1A2 Key Telephone Systems. May also be used in the 3B Speakerphone System.

500CRW (manual) and 500DRW (dial): Intended for individual lines, two-party selective rate, two-party selective message rate (tip and ring), divided code ringing, nonselective party lines, four-party semiselective, regular PBX stations, and 750A PBX keyless stations. May also be used in certain cases on common battery lines instead of local battery talking, common battery signaling telephone sets, and associated local battery.

Furnished wired for all of the above services except tip party selective dial message rate, tip party flat rate automatic ticketing, tip party flat rate automatic message accounting, and zone registration. May be arranged for these services by rearranging ringer connections. A 42A-49 Connecting Block is furnished loose.

500ERW (manual) and 500FRW (dial): Used on divided code ringing and nonselective party line service. Plunger switch is wired to avoid interference with another party line user's dialing or talking when hand set is lifted to place a call. Only a low-loss receiver circuit is bridged across the line with normal operation of line switch (switch-hook) contacts. When line is not busy, pulling up left-hand plunger operates plunger switch and cuts in talking and dialing circuit elements; call can then be placed or answered. Restoring hand set restores switch automatically. A 42A-49 Connecting Block is furnished loose.

500MRW (dial): Has a four-conductor cord which provides a talking circuit with a bridged ringer and "A" lead control circuit. For use with 1A1 Key Telephone System by rearranging internal connection. Separate talking and ringing circuit can be provided.

500RRW (manual) and 500SRW (dial): For use only in speakerphone systems. Otherwise same as 500CRW (manual) and 500DRW (dial) Telephone Sets. A 42A-49 Connecting Block is furnished loose.

500WRW (manual) and 500YRW (dial): Equipped with a neon lamp assembly to provide a message waiting fea-

ture. Arranged to receive and hold a visual signal under control of an attendant of a PBX to indicate that an incoming call for the station was not completed. May be used on individual or two-party selective flat rate lines.

501CRW (manual) and 501DRW (dial): Four-party selective and semiselective polarized ringing line. May also be used in marginal cases for these services on common battery lines instead of local battery talking, common battery signaling telephone sets and associated local battery. A 42A-49 Connecting Block is furnished loose.

502BRW (dial): Equipped with exclusion feature operated by manually raising the left plunger. When hand set is replaced, the exclusion switch is returned to normal. Used in the 1A1 Key Telephone System and the 101 type key equipment.

Transmission features and external appearance same as 500 type sets except for the key located on front of the housing.

Dial sets are arranged to suppress dialing induction into radio receiving sets.

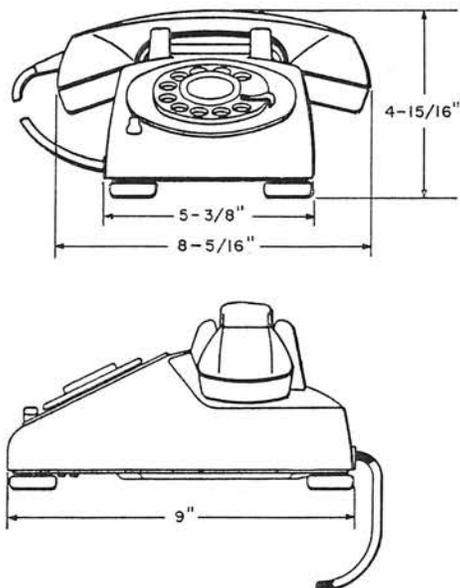

510BRW (dial): Equipped with combined turn-push button key for switching and signaling. Contains cutoff external ringer.

510ERW (manual) and 510FRW (dial): Has a six-conductor mounting cord which permits two-line pickup and signaling as basic features. 510FRW type otherwise same as 510BRW.

Arranged for but not equipped with a 44B Bracket (mount in place of ringer), a 152A Capacitor, and a number 7 type buzzer. Must be ordered separately if required.

510 Type

511 Type

The 511 type is a common battery desk type telephone set which has the same physical appearance and dimensions as the 510 type.

The ringer provides for manual control in four steps without removing the housing and is so arranged that by removing the housing and making a minor adjustment the ringer can be silenced. The key is a combined turn and push button key for switching and signaling purposes. It has an exclusion feature, i.e., by manually raising the left plunger, an extension set will be disconnected. When the hand set is replaced, the exclusion switch is returned to normal. Dial sets are arranged to suppress dialing induction into radio receiving sets. The set is arranged for but not equipped with a 44B Bracket (mounts in place of the ringer), a 152A Capacitor, and a number 7 Buzzer.

Used in the 1A1 and 1A2 Key Telephone System and the 1A Speakerphone System.

Each 511FW and 511HW Telephone Set contains an H1A Ringer, a 425E Network, a 584A Key, a 9H Dial and a G3AR Hand Set. The 511FW is equipped with a D20J Cord and the 511HW is equipped with a D20K Cord.

511FW and 511HW: Has an additional switch and key contacts which have been added to provide control of "A" lead type key system circuits. Each is equipped with a 20-conductor cord.

511FW: The 20-conductor cord is provided with spade tips for connector block mounting.

SETS

Telephone

511 Type (Continued)

511HW: The 20-conductor cord is provided with a KS-16689L1 Plug having pin and color code assignments in accordance with established key system station connection patterns.

Arranged for but not equipped with a 44B Bracket (mount in place of Ringer), a 152A Capacitor, and a number 7 type Buzzer. Must be ordered separately if desired.

Used in the 1A1 Key Telephone System.

513BW-61

A common desk type telephone set which provides an interlock feature between the telephone line and a data set. The set is light gray and has overall dimensions of 8.297 inches wide by 9 inches deep by 4.906 inches high. The set has an exclusion type data key (left plunger) for voice-to-data transfer.

When handset is removed, set is arranged for voice transmission, and by manually raising the left plunger, set is arranged for data transmission. By partially depressing the left plunger, voice transmission is restored.

Also equipped with a test key which is a turn and push-button key for invoking the test mode at which time the message waiting style test lamp becomes illuminated to indicate operation of the test circuit.

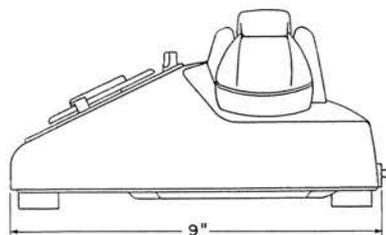

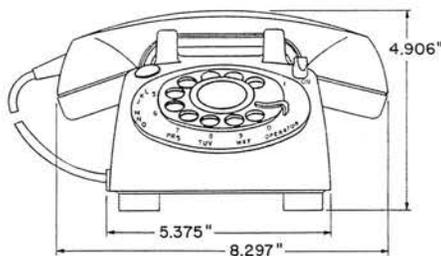

The set contains a D10N-61 Cord, a 7C-61 Dial, a 584A Key, a 52A Lamp, a 425B Network, a C4A Ringer, and a G3AR-61 Hand Set.

The ringer provides for manual volume control in four steps without removing the housing and is so arranged that by removing the housing and making a minor adjustment, the ringer can be silenced.

Used with Data Set J1D401F.

Comcode: 100 677 376

514BW

Common battery desk type telephone set for use with a number 52 or 53 type head telephone set. Provided with a removable plug above and to the left of the dial to accommodate a message waiting lamp. The message waiting lamp may be added at time of installation by using D-179968 Kit of parts for a screw type lamp socket or D-179969 Kit of parts for a bayonet type of lamp socket and appropriate lamp. The lamp and the kit of parts required for its installation are not furnished and must be ordered separately. The ringer provides for manual control to loud or soft by means of a ringer arm projecting through the base.

The set is provided with a key for switching between head telephone set and hand set operation and also provides a flash function for operator recall.

SETS

Telephone

Arranged for but not equipped with a KS-8109L2 Buzzer. Must be ordered separately if required.

Sets are available in colors shown in the table.

514BW-60	101 093 045	Light Beige
514BW-61	101 093 052	Light gray

Used with 1A1 and 1A2 Key Telephone Systems.

515BW Type

The 515BW type telephone sets are two-line desk sets similar to the 510 type telephone sets except that the turn key contact arrangement permits the holding of either line while switching to the other line. This is accomplished by manually raising the left hand plunger before operating the turn key. The plunger is automatically returned to normal when the hand set is restored. The key has a push button element intended for use as a signal key. Intended for normal residential or non-key system use.

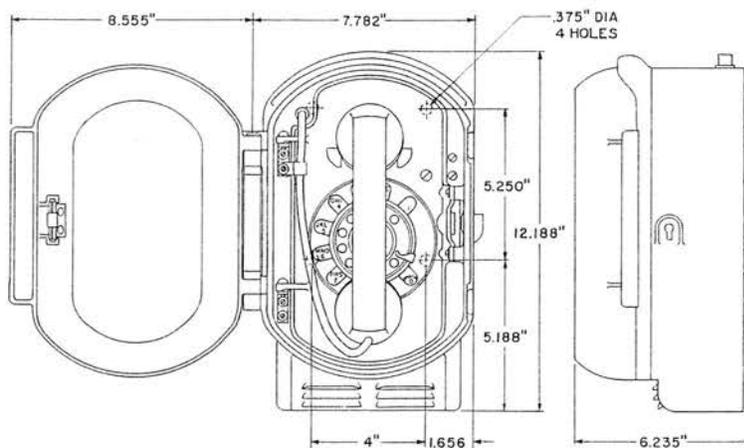

These sets are equipped with a 425E Network, a C4A Ringer, a D6AA-() Mounting Cord, a 9C-() Dial, and a G3AR-() Hand Set.

SETS

Telephone

525AW and BW

525BW

Common battery sets for outdoor use on two-party selective flat rate, two-party selective message rate (manual and ring party dial only), four-party semiselective, and divided code ringing. Can be changed in the field for individual line, tip party dial message rate, and nonselective party line stations services.

The housing is gray finished metal having inner and outer doors. The outer door is self-closing, fastened by means of a self-locking KS-8028 Lock. Where a self-locking lock is not desirable, it can be replaced by a KS-7861 Lock which must be ordered separately.

A 29D Bracket arranged to mount this set on building, fence, or pole must be ordered separately.

525AW: Used in manual systems.

Comcode: 100 677 491

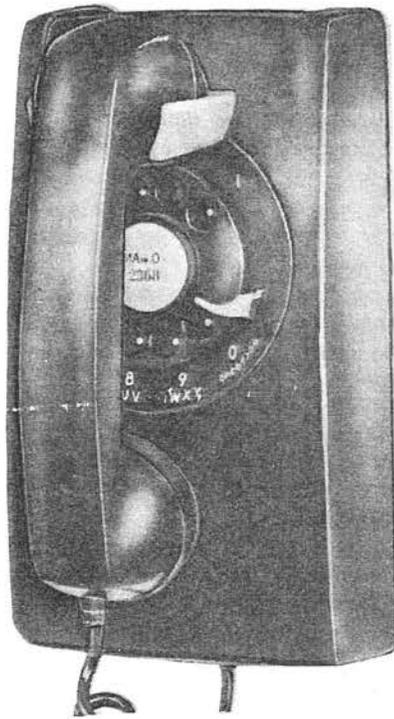

525BW: Used in dial systems.

Comcode: 100 677 509

558FW

Common battery wall type sets each having a snap-on type cover. Volume of ringer may be changed manually by means of an arm projecting from the underside of the cover. Ringer can be silenced by removing the cover and making a minor adjustment. Overall dimensions with hand set in place are 5-1/2 inches wide by 5-19/32 inches deep by 9-13/16 inches high.

Dial sets are arranged to suppress dialing induction into radio receiving sets.

554ARW (manual) and 554BRW (dial): Used for individual lines, two-party selective flat rate, two-party selective message rate (tip and ring), divided code ringing, nonselective party lines, four-party semiselective, regular PBX stations, and number 750A PBX keyless stations.

556BRW (dial): Used for four-party selective and eight-party semiselective (polarized ringing lines) services.

All 554 and 556 type telephone sets may be used in certain cases for these services on common battery lines instead of local battery talking, common battery signaling telephone sets, and the associated local battery.

Transmission features and external appearance same as 554 and 556 type sets except for key located on front and top of housing. The key on the front of set is a combined turn and push button key for switching and signaling purposes. The exclusion type key, projecting through the top of the housing, provides the means for disconnecting an extension set by manually raising the plunger. When the hand set is replaced on the switch hook, the exclusion key is returned to its normal position.

SETS

Telephone

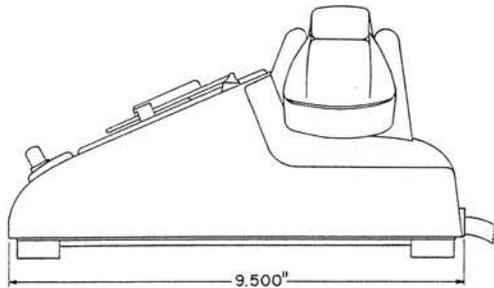

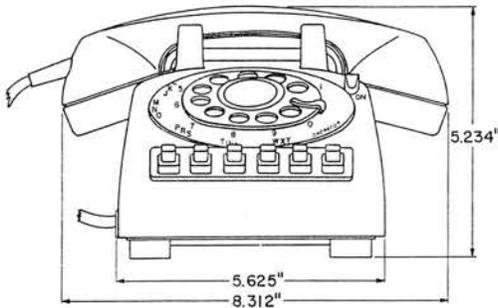

558FW (Continued)

Used in the 1A Key Telephone System. May be arranged for use in the 1A and 2A Interphone Systems by rearranging the ringer, exclusion key, and switch hook connections. Holes are provided in the base for mounting a 659A Transmitter when required in the home communication system. When used in the home communication system, the exclusion type key may be used to place a hold on the central office line while using the intercommunication line.

Additional switch and key contacts have been added to provide for control of A-lead type key system circuits.

558FW-61	100 843 218	Light gray

563HBW

Common battery six button desk type key telephone sets arranged for use with a number 52 or 53 type head telephone set. Head telephone sets are not furnished and if desired must be ordered separately.

Arranged for hold (H) and pickup (P) as follows: HPP(P)(P)(P). The spring combinations associated with the pickup buttons (P) may be converted for signaling. The pickup (P) buttons are of the illuminated type, i.e., when illuminated, they serve as line busy and/or incoming call signals. Equipped with 51A Lamps for illuminating the pickup buttons (one lamp for each button). The hold (H) button is arranged for, but not equipped with a 51A Lamp. A blocking ring is furnished for use in blocking an unused button.

Provided with a 637A Key for switching between head telephone set and hand set which also provides a flash function for operator recall.

Equipped with one each of the following apparatus: 241A Amplifier, N1A Ringer, 425E Network, 100A Varistor, 9C-() Dial, G3AR-() Hand Set, D50N-() Cord, 636A and 637A Key.

Arranged for but not equipped with a KS-8109 Buzzer. Provided with an exclusion plunger, but not equipped with an exclusion key. The exclusion key may be installed in the field using a D179935 Kit of Parts, which must be ordered separately.

The ringer provides for manual control to loud, soft, and off by means of a ringer arm projecting through the lower left side of the housing. The ringer may be used as a line ringer or a common audible signal.

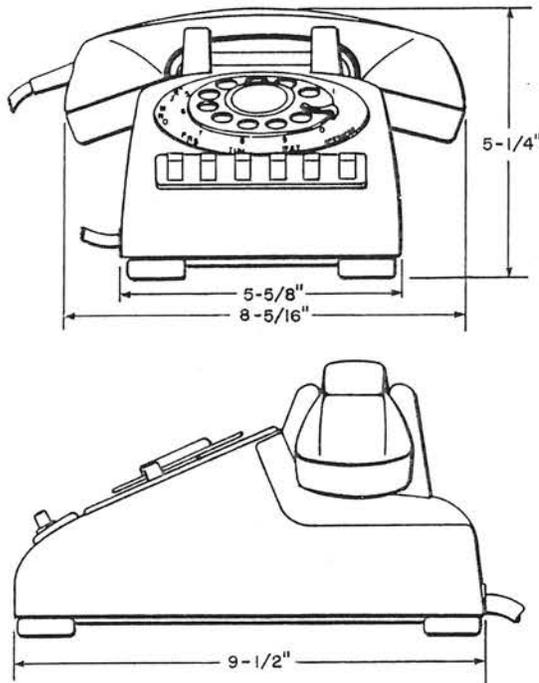

Used in the 1A1 and 1A2 Key Telephone Systems.

Telephone

564HLW, 565 Type, 566MDW, 568HRW, and 568HSW

Common battery six-button desk type arranged for hold (H) and pickup (P). Spring combination associated with pickup button (P) may be connected for signaling at time of installation. Pickup buttons are illuminated type. When illuminated, serve as line busy and/or incoming call signals. Blocking ring is furnished to block unused buttons. Volume of ringer can be varied by means of a knurled cam projecting through the base. By removing the housing and making a minor adjustment, the ringer can be silenced. Dial sets are arranged to suppress dial induction in radio receiving sets.

Sets are arranged for hold (H), pickup (P), cutoff (C), and local (L) as set forth in the following table. When shown as (P), the pickup button may be connected for signaling at the time of installation.

Code No.	Key Configuration Codes
564HLW	H P P (P) (P) (P)
565GKW	P P P (P) (P) (P)
565HKW	H P P (P) (P) (P)
565LKW	H P P P (P) C
566MDW	H P P P P L
568HRW	H P P (P) (P) (P)
568HSW	H P P (P) (P) (P)

564HLW: Equipped with five 51A Lamps. Hold position is arranged for but not equipped with a lamp. Must be ordered separately if required.

Arranged for but not equipped with a KS-8109L2 Buzzer. Must be ordered separately if required.

Screw terminal connections are provided on the key terminal board for connection of auxiliary features such as buzzers, lamps, and keys.

Wired for use in 1A1 and 1A2 Key Telephone Systems.

565 Type: Same as 564 type except is arranged for but not equipped with an exclusion key. The exclusion key may be made at the time of installation by using a D-179935 Kit of parts which is not furnished and must be ordered separately if required.

Arranged for but not equipped with a P-25E962 Terminal Strip which provides screw terminals for connection of additional auxiliary services. Must be ordered separately when required.

May also be arranged for use in the 3B Speakerphone System by rearranging connections.

566MDW: Has the same lamp arrangement as the 564HLW type. The hand set is equipped with a spring cord. The hold position cannot be illuminated.

Used in the 3B Speakerphone System.

568HRW: Arranged for two-wire and four-wire service. Contains a relay for the necessary switching between the two configurations. All key buttons are arranged for and the five pick-up buttons are equipped with 51A Lamps for illumination. The set is also arranged for a KS-8109L2 Buzzer which is not furnished and must be ordered separately, and an exclusion switch assembly, operated by lifting the left plunger.

568HSW: Similar to 568HFW. Hold button is arranged for but not equipped with a 51A Lamp. It is also arranged for but not equipped with a KS-8109L2 Buzzer. Must be ordered separately if required.

Intended solely for specially engineered lines—Not for general telephone use.

CALL DIRECTORS

These are illuminated button key telephone sets designed to permit answering, originating, signaling, or holding calls on central office, PBX, tie lines, etc., when associated with 1A1, 1A2, 6A, or equivalent key telephone systems. The sets are equipped with a colored plastic housing with a sloping front surface on which is mounted a dial and either three (18 button model) or five (30 button model) keys. This sloping front surface is covered by a colored mat held down by clear plastic face plates. The matching colored hand set is supported by a switchhook extending from the left side. Five mats are furnished with each set and are colored cream white, green, blue, silver, and gold. Many color variations for blending with office decor are possible. One sheet of three P-44E130 Perforated Blank Designation Strips and one sheet of six P-44E129 Blank Designation Strips are furnished.

Sets are arranged to suppress dialing induction into receiving sets. Two blocking rings are furnished for blocking each unused button.

When ordering, specify the telephone set basic code i.e. 630DW, suffixed by the key code i.e. 3 and the color code i.e., -58. Example: 630DW3-58.

608CW
CALL DIRECTOR

A general purpose five-position key telephone set with overall dimensions of 15.125 inches wide by 8.125 inches deep by 4.226 inches high.

Equipped with a flash and release key. Provides either two- or four-wire service with central or private lines. A relay provides for switching between two-wire or four-wire service. The set is arranged for 52 or 53 type head telephone set which if required must be ordered separately.

The set is available in key configuration codes 3, 12, 17, and 20. See table following CALL DIRECTOR telephone sets.

CARD DIALER

These are telephone sets arranged for card dialing. The top surface of the housing contains two storage pockets to accommodate two sets of P-24E238 Dialing Cards and a set of P-13E363 Alphabetical Index Cards which are furnished with the set. The molded plastic housing has a cavity frame type opening into which a removable plastic face plate is assembled. The face plate is retained by a latch. The dial letters and numbers appear on the under surface of the face plate in neutral gray while the rest of the surface is dark gray. Color must be specified as part of code number, otherwise green (-51) will be furnished. The dial requires an external 12 to 19 volt, 60 Hz ac power supply for the motor used to power the mechanical operation of the dials.

The power can be obtained from the number 4-6 tap on the KS-16886 Transformer.

Code No.	Comcode	Color

660AW1
CARD DIALER

A telephone set with overall dimensions of 9.650 inches wide by 9 inches deep by 4.481 inches high.

For use on individual lines, nonselective party lines, two-party selective flat rate, two-party selective message rate, and divided code ringing. Rearranging the mounting cord leads and set straps can provide tip party selective dial message rate, tip party flat rate automatic ticketing, tip party flat rate automatic message accounting, and zone registration services.

662AW
CARD DIALER

A key type telephone set with overall dimensions of 9.650 inches wide by 9 inches deep by 4.293 inches high. A sheet of perforated blank designation strips is furnished with the set.

For use in the 1A1 and 1A2 Key Telephone Systems.

SETS

Telephone

662AW (Continued)

662AW2: Equipped with a 598A Key which has six pickup (P) buttons.

662AW3: Equipped with a 599B Key which has four pickup (P) buttons, one cutoff (C), and one hold (H) button.

Power can be obtained from the 2075A Transformer number 19 or 20 Power Unit or 18 volts tap on the 101G or 101J Power Plant.

663AW1
CARD DIALER

A telephone set with overall dimensions of 9.650 inches wide by 9 inches deep by 4.481 inches high.

The set is also arranged for use with a 52SW Head Telephone Set. It is provided with a turn and push button key for use with the head telephone set. When this button is turned to the HEADSET ON position, switching occurs which parallels the functions of the line switch. When the hand set is removed from the cradle, the head telephone set and the amplifier are connected into the circuit, and the hand set is disconnected. The ringer provides for a manual volume control in four steps without removing the housing. By making a minor adjustment the ringer can be silenced.

For use as a single line pickup in the 1A1 and 1A2 Key Telephone Systems.

Power requirements are the same as on 662AW type telephone sets.

These are common battery desk type dial telephone sets with overall dimensions of 8.444 inches long by 3.938 inches wide by 4.188 inches high.

702BW: This set is equipped with a lamp assembly for dial illumination. The lamp may also be used as a night light by operating a slide switch located on the rear of the set. A 6 to 8 volt ac or dc supply is required to operate the lamp. An ac supply may be obtained from a 2012A type or a KS-16184L1, L2, or L3 Transformer, none of which is furnished and must be ordered separately.

The ringer provides for manual volume control to loud, soft, and off by means of the ringer arm projecting through the base. Operation to the off position is prevented by a screw which is removable at the option of the installer.

Intended for individual lines, two-party selective flat rate, two-party selective message rate (tip and ring), divided code ringing, and nonselective party lines. Furnished wired for all of these services except tip party selective dial message rate and tip party flat rate automatic ticketing.

702DW: Same as 702BW Telephone Set except it is equipped with a lamp assembly (including a KS-16893L1 red neon glow lamp) to the left of the dial to provide a message waiting feature. Arranged to receive and hold a visual signal under control of an attendant at a PBX to indicate that an incoming call was not completed.

Intended for connection to a PBX or individual and two-party lines.

These sets are available in the colors shown in the table.

SETS

Telephone

712BW
PRINCESS

A common battery desk type dial telephone set equipped with a lamp assembly for dial illumination. The lamp may also be operated as a night light. The lamp is removable to permit replacement. The ringer provides for volume control to loud, soft, and off by means of a ringer arm projecting through the base. The set has an exclusion feature which will disconnect an associated extension set manually. The set also has a turn button key for connection to either of two lines and a push button element for signaling.

With simple modifications at the time of installation, this set may be used for two-line pickup, hold on both lines with 1A1 Key Telephone System and 3B Speakerphone, two-line pickup with excludable extension on line 1, secretarial service with hold, door answering, and home interphone, and one-line pickup for cutoff extension station or extension line ringer.

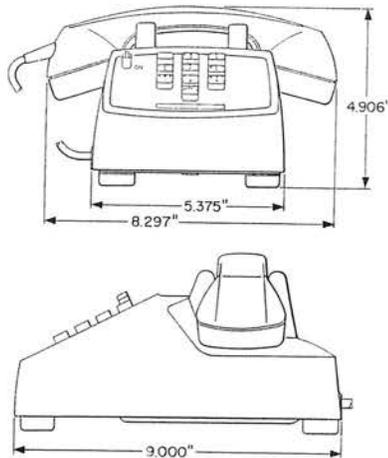

This set is available in the colors shown in the table.

1514BW-3

2500DW

A black common battery desk type TOUCH-TONE telephone set. Equipped with a jack to provide for head telephone set or hand set operation. Equipped with a 253A TOUCH-TONE Dial, a G3AR-3 Hand Set, an N1A Ringer, a 642A Key, a D10P-3 Cord, a 241A Amplifier, a 425G Network, and a 100A Varistor. If Head Telephone Set is required, it must be ordered separately. A snap-on plastic face plate, arranged to accommodate a number card, is mounted on the top side of the housing.

The ringer provides for manual control to loud, soft, and off by means of a ringer arm projecting through the base. Move to the off position is prevented by a screw which is removable at the time of installation.

A key provides for switching between head telephone set and hand set operation and also provides a FLASH function for operator recall.

Used initially in 1A1 and 1A2 Key Telephone Systems.

Comcode: 101 231 298

A common battery type telephone set with overall dimensions of 8.297 inches wide by 4.906 inches high by 9.000 inches deep. The face plate is finished on the underside in a color corresponding to the color of the telephone set and is retained by means of a latch.

The ringer provides for manual volume control in four steps without removing the housing and is so arranged that by removing the housing and making a minor adjustment, the ringer can be silenced.

Arranged for mounting, but not equipped, with a P-20F907 guard assembly which provides a polarity guard and a lightning surge protector for the polarity guard. **Must be ordered separately when required.**

For use on individual lines, two-party selective flat rate, two-party selective message rate, divided code ringing, nonselective party lines, four-party semiselective, regular PBX stations, and keyless PBX stations. By rearranging the ringer connections, tip party selective dial message rate, tip party flat rate automatic ticketing, tip party flat rate automatic message accounting, and zone registration may be furnished.

This set is available in the colors shown in the table.

TOUCH-TONE

2564HLW
TOUCH-TONE

A desk type, common battery, 12-button TOUCH-TONE dial telephone set equipped with a line switch which provides six transfer contacts and is arranged for two-wire service. The set is convertible to four-wire service at installation. Overall dimensions are approximately 8.297 inches wide by 4.906 inches high by 9.000 inches deep.

Consists essentially of a 35C3B TOUCH-TONE Dial, an N1A Ringer, a 425G Network, an exclusion switch assembly operated by lifting the left plunger, a card-operated line switch, a terminal strip assembly, a printed circuit polarity guard assembly, a metal base, a plastic housing assembly, a plastic snap-on face plate assembly in a coordinated color which mounts from the top side and is arranged to accommodate a number card, a G3Y-() Hand Set, and a D24E-() Mounting Cord. The set is arranged for mounting a KS-8109L1 Buzzer which is not furnished and if desired must be ordered separately.

Intended solely for specially engineered lines—Not for general telephone use.

Six-button desk type TOUCH-TONE key telephone sets with overall dimensions of 8.313 inches wide by 9.556 inches deep by 5.546 inches high.

Each has one hold (H) and five pickup (P) buttons. The spring combinations associated with the pickup (P) buttons may be converted for signaling. The pickup (P) buttons are of the illuminated type, i.e., when illuminated they serve as line busy and/or incoming call signals. A blocking ring is furnished for use in blocking an unused button. Equipped with 51A Lamps for illuminating the pickup (P) buttons (one lamp for each button). The hold (H) buttons are arranged for, but not equipped with, 51A Lamps. The face plate is finished on the underside in a color corresponding to the telephone set, with the exception of the clear spaces adjacent to each of the key buttons through which the button designations are viewed.

Each set contains a 636A Key, a 425K Network, an H1A Ringer, a 35A3A Dial, a G3AR Hand Set, and a D30D Mounting Cord. The volume of the ringer can be varied by means of a knurled cam projecting through the base. By removing the housing and making a minor adjustment, the ringer can be silenced. Arranged for mounting a KS-8109L1 Buzzer which is not furnished and, if desired, must be ordered separately.

Used in 1A1 and 1A2 Key Telephone Systems.
Replace the 1564HLW Type Telephone Sets.

2568HUW

A desk type, common battery, TOUCH-TONE dial, six-button key telephone set arranged for two-wire service and equipped with a line switch which provides six transfer contacts. The set is convertible to four-wire service at installation. Overall dimensions are approximately 5.625 inches wide by 9.556 inches deep by 5.234 inches high.

The spring combinations associated with the six push buttons provide a hold and five line pickups with the last three pickups convertible for signaling. The pickup key buttons are illuminated and serve as line busy, held line and/or incoming call signals. The hold button is arranged for illumination but is not equipped with a 51A Lamp.

The set consists essentially of an N1A Ringer, a 636D Key, a 35C3A Dial, a 425G Network, a card operated type switch assembly having six transfer contacts, an exclusion switch assembly operated by lifting the left plunger, a printed wiring board assembly containing an MA4 Relay which performs the necessary switching between two- and four-wire configurations, a guard assembly which provides a polarity guard and a surge protector for the polarity guard, a metal base, a plastic housing assembly, a G3Y-() Hand Set, and a D50N-() Mounting Cord.

It is equipped with a plastic snap-on face plate in a coordinated color which mounts from the top side and is arranged to accommodate a number card and a designation strip for the key buttons.

The set is also arranged for mounting a KS-8109L2 Buzzer which is not furnished and if desired must be ordered separately. A blocking ring is furnished for use in blocking an unused key button.

Used in 1A1 and 1A2 Key Telephone Systems and 3B Speakerphone Systems.

Intended solely for specially engineered lines—Not for general telephone use.

Telephone

**2626AW1-3
TOUCH-TONE**

A large capacity TOUCH-TONE type key telephone set arranged for use with four-wire switching systems. The overall dimensions are 12.500 inches wide by 8.250 inches deep by 4.226 inches high. This set is available in black (-3) only.

Equipped with a 220A1 Face Plate, a 22D3 Dial, a G3AR-3 Hand Set, a D120F-3 Cord, a 599A Key and two 598A Keys. Also equipped with an MA4 Relay which provides for switching between two- and four-wire circuits and an MB5 Relay which performs the same function as the common switch in the dial when any four procedure keys (top four buttons in position 3) are depressed.

The set also contains a KS-16390L4 20 uf Capacitor, a 4010B Network, an N1A Ringer, and a KS-13490L1 Resistor (1300 ohms). The ringer provides for manual control to loud, soft, and off by means of a ringer arm projecting through the base. The ringer may be used as a line ringer or a common audible signal. The set is also equipped with a KS-8109 Buzzer for use as an auxiliary audible signal.

Provided with a clear plastic face plate together with a silver color face mat for use under the face plate, and a snap-on bezel for retaining the face plate and mat, and three sheets of six perforated blank P44E129 designation strips.

Used in the number 307 Switching System.

Intended solely for specially engineered lines—Not for general telephone use.

Comcode: 100 717 024

CARD DIALER

These telephone sets are arranged for card dialing and equipped with a G3ARW Type Hand Set. The top surface of the housing contains two storage pockets to accommodate two sets of P-21F752 Dialing Cards, (20 cards per set), plus a set of P-13E363 alphabetical index cards which are furnished with each set. The molded plastic housing mounted on a gray metal base has a cavity frame type opening into which a removable plastic face plate is assembled, in a color corresponding to the color of the telephone set. The face plate is retained by means of a latch. A ringer arm projecting through the base provides manual control to loud, soft, and off. Subscriber operation to off position is prevented by a screw which is removable at the option of the installer. Dial permits manual dialing when the card is in the "stop" position. Color must be specified as part of code number, otherwise -51 (green) will be furnished. The dial requires an external 12 to 19 volt, 60 Hz ac power supply for the motor used to power the mechanical operation of the dials.

**2660AW Type
CARD DIALER**

2660AW1: A twelve-button TOUCH-TONE type telephone set with overall dimensions of 9.650 inches wide by 9 inches deep by 4.381 inches high. Equipped with a D3BN Type Mounting Cord.

SETS

Telephone

For use on individual lines, two-party selective flat rate, two-party selective message rate (tip and ring), divided code ringing, non-selective party lines, four-party semi-selective, and regular PBX stations. May also be used in certain cases on common battery lines instead of local battery talking, common battery signaling telephone sets, and the associated battery.

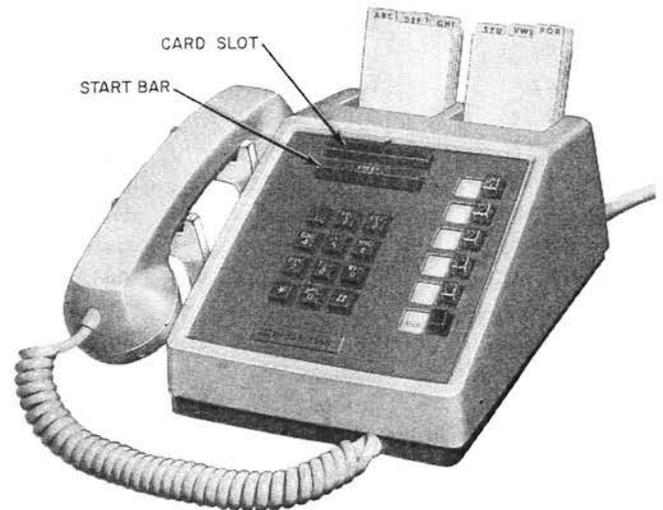

2660AW2: Same as 2660AW1 except equipped with a D6AF Type Mounting Cord and an exclusion key.

2663AW1
CARD DIALER

A twelve-button TOUCH-TONE telephone set with overall dimensions of 9.650 inches wide by 9 inches deep by 4.381 inches high. Equipped with a D6AF Type Mounting Cord.

Provided with a combined turn and pushbutton key for use with a head telephone set. By turning this button to the "HEADSET ON" position, switching occurs which parallels the functions of the line switch when the hand set is removed from the cradle, the head telephone set and amplifier are connected into the circuit, and the hand set is disabled. By depressing the turn-button, the PBX operator can be signaled when using a head telephone set.

For use as station apparatus in the 1A1, 1A2, and 6A Key Telephone Systems.

2664AW1: A twelve-button TOUCH-TONE type telephone set with overall dimensions of 9.650 inches wide by 9 inches deep by 4.381 inches high. Equipped with a 599A Key, a D50K Type Mounting Cord, and one sheet of six perforated blank designation strips.

Provided with a combined turn and pushbutton key for use with a head telephone set. By turning this button to the "HEADSET ON" position, switching occurs which parallels the functions of the line switch when the hand set is removed from the cradle, the head telephone set and amplifier are connected into the circuit, and the hand set is disabled. By depressing the turn-button, the PBX operator can be signaled when using a head telephone set.

For use in the 1A1 and 1A2 Key Telephone Systems.

2664AW2: Same as 2664AW1 Telephone Set except equipped with a 598A Key.

2664AW3: Same as 2664AW1 Telephone Set except equipped with a 599B Key.

SETS

Telephone

2684AW Type

Two blocking rings are furnished for use in blocking unused buttons. Provided with a number 220 type clear plastic face plate together with mats of coordinated colors, plus silver and gold, for use under the face plates to provide a choice of color contrast, two piece bezel for retaining the face plate, a mat, one sheet of three perforated blank designation strips (P44E130) when indicated in table, and one sheet of six perforated blank designation strips (P44E129). Also provided with a 35C3B TOUCH-TONE Dial, a 4010B Network, two- and four-wire relay, a six transfer switch hook, an N1A Ringer, a G3Y-() type hand set, a D120C-() type mounting cord, and the apparatus shown in the table. Volume of the ringer may be varied in two steps. By removing the housing and making a minor adjustment, the ringer can be silenced.

Intended solely for specially engineered lines—Not for general telephone use.

Multiple row key combined telephone set with 18 line capacity TOUCH-TONE Dial. Overall dimensions are 12.500 inches wide by 8.250 inches deep by 4.226 inches high.

TOUCH-TONE

3568HHW and 3568HTW
TOUCH-TONE

A common battery, desk type, telephone set arranged for two- or four-wire service. The sets are factory wired for four-wire service. Overall dimensions are 8.312 inches wide by 9 inches deep by 4.906 inches high.

Each set consists of a 66A3A Dial, an N1A Ringer, a 425G Network, a printed circuit board assembly containing a 460A Diode (used as a polarity guard), and a 425D Diode (used as a surge protector), an exclusion switch assembly, operated by lifting the left plunger, a card operated type line switch, two terminal strip assemblies, a metal base, a plastic housing assembly, a plastic snap-on face plate which mounts from the top side and is arranged to accommodate a number card, a G3AR Hand Set, and a D24E Cord.

Each set is arranged to mount but not equipped with a KS-8109L1 Buzzer. Buzzer must be ordered separately if required.

Used with the 758C PBX.

Intended solely for specially engineered lines—Not for general telephone use.

Common battery, desk type, six-button key telephone sets arranged for two- or four-wire service. Overall dimensions are 8.312 inches wide by 9.556 inches deep by 4.906 inches high. The spring combinations associated with the six push buttons provide a hold (H) and five line pickups (P) with all pickups convertible for signaling. The pickup (P) key buttons are illuminated and serve as line busy, hold line and/or incoming call signals. The hold (H) button is also arranged for illumination. The key is arranged to permit the interchangeability of any pickup line to any pickup position.

Each set consists of a 66A3A Dial, a 635A2 Key, an N1A Ringer, a 425E Network, a printed circuit board assembly, containing a 460A Diode (used as polarity guard), a 425D Diode (used as a surge protector), and an MA4 Relay which performs the necessary switching between two-wire and four-wire configurations, an exclusion switch assembly operated by lifting the left plunger, a card operated type line switch, two terminal strip assemblies, a metal base, a plastic housing assembly, a plastic snap-on face plate which mounts from the top side and is arranged to accommodate a number card, a G3AR Hand Set, and a D50W Cord. Each set is arranged for but not equipped with a KS-8109L1 Buzzer, which must be ordered separately if required. The 3568HTW and 3568HHW are the same except the 3568HHW contains a 66A4B Dial (illuminated) instead of a 66A3A Dial (unilluminated).

Intended solely for specially engineered lines—Not for general telephone use.

3640AW Type
TOUCH-TONE

A desk type telephone set in a plastic housing with a sloping top surface having overall dimensions of 12.5 inches wide by 8.250 inches deep by 4.226 inches high. Has a clear, antiglare plastic face plate (P-29E340) and a coordinated colored mat which are assembled in a stainless steel bezel which snaps in place and can be readily removed from the housing for maintenance.

The set is also equipped with a 66A3A or 66A4B Dial, a G3AR Hand Set, a D150 Cord, a 4010B Network, an N1A Ringer, exclusion switch assembly, line switch assembly, and a printed circuit board containing an MA4 Relay (for connecting to four-wire circuits) with polarity guard and surge protector.

The set is available in key configurations shown in table following CALL DIRECTOR telephone sets.

The sets coded with the suffix AW1A, AW2A, AW11A are equipped with a 66A3A Dial. Sets that have the suffix AW1B, AW2B, AW11B are equipped with 66A4B Illuminated Dials. The numbers 1, 2, and 11 indicate the key code configuration. The exclusion switch is located near the upper left hand corner of the face plate. The set is arranged for but not equipped with a KS-8109L2 Buzzer. The buzzer must be ordered separately if required.

The basic telephone set code, the key configuration code, the color code, and dial code must be specified when ordering, i.e., 3640AW1B-56.

Used with AUTOVON key systems.

Intended solely for specially engineered lines—Not for general telephone use.

**3641AW Type
TOUCH-TONE**

A desk type telephone set in a plastic housing with a sloping top surface having overall dimensions of 15.125 inches wide by 8.250 inches deep by 4.226 inches high. Similar to 3640AW type except 3641AW type has five key positions. Has a clear, antiglare plastic face plate (P29E342) and a coordinated colored mat which are assembled in a stainless steel bezel which snaps in place and can be readily removed from the housing for maintenance.

The set is also equipped with a 66A3A or 66A3B Dial, a G3AR Hand Set, a D250 Cord, a 4010B Network, an N1A Ringer, exclusion switch assembly, line switch assembly, and a printed circuit board containing an MA4 Relay (for connecting to four-wire circuits) with polarity guard and surge protector.

The set is available in key configurations shown in table following the CALL DIRECTOR telephone sets.

The sets coded with the suffix AW1A, AW2A, AW3A, AW16A, and AW17A are equipped with a 66A3A Dial. Sets that have the suffix AW1B, AW2B, AW3B, AW16B, and AW17B are equipped with 66A4B Illuminated Dials. The numbers 1, 2, 3, 16, and 17 indicate the key code configuration. The exclusion switch is located near the upper left hand corner of the face plate. The set is arranged for but not equipped with a KS-8109L2 Buzzer. The buzzer must be ordered separately if required.

The basic telephone set code, the key configuration code, the color code, and the dial code must be specified when ordering, i.e., 3641AW1B-56.

Intended solely for specially engineered lines—Not for general telephone use.

switch which provides the switching required by high security circuits, a 460A Diode used as a polarity guard, and a 425D Diode which is used to provide surge protection. The sets are provided with two card sets, P29E718 (20 cards) and P29E719 (nine index cards). The M1A Ringer volume is adjustable from loud to soft and may be silenced by removing the housing and making a minor adjustment. The MA4 Relay provides two- or four-wire service. The sets are arranged for but not equipped with a KS-8109L2 Buzzer which must be ordered separately if required.

The 3666AW1A and 3666AW1B are the same except that the 3666AW1A is equipped with a 67A type dial and the 3666AW1B is equipped with a 67B illuminated type dial.

Used in AUTOVON.

Intended solely for specially engineered lines—Not for general telephone use.

Provides four-wire and two-wire termination of a trunk.

Each consists of component apparatus mounted on a printed wiring board and assembled into an aluminum can having overall dimensions of 5.250 inches wide by 1.750 inches high by 7.000 inches deep. Each set is equipped with a 20-pin, 503A Connector.

Each is composed of a two-transformer hybrid, compromise networks with adjustable building-out capacitor, and screw-type switches on the end opposite the plug end for selecting various circuit options.

Nominal impedance of the four-wire branches is 600 ohms.

Arranged to be removed from a mounting by means of a 602D Tool.

1A and 1B: Each has an inductor in the "simplex" leads. The 1A set is for use with nominal 900 ohm two-wire lines and the 1B set is for use with nominal 600 ohm two-wire lines.

1C, 1D, and 1G: Intended for general use in nonrepeatered circuits. Each contains two sockets to accommodate number 89 type resistors for level adjustment on the transmitting and receiving branches of four-wire lines. The 1C set is for use with nominal 900 ohm two-wire lines. The 1D set is used with nominal 600 ohm two-wire lines. The 1G set is for nominal 900 ohm two-wire lines and provides an optional 1 mf or 4 mf capacitor across the A and B leads for duplex signaling applications.

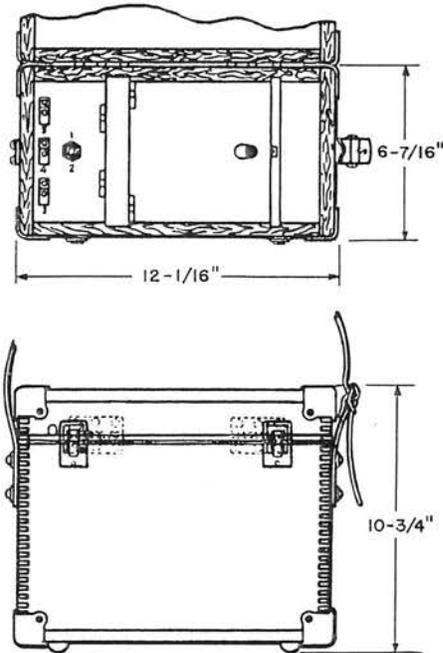

1H: Similar to the 1A set except it provides a 11,600 ohm input impedance instead of 900 ohms and includes a fixed balancing network for controlling the transhybrid loss.

1J: Similar to the 1A set except for use in bridging on 600 ohm four-wire lines and provides a 450 ohm input impedance on the two-wire side.

SETS

Test

20C

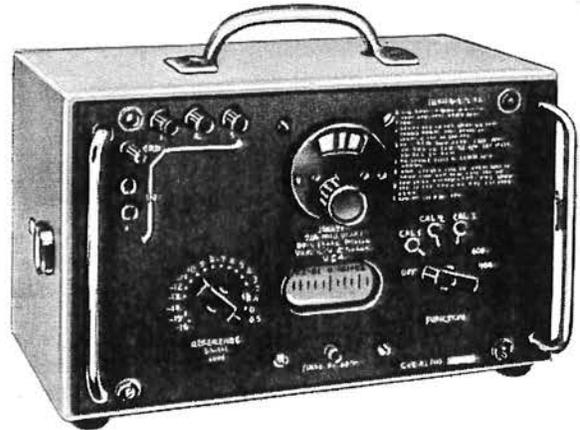

A portable test set consisting of a vibrator-type tone source, a motor driven interrupter, and associated apparatus mounted in a wood case. Continuous or intermittent tone can be selected by means of a switch. The set is powered by four ASA number 6 dry cell batteries which are not furnished.

The set provides a source of audio frequency tracing current for use in following the path of buried cable or in running down faults in cable where a heavy tracing current is required.

Comcode: 100 718 667

22A Milliwatt Reference Meter (J94022A)

A portable transistorized battery operated test set enclosed in a metal case. The dimensions are 9-1/2 inches high by 13-3/4 inches long by 10 inches wide. Weight is 15 pounds (including batteries).

A number of patching cords, plugs, and tools suitable for making connections to different types of switchboard equipment are available. The type of switchboard must be specified. These accessories are not furnished as part of test set and must be ordered separately.

Cords required for connection must be ordered separately. The output is equipped with two jacks so that cords with either 309 or 310 type plugs may be used.

The set is powered by three self-contained batteries, one NEDA 207 type 45-volt and two D-size 1.5-volt which are not furnished.

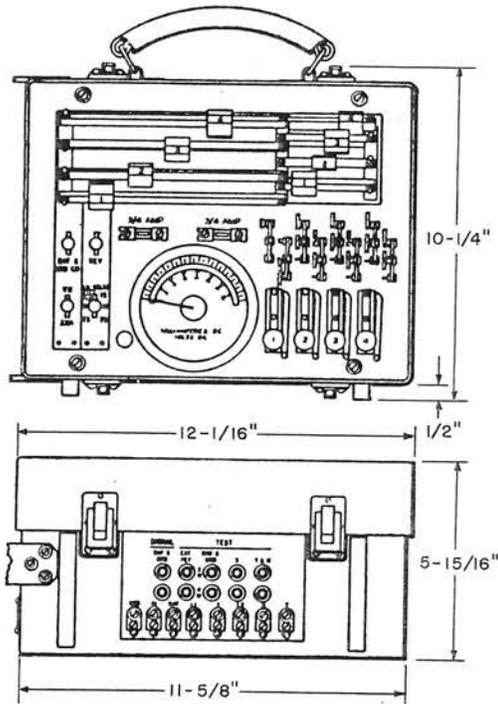

Used to calibrate the milliwatt 1000 cycle outlets and related losses in the telephone office within ± 0.3 db at 1000 cps. The meter is shielded so as not to be affected by electrical and magnetic fields. The operating ranges are -16 to 0 dbm in 1 db steps and +0.5, +4.0, and +7.0 dbm. Output impedance is 600 to 900 ohms.

Comcode: 600 017 800

SETS

Test

35F Test Set (J94714B-1)

A dc regulating and measuring device intended for use in testing and adjusting relays and other apparatus for which current flow and voltage requirements are specified.

Equipped with meter, variable resistances, and associated control keys by means of which it is possible to set up four different and independent testing conditions at one time for checking current flow or voltage drop requirements specified for relays or other apparatus. The set is wired for central offices having positive pole of the central office battery grounded.

Current range of meter provides for full-scale deflections of 3, 15, 75, and 750 milliamperes and voltage range provides for full scale deflections of 15, 75, and 300 volts. These ranges are under control of two nonlocking lever type keys.

The 35F Test Set may be ordered for various patching applications. Following is a description of each.

Number	Description
35F (J94714B-1 List 1 and C)	Basic test set.
35F (J94714B-1 List 2)	Patching cord for use with 92 type jack.
35F (J94714B-1 List 3)	Patching cord for use with 49 type jack.

35F Test Set (J94714B-1) (Continued)

Number	Description
35F (J94714B-1 List 4)	Patching cords for use in panel and crossbar offices.
35F (J94714B-1 List 5)	Patching cords for use in step-by-step offices.
35F (J94714B-1 List 6)	A combination of list 2, 4, and 5.
35F (J94714B-1 List 7)	A combination of list 3, 4, and 5.
35F (J94714B-1 List 8)	Patching cords for use in testing 223 type switches in TD-2 Microwave Systems.

The desired list number as described above must be specified in the order.

In addition the operating voltage must be specified by requesting List A for 2S Lamp (24 volts) and List B for 2Y (48 volts).

 100 718 741 E/W 24 volt lamp
 100 718 758 E/W 48 volt lamp

36A Video Visual Gain and Delay Distortion Measuring Set (J64036)

The 36A transmitting set consists of solid-state circuits divided into three modular units, two solid-state regulated power supplies, and two control knobs. The 36A receiving set consists of solid-state circuits divided into four modular units, an attenuator, level meter, and two solid-state regulated power supplies, plus some control knobs.

A J64036AA video visual gain and delay distortion measuring set transmitter, used in conjunction with one or more J64036AB video visual gain and delay distortion measuring set receivers, provides a convenient means for the precise measurement of gain and delay distortion over video transmission facilities throughout the 12- to 330-kHz low frequency range. Line voltage is 105 to 125 volts. The sensitivity is 0.03 db for gain and 0.02 usec for delay.

The sets are available in combination cases only; they can be used either as portables or as 19-inch rack mounted units. Angle mounting brackets are furnished with the sets and storage for the brackets is provided in the case covers.

Comcode: 100 718 766

Test

**36B Video Visual Gain and Delay Distortion
Measuring Set
(J64036)**

The 36B set is designed for continuous measurement and display of the gain and delay characteristics of the high video range of 200 kHz to 10 MHz. The 36B receiving set in combination with the 36B transmitting set provides a comprehensive system for analysis of video transmission. The set displays the gain and delay versus frequency characteristics on an oscilloscope (not included). The sensitivity of the instrument is 0.03 db for gain and 10 nanoseconds for delay. The high frequency sweep limit is adjustable from 3 MHz to 10 MHz. A SYNC pulse, running at about horizontal rate, is included so that measurements may be made on video circuits with the clampers operating.

Separate transmitting (J64036BA-1 L1) and receiving (J64036BB-1 L1) sets are provided for making either loop or straight-away measurements. Both sets are equipped to operate in either 75 ohm unbalanced or 124 ohm balanced circuits. A frequency marker is included in the receiver for precise indication of frequency points.

Comcode: 100 718 774

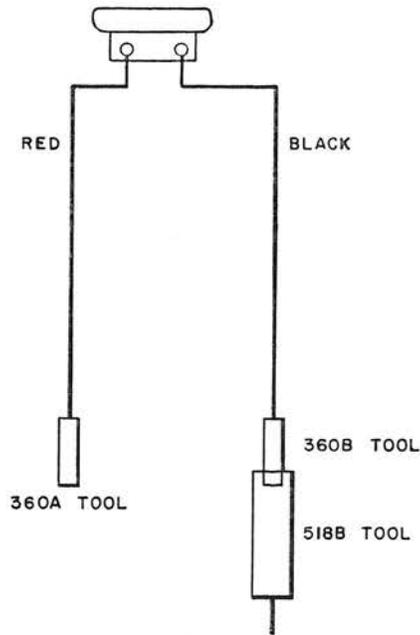

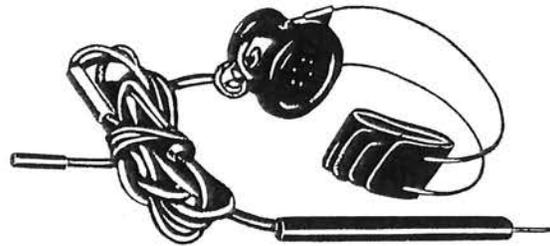

Electrical Characteristics:

Line voltage	105 to 125 volts ac
Frequency range	200 kc to 10 mc
Transmitter output	+3 to -7 dbv
Receiver input	+3 to -12 dbv
Dynamic range gain	+1 to -10 db
Delay	+14 usec

The (J64036BA-1 L1) transmitting unit is 17 inches wide by 14 inches high by 7 inches deep and weighs 24 pounds.

The (J64036BB-1 L1) receiving unit is 17 inches wide by 15 inches high by 9 inches deep and weighs 28 pounds.

67C

This test set consists of a number 509 Receiver, 15G-3 Headband, 360A and 360B Tools, and 518B Tool assembled with a W2CJ Cord. The 518B Tool is equipped with a switch which when depressed shunts a 51,000 ohm ± 5 percent resistor (part of the tool) out of the circuit.

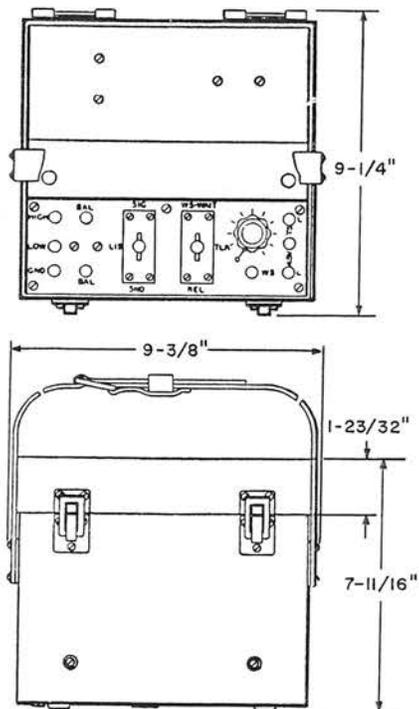

Used as a probe on distributing and apparatus frames in manual and dial central offices.

Comcode: 100 718 865

SETS

Test

76C

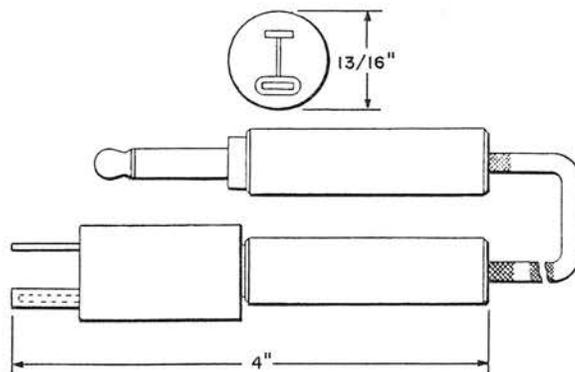

A portable battery operated electron tube oscillator for use by cable splicers on exchange and toll cable for identifying cable wires and other tone testing purposes. Trays for batteries and storage for splicer's talking set (52EW Head Telephone Set) is provided in the case.

The set is powered by two ASA type 30, 4.5-volt and two 16F80 flat cell type 24-volt batteries which are not furnished.

Provides a 500 cycle tone, modulated at a 7 cps rate. A dc relay arrangement for identifying cable wires through wet spots, and a calling-in signal arrangement are also provided.

Comcode: 100 718 881

79D

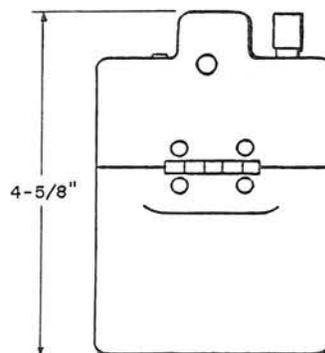

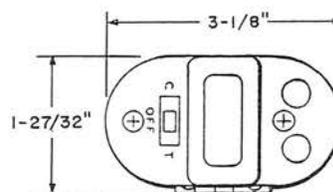

This test set consists of an exploring coil enclosed in a metal case equipped with a handle and a P2AS Cord equipped with a 347B Plug.

Used with the 147B Amplifier for distinguishing between working and dead coaxial pairs by detecting the presence or absence of power hum. Also intended with the aid of audio frequency tracing currents for identifying exchange cable pairs, such as those used for multiple battery feeds, and PBX extensions that have low resistance to ground on both tip and ring sides.

Replaces the 79C Test Set.

Comcode: 101 406 429

81AW

SETS

Test

81AW (Continued)

This test set consists of a buzzer, capacitor, and switch housed in an insulated molded case with cover. There are two spring-type binding posts for connecting leads.

This set is powered by two ASA type BA-30 or D Batteries which are not furnished.

Used to make tone and dc continuity tests in tracing dead drop, block, and inside wires.

Comcode: 100 718 923

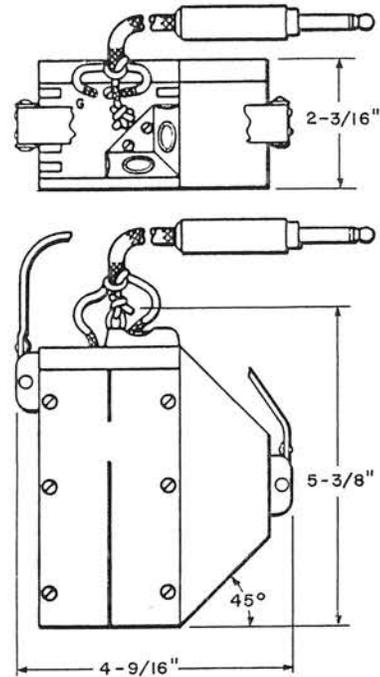

91A

This test set consists of a KS-14132 Carrying Case, a 147B Amplifier, a 2W4A Cord equipped with a 723A Receiver and a 15F Headband, and a W2BJ Cord equipped with a 347B Plug and a 513A Tool. Two Eveready batteries, one number 1015 and one number 412, are required but are not furnished.

For use in identifying wires in toll and exchange cables. It can be used with a 75B, 101B, or 105B Test Set for running down conductor troubles in cables, with a 93A Test Set for tracing the path of buried cables, and with a 79C Test Set for identifying coaxial cable conductors in toll cables to determine whether the coaxial tube is energized and for identifying cable wires where a magnetic type of probe is necessary, such as multiple battery leads in private branch exchanges.

Comcode: 100 718 980

93A

This unit consists of a single winding coil on a straight iron core enclosed in a wood case. It is equipped with a two bubble level, a W2CG Cord, and a 347B Plug for making external connections. It utilizes a tracing current supplied by a tone source such as a 20C or number 76 type test set.

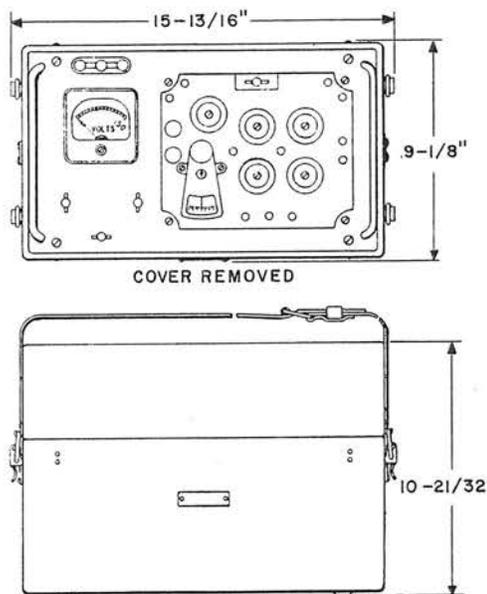

For use in conjunction with an audio frequency tracing current for determining the position and depth of buried cable and wires. It is placed vertically for determining position and at an angle of 45 degrees for determining depth.

Comcode: 100 718 998

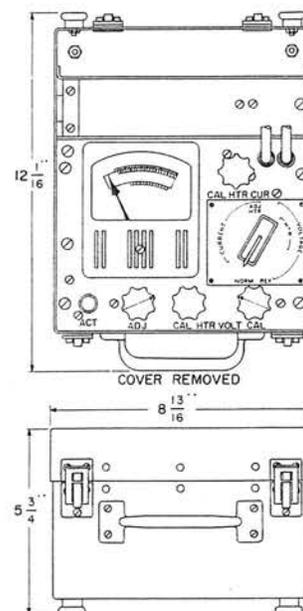

SETS

Test

96A and B

97A

96A: A portable test set consisting of a voltmeter and Wheatstone bridge units, with associated apparatus for supplying dc and ac bridge potentials. It is mounted on a metal panel and enclosed in a metal case provided with a removable cover and a carrying strap. Contains a compartment for the batteries and one for storing the cord and battery leads.

Furnished with one W3AG Cord and six P-340034 Battery leads. Seven ASA type 15A Batteries are required for the operation of this set but are not furnished and must be ordered separately.

Used in making insulation resistance tests and locating faults, including opens, in telephone cables.

Comcode: 100 719 020

96B: Same as 96A except provided with additional elements and control key to permit the supply of ac potentials of 1/2 and 1/4 the frequency regularly provided by the 96A Test Set. Also equipped with an adapter unit which contains a compartment for a battery.

Seven ASA type 15A Batteries, and one 2BBP Battery, Burgess Battery Co. or one 152S Battery, Specialty Battery Co. (for adapter unit) are required but are not furnished and must be ordered separately.

Used in making insulation resistance tests and locating faults, including opens, in telephone cables and capacitance and resistance measurements on telephone ocean cables.

Comcode: 100 719 038

Consists of component apparatus assembled on a metal panel and enclosed in a metal box having a removable cover. A W6E Cord is provided. Contains a compartment for dry cells and another for storing the cords and plugs.

This is a special test set for in-service measurement of ac heater voltage, dc plate voltage, and amplifier and regulator plate currents in the L1 Carrier System. Internal provision is also made for loading repeater heater circuits to reduce heater voltage for an activity test.

The set has a multiscale millivoltmeter with appropriate series and shunt resistors for making dc measurements. Can also be used to measure calibrating voltages applied to two thermocouples (furnished as part of set) and as an indicating meter when measuring with thermocouples. The thermocouples are used for ac measurements. A rotary switch is used to set up the circuit combinations for calibration and measurement, permitting measurements to be made immediately after calibration.

The set has a dc voltage range of 40 to 200 volts; dc current ranges of 4 to 20 milliamperes and 10 to 50 milliamperes; an ac voltage range of 3 to 7.5 volts and an ac current range of 0.6 to 1.1 amperes.

Two ASA type 3D batteries are required for operation but are not furnished.

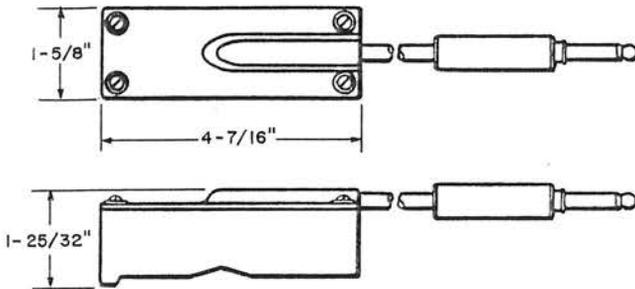

Used in measuring power supply voltages and current in the type L Carrier Telephone Systems.

Comcode: 100 719 046

SETS

Test

101B

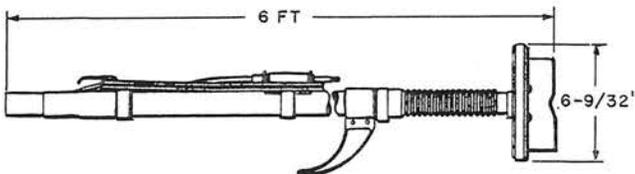

A low impedance test set consisting of an exploring coil enclosed in a cast resin block. A 6-foot cord equipped with a 347A Plug is permanently connected within the block.

Used in conjunction with a number 147 type amplifier and a head receiver.

Intended as a magnetic pickup for audio frequency tracing currents and for running down faults in cables. Utilizes tracing current supplied by tone source such as 76 type test set.

Comcode: 100 719 087

105D

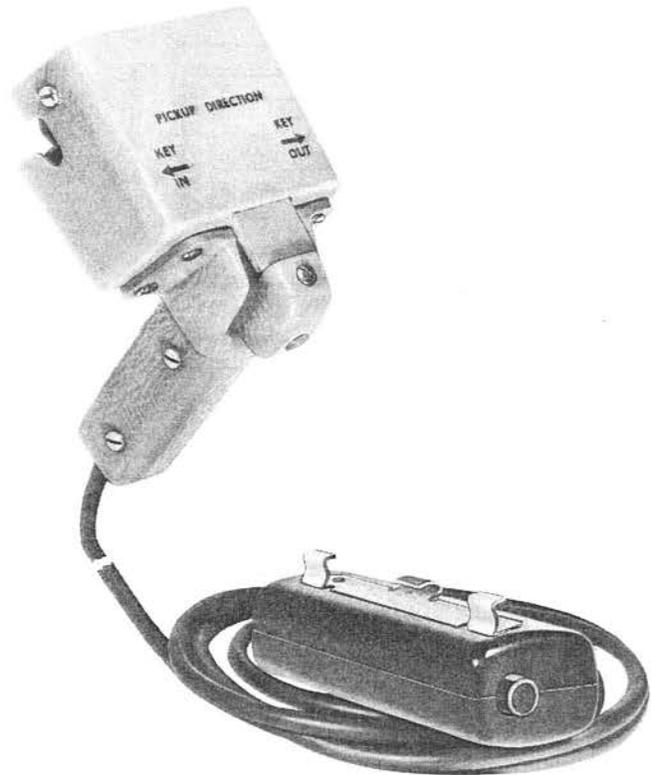

A low impedance test set which consists of an exploring coil mounted on an insulated extension handle and equipped with a W3AM Cord. The corrugated section is flexible to permit positioning of the coil. The hook permits hanging the test set on a strand or cable. The length of the test set can be increased by adding one or two AT-6600 Small Tree Pruner extension sections.

Utilizes tracing current supplied by a tone source such as the 76C Test Set.

Used as a magnetic pickup for audio frequency tracing currents in running down faults in cables in conjunction with a 147B Amplifier and a head receiver.

Comcode: 100 719 111

106A

A portable test set consisting of an exploring coil unit assembled in a housing of insulating material having a pistol grip connected by means of a 6-foot cord to a switch box containing a push button key and terminated in a 238A Jack.

The overall dimensions of the exploring coil unit are 4-11/16 inches high by 3-11/16 inches wide by 4-13/16 inches deep. Overall dimensions of the switch box are 1-7/8 inches high by 4-1/2 inches long by 1-3/4 inches wide.

For use with the number 107 type test set for making directional fault location tests for grounds, shorts, and crosses on open wire circuits.

Comcode: 100 719 129

SETS

Test

107A and B

107A: A portable test set housed in a case of insulating material. It consists of a hand-operated ringing generator and talking facilities and contains a filter for use on carrier circuits. It provides local and common battery talking facilities when used with the head telephone set, 20 and 135 cps ringing facilities, and a test tone for directional fault locating with the 106A Test Set. The set is equipped with 6-foot leads for connection to open wire lines and a jack for connection of the head telephone set.

One 53HCW Head Telephone Set is required for operation but is not furnished and must be ordered separately. One ASA type 3D Battery is required but is not furnished.

For use by linemen for talking and testing on open wire lines.

Comcode: 100 719 137

107B: Same as the 107A except that it has a dial having high dielectric strength.

Comcode: 100 719 145

110A and 111A

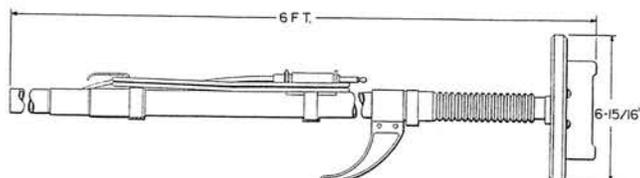

Fig. 1

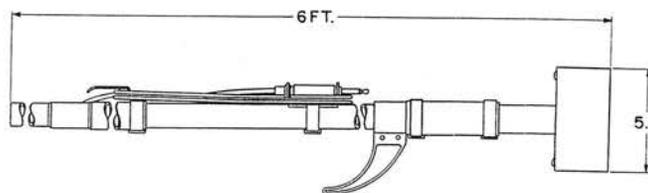

Fig. 2

Each consists of an exploring unit mounted on an insulated extension handle and equipped with a W3AM Cord. The hook permits hanging the test set on a strand or cable. The length of the test set can be increased by adding one or more AT-6600 small tree pruner extension sections.

110A: Fig. 1. Low impedance test set for use in conjunction with a 99B Test Set and a head receiver. An insulated flexible coupling facilitates positioning of the exploring unit.

Utilizes tracing current supplied by a 20 cps ringing generator. Used as a magnetic pickup for low frequency tracing currents in running down faults in long or loaded cables.

Comcode: 100 719 178

111A: Fig. 2. High impedance test set for use in conjunction with a number 147 type amplifier. A coupling of heavy duty rubber tubing minimizes damage to probe end.

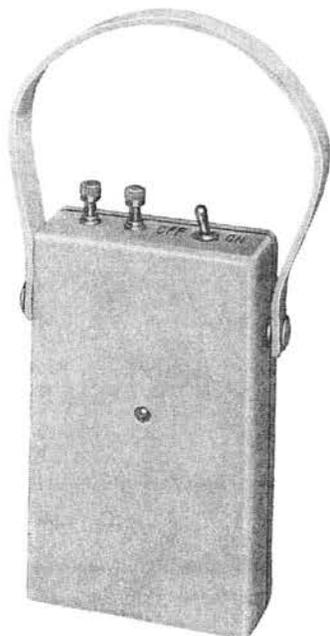

Utilizes tracing voltage supplied by the 76C Test Set or equivalent.

Comcode: 100 719 186

SETS

Test

114A

A battery operated, transistorized oscillator. Overall dimensions are 7.44 inches high (to the terminals, not including the carrying strap) by 4.75 inches wide by 1.44 inches deep.

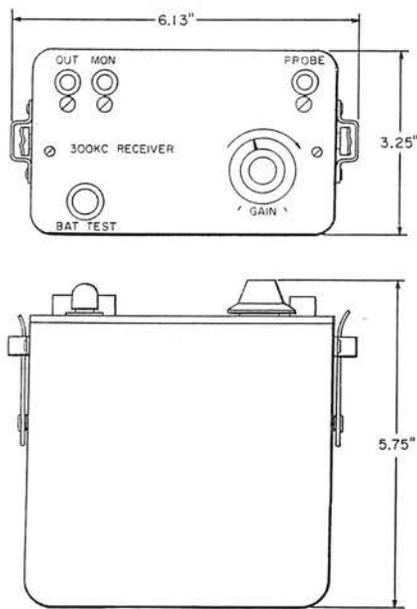

It consists of apparatus such as diodes, capacitors, inductors, resistors, and transistors, on a printed wiring board assembled in a plastic case having a removable cover. Wiring board is equipped with two battery holders. Two P. R. Mallory mercury batteries, TR135R (6.5 volts) are required for operation, but are not furnished.

Used as a source of test tone for identifying individual conductors in cables and, in conjunction with a 111A Test Set, for locating opens in multiple wire facilities, such as B urban and B rural wire.

It provides a 500 cps signal interrupted at approximately 10 times per second.

Comcode: 100 719 228

115A

A portable transistorized battery operated detector intended to pick up a 300 kc signal from the 116A Test Set and convert it into an audible signal for identifying working wires in a cable without removing the wires from service in K and N Carrier Telephone Systems. Provision is made for listening to the tone by means of a talking pair and the headphone of a cableman's talking set.

Two ASA type AA Batteries are required for operation but they are not furnished and must be ordered separately. The set is equipped with a leather carrying strap.

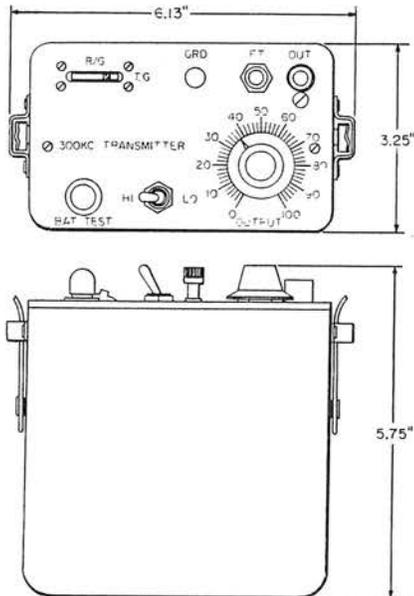

Used with the 120A Test Set.

Comcode: 100 719 236

SETS

Test

116A

A portable transistorized battery operated crystal controlled oscillator, the output of which consists of an unmodulated carrier frequency of 300 kc \pm 100 cps.

For use with the 115A Test Set for identifying working wires in a cable without removing the wires from service in K and N Carrier Telephone Systems.

Four ASA type AA Batteries are required for operation but are not furnished. Set is equipped with a leather carrying strap.

Used with the 120A Test Set.
Comcode: 100 719 244

120A

A test set consisting of a KS-19237L1 Carrying Case, a 115A Test Set, a 116A Test Set, a W2CC Cord equipped with 310 Plug, a W1AN Cord, and three W2FC Cords.

For use in identifying working wires in a cable without removing the wires from service in K and N Carrier Telephone Systems.

Comcode: 100 719 251

121A

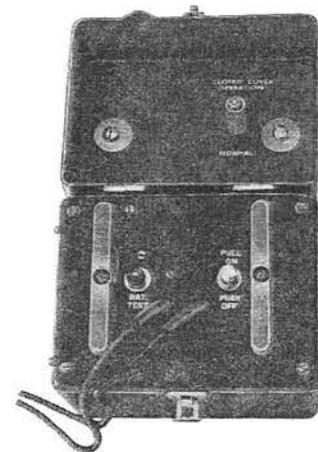

Consists of a 122A and a 123A Test Set contained in a gray-black plastic carrying case with dimensions of 30.1 inches long by 13.1 inches deep by 8.2 inches high, not including the handle which extends approximately .75 inches beyond the 13.1 inch dimension.

Used to check location and depth of telephone cable buried up to 50 inches deep.

Comcode: 100 719 269

122A

SETS

Test

122A (Continued)

A battery operated, transistorized, signal source housed in a metal case with a hinged cover. The inside of the cover is equipped with a two position switch guard to allow operation with the cover closed and to insure that the case will be turned off when it is not in use. The set is 6 inches long by 5 inches deep by 6 inches high, not including the handle which extends about 1 inch above the 6 inch high dimension. It weighs approximately 4-3/4 pounds.

Two 8-foot single conductor test leads are provided for connecting the set between ground and the metal sheath of the cable to be located. A bulge in the hinged cover rim allows the cover to be closed during operation without damaging the test leads. **In no circumstance should a test lead from this set be applied to a conductor or pair in a cable.** When not in use, the test leads are secured around two cleats on the panel.

The set has a 20 kc output limited to a maximum current of 50 ma on the shield to minimize interference with telephone circuits.

The set operates for approximately 100 hours from a set of four ASA type D dry cell batteries. **The batteries are not furnished.** Provision is made for checking the battery by pulling the switch to on and then depressing the plastic cap of the BAT TEST Lamp.

Used with a 123A Test Set (depthometer) in tracing the path and determining the depth of buried telephone cable.

Comcode: 100 719 277

123A

A 20 kc test set (depthometer) for use with a 122A Test Set.

Overall dimensions are 8.4 inches long by 6.3 inches wide by 4.5 inches high, not including the folding leg which is 3 feet 6-1/2 inches long when extended for use.

Consists of battery powered circuitry mounted on a printed wiring board assembled in a housing which is equipped with a folding metal leg containing two inductors used as pickup coils for detecting the 20 kc signal generated by the 122A Test Set. Depth of cable can be read on a meter calibrated in inches. **Four ASA Type AA primary batteries are required for operation of this set but are not furnished.**

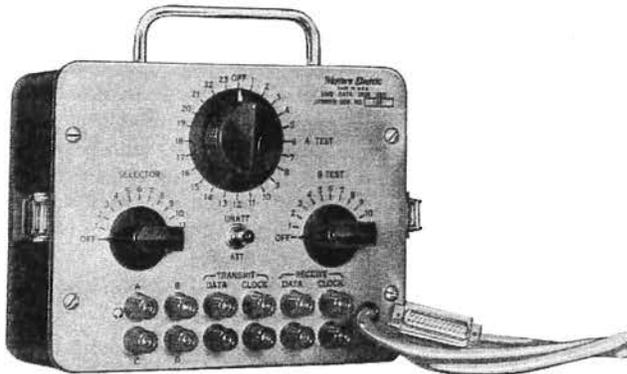

Used to check location and depth of telephone cable buried up to 50 inches deep. Greatest ranges from point of tone application are 1 mile for plastic sheathed cables, 1/5 mile (approximately 1000 feet) for jute covered cables, and 100 feet for lead sheathed cables.

Comcode: 100 719 285

SETS

Data Test

901B (J79901B L2)

A portable test set used to make out-of-service installations and routine trouble checks on data sets. Operation of the switches simulates various business machine actions to the data set. A two-position toggle switch is used to control automatic answering circuits of the data sets equipped for unattended operation.

The dimensions are 7 inches high by 7 inches wide by 9 inches deep, and the weight is 6 pounds.

The set is designed to operate alone and may further be used in conjunction with 902 and 903 Data Test Sets to provide accessible interface connections.

The set will test 103AW, BW, DW, and FW, 201AW and BW, 202AW, BW, CW, and DW, 301BW, 401AW, BW, CW, EW, JW, and LW, 402CW and DW, 601AW and BW, and 602AW Data Sets. Power is supplied by set under test when required.

The following adapter cords are required and must be ordered separately.

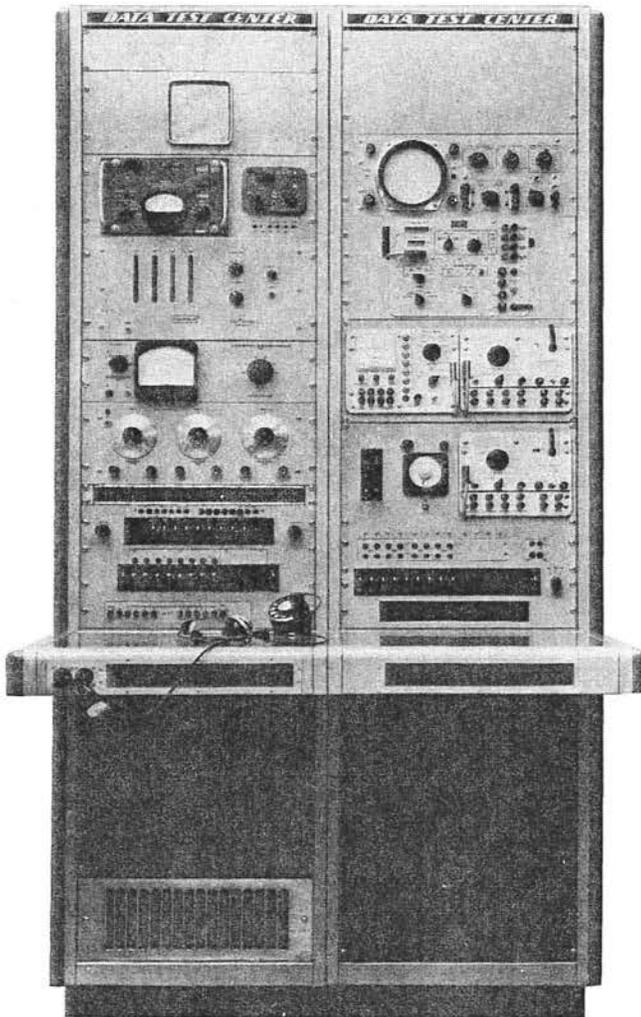

Quantity	Cord No.	For Use With Data Set
1	M26D	401BW
1	M26F	401AW

Used alone for making voltage measurements for isolating trouble in data sets.

Comcode: 600 016 539

SETS

Data Test

904 A, B, C, and D Data Test Center
(J79904A, B, C, and D)

904A

904B

This test set is used for remote testing of the data set associated with DATA-PHONE and Voice Band Private line data services and to assist in the installation, repair, and maintenance of DATA-PHONE service.

904A: Consists of general purpose test equipment required for static testing such as oscillators, frequency counters, oscilloscopes, and level meters mounted in a cabinet approximately 2-feet wide by 2-feet deep by

7-feet high. The wiring of the equipment is arranged to terminate in test keys and plug-in jacks so that connections can be made by means of patch cords.

904B: It is used in association with the 904A to perform dynamic testing. It performs the same tests as the 904A plus transmitting, receiving, and evaluating data signals between the station and the Data Test Center over both DATA-PHONE and private line data service networks. This unit includes 901B, 902B, and 903B Data Test sets. The equipment wiring is arranged to terminate in test keys and cord reel units which are used to make circuit connections to the trunk line. The unit is mounted in a 7-foot cabinet similar to the 904A.

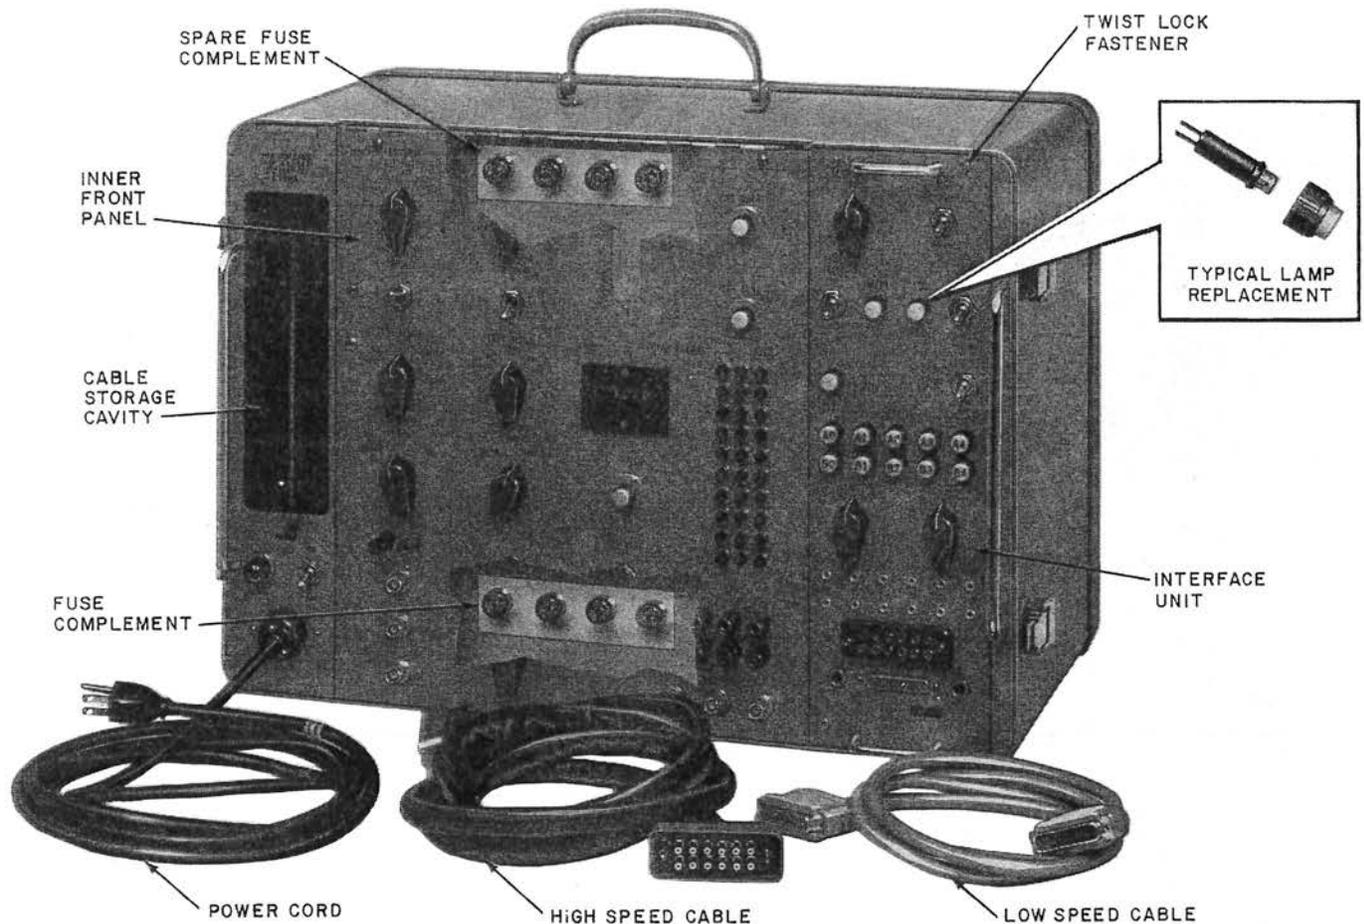

904C: Same as the 904A except it is mounted on a 23-inch relay rack 11 feet 6 inches high.

904D: Same as the 904B except it is mounted on a 23-inch relay rack 11 feet 6 inches high with special front and rear adapters.

SETS

Data Test

912A (J79912)

The 912A Wideband Data Test Set is used to test wideband data stations or sets which operate in the range of 9 to 2000 kilobits per second. The test set, designed to be either portable or fixed, determines error rates, tests all interface functions of a wideband data set or station, makes margin tests of received nonsynchronous data and can test low-speed Data Sets 400BW which may be associated with a wideband data station.

The test set is composed of two major units, the basic test set and a plug-in interface unit. Each interface unit is supplied with suitable interface cables and contains the interface connectors, control lamps, switches, cable drivers and terminators peculiar to a group of data sets or to a test set application. As an example the interface unit interfaces the test set with Data Sets 301 type and

303 type and provides a means of testing a Data Set 404BW which is often part of a 303 type Wideband Data Station. The interface unit can connect to a maximum of five Data Sets 301 or 303 type. A switch on the interface unit selects the data set to be used.

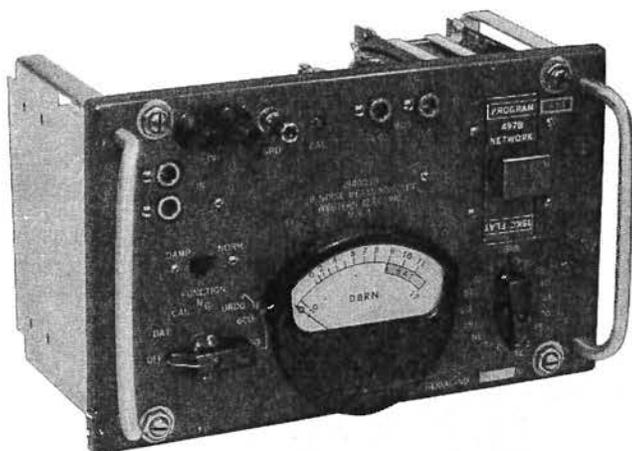

The power supply is fused and converts 117 volt, 60 Hz ac power into three regulated dc outputs (+12V, -12V and +6V) which are distributed to all parts of the test set.

The 912A Wideband Data Test Set is a light gray unit with dark decaled markings and is enclosed, when portable, in a light gray luggage type case. The overall dimensions of the test set are 21 inches by 15 inches by 12 inches and the weight is 45 pounds.

SETS

Noise Measuring

3B (J94003B)

The 3B is a compact, transistorized, rack mounted noise measuring set. The set measures noise in dbrn on message and program circuits. It has both dynamic and frequency characteristics which make its readings comparable to the response of the human ear.

A 497A Network for use on C Message and 3 KHz Flat circuits is furnished as part of the set. 497B Network for use on Program and 15 KHz Flat circuits is available but must be ordered separately if needed. The networks can be changed on a plug-in basis. C Message weighting has been accepted by the Edison Electric Institute for Telephone Coordination Measurement and conforms to the ASA Noise Reference.

The 3B will measure noise metallic into self-contained 600 or 900 ohm terminations or on a bridging basis without any auxiliary apparatus. Direct reading at noise-to-ground can also be made. A built-in battery supply filter eliminates false noise readings due to battery noise. Provision is made for a jack-field appearance of the input

circuit. Internal calibration is provided. For special investigations, both ac and dc outputs are available for monitoring and for connection to external recording devices.

Characteristics

Reference Noise	-90 dbm at 1000 Hz (ASA Standard)
Range	0 to 97 dbrn (above reference noise)
Accuracy	± 1 dbrn
Input Impedance	Noise Metallic 600 to 900 ohms Bridging 10,000 ohms Noise to Ground 10,000 ohms
Weighting Networks	(497A) C Message and 3 KHz flat (497B) Program and 15 KHz flat
Size	7 inches high by 9 inches deep on 19 inch or 23 inch panel
Weight	9.5 lbs—19 inch panel 11.3 lbs—23 inch panel
Power	48 volt central office battery

When ordering the 3B Noise Measuring Set, the following should be utilized:

3B Noise Measuring Set (J94003B List 4) should be shown on the order when the assembly, equipment, wiring, and cover for one 3B Noise Measuring Set are required.

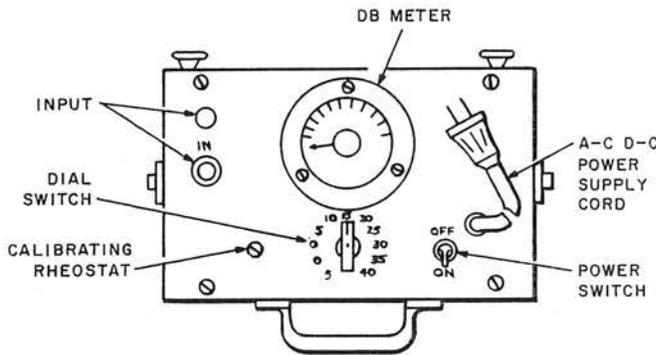

3B Noise Measuring Set (J94003B List 6) should be shown on the order when List 4 and the assembly, equipment, and wiring for mounting on a 19 inch panel are required.

3B Noise Measuring Set (J94003B List 7) should be shown on the order when List 4 and the assembly, equipment, and wiring for mounting on 23 inch panel are required.

SETS

Transmission Measuring

13A

A test set consisting of a three-stage negative feedback amplifier and a rectified-type meter mounted on a panel chassis and enclosed in a metal box. Overall dimensions are 10-7/8 inches by 8-1/8 inches wide by 8-5/16 inches deep with cover.

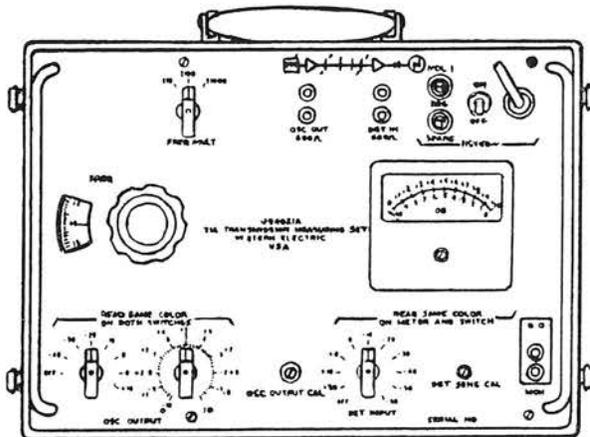

The meter has gain and loss scales of 5 db range each. The transmission range is -45 to +10 db, referred to 1 milliwatt over a range of 30 to 15,000 Hz, with an input impedance of 600 ohms. Slide rheostat is provided for calibration and is screwdriver-adjustable through the panel.

Operates on 105 to 125 volts dc or 105 to 125 volts, 50 to 60 Hz or 25 Hz ac power supply. Consumes approximately 50 watts.

Used in conjunction with a number 19 type oscillator or other suitable source of testing power for lining up and equalizing circuits for program transmission.

Comcode: 100 719 418

21A (J94021A-1 List 1 and A)

A portable test set available in two forms: as an ac operated oscillator and detector or an ac operated oscillator only. It can be adapted for mounting in 19- or 23-inch equipment racks. Dimensions excluding cover are 17 inches long by 12 inches high by 8 inches deep. Weight is 37 pounds. Operates on 115 volts, 60 Hz.

As an oscillator and detector: Used to measure gain and loss of amplifiers, line sections and other components on voice channel and program transmission circuits, including telephone repeaters.

As an oscillator: Furnishes constantly adjustable frequencies from 20 to 20,000 Hz at variable output levels.

Oscillator specifications: Adjustable in these ranges: 20 to 200, 200 to 2,000, and 2,000 to 20,000 Hz.

Oscillator output: Adjustable from +20 to -50 dbm. As a detector: Provides sensitivity from -70 to +30 dbm.

Possible measuring gains up to 80 db of losses up to 90 db.

To provide additional Detector Equipment, order J94021A-1 L2 and B.

If to be mounted on 19-inch relay racks, order J94021A-1 L3 and D; if on 23-inch relay racks, order as J94021A-1 L4 and E.

23A, B, and C (J94023)

The 23A, B, and C (J94023) type sets have a measurement range from -25 to +10 dbm in the frequency range of 300 to 5000 Hz.

23A (J94023A-1 L1): A simple, passive, portable set which replaces the 12B Transmission Measuring Set. It can be used to measure levels of -25 to +10 dbm over the frequency range of 300 to 5000 Hz on both 600 and 900 ohm circuits. Holding and dialing features are also provided for setting up a connection on a trunk preparatory to making measurements. No batteries or external power are required. Characteristics of the set are given

SETS

Transmission Measuring

in Table A. The set consists essentially of eight consecutive circuits as follows: input, holding, blocking, impedance matching, attenuator, filter, detector, and meter.

The 23A is packaged in an aluminum case of the deep-drawn type. It is provided with a retractable handle for carrying and has a small door in the side for access to the calibration controls. See Table B for size and weight.

23B (J94023B-2): Designed for jack panel mounting and requires no power connection or internal batteries. It will measure levels of -25 to +10 dbm over the frequency range of 300 to 5000 Hz on either 600 or 900 ohm circuits. No holding or dialing features are provided as these are normally provided elsewhere on the test panel. Characteristics of the set are given in Table A. The set consists essentially of six consecutive circuits as follows: blocking, impedance matching, attenuator, filter or pad, detector, and meter. The 23B type set is available with (list 4) or without (list 2) the front panel as, in some usages, the set may be mounted on subpanels behind existing facepanels. When the 505T Filter is not required, it is replaced by a pad which has a loss equal to the flat loss of the filter. This pad is furnished in all 23B type sets even though not used. The filter is furnished only when called for by the list number.

The 23B is packaged in a wrap-around type aluminum case with removable back and with or without the front panel. The calibration controls appear at the front of the set.

23C (J94023C-1 L1): Same as 23A except is arranged for panel mounting.

Any patching cord terminating in 309, 310, or 240A type plug may be used in the jacks provided in these sets. Suggested cords are 3P3A(6 feet), 3P12H(8 feet), 1W13B(6 feet). 1W13B includes two 360A Tools and either number 364 (spade tip) Tool or number 365 (alligator clip) Tool should be used with the 360 type tool.

Patching cords if required must be ordered separately.

 100 723 030 On 1-13/16 inch shelf

59A

Consists of two molded lamp strips, each containing six lamp sockets equipped with 51A Lamps, and a KS-16672L1 Connector assembled to a metal bracket. Lamp sockets are wired to the connector.

An E4646 Designation Strip and a light shield are provided.

Arranged to mount interchangeably with a 598A Key or a 105B Apparatus Blank.

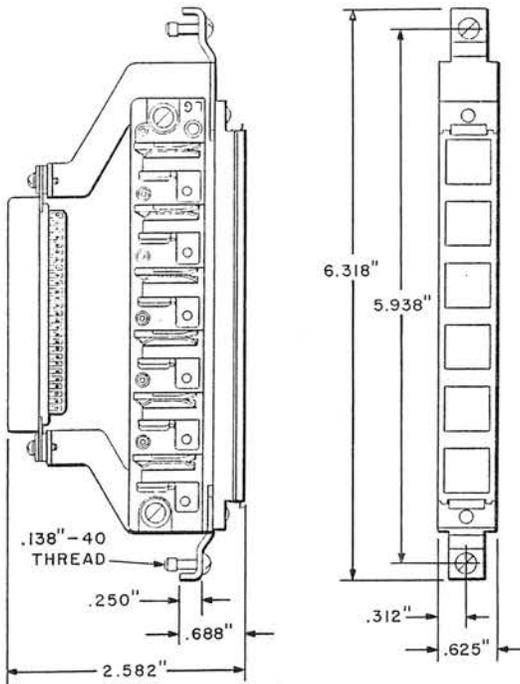

Forms a part of the number 630 type telephone sets.

Comcode: 100 723 097

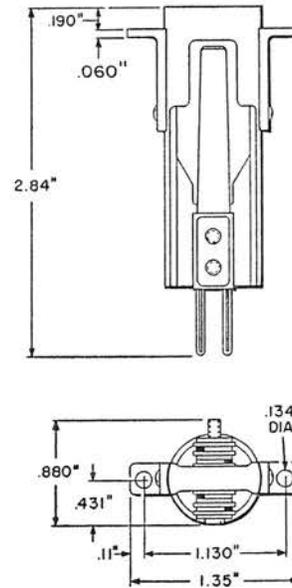

SOCKETS

Lamp

61A

65A

Consists of a molded lamp strip containing six lamp sockets, which are arranged for 51A or 52A Lamps, and a KS-16672L1 Connector assembled on a metal bracket.

The lamp strip is equipped with a light shield and a removable translucent red face strip. The lamp sockets are wired to the connector, which is provided with a nonreturnable dust cover.

For use with the 623A Key in the number 301 and 302 Switching Systems.

Comcode: 100 723 139

A singly mounted socket arranged to mount a number 2 type lamp under a 77A Lamp Cap. Mounting screws are furnished.

Terminals are arranged for mechanically wrapped connections.

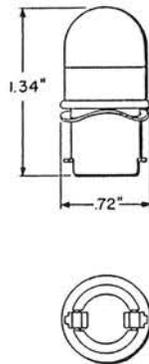

For use in switching systems.

Comcode: 100 723 147

SOCKETS

Lamp

66 Type

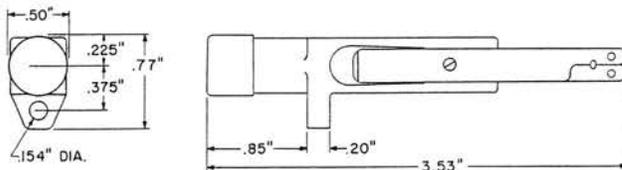

The 66 type sockets contain two springs which serve as contacts for a number 2 type lamp, and are equipped with a lamp cap and a spring washer.

Code No.	Comcode	Color of Lamp Cap
66A	100 723 154	Red
66B	100 723 162	Amber
66C	100 723 170	White
66D	100 723 188	Green

Arranged to mount in 18A, 19A, 21A, 22, or 23 type fuse blocks or a 308A Lamp Socket Mounting. For use in switching systems.

67A and 67B

The 67A and 67B Lamp Sockets are singly mounted and are arranged for a number 2 type or an A type lamp.

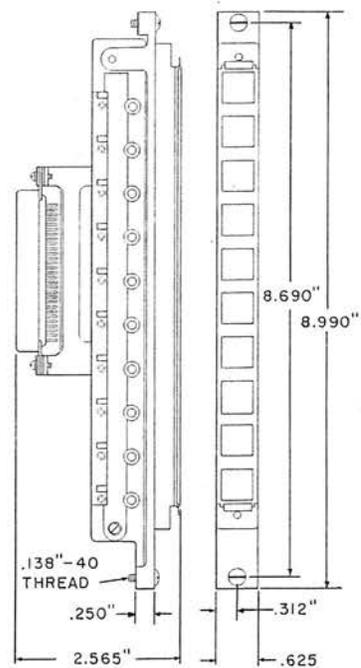

67A: Equipped with a red lamp cap.

Comcode: 100 723 196

67B: Equipped with a white lamp cap.

Comcode: 100 723 204

69A

The 69A Lamp Socket consists of one ten-lamp, lamp strip which provides receptacles for mounting 51A Lamps. The lamp strip is attached to a steel frame to which also mounts a lamp block to contain the light and a 50 terminal KS-16672L1 Connector. A light shield holds a colored transparent plastic strip over the lamp block.

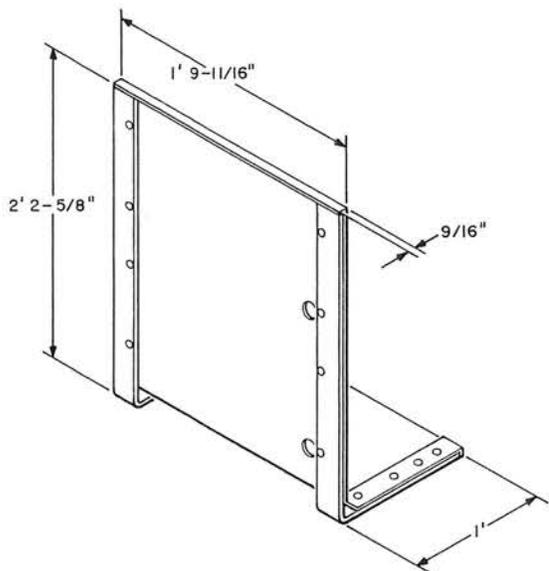

Used in station systems.

Comcode: 100 723 212

STANDS

Floor

ED-91296-70, Group 4

A metal stand which consists of two supports and a cover having a light olive gray enamel finish. Stand has capacity for two cabinets. Screws for mounting are furnished.

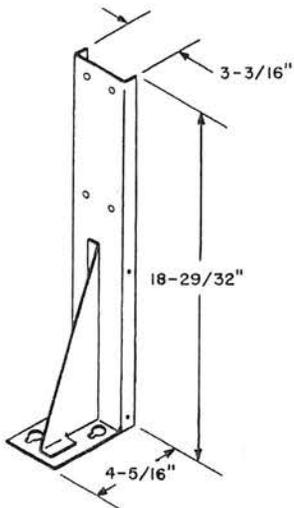

Used for floor mounting the ED-91472-70 Apparatus Cabinet.

STRIPS

Terminal

BP5A

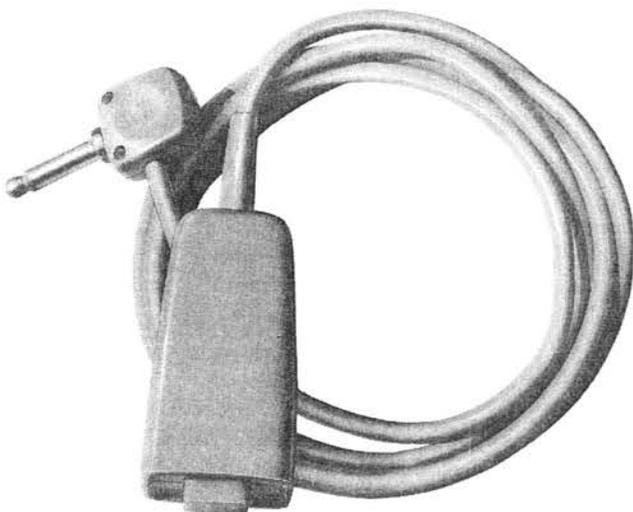

Has five rows of 100 terminals each molded in a cast resin block mounted on a metal angle equipped with a mounting lug and fanning strip. Terminals are arranged for mechanically wrapped connections.

Provided with .250 inch-20 machine screws and lock-washers for mounting.

Comcode: 100 735 653

SWITCHES

261A

Each consists of a plastic housing, a 224A Switch and a spring loaded plunger assembly. Equipped with an M2ER type cord and a 444A Plug.

The switch is normally open, SPST, momentary operating type.

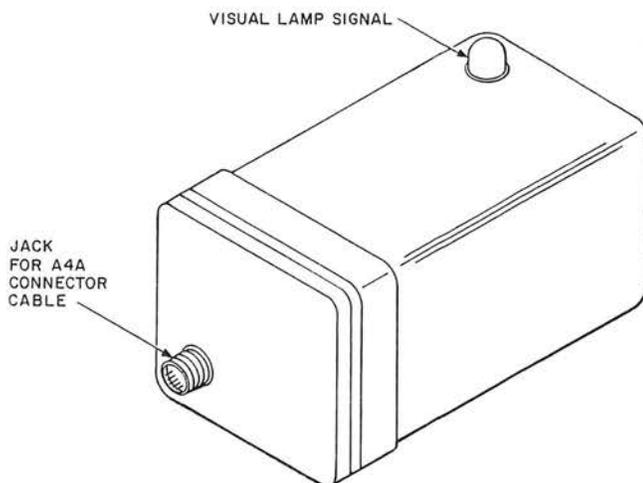

Overall dimensions are 3.0 inches long by 1.540 inches wide by 1.00 inch high.

Available in the following colors:

Code No.	Comcode	Color
261A-58	101 416 840	White
261A-60	101 416 857	Light beige
261A-61	101 416 865	Light gray

Used with the M2ER type cord to form the nurse's call cord for use with the number 802 type telephone in the 3A (hospital) Communication System.

270AW

Provides for automatic connections of either one or two Central Office or PBX lines.

It is a factory-sealed unit. The approximate overall dimensions, excluding connectors, indicator lines, and mounting brackets, are 5.83 inches long, 3.70 inches wide, and 2.90 inches high.

Intended solely for specially engineered lines — not for general telephone use.

The switch operates on either 18 volts A.C. or 20 volts D.C. The A.C. voltage can be supplied by a 2012B transformer, using a separate transformer for each switch. The D.C. voltage may be supplied from a key telephone system power supply, if available. A transformer with a grounded secondary cannot be used. Drain should be figured at 50 mils of current for each switch.

A 51A Lamp is used in the switch.

Comcode: 101 629 053

Connector cables, cords, and transformers must be ordered separately but will be shipped with the switch. These are:

A4A Connector Cable: An input cable, installed between the switch and distribution point. Available in 50, 100, or 200-foot lengths.

M4AJ Cord: An output cord used between the switch and a desk-type telephone set. Replaces the cord normally supplied with the telephone set. Supplied in four-foot lengths.

M4AK Cord: An output cord used between the switch and a wall-type telephone set. Supplied in ten-foot lengths.

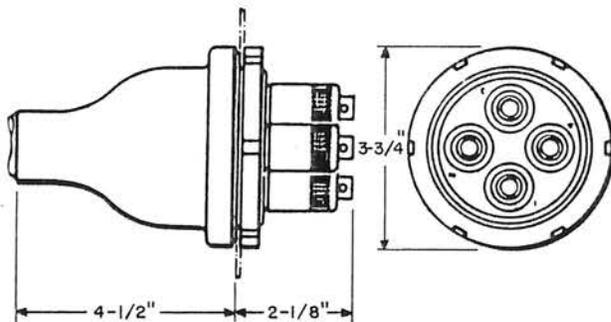

2012B Transformer: A separate transformer is required for each switch.

2A Clamp: To provide a clamping arrangement to prevent accidental dislodgement of the 2012B Transformer from an electrical outlet installation.

TERMINALS

Cable

38A

of the four pairs of conductors passes through a tube of the tube assembly and connects to the contacts of one of the connectors.

The terminal is filled with dry air or nitrogen under pressure and equipped with an air valve in the cable stub. Cable stubs are available in 15, 25, 30, and 75-foot lengths. Length must be specified on order.

Used for terminating video pairs in central offices or program pickup points.

- Comcode: 100 744 861 E/W 15 ft Stub
- 100 744 887 E/W 25 ft Stub
- 100 744 895 E/W 30 ft Stub
- 100 744 978 E/W 75 ft Stub

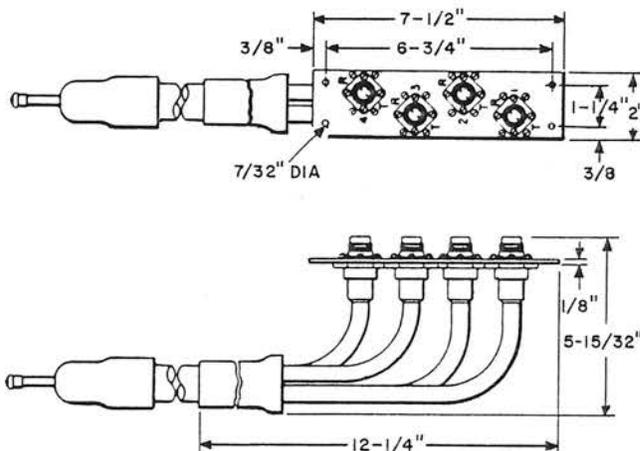

Gas tight cable terminal consisting of a cylindrical coupling provided with a four shielded pair number 19 AWG stub cable 15 feet long. Each pair of conductors is connected to a soldering terminal provided with a shielding cap.

Mounts on a bracket or in an apparatus case. A 3-1/32 inch diameter hole is required for mounting.

Used for terminating video pairs in central offices or manholes.

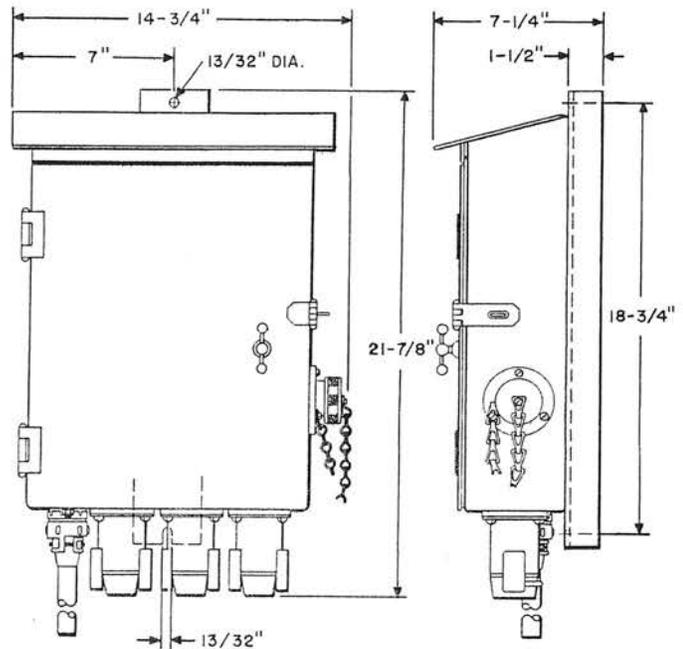

Comcode: 100 744 754

45A

Gas tight cable terminal consisting of a metal plate equipped on one side with four KS-14743 Connectors and on the other side with a tube assembly which is terminated with a four-pair video type lead covered polyethylene insulated stub cable having number 16 AWG conductors. Each

48B and C

Each consists of a G16B Binding Post Chamber mounted in a weatherproof metal box which is arranged for mounting on a post or pole.

Each contains one 4-conductor and three 10-conductor cables. The conductors at one end of each cable are connected to terminals on the binding post chamber. At the other end conductors are terminated in one 4-contact and three 10-contact external connectors respectively.

TERMINALS

Cable

48B and C (Continued)

Used for connecting the control cable between the two areas of a NIKE B battery to the equipment in each area in installations where the telephone company provides the intra-battery cable.

48B: Used at the Battery Control location.

Comcode: 100 745 074

48C: Used at the Launch Area.

Comcode: 100 745 082

Each consists of a base of molded insulating material, reinforced with metal and contains a six-pair terminal block. Cover is of molded insulating material and is assembled to the base by means of wire clips.

Arranged for three additional six pair P-18A782 Terminal Blocks which are not furnished and must be ordered separately.

Equipped with three distributing rings for support of drop wires and arranged for suspension from strand by means of clamps that are part of the base.

Used as distribution terminals for polyethylene insulated cable of diameter indicated in table. Also suitable for enclosing sheath openings at straight splices of polyethylene insulated cables. Provision is made for electrical continuity of the metallic portions of the two cable sheaths.

49A2, 49A3, and 49B2

Code No.	Comcode	Fig. No.	Diameter of Cable Arranged for (Inches)

TERMINALS

Cable

53A3-50

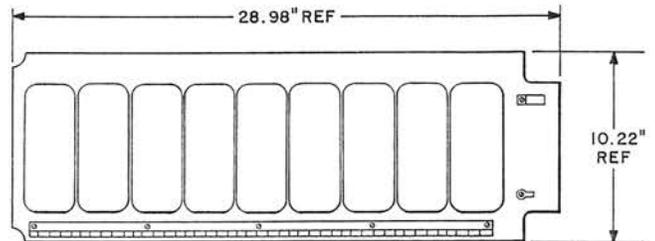

The 53A3-50 Cable Terminal is a 50 pair cable terminal used as an unprotected distribution terminal at locations where there is a heavy concentration of drop or block wires and is intended for wall or pole mounting. Overall dimensions are 22-7/8 inches high by 8-3/16 inches wide by 2-1/2 inches deep.

This terminal consists of a sheet metal box having a hinged cover and a gastight 2C1-50 Terminal Block into which a lead sheathed cable has been molded. The front of the box is flanged to prevent the entrance of moisture and the door is furnished with a gravity-type locking catch which must be raised on the hinges to open. The terminal block is equipped with a 50 pair fully color coded PVC insulated conductor stub having a lead sheath and a gastight plug. The stub is six feet long but stubs of 12 and 25 feet are also available but must be specified on the order if required.

- Comcode: 100 745 199 E/W 6 ft Stub
- 100 745 207 E/W 12 ft Stub
- 100 745 215 E/W 25 ft Stub

64B1-75 and 64B1-100

Consists of a fanning strip mounted on a terminal plate assembly 1 inch deep with a six foot AT-7441D Inside Wiring Cable.

64B1-75: A 75 pair cable is wired to the terminal plate. For use in the 1A1 Key Telephone System.

Comcode: 100 745 397

64B1-100: A 100 pair cable is wired to the terminal plate. For use in the 6A Key Telephone System.

Comcode: 100 745 405

64B1-100: A 100 pair cable is wired to the terminal plate. For use in the 6A Key Telephone System.

Comcode: 100 745 405

TERMINALS

Cable

BH Type

Each terminal consists of a metal sealing chamber having an insulating panel equipped with terminal posts, screws and washers, a 10- or 25-foot long (alpath sheath) stub cable connected to the binding posts inside the chamber, and a metal box with hinged doors. Stub cable length must be specified on order.

The stub cable has a gastight resin plug, is fully color coded the same as standard even count PIC cable, and has the same number of pairs of number 24 AWG PVC insulated conductors as there are pairs of binding posts, thus providing in and out line connections. The stub cable pairs are connected to the binding posts in horizontal sequence and the appropriate lug numbers are stenciled on the marking strips to facilitate splicing to even count PIC cable.

Holes in the bottom of the box and five additional pairs of binding posts at the bottom of the panel are provided for bringing in and terminating drop wires. Brackets for pole or wall mounting are furnished. The terminal housing is equipped with a locking device to prevent the horizontal door latch from being opened. This device is locked and unlocked with a 216B Tool which must be ordered separately.

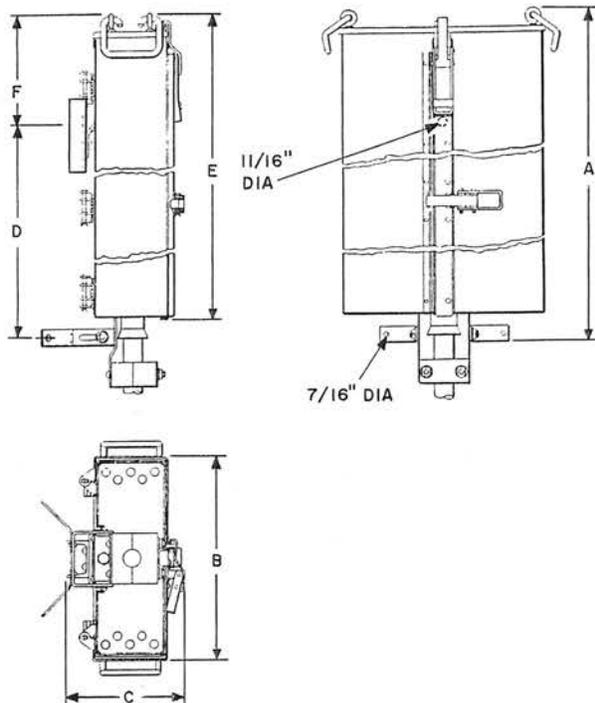

These terminals are designed for installation between feeder cables and distribution cables and within runs of these cables to provide flexibility through cross connections.

TERMINALS

Cable

BJ Type

Each cable terminal consists of an insulating panel assembly equipped with terminal posts, screws, washers, and a bottom mounted 25-foot long stalpeth sheath stub cable connected to the binding posts. The panel assembly is enclosed in a galvanized steel box equipped with hinged doors.

The stub cable has a gastight resin plug, is fully color coded the same as standard even count PIC cable, and has the same number of pairs of number 24 AWG PVC insulated conductors as there are pairs of binding posts, thus providing in and out line connections. The stub cable pairs are connected to the binding posts in horizontal sequence and appropriate lug numbers are stenciled on the marking strips to facilitate splicing to even count PIC cable.

Holes in the bottom of the box and ten additional pairs of binding posts at the bottom of the panel are provided for bringing in and terminating service wires. Brackets for pole or wall mounting are furnished. The terminal housing is equipped with a locking device to prevent the horizontal door latch from being opened. This device is locked and unlocked with a 216B Tool which must be ordered separately.

Used to furnish cross connecting facilities in the distribution cable plant where a bottom access stub cable is required for connecting to buried or underground systems.

Replaces BG200 and BG400 Cable Terminals.

TERMINALS

Cable

NC and NF Type

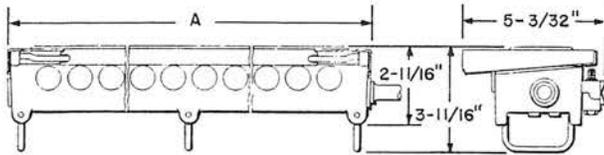

Fig. 1

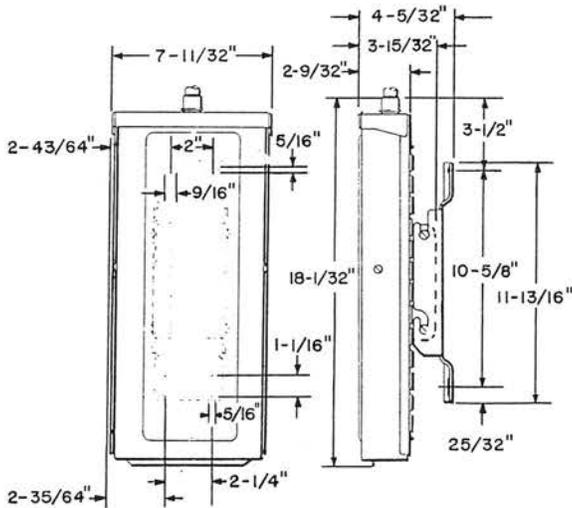

Fig. 2

NC10 and NC16, NF10 and NF16: Each consists of a cast metal housing having a hinged metal cover and containing terminals and a lead covered polyvinyl chloride insulated nonquadded stub cable molded in a gas tight terminal block. NC type cable terminals contain protector units as indicated in table. Cable terminals are equipped with a 3-foot stub cable having number 24 AWG conductors. Can be obtained equipped with a stub cable 5 feet 6 inches, 8, 12, or 25 feet long when specified. Each has three distributing rings for supporting drop wires. Terminal block can be reversed to permit entrance of stub cable from opposite end of housing.

For use in outdoor distributing systems and can be mounted directly on the cable and strand. Can also be mounted on a pole or wall by means of a 45A Bracket which if required must be ordered separately.

NC25 and NF25: Each consists of a sheet metal housing containing terminals and a lead covered polyvinyl chloride insulated nonquadded cable molded in a gas tight terminal block. Equipped with a 5-foot 6-inch stub cable having number 24 AWG conductors. Can be obtained with a stub cable 8, 12, or 25 feet long when specified. Terminal block can be reversed to permit entrance of stub cable at bottom of housing.

For use in cable distributing systems for pole or wall mounting.

TERMINALS

Cable

NH16 and NH25

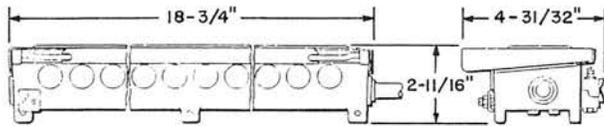

Fig. 1

Each is provided with a clamp fixture for terminating the number 6 ground wire to the housing to provide protector ground, and a 12-foot lead covered polyvinyl chloride insulated nonquadded stub cable having number 24 AWG conductors. Can also be obtained with stub cable 25 feet long when specified.

Arranged for pole or wall mounting. The terminal block can be reversed to permit entrance of stub cable at bottom of housing.

Used as fuseless protected building terminals, either indoors or outdoors.

NH16: Consists of a cast metal housing having a hinged metal cover and containing terminals and the stub cable molded in a gastight terminal block. A 45A Bracket (not shown in illustration) is provided for pole or wall mounting.

NH25: Consists of a sheet metal housing containing terminals and the stub cable molded in a gastight terminal block.

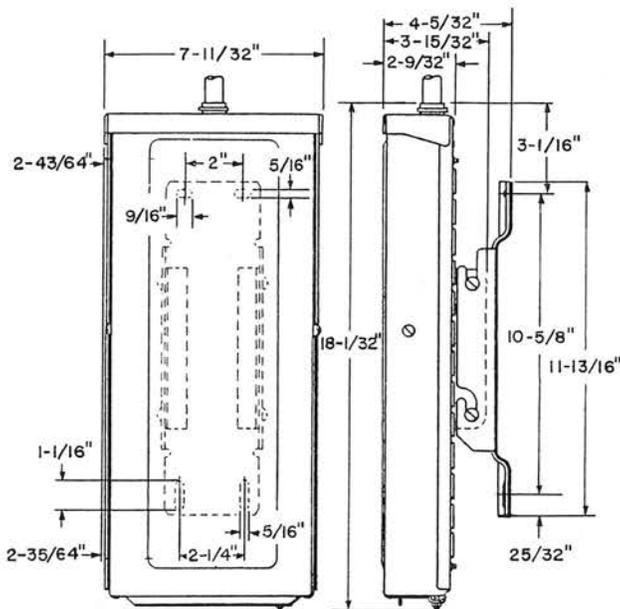

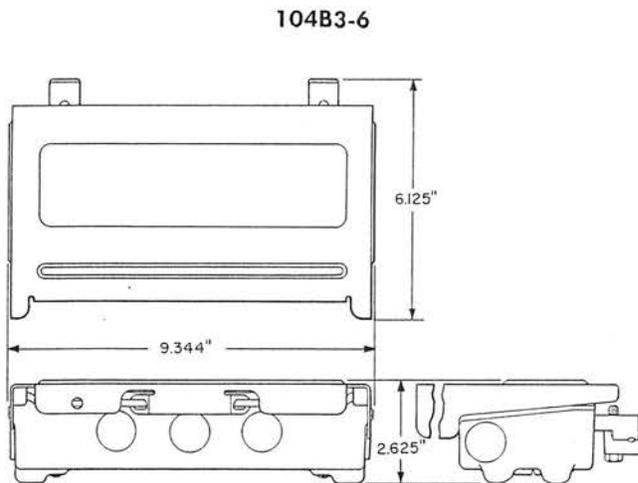

Fig. 2

TERMINALS

Wire

Consists of a cast metal housing having a hinged metal cover containing a connecting block equipped with six pairs of binding post and two terminals for ringing ground connections:

Arranged for mounting on the support wire of multiple line wire. Knockouts are provided in the housing for pole or cross arm mounting.

Provided with rubber grommets for entrance of wires.

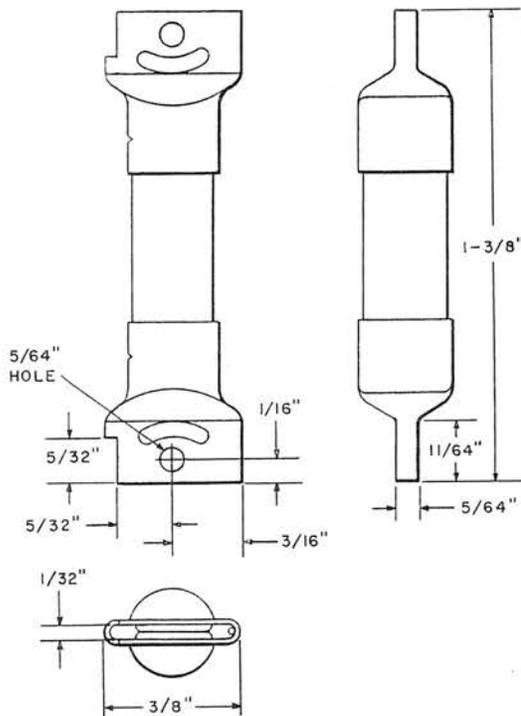

Used for outdoor use with multiple line wire for drop wire connections where protection is not required.

Replaces 104B2-6 Wire Terminal.

Comcode: 101 233 179

THERMISTORS

1A

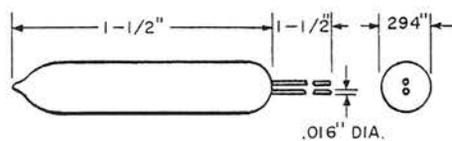

Consists of a circuit element, having a negative temperature coefficient of resistivity, in a glass envelope enclosed in a fiber tube with metal end caps. The thermistor is designed to act as a time delay element in circuits to delay relay operation. With the nominal resistance at 77° F with 60,000 ohms zero current and 450 ohms maximum current, the maximum continuous current is .015 ampere for ac only. Temperature coefficient at 77° F is -1.7 percent per degree F.

Arranged to mount on apparatus terminals, and for use in PBX trunks, wiring plans, and key telephone systems employing a ring-up relay.

Comcode: 100 748 029

21A

Consists of a bead type thermistor mounted in an evacuated glass tube and provided with tinned leads. Has a high negative temperature coefficient of resistance and

is for use as an oscillator amplitude control. Negative temperature coefficient of resistance at 25° C is approximately 4.6 percent per degree C.

Cold resistance:

Ro at 0° C is approximately 18 megohms

Ro at 25° C is approximately 5.3 megohms

Ro at 40° C is approximately 2.7 megohms

Power sensitivity:

To reach Ro/100 at 25° C requires approximately 2 milliwatts

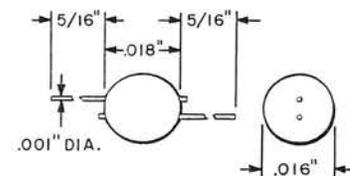

To reach Ro/1000 at 25° C requires approximately 5 milliwatts

Maximum continuous current is 1 milliampere ac or dc.

For use in the alarm and control circuit of the TD-2 Radio System and for sequence signaling transmitting units in television or radio order wire circuits.

Comcode: 100 748 284

23A

Glass-coated bead type thermistor with platinum iridium leads. Negative temperature coefficient of resistance at 25° C is approximately 3.4 percent per degree C and at 38° C is approximately 3.1 percent per degree C. Maximum safe operating temperature is 150° C.

Cold resistance:

Ro at 0° C is approximately 5000 ohms

Ro at 25° C is approximately 2000 ohms

Ro at 38° C is approximately 1300 ohms

Ro at 50° C is approximately 900 ohms

Ro at 75° C is approximately 460 ohms

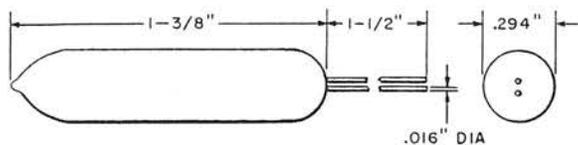

Ro at 100° C is approximately 250 ohms

Intended for use in measuring high frequency power in test equipment and for measurement of temperature where an extremely small electric thermistor sensing element is required.

Comcode: 100 748 326

THERMISTORS

37B

Consists of a bead type thermistor mounted in an evacuated glass tube and provided with tinned leads. When measured at an ambient temperature of 70° C with 60 milliamperes flowing through the thermistor, the resistance is 6,000 ohms minimum and 10,000 ohms maximum. With 10 ma applied the resistance is 84.6 ohms minimum and 95.4 ohms maximum. The ratio of resistance at 70° C to that at 25° C is approximately 5.6.

For use in television terminals.
Comcode: 100 748 490

THERMOCOUPLES

20, 21, and 22 Type

A thermoelectric couple in which the junction of two dissimilar metals is heated by passing a current through a resistance wire to the midpoint of which the junction is attached. These elements are enclosed in a highly evacuated glass bulb which is packed in cotton and mounted in a container of insulating material. Four terminals are provided at one end, two (marked H) for connection to the heater element and two (marked G) for connection to the couple element.

TOOLS

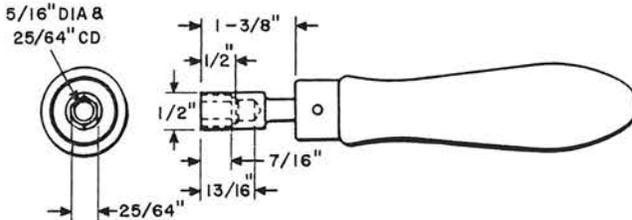

45B

A socket wrench for use on armature adjusting nuts of relays and clamping and mounting nuts of number 114 and similar type relays.

Comcode: 100 750 397

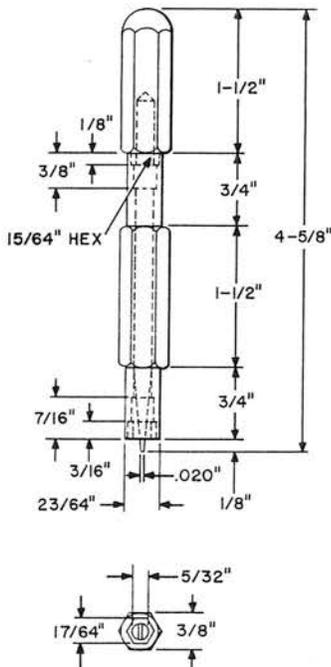

46

A socket wrench for use on hexagon cap nuts of relays.

Comcode: 100 750 405

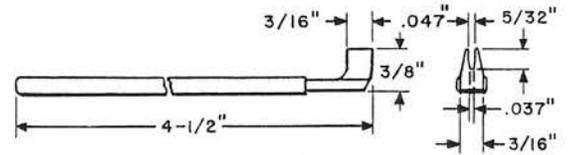

48

A double socket wrench and screwdriver. Used in adjusting armature contact screws of relays.

Comcode: 100 750 421

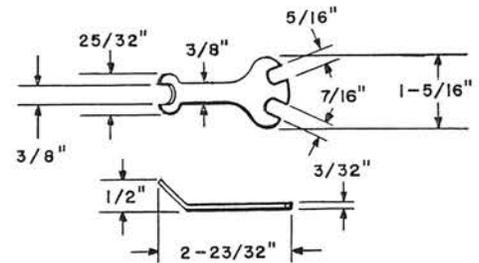

50B

A tool for adjusting relay springs.

Comcode: 100 750 439

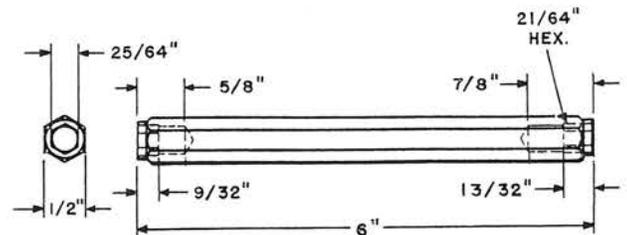

63

A triple wrench for use on nuts of binding posts of receivers and transmitters.

Comcode: 100 750 462

70

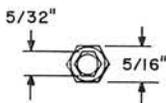

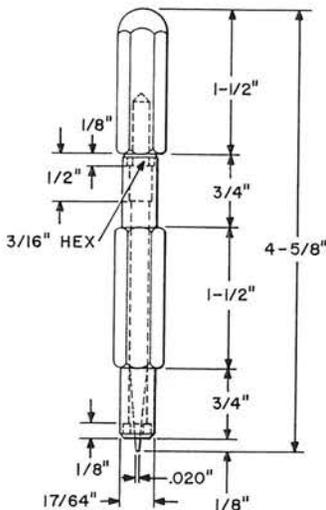

A double socket wrench for use on 21/64 inch and 25/64 inch hexagon nuts on receivers, transmitters, and subscriber set binding posts.

Comcode: 100 750 488

TOOLS

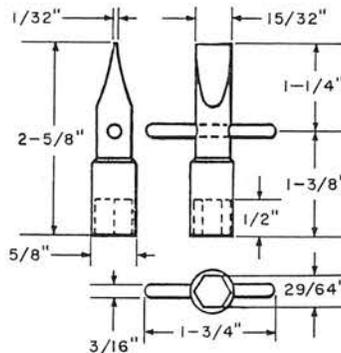

72

A double socket wrench and screwdriver. Used in adjusting armature contact screws of relays. Engages 3/16 inch and 5/32 inch hexagon nuts. Screwdriver part is known as number 147 Tool and socket wrench end is known as 403A Tool. May be ordered separately under these code numbers.

Comcode: 100 750 504

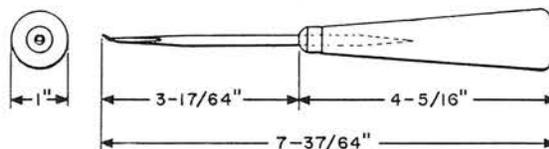

84

A combination socket wrench and screwdriver for use on number 7 type fuses. Socket engages hexagon nut, 7/16 inch across flats.

Comcode: 100 750 546

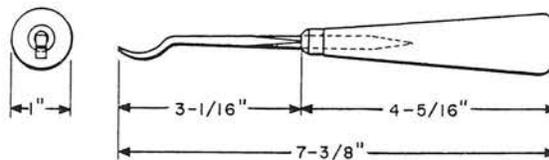

117

A spring adjuster for use in adjusting tip and ring springs of number 49 and number 92 Jacks. Used with number 118 Tool for adjusting abnormally bent ring springs of the number 92 Jack. Has offset end to reach the end of the tip spring without interfering with the ring spring.

Comcode: 100 750 637

118

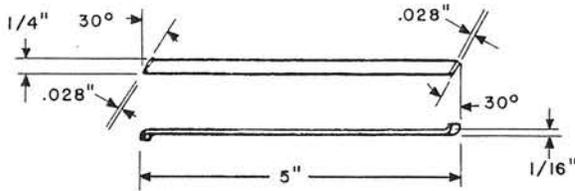

A spring adjuster for use in adjusting abnormally bent ring springs of the number 92 Jack. Used in connection with number 117 Tool.

Comcode: 100 750 645

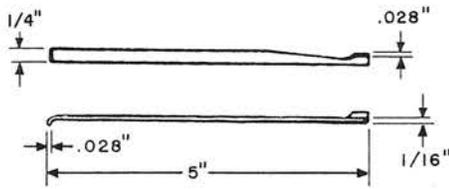

TOOLS

206

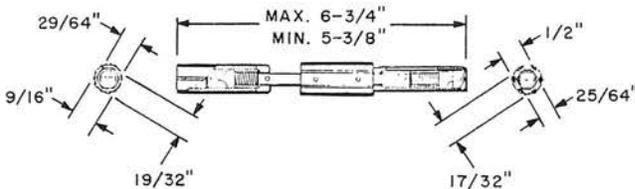

An offset screwdriver used with the number 207 Tool for adjusting the screws holding the springs on flat type relays after the relays have been mounted.
Comcode: 100 750 850

207

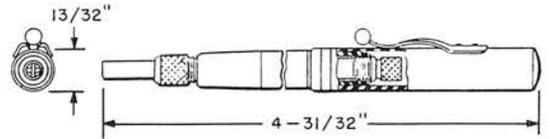

An offset screwdriver used with the number 206 Tool for adjusting the screws holding the springs on flat type relays after the relays have been mounted.
Comcode: 100 750 868

216B

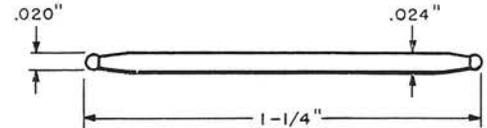

A combination double end screwdriver and double end socket wrench (taking hexagon nuts 3/8 inch and 7/16 inch across the flats) for use in placing fuses in cable terminals and connecting wires to fuses and binding posts. The socket wrenches may be extended beyond the screwdriver ends and locked in position or may be released to turn freely over the screwdriver shanks. Ends are insulated from each other by an insulating coupling.
Comcode: 100 750 926

265C

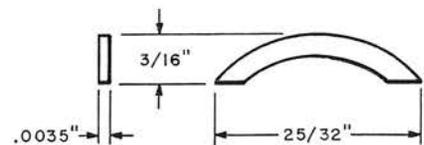

Consists of a chuck having a rubber handle and a magazine. Chuck is arranged to hold any number 266 type tool. Furnished with a 266E Tool in the chuck and six 266C and five 266E Tools in the magazine.
Comcode: 100 751 221

266C

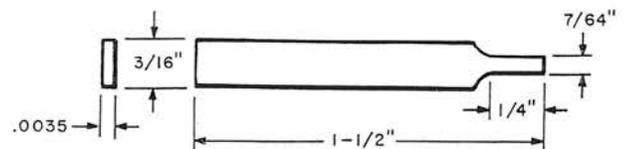

A sand blasted steel music wire. For use in cleaning pits on relay contacts.
Comcode: 100 751 239

266D

A sand blasted sheet steel blade. For use with the 265C Tool for burnishing contacts on UB type relays.
Comcode: 100 751 247

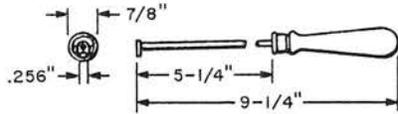

266E

A sand blasted sheet steel blade. For use with the 265C Tool for burnishing relay contacts except those on UB type relays. The wide end is for use on flat spring relays and the narrow end for use on wire spring relays.
Comcode: 100 751 254

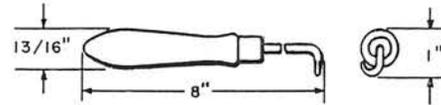

TOOLS

277

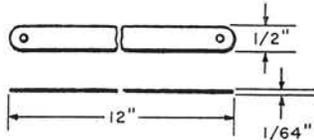

An open end offset wrench, intended for use on mounting nuts of number 18 or 19 type resistors which have been wired in position. Arranged for hexagonal nuts 1/4 inch across flats.
Comcode: 100 751 353

289

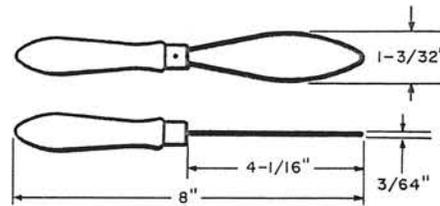

Metal hook with a wooden handle intended for dressing skimmers to relays and resistors.
Comcode: 100 751 395

284

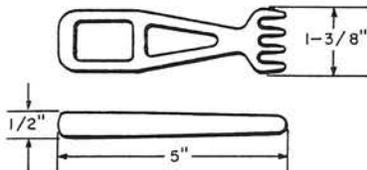

A straight metal needle intended for use as a cable sewing needle.
Comcode: 100 751 361

291

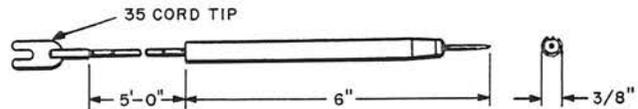

Consists of a piece of music wire formed into a loop and mounted in a wooden handle. For pulling wires in terminal blocks.
Comcode: 100 751 403

286

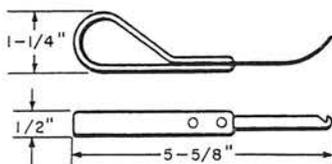

A metal comb intended for dressing skimmers to jacks.
Comcode: 100 751 379

298

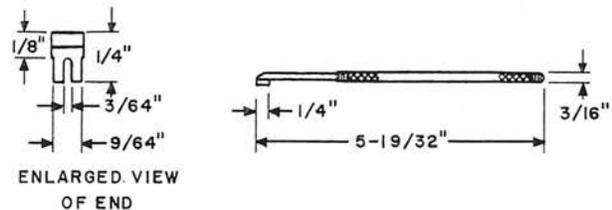

A test pick having a handle of insulating material and equipped with a connecting cord.
Comcode: 100 751 452

287

A curved metal needle with a metal handle. Used as cable sewing needle.
Comcode: 100 751 387

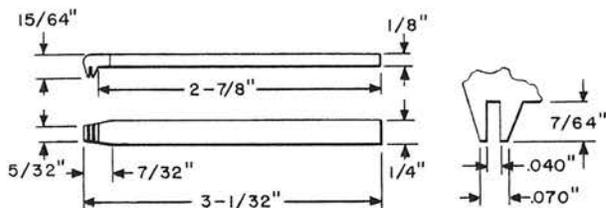

300

Used in adjusting relay springs. Handle covered with cotton sleeving.
Comcode: 100 751 460

TOOLS

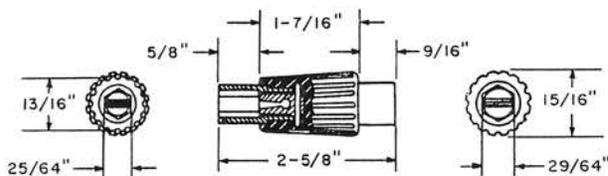

303

Used to adjust interrupter spring and retaining pawl on number 200 type selectors; also used to adjust springs on vertical type key.

Comcode: 100 751 478

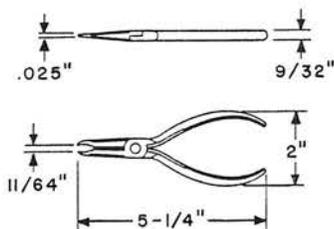

311

A double ended socket wrench for use on substation apparatus. The sockets are molded into a fluted handle of insulating material. A slot is provided at the bottom of each socket so that a screwdriver can be inserted for use as an extension handle. Engages hexagon nuts 3/8 inch and 7/16 inch across flats.

Comcode: 100 751 510

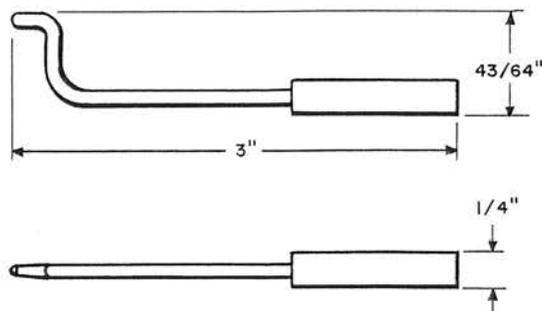

319B

For use in removing number 2, 4, and 8 type lamp caps and number 59, 60, and similar type number plates.

Comcode: 100 751 585

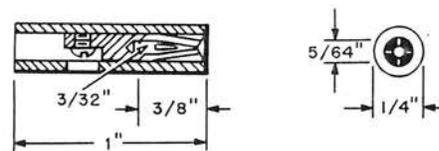

340

Used in adjusting armature and contact air gaps on polarized relays of number 206 and 215 types.

Comcode: 100 751 742

360A, B, and C

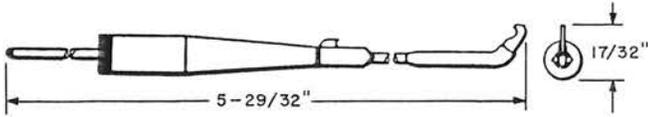

Spring chucks. Used in conjunction with number 361, 361B, 364, 365, or 419A Tools; arranged to attach to number 893, W1C, W1H, W1J, W1K, W1L, W1M, or similar cords.

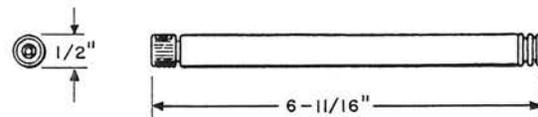

Code	Comcode	Shell Color
360A	100 751 940	Red

410B	100 752 476	2

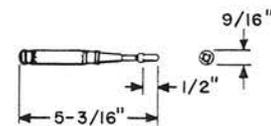

411C

An adjustable test pick with handle of insulating material. Used in conjunction with 360A Tool.

Comcode: 101 204 485

414B

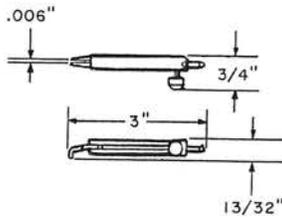

Used in driving number 49 and 141 type jack sleeves into position when replacing worn sleeves in jack mountings.

Comcode: 100 752 518

TOOLS

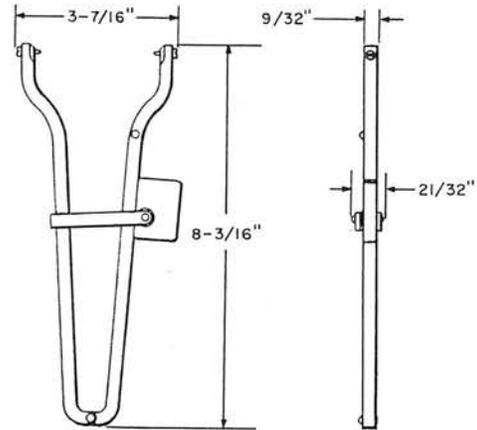

419A

Used in conjunction with number 360 type tools to make test connections to the springs and terminals of relays and other telephone apparatus.

Comcode: 100 752 567

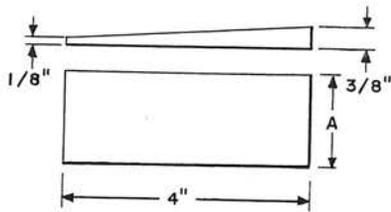

438A

Intended for use in removing and replacing transmitters, receivers, and various parts on E1B type hand sets.

Comcode: 100 752 690

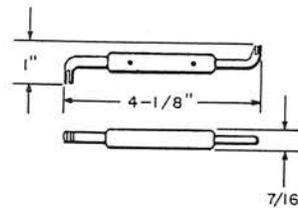

429A and B

Wooden wedges intended to support universal type key above key shelf when inspecting and adjusting keys.

Code No.	Comcode	Dimension A (Inches)
429A	100 752 633	1-1/2
429B	100 752 641	2-1/4

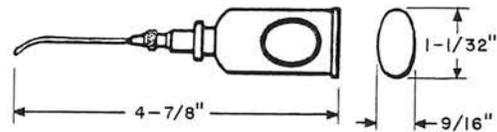

466A

Intended for use in adjusting contact springs on hand set mountings, desk stands, station keys, and other station apparatus. Also used for adjusting contact springs.

Comcode: 100 752 948

486A

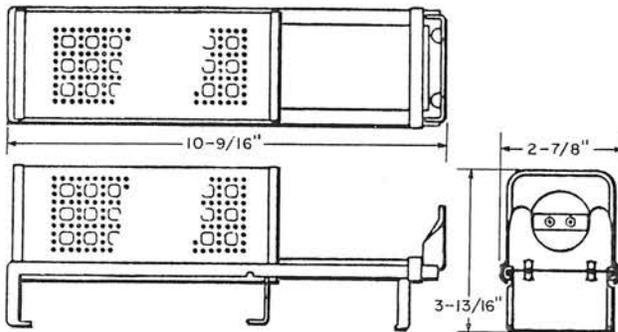

Oil can with special nozzle. Intended for use in lubricating fulcrum pins of universal type keys.

Comcode: 100 753 151

TOOLS

504A

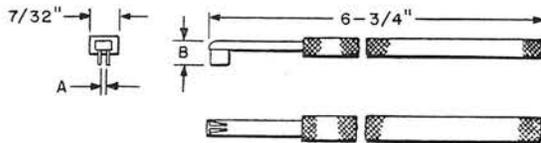

A rectangular cage; inner shield mounted on a base which may be used on a flat surface or fastened to a ladder step. Base extends beyond the cage and is formed to fit the handle of a soldering iron.

Used as a holder for a soldering iron.

Comcode: 100 753 342

505A, 506A and B, and 507A

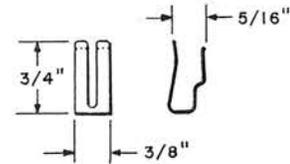

Contact spring adjusting tools. Have insulating covers on handles.

505A, 506A, and 507A: Intended for use in adjusting U- and Y-type relays.

506B: Intended for use in adjusting number 444 type jacks.

Code No.	Comcode	Dimensions (Inches)	
		A	B
505A	100 753 359	.015	1/4
506A	100 753 367	.025	1/4
506B	100 753 375	.024	3/16
507A	100 753 383	.032	15/64

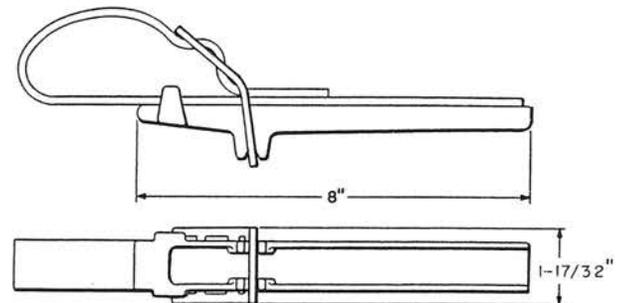

508A

An armature blocking tool consisting of a U-shaped metal clip intended for blocking the armatures of U- and Y-type relays in either the operated or unoperated positions.

Comcode: 100 753 391

514C

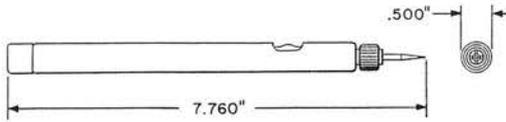

An adjustable strap wrench with a metal handle. Used for tightening and loosening the transmitter and receiver caps of hand sets and for other applications where an adjustable strap wrench can be used.

Comcode: 100 753 474

TOOLS

518C

An adjustable test pick having a handle of insulating material containing a 51,000 ohm \pm 5% resistor which is connected in series with the test pick. A clip switch is provided for short-circuiting the resistor.

Arranged for mounting a 360 type tool at one end; this end is equipped with a threaded cap to prevent release of the tool which is connected to a test cord. The other end is equipped with a chuck, mounting a test pick which can be adjusted to extend approximately 3-3/4 inches.

Used initially for circuit testing.

Replaces 518B Tool.

Comcode: 101 470 268.

563A, 564A, 565A, and 566A

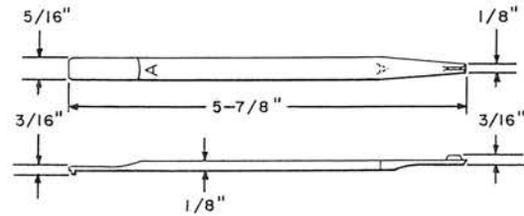

Fig. 1

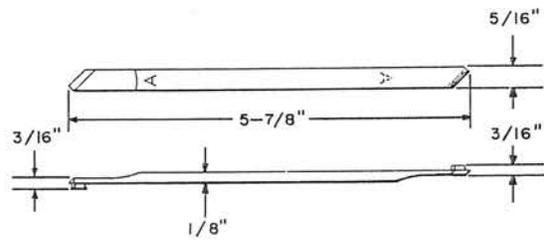

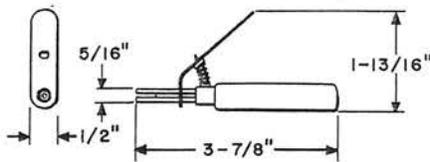

Fig. 2

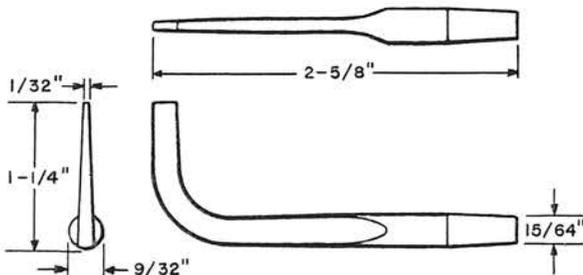

553A

Used in removing switchboard lamps.

Comcode: 100 753 904

562B

Used in checking the stud gaps of U, Y, and UA type relays.

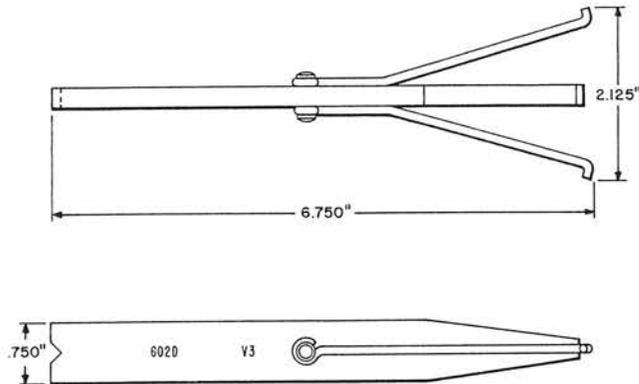

Comcode: 100 754 019

Offset screwdrivers for number 6 and 8 screws, respectively. For general use.

Code	Comcode	Fig. No.
563A	100 754 027	1
564A	100 754 035	1
565A	100 754 043	2
566A	100 754 050	2

TOOLS

602D

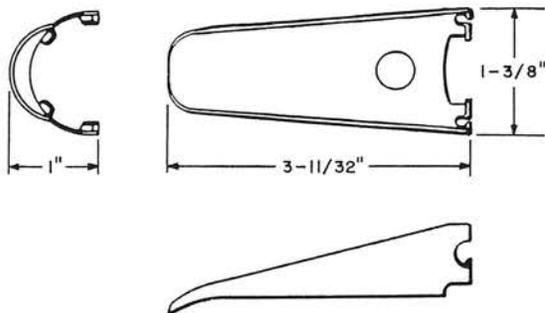

Consists of a bar having two swivel hooks which are intended for insertion in the holes provided in the lugs of the amplifier. The ends of the bar are notched so as to provide a brace against the repeater shelf when removing the amplifier.

Used to remove plug-in amplifiers associated with V3 and V4 Repeaters from their shelf mountings.

Comcode: 100 754 456

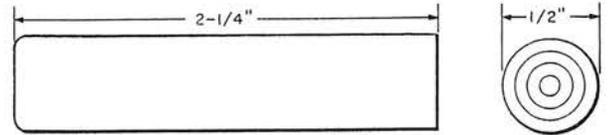

603A

For use as a lever in removing number 275 and 276 type relays from their sockets. Has wedge projections at one end which are intended to be inserted between the base of the relay and the socket.

Comcode: 100 754 464

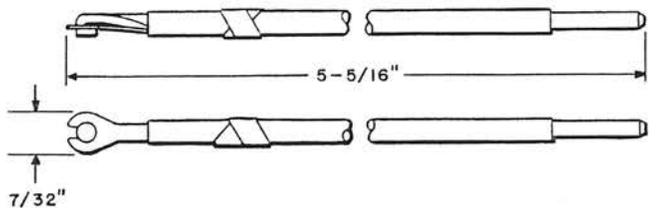

605A

Consists of a metal rod, one end of which is recessed. For use in maintaining concentricity between the center contact and the body of a number 337 type plug while soldering the plug to the center conductor of a coaxial cable.

Comcode: 100 754 514

607A

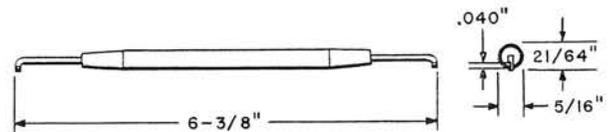

Consists of a metal rod, the center portion of which is covered with an insulating sleeve. One end is hook-shaped. The other end is arranged to fit a number 360 type tool.

For use as a connector in observing the electrical performance of U, Y, and UA type relays.

Comcode: 100 754 530

628A

Consists of a molded handle of insulating material with an offset metal blade containing a slot at each end.

Used for disengaging the balance spring on the AF, AG, and AJ type relays.

Comcode: 100 754 720

TOOLS

629A and B

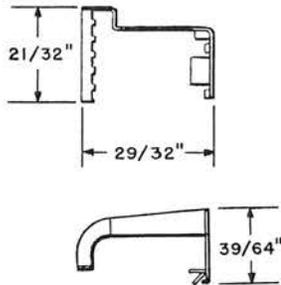

Fig. 1

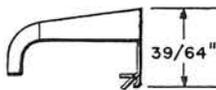

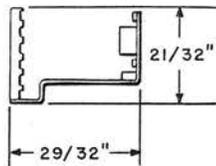

Fig. 2

Metal spring holders arranged to clamp onto the core plate of the relays and slotted to engage the movable springs on the right-hand side of the fixed springs. See Fig. 1 for 629A and Fig. 2 for 629B.

For use with AF, AG, and AJ type relays in conjunction with the 630A Tool in guiding the movable springs during the removal of cards from the relays.

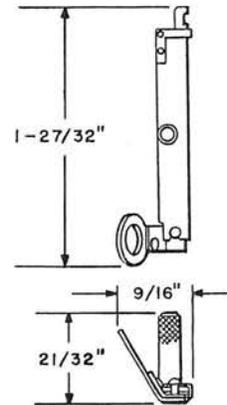

629A: Engages springs in positions 7 through 12.

Comcode: 100 754 738

629B: Engages springs in positions 1 through 6.

Comcode: 100 754 746

630A

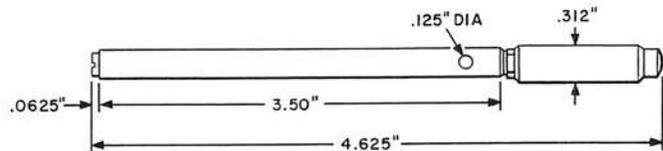

A metal spring holder slotted to engage the 12 movable springs on the left-hand side of the fixed springs. Equipped with a clamp plate of insulating material.

For use with the AF, AG, and AJ type relays in conjunction with the 629A and B Tools in guiding the movable springs during removal of cards from the relays.

Comcode: 100 754 753

635B

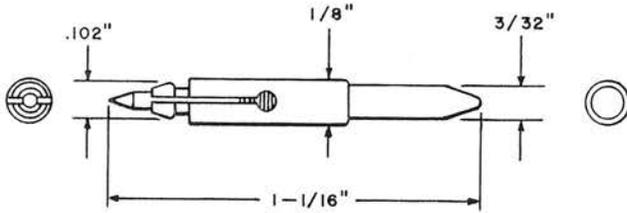

A wire wrapping tool having a handle and shell, each covered with a sleeve of insulating material. It has a .073 inch diameter hole 1/2 inch deep to accommodate a terminal and will wrap 3 wires up to 22 AWG. Has a hole near handle to facilitate removal of broken wires.

Used on terminals of wire spring relays, Number 5 Crossbar wire spring number group, and other components having similar terminals.

Comcode: 100 754 779

TOOLS

639A

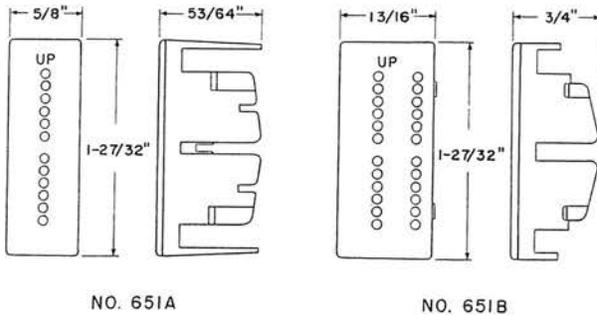

Consists of a round metal body having a metal pin-pointed spring-actuated plunger at one end and a metal plug at the other.

For use in making connections to the stationary contacts on the AF, AG, AJ, and AK type relays. The split sleeve at the pointed end is arranged to enter holes in the number 651 type tools when these tools are mounted on the relays during tests after the relay covers are removed. The plug at the other end is arranged to plug into a number 360 type tool.

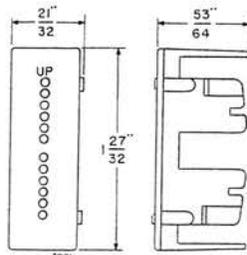

Comcode: 100 754 811

651 Type

NO. 651A

NO. 651B

NO. 651D

The 651 type tools are molded plastic covers for use in conjunction with the 639A and number 360 type tools for making test connections to stationary contacts on wire spring type relays.

651B: Used on 24 position AJ type relays.

Comcode: 100 754 944

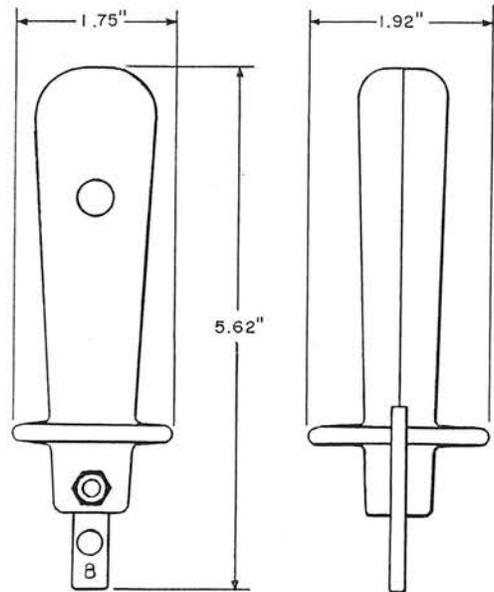

651C: Used on AF, AG, and 12 position AJ type relays which are not equipped with a wire clip for retaining the relay contact cover.

Comcode: 100 754 951

651D: Used on AF, AG, twelve position AJ, and AK type relays equipped with a wire clip for retaining the relay contact cover.

Comcode: 100 754 969

714B

A hand tool having a plastic handle, containing a metal blade. The blunt end is for connecting a looped conductor, and the sharp end for terminating and cutting off a plastic insulated wire on a quick-connect terminal. One half of the handle is yellow to indicate the cutting side of the blade and the other half is green.

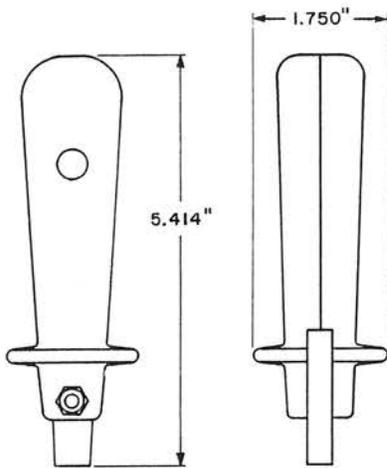

The blade is reversible and can be used in either of two positions. Changing positions of the blade requires the use of a screwdriver. Replacement blade can be obtained as P-46L211 Blade.

Intended for use with number 66 type connecting blocks.

Comcode: 100 755 511

TOOLS

714E2

A hand tool having a green plastic handle, containing a metal blade.

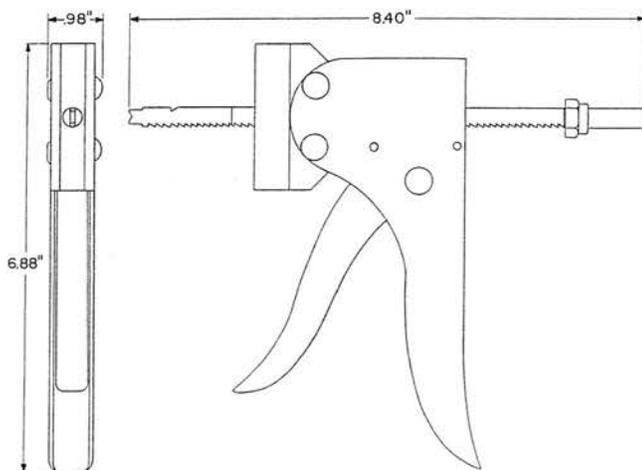

The blade is reversible and can be used in either of two positions. Changing position of the blade requires use of a screwdriver. One end of the blade is intended to seat wire in twin clip quick-connect terminal, and the other end is intended to seat wire in single clip quick-connect terminal. The blade is insulated with plastic to prevent electrical shorts during installation.

The blade has holes in the tool face to provide a means for holding the end of the wire during termination procedure.

Intended for use on Main Frames for ESS.
Replaces 714E Tool.

Comcode: 101 285 344

715A

Consists of a metal housing having a hand-grip operating lever that actuates a ratchet rod. Arranged to accommodate a 716A or 716B Tool.
Forms a part of the 104B Tool Kit.

Comcode: 100 755 545

716A and 716B

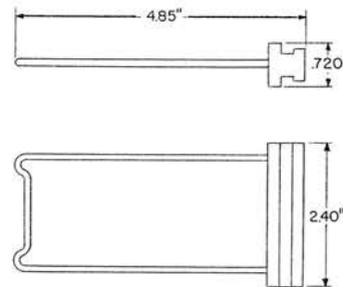

Fig. 1

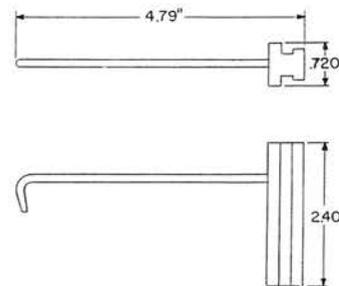

Fig. 2

Metal blocks each equipped with a formed metal rod.
716A: Used in conjunction with the 715A Tool, in replacing coils of AF, AG, and AJ type relays. See Fig. 1.

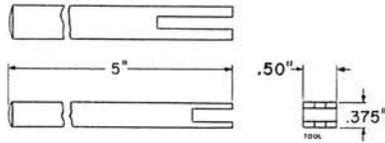

Comcode: 100 755 552

716B: Used in conjunction with the 715A Tool, in replacing coils of AK type relays. See Fig. 2.

Comcode: 100 755 560

TOOLS

717B

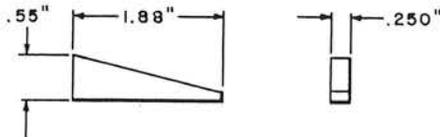

A metal bar with a double slotted end.

Intended for use in positioning the coil when replacing faulty coils on AF, AG, AJ, AK, 286, 287, and 288 type relays.

Comcode: 100 755 578

718A

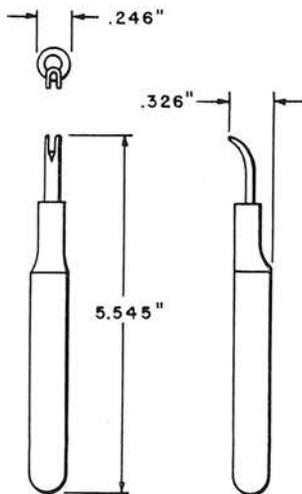

Wedge shaped block of insulating material.

Intended for use in supporting the armature and armature hinge springs, when displacing these parts to provide clearance for removal of the coils of AF, AG, AJ, and AK type relays.

Comcode: 100 755 586

724A

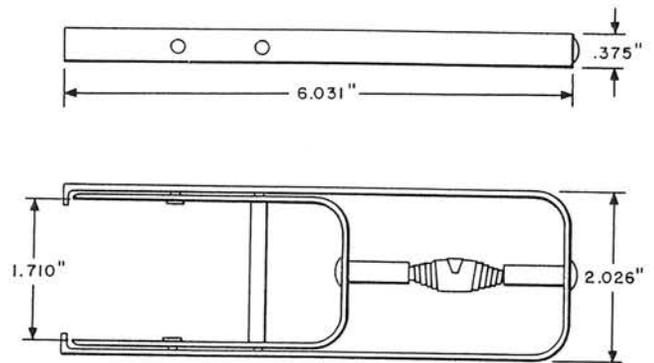

A metal tool having an insulated handle.

Intended for use to remove wire out of quick-connect clip type terminals in number 66 and 72 type connecting blocks.

Comcode: 100 755 636

752A

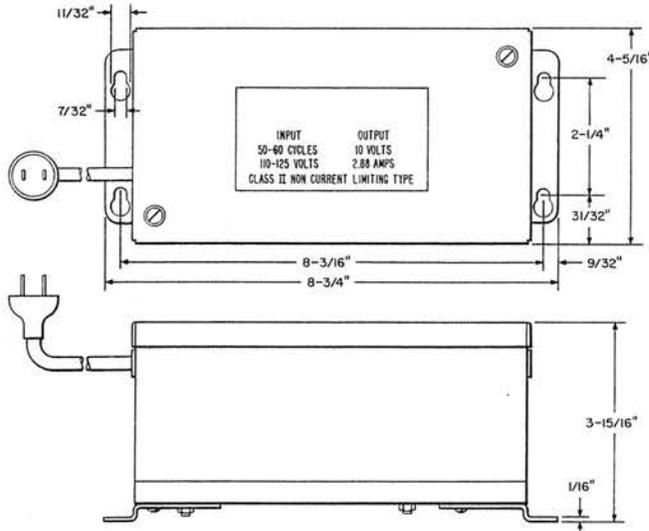

Consists of two nesting "U" shaped metal brackets connected with a spring and arranged to slide one within the other in opposite directions.

Used in extracting D-type circuit packs from 910A Connector.

Comcode: 101 170 355

TRANSFORMERS

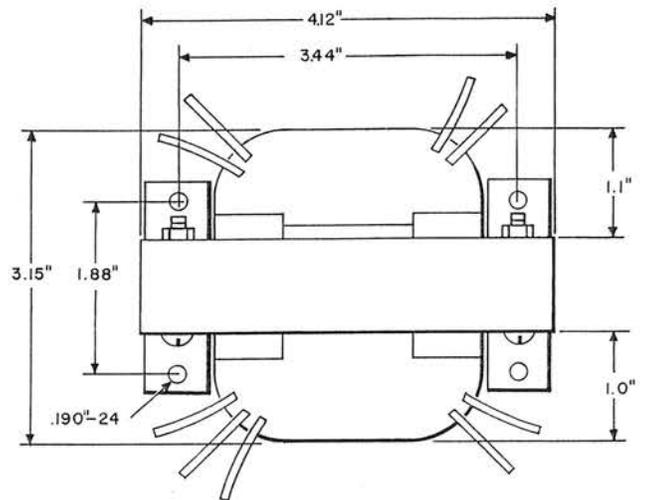

393B

Used as a power supply for lighting lamps in the 1A1 Key Telephone System.

Comcode: 100 761 055

410B

Consists of windings on a silicon steel core, potted in a housing and contained in a metal case which has a light olive gray enamel finish.

Provided with a power supply cord, approximately 6 feet long, equipped with a parallel blade plug for the primary connection. Unused length of cord can be stored in the case. Secondary connections are intended to be brought in through a bushing on the side opposite the power cord. Top cover can be removed for access to secondary terminals. Contains two 24C Fuses in parallel, which are internally wired in series with the secondary winding.

With 101-135 volts, 50-60 Hz, applied to the primary, transformer delivers 10 volts \pm 1 volt at any load from 0-2.88 amps when connected as follows:

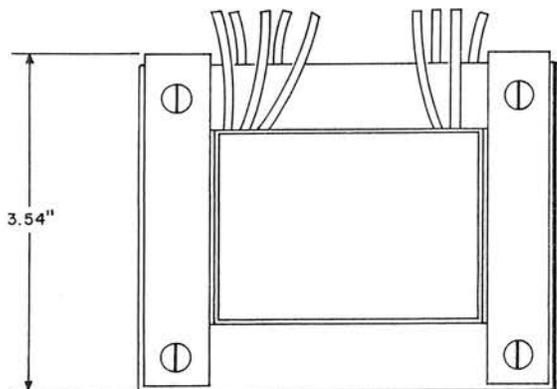

Primary Volts	Secondary Winding
110 \pm 8%	A-D
115 \pm 8%	A-C
120 \pm 8%	B-D
125 \pm 8%	B-C

Terminals B and C are taps on winding A-D. Closest recommended mounting centers are 4-7/16 inches by 8-15/16 inches.

Approximate dc resistance of windings:

Winding	Ohms
Primary	7.0
A-C	0.070(a)
A-D	0.070(a)
B-D	0.068(a)

(a) Resistance with one 24C Fuse replaced by a dummy fuse or other suitable shorting devices having a resistance less than .001 ohm.

Shell type transformer having a silicon steel core clamped between metal brackets which provide a means for mounting.

Provided with flexible terminal leads. The red, blue, and blue-white leads are approximately 3 inches long; the green, brown, and orange leads are approximately 3.5 inches long; and the red-white, green-white, and brown-white leads are approximately 4.5, 5.5, and 6.0 inches long, respectively.

With 111, 117, or 123 volts, 60 Hz, applied to winding (red, red-white), (red, blue), or (red, blue-white), respectively, winding (green, green-white) delivers 2.9 amps at approximately 18 volts, and winding (brown, orange) delivers 1.3 amps at approximately 18 volts, or winding (brown, brown-white) delivers 4.5 amps at approximately 9.5 volts. All windings are intended to operate at ground potential.

TRANSFORMERS

410B (Continued)

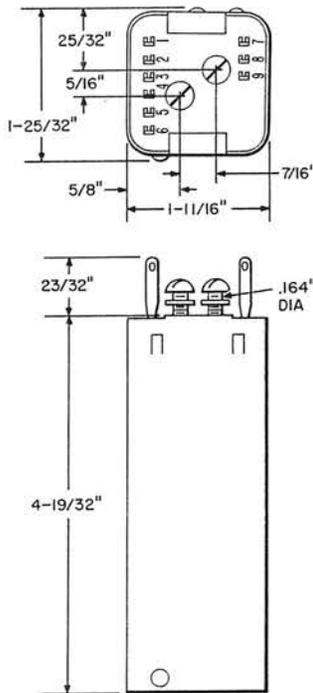

Approximate dc resistance:

Winding	Taps	Ohms
Red, Blue-White	Red-White, Blue	2.9
Green, Green-White	—	0.15
Brown, Orange	Brown-White	0.16

Closest recommended mounting centers are 3.625 inches by 4.500 inches.

Used with the 19A and 20A Power Units.
Comcode: 100 839 406

2008B

Consists of windings on a silicon steel core, two thermistors, and a resistor potted in a metal can.

With 115 volts, 60 Hz applied to windings (1-4), (2-4), or (3-4), the other windings deliver the individual loads specified below.

Winding	Winding (1-4) delivers		Winding (2-4) delivers		Winding (3-4) delivers	
	Volts	Amps	Volts	Amps	Volts	Amps
(5-7)	5.7	0.590	6.0	0.590	6.1	0.590
(5-8)	5.7	0.880	6.0	0.880	6.1	0.880
(5-9)	5.7	1.180	6.0	1.180	6.1	1.180
(5-6)	5.7	1.330	6.0	1.330	6.1	1.330

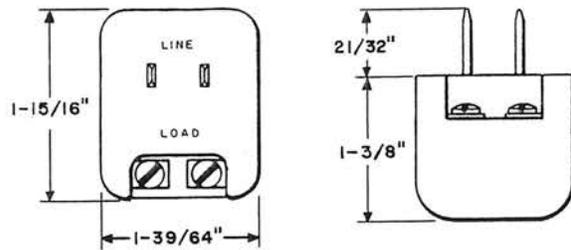

This transformer is temperature compensated so that the load voltages are maintained within $\pm 1\%$ over an ambient temperature range of 30°C to 65°C when operated under the above load conditions. Winding (5-6) is intended to be operated at not more than 50 volts peak to ground. Provided with an electrostatic shield between winding (1-4) and the other windings. The shield is connected internally to the core and can. Approximate dc resistances of windings (1-4) and (5-6) are 167 ohms and 0.512 ohm, respectively.

Closest recommended mounting centers are 1-13/16 inches by 1-13/16 inches.

Used in J44105 and J44106 Amplifiers in the A2A and A2B Video Systems, respectively.

Comcode: 100 763 754

2012A and 2012B Type

Consists of windings on a silicon steel core, encapsulated in a cast resin case. Available in light olive gray (-49) and ivory (-50).

Transformers are self-protected against burnout core to overloading or short-circuiting of the load terminals.

Two prong type terminals are arranged to plug into a standard convenience outlet and serve as the mounting device. Two recessed screw type terminals are provided for load connections.

A 2A type clamp (ordered separately) is required to provided a clamping arrangement.

2012A: With 115 volts, 60 Hz applied to the line winding, the load winding delivers approximately 6.7 volts at 250 ma. Approximate dc resistances of the line and load windings are 710 ohms and 15 ohms, respectively.

Used to supply dial light power to the 702BW type telephone set and the 51AW Control Unit.

TRANSFORMERS

2012B: With 115 volts, 60 Hz applied to the line winding the load winding delivers approximately 16.2 volts at 132 ma. Approximate dc resistances of the line and load windings are 710 ohms and 46 ohms, respectively.

Used to supply power to the 55AW-49 Control Unit in the 3B Speakerphone System.

Code No.	Comcode	Color
2012A-49	100 763 770	Light olive gray
2012A-50	100 763 788	Ivory
2012B-49	100 763 796	Light olive gray
2012B-50	100 763 804	Ivory

Approximate dc resistance:

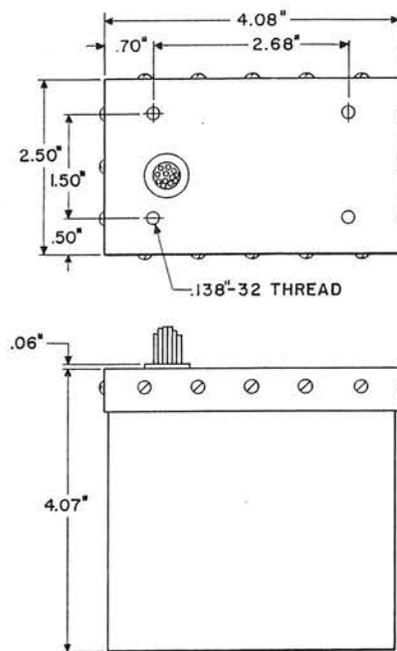

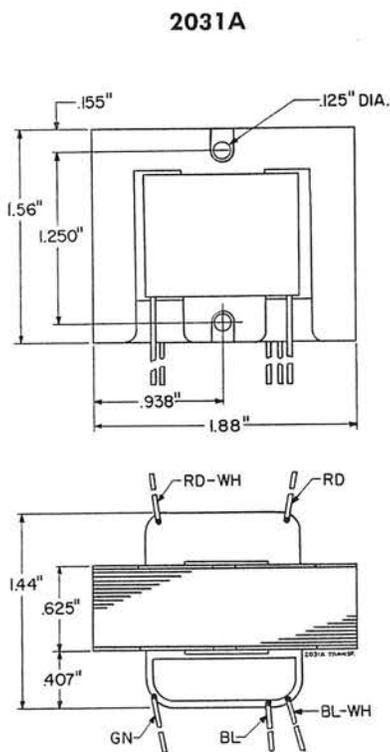

Winding	Ohms
Red, Red-White	98.5
Blue, Green	7.2

Closest recommended mounting centers are 1-11/16 inches by 2 inches.

Used in the J87202A Rectifier.

Comcode: 100 764 067

2055B

Consists of windings on a silicon steel core. Equipped with flexible terminal leads approximately 6 inches long.

With 117 volts, 60 Hz, applied to winding (red, red-white), winding (blue, green) delivers 0.16 amp at approximately 21.0 volts to both a bridge-type rectifier with a capacitive input filter and a full wave rectifier with a capacitive load. Terminal lead (blue-white) is a center tap on winding (blue, green). Winding (blue, green) is intended to be operated at ground potential.

Consists of windings on a silicon steel core having magnetic shunts potted and assembled in a metal can which provides magnetic shielding.

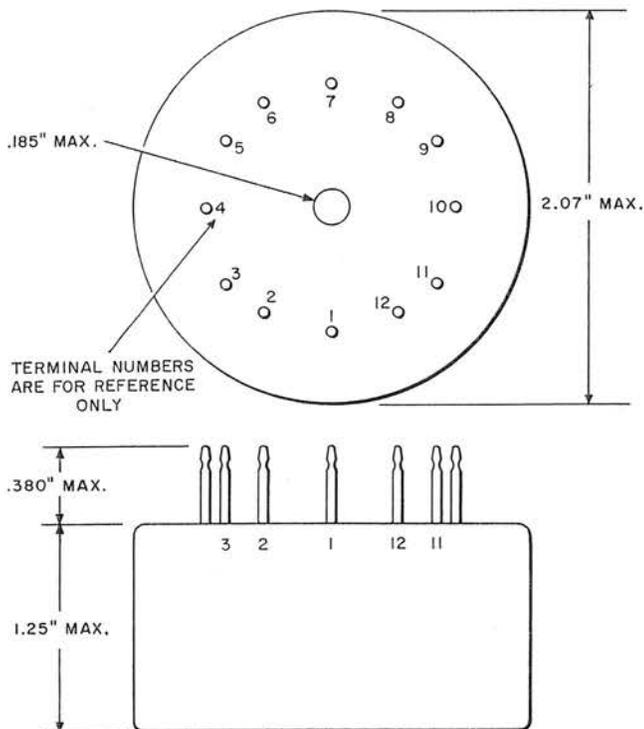

Provided with flexible terminal leads approximately 9 inches long.

This transformer has special characteristics which restrict it for use only with the J87212 Rectifier, 201AW Data Set, and 804AW Data Auxiliary Set.

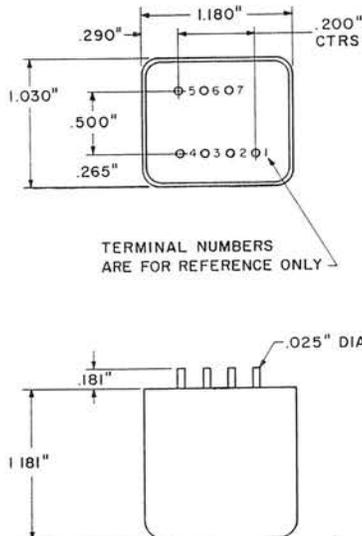

Comcode: 100 764 398

TRANSFORMERS

2151A

2543F

A toroidal transformer with a tape wound, oriented, 50 percent nickel-iron core cast in a cylindrical case of thermosetting resin.

With 40 volts dc applied alternately across windings (2-3) and (4-3) at a frequency of 8000 Hz, windings (1-2) and (4-5) each deliver 0.023 amp at approximately 3.3 volts into half-wave rectifiers terminated by resistive loads. Winding (6-7) delivers 0.075 amp at approximately 212 volts into a capacitively terminated full-wave bridge rectifier. Winding (8-9) delivers 0.040 amp at approximately 20 volts into a capacitively terminated full-wave bridge rectifier. Winding (10-12) delivers 0.025 at approximately 117 volts into a capacitively terminated full-wave rectifier with terminal (11) the center tap.

Windings (1-2), (4-5), and (2-3), (3-4) are wound as parallel pairs.

Comcode: 101 406 452

The maximum dc resistance of the windings at 20° C is as follows:

Windings	Resistance (Ohms)	Windings	Resistance (Ohms)
(1-2)	0.390	(6-7)	5.80
(2-3)	0.165	(8-9)	1.55
(3-4)	0.165	(10-11)	7.00
(4-5)	0.390	(11-12)	7.00

Consists of windings on a permalloy core, potted in a metal can and arranged to mount on printed wiring boards.

Has an impedance ratio of 300 to 28 ohms between windings (5-7) to (1-4). There are no electrical connections to terminals 2, 3, and 6.

The approximate dc resistance of windings is as follows:

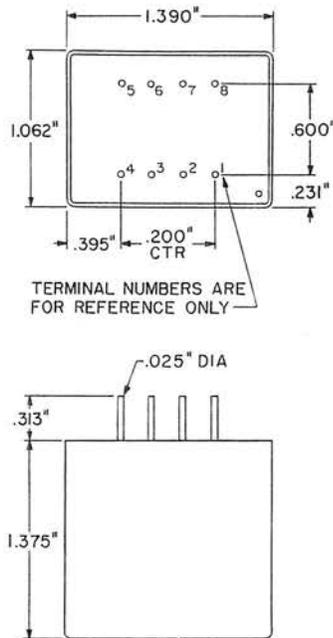

Windings	Ohms
1-4	2.1
5-7	31

Used in the receiver amplifier of the 3B Speakerphone System.

Comcode: 100 767 524

TRANSFORMERS

2568B

Consists of windings on a permalloy core, potted in a metal can and arranged to mount on printed wiring boards. Intended to operate over the voice frequency range.

The transformer has an impedance ratio of 1200 ohms or 600 ohms to 900 + 90 ohms between windings (1-5) or (2-4) to (6-7) and (7-8). Terminal 7 is a tap on winding (6-8). Terminals 2, 3, and 4 are taps on winding (1-5). Windings (2-3), (3-4) and (1-3), (3-5) are balanced to provide longitudinal suppression.

Approximate dc resistance:

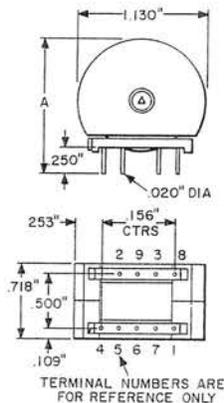

Windings	Ohms
1-5	90
2-4	70
6-7	105
7-8	10

Closest recommended mounting centers are 1.875 inches by 1.531 inches.

Used with 227A and B Amplifiers.

Comcode: 100 769 868

2576 Type

Each consists of windings partially enclosed in a ferrite core having an adjustable tuning slug.

Arranged to mount on a printed wiring board. Closest recommended mounting centers are 0.938 inch by 1.250 inches.

Adjustable over a range of ±5% from the nominal value.

Has a nominal inductance and dc resistance as indicated in the table at 3 volts ac, 1000 Hz. Has a ratio of 1:1 between windings (1-5) and (6-10). There are no electrical connections to terminals 2, 3, 4, 7, 8, and 9.

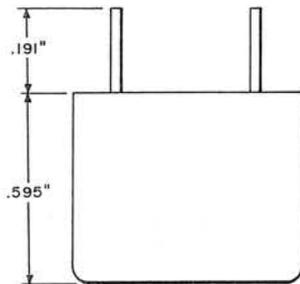

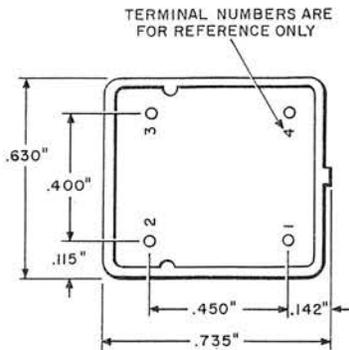

Code No.	Comcode	Nominal Inductance (h)	DC Resistance		Operating Frequencies (Hz)
			(1-5) (Ohms)	(6-10) (Ohms)	
2576W	101 188 613	.0518	15	18	2025 and 2225
2576Y	101 188 621	.0700	19	22	2025 and 2225
2576AA	101 188 639	.01660	4	6	1070 and 1270
2576AB	101 188 647	.01961	5	6	1070 and 1270

The 2576W and Y were used initially in Data Set 108A Demodulator—Linear Detector Circuit. The 2576AA and

AB were initially used in Data Sets 108B and C Demodulator—Linear Detector Circuit.

TRANSFORMERS

2579B

Consists of a spool winding with a shell-type, laminated permalloy core, potted with epoxy resin in a rectangular plastic case. Designed for single-side mounting by means of the terminals which are suitable for printed wiring boards.

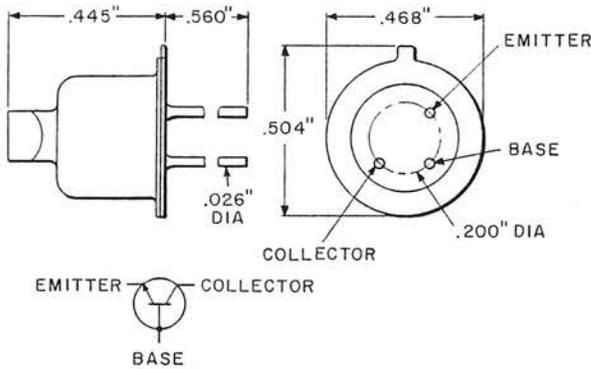

Has an impedance ratio of 150 to 1000 ohms between windings (1-2) and (3-4). Approximate dc resistance of windings (1-2) and (3-4) is 20.5 and 67 ohms, respectively. Operates over the voice frequency range.

Used initially in 151A Amplifier—In telephone station apparatus for coupling a transistor to the receiver.

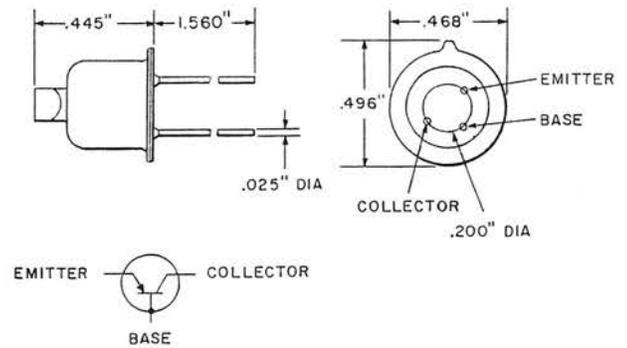

Comcode: 101 170 660

TRANSISTORS

8B

12E and K

An N-P-N germanium alloy junction transistor assembled in a hermetically sealed metal can.

Used with number 151 and 153 type amplifiers.

Comcode: 100 787 712

17A and B

18A and 19A

Each is a P-N-P germanium alloy junction transistor assembled in a hermetically sealed metal can.

17A: Used initially in the 901 Data Test Set (J79901).

Comcode: 100 788 025

17B: Used in the 238A Amplifier.

Comcode: 100 788 033

Maximum Ratings Absolute Values	17A	17B
Voltage		
Collector to base	-20	-20 V dc
Emitter to base	-10	-20 V dc
Collector to emitter	-20	-20 V dc

18A: Consists of a pair of N-P-N silicon nonepitaxial mesa transistors, one of which is shown in the illustration. The pair is matched so that the product of the common emitter current gains is in the range of 3,200 to 14,000.

TRANSISTORS

18A and 19A (Continued)

Each transistor is assembled in a hermetically sealed metal case.

On end with base and emitter leads, third lead extends only .040 inch beyond mounting surface and is for mounting purposes only.

Used initially in the 228A, D, H, and 229A Amplifiers.
Comcode: 100 788 041

TRANSMITTERS

662B

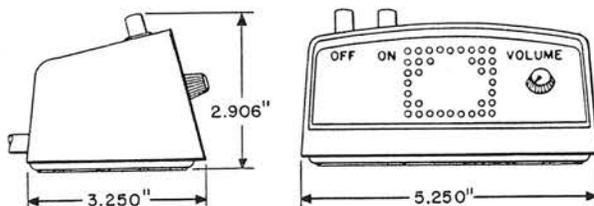

Consists of an AC1 Transmitter Unit equipped with 18-inch long leads and a clamp ring. Mounting screws are furnished. The cord tips are arranged for number 4, 5, or 6 screws.

For use in customized installations of the 3B Speakerphone System.

Comcode: 100 790 195

666BW Type

Each consists of a transistorized amplifier assembled on a printed wiring board, an AC1 Transmitter Unit, a volume control, a terminal strip, and an ON and OFF key assembly with a lamp strip and 51A Lamp mounted on a metal base and enclosed in a plastic housing. The ON push button is illuminated by means of the 51A Lamp. Furnished with a cord having the same color as the housing as referenced in the table.

For use in the 3B Speakerphone System.

667B

Consists of an AB2 Transmitter Unit, a three-transistor feedback amplifier, a volume control, two push button operated spring combinations, and an assorted lamp block assembled on a metal mounting. Terminated in a KS-16672L1 Connector and seven terminal leads approximately 11 inches long. Leads are equipped with cord tips which are arranged for number 4, 5, or 6 screws for connection to an associated dial and network. The ON push button operates two sets of make contacts and the OFF button operates a set of break contacts.

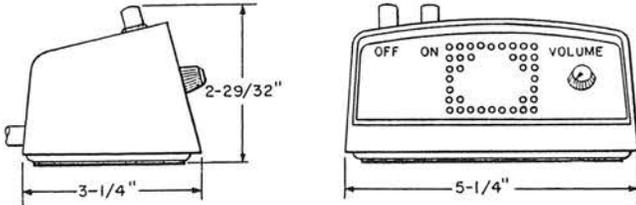

The lamp block is equipped with a light shield, and the ON push button is illuminated by means of a 51A Lamp. The connector is provided with a nonreturnable dust cover.

For use as part of number 630, 631, 632, 634, and 635 type telephone sets.

Comcode: 100 790 476

TRANSMITTERS

670AW Type

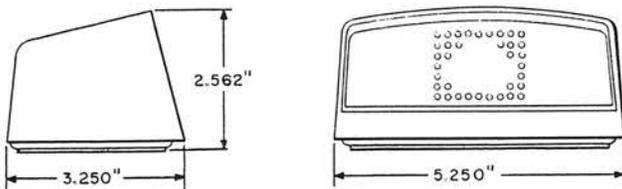

Each consists of a transistorized amplifier assembled on a printed wiring board, an AC1 Transmitter Unit, a volume control, a terminal strip, and an ON and OFF key assembly with a lamp strip and 51A Lamp mounted on a metal base and enclosed in a plastic housing. The ON push button is illuminated by means of the 51A Lamp. Furnished with a cord having the same color as the housing as referenced in the table.

671AW-60	100 790 906	Light Beige
671AW-61	100 790 914	Light Gray

For use as an auxiliary transmitter in conjunction with a 670AW type master transmitter in conference room arrangements having a maximum of five auxiliary transmitters in the 3B Speakerphone System.

672A

Consists of an AC3 Transmitter Unit, a three transistor feedback amplifier, a volume control, two push button spring contacts, and an associated lamp block assembled on a metal mounting. Overall dimensions are 6 inches long by 1.920 inches wide by 2.730 inches high.

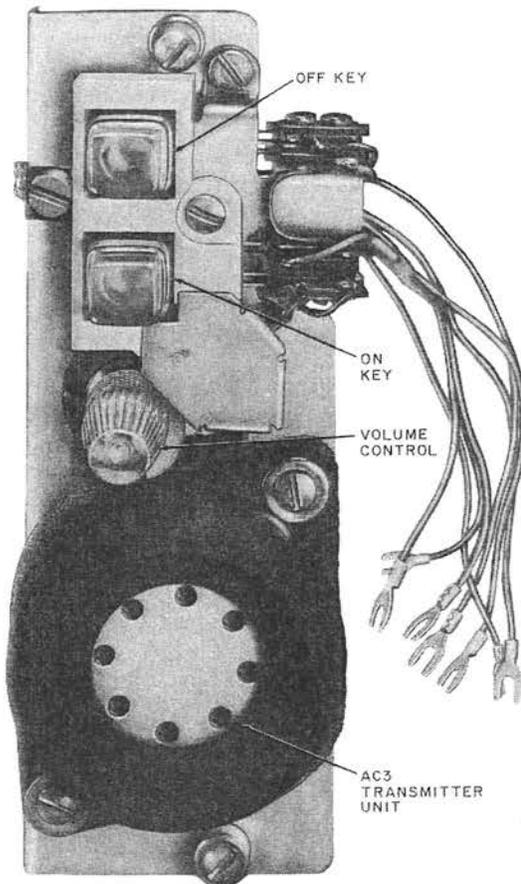

The transmitter is terminated with seven spade-tipped leads for connection to an associated circuitry. The ON push button operates two sets of make contacts and the OFF button operates a set of break contacts. The ON button is illuminated by a 51A Lamp.

Used with 3B Speakerphone service in the 3640AW and 3641AW type telephone sets.

Comcode: 100 790 948

TRANSMITTERS

673A

Consists of an AC3 Transmitter Unit, a three transistor feedback amplifier, a volume control, two push button operated spring contacts, and an associated lamp block assembled on a metal mounting. Terminated with seven leads equipped with cord tips for connection to associated circuitry.

The ON push button operates three sets of make contacts and the OFF button operates a set of break and a set of make contacts.

The lamp block is equipped with a light shield and the ON key button is illuminated by means of a 51A Lamp.

Overall dimensions are 5.108 inches long by 2.040 inches wide by 2.831 inches high.

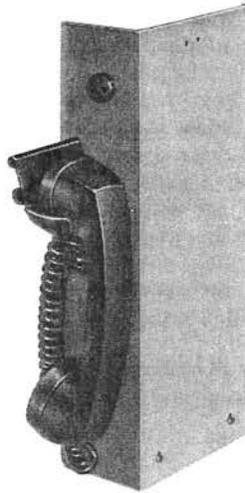

Used initially in the 3B Speakerphone System in 1671A7 Telephone Sets.

Comcode: 100 790 955

UNITS

Apparatus

8 Type

Each consists of a switchhook assembly, a G1FR-3 Hand Set, a 425E Network, a terminal block, and the apparatus listed below, assembled and wired in a case having a removable cover.

Arranged for but not equipped with a 123A1A Protector.

Arranged to mount in a number 111 type Apparatus Box.

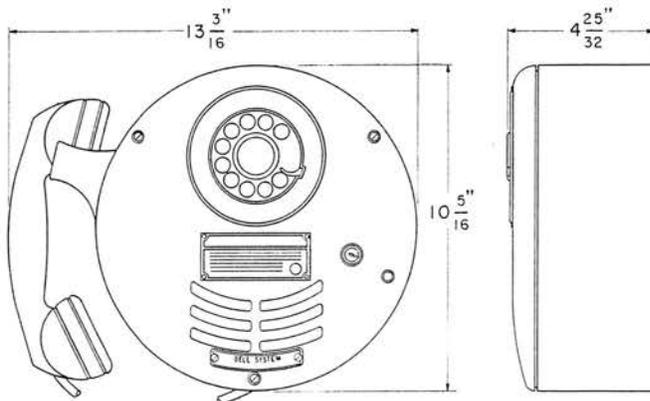

Provided with three machine screws for mounting.

Used in number 570 type Telephone Set.

Code No.	Comcode	Diode	Ringer	Switch	Resistor

(a) Single pole, double throw microswitch. May be obtained with a lock type switch when specified.

9AW and 9BW

NO. 9B ALSO GENERAL DESIGN AND DIMENSIONS OF NO. 9A

9AW: Consists of a 85A Apparatus Blank, a 195A Capacitor, a special 101A Induction Coil, a B1AB Ringer, two 29C Gongs, a F6ARW-3 Hand Set, and a 37B Varistor, contained in an aluminum housing, except the hand set which is external. The unit is equipped with a 23A Lock.

Comcode: 100 795 129

9BW: This unit is the same as the 9AW except it also is equipped with a special 6A Dial, a 56B Dial Adapter, a special 147B Number Plate and a 61D Filter.

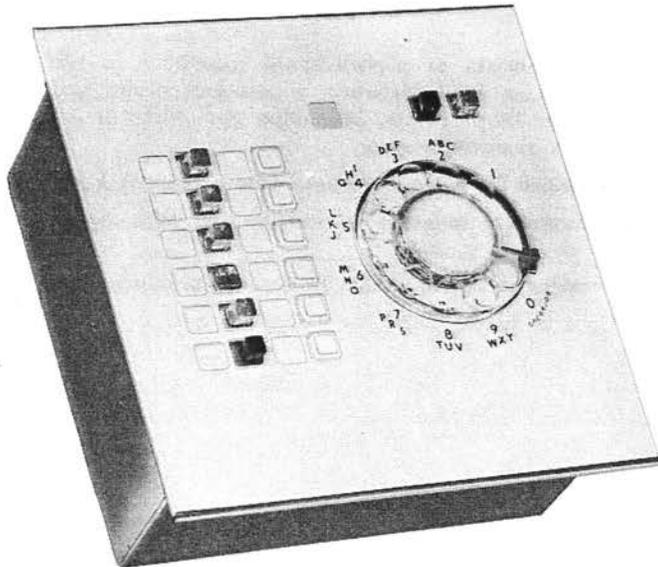

Comcode: 100 795 137

Each is furnished wired for bridged ringing lines. They may be arranged for grounded ringing by changing the termination of one ringer lead.

Forms a part of the 320ERW and 320FRW Telephone Sets, respectively.

**UNITS
Apparatus**

10A

Designed for flush mounting in a desk top. The unit contains a 599A Key, a 105B Apparatus Blank, and a 6N-3 Dial. Above the dial are mounted a white CALLS WAITING window illuminated by means of a 2Y Lamp, an amber buttoned FLASH key, and a clear buttoned supervisor's CALL key. The unit is furnished with a clear plastic 35A Face Plate together with five face mats colored silver, gold, blue, green, and cream white for use under the face plate to provide a choice of color contrasts, and a snap-on bezel for retaining the face plate and a mat.

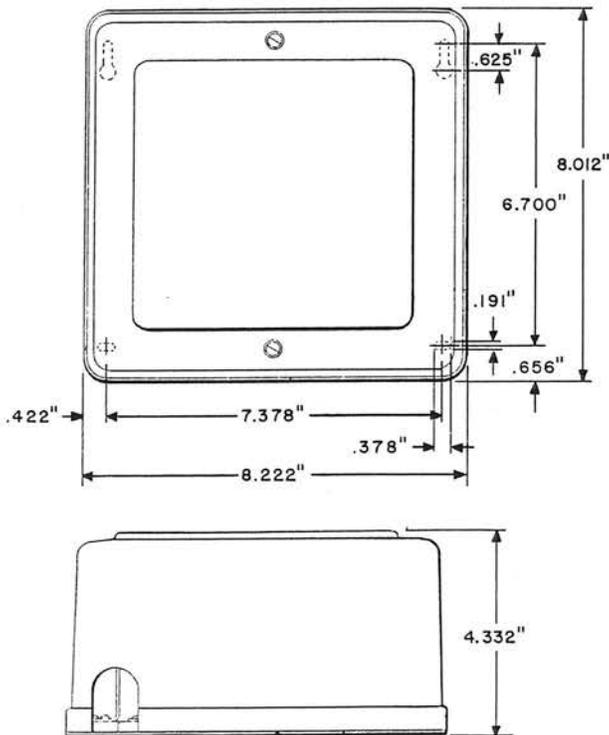

Terminal connections require an A25A type connector cable for the 599A Key. **Length and endings for the connector cables must be specified.** The overall dimensions are 8.463 inches wide by 4.148 inches deep by 8.992 inches high.

For use with call distributing systems at an attendant's position for answering and transferring incoming calls.

Comcode: 100 795 145

Control

55BW-49

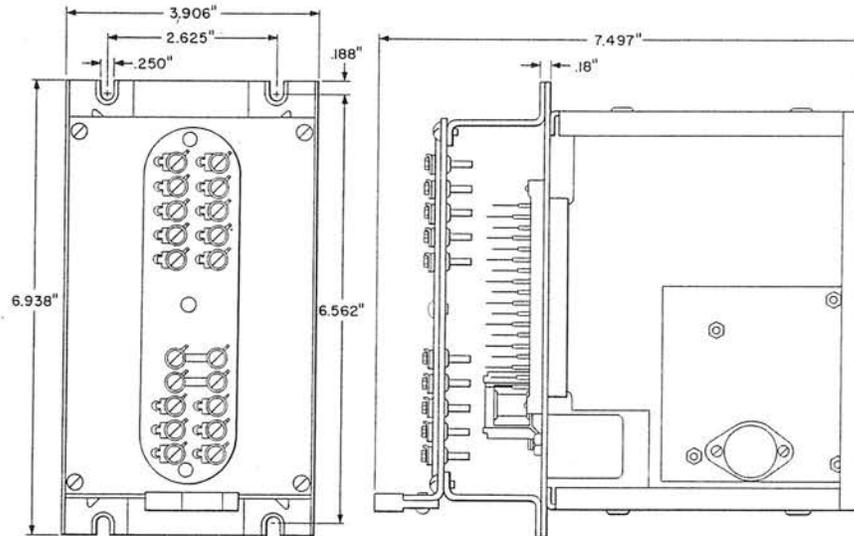

This unit consists of a line hybrid coil, a line holding coil, and four printed wiring boards with their associated components. Mounted on a metal base plate with a removable light olive gray plastic cover.

Two of the printed wiring boards provide gain in the transmit and receive paths of the control unit. The amount of gain is automatically adjusted by the remaining two printed wiring boards which comprise the noise and switchguard circuits. The unit must be connected to a 2012B type transformer for power.

For use with the 3B Speakerphone System using rotary or TOUCH-TONE dials.

Comcode: 100 795 624

UNITS
Control
57B

Consists of three plug-in printed wiring board assemblies incorporating transistorized amplifiers and associated transmission transformers. Two of the printed wiring board assemblies, each of which incorporates a current controlled attenuator in the form of a resistor-semiconductor network called a variollosser, are employed to provide gain in the transmit and receive paths of the control unit. The amount of gain provided in each path is automatically adjusted by the action of speech-activated switchguard and control circuits comprising the remaining printed wiring board assembly. The unit is powered entirely from the system in which it is used. One required transmission transformer and the jacks for receiving the printed wiring board assemblies are mounted to a front plate arranged for standard mounting in key service units.

All required connections to the control unit are made to a 20-terminal terminal strip mounted on a terminal plate parallel to and approximately 1-1/2 inch behind the front mounting plate. A two-hole fanning strip is also mounted at one end of the terminal plate perpendicular to the surface of the plate. When assembled in the key equipment in which it is used, the printed wiring boards will be accessible from the front of the equipment.

The overall front dimensions are 3.906 inches wide by 6.938 inches high. The terminal plate and fanning strip extend approximately 2-5/8 inches behind the mounting plate and the printed wiring boards extend approximately 5 inches in front of the mounting plate. The approximate weight of the unit is 5 pounds.

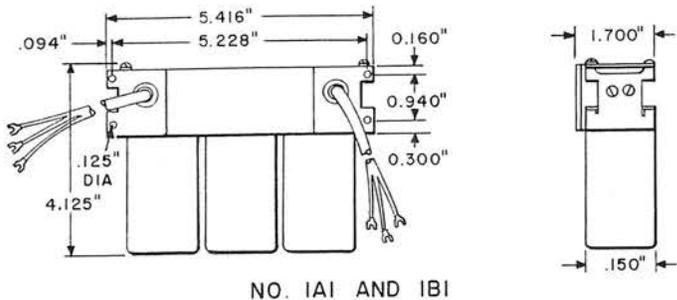

Used in the 2A Communication System. May also be used in the 3A Communication System — hospital interphone.

Comcode: 100 795 640

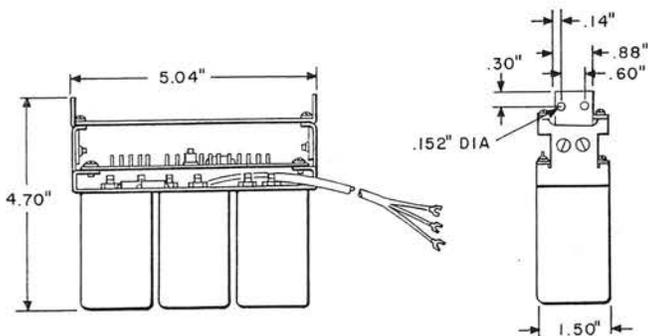

UNITS

Data

1A1, 1B1, and 2A1

NO. 1A1 AND 1B1

NO. 2A1

1B1: Consists of a receiver circuit on a printed wiring board. The input signal is a single frequency signal of 387 Hz transmitted in the reverse direction relative to forward data transmission. The receiver detects this signal and gives an output indication of its presence.

The unit mounts on the chassis of the 402C2 Data Set. Overall dimensions are 5.416 inches by 4.125 inches by 1.700 inches.

For use with data sets in DATA-PHONE service over the switched telephone network as the receiving portion of a simultaneous reverse signaling system.

Comcode: 100 818 111

2A1: Consists of a transmitter circuit on a printed wiring board. A single frequency signal of 387 Hz, which can be on-off keyed, is transmitted in the reverse direction relative to forward data transmission.

The unit is arranged to mount between the slider grid of the 402D2 Data Set.

Overall dimensions are 5.040 inches by 4.700 inches by 1.500 inches.

For use with data sets in DATA-PHONE service over the switched telephone network as the transmitting portion of a simultaneous reverse signaling system.

Comcode: 100 818 129

These are reverse channel units used as circuit assurance, line break, or low speed serial reverse information channels.

1A1: Consists of a transmitting and receiving circuit on a printed wiring board. A single frequency of 387 Hz, which can be on-off keyed, is transmitted in the reverse direction relative to forward data transmission. The receiver detects this signal and gives an output indication of its presence.

The unit mounts on the chassis of 202C2 and 202D2 Data Sets.

Overall dimensions are 5.416 inches by 4.125 inches by 1.700 inches.

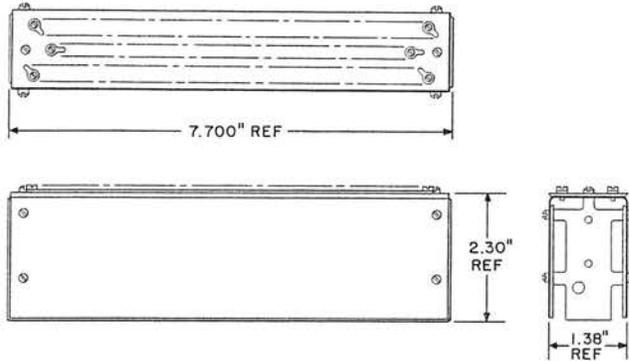

For use with data sets in DATA-PHONE service over the switched telephone network as the transmitting and receiving portion of a simultaneous reverse signaling system.

Comcode: 100 818 103

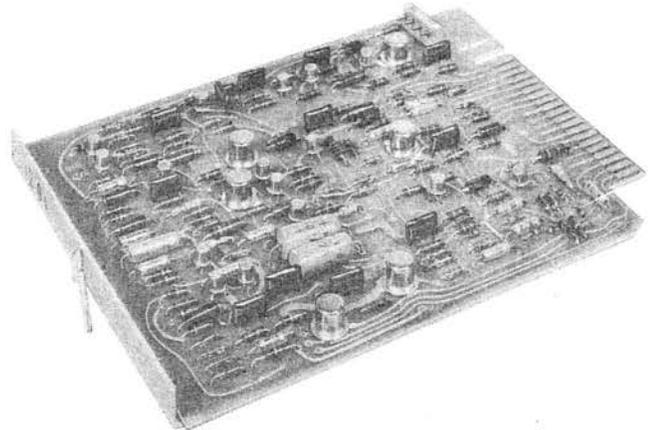

UNITS

Data

3A1

12B1

Consists of apparatus such as transistors, resistors, capacitors, inductors, transformers, and relays mounted on a flexible and rigid printed wiring board which is mounted on a frame with a common terminal strip forming a rectangular package.

The unit provides unattended call answering and disconnect for data terminals as well as provision for normal voice telephone service with an associated telephone set and also provides standardized connect-disconnect features, customer contact and voltage controls, and data-to-talk and talk-to-data transfer controls for data sets used in the DATA-PHONE service.

Power is obtained from an associated data set either +18 volts or -18 volts or both.

For use with Data Sets 202CW and 402CW type and Data Auxiliary Set 804AW.

Comcode: 100 818 137

Consists of component apparatus mounted on a printed wiring board terminated in printed wiring terminals. Arranged to be inserted into a 927A Connector.

Overall dimensions are 7.300 inches long by 5.500 inches wide. Recommended mounting center is 5.80 inches.

Provides control functions for M37 type teletypewriter stations for direct access service in conjunction with the AR15 Circuit Pack.

Used initially in Data Auxiliary Set 820C1.

Comcode: 101 370 443

UNITS

Key Service

311A Type

Each 311A type key service unit is factory prewired which eliminates costly and time consuming installation expenses such as wire skinning, twisting of terminals, and soldering. Units are arranged to utilize quick-connect clip on terminals which are easily accessible on the back of the gate. The units are shipped complete with back-board, apparatus mounting, and cover and are designed for system growth.

Each consists of a 16C Apparatus Mounting, equipped with key telephone units as indicated in table, a KS-15900L1 Interrupter, and a 117A Cover. Also provided with a rectifier and connecting blocks as indicated in table. Overall dimensions are approximately 16.688 inches high by 26.062 inches wide by 9.656 inches deep.

Provides lamp flashing, winking, ringing, time out, manual intercom (except as noted) transfer and line signaling features, common equipment for central office or PBX lines, and either a 9-station or 18-station dial selective intercom unit as indicated by footnotes.

311A11 and 311A12 Types: Intended to connect to nine central office or PBX lines. Do not provide manual intercom.

311A13 Type and 311A14: Intended to connect to 13 central office or PBX lines. Do not provide manual intercom.

311A16D: Performs switching and signaling functions for 6 to 18 intercom stations in the 2A Communication System.

311A11 to 311A14 types are used in the 1A1 Key Telephone Systems. 311A16D is used in the 2A Communication System.

Provisions are made for plugging in two each 216B and 253B Key Telephone Units when expansion to full capacity is desired. Additional 216B and 253B Key Telephone Units if required must be ordered separately.

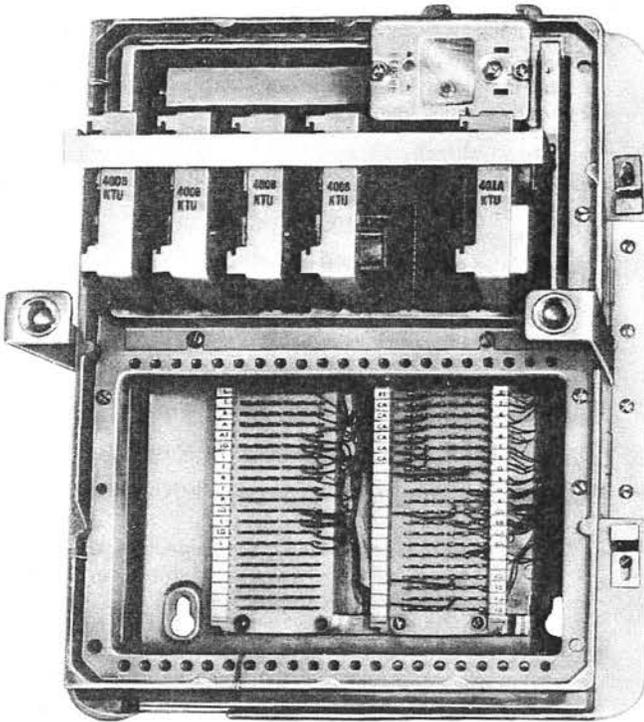

Code No.	Comcode	Contains Key Telephone Units

- (a) Provides an 18-station dial selective intercom unit.
 - (b) Equipped with a J86731D-3 L1 Power Plant. Does not include 20 Hz ringing supply.
 - (c) Equipped with four 66B1-25 Connecting Blocks.
 - (d) Equipped with a 57B Control Unit.
 - (e) Does not contain a KS-15900L1 Interrupter.
 - (f) Equipped with four 66B3-50 Connecting Blocks.
- 311A16D replaces 311A15 Key Service Unit.

UNITS

Key Service

501AW and 502AW Type

(COVER REMOVED)

The factory prewired capacity of these units is a total of six circuits. This may be a combination of lines (central office or PBX) and manual intercom. An additional two lines may be added by inserting a 259A Key Telephone Unit, which if required must be ordered separately.

The 400 type key telephone units are required and must be ordered separately.

Each consists of a 31B Apparatus Mounting on a 177A Backboard. The apparatus as shown in table is assembled on the mounting in addition to one KS-19175L1 Interrupter and one each 66B1-25 and 66B3-50 Connecting Blocks. Each unit includes a receptacle assembly consisting of six 906A Connectors, one 907B Connector, and one 299A Terminal Strip. Approximate overall dimensions are 14.125 inches by 28 inches by 9.5 inches deep.

The unused lower half of the unit will accept number 259 type or 400 series KTUs.

For use in the 1A2 Key Telephone System.

(a) Wall mounted.

UNITS

Key Service

503B2

Consists of a mounting plate and two mounting bars equipped with the following apparatus:

- 1 263A Key Telephone Unit
- 1 585A Panel
- 1 66B4-25 Connecting Block
- 1 19 Type Power Supply
- 3 KS-16671L2 Plugs

Provides lamp flashing to external circuits, manual intercom and line signaling features, visual and audible signals or both on incoming calls, and common equipment for control office or PBX lines.

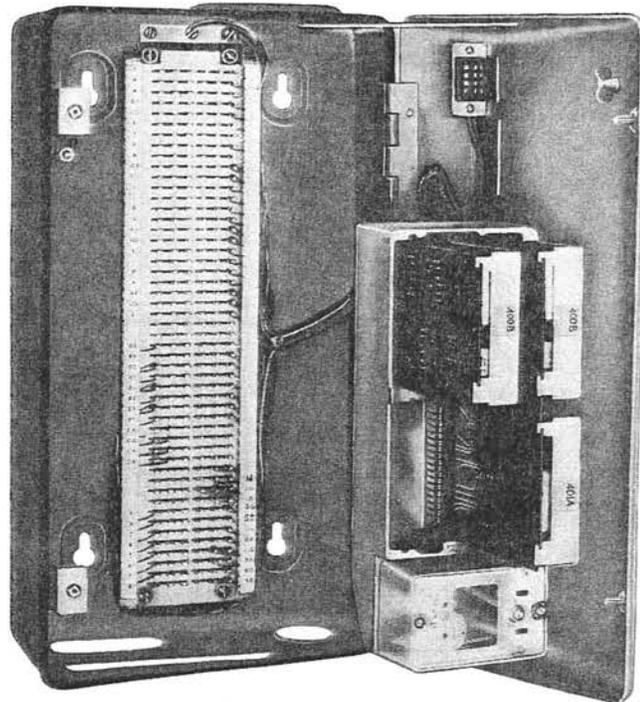

Arranged for wall or rack mounting and for connections through an A75A Connector Cable which is not furnished and must be ordered separately.

Used in 1A2 Key Telephone Systems.

Replaces the 503B1 Key Service Unit.

Comcode: 101 207 603

550B and 551BW

The prewired capacity of these wall mounted units is a total of four circuits. This may be any combination of lines (central office or PBX) and manual intercom.

550B: Consists of a KS-19175L1 Interrupter and four 906C Connectors wired to a 66B5-37 Connecting Block and assembled in a metal case having a hinged cover. Overall dimensions are 15.19 inches by 7.94 inches by 5.60 inches.

Arranged to mount four number 400 or 401 type key telephone units, which must be ordered separately.

Comcode: 101 602 332

551BW: Same as 550B except equipped with a 28A1 power supply.

Comcode: 101 551 349

A power cord is required and must be ordered separately as follows:

Part Number	Comcode	Length
P40J326	824 013 262	1-1/2 feet long
P40J327	824 013 270	2 feet long
P40J328	824 013 288	4 feet long
P40J329	824 013 296	6 feet long
P40J099	824 010 995	12 feet long

These units have no space available for optional 400 series KTUs.

For use in 1A2 Key Telephone System..

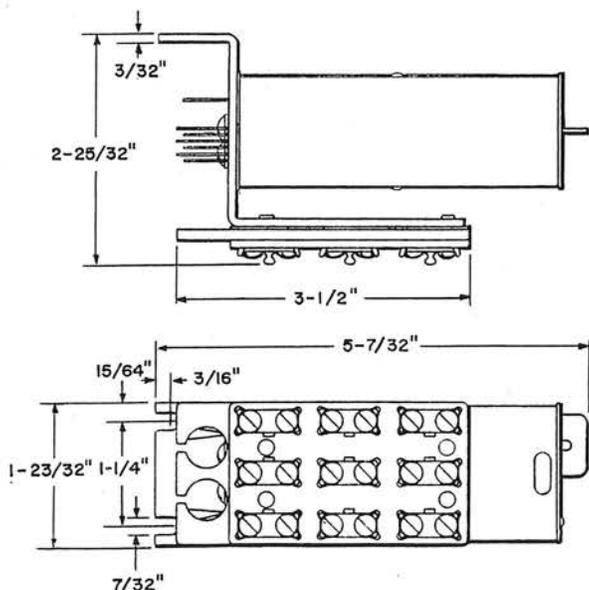

Replace 550A and 551AW Key Service Units, respectively.

UNITS

Key Telephone

The key telephone units consist of apparatus such as relays, capacitors, coils, resistors, etc. assembled on a metal panel and surface wired to a terminal panel. Mounting screws are furnished with each unit. Each unit serves a specific requirement in the 1A1, 1A2, and 6A Key Telephone Systems.

3A

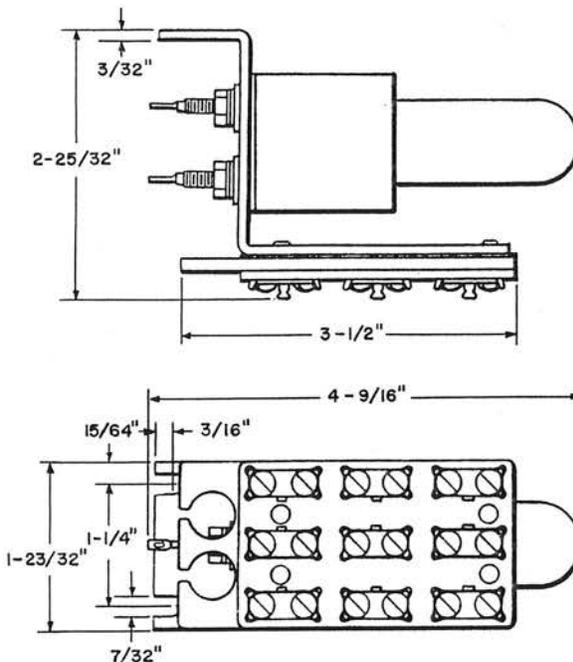

Arranged to mount in a number 105BW Apparatus Box. Requires angle type P-37B204 Bracket for installation on 16C Apparatus Mounting or when unit is relay rack mounted.

For use in the intercommunicating signaling circuit of the 1A and 1A1 Key Telephone Systems.

One required for each intercom circuit.

Comcode: 100 826 288

11A

Arranged to mount in a number 105BW Apparatus Box. Requires angle type P-37B204 Bracket for installation on 16C Apparatus Mounting or when unit is relay rack mounted.

For use in the ringing feed lamp circuit of the 1A and 1A1 Key Telephone Systems.

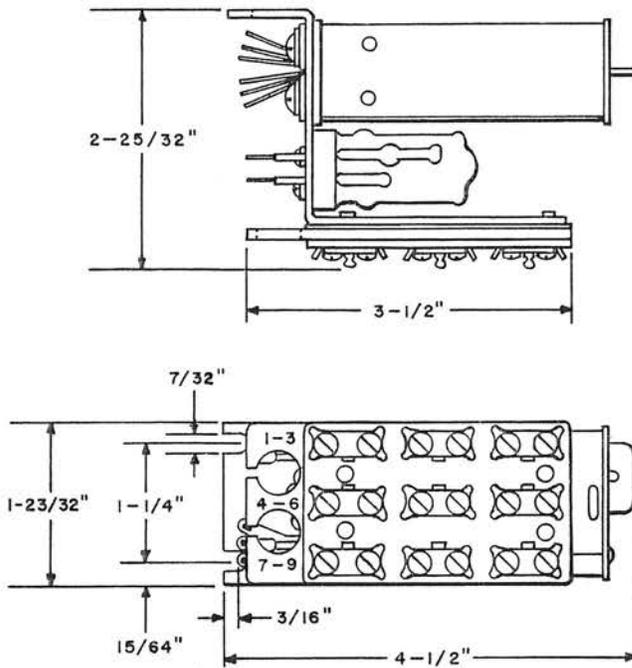

One required for each central office generator feed.

Comcode: 100 826 361

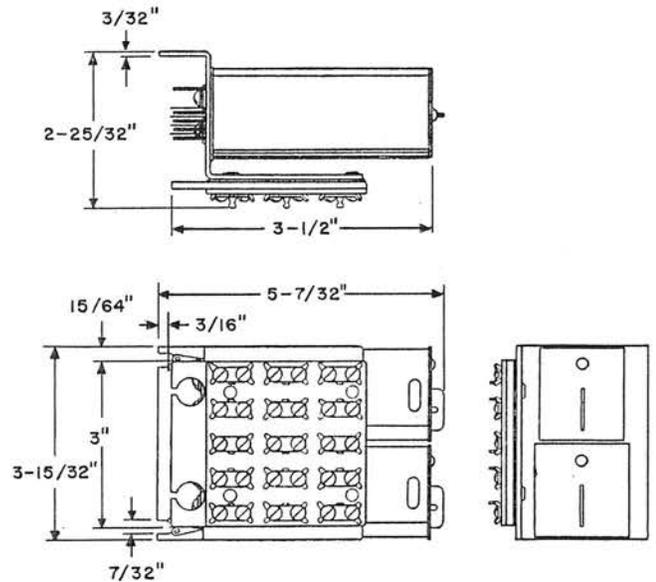

UNITS

Key Telephone

16A

19B

Arranged to mount in a number 105BW Apparatus Box. Requires angle type P-37B204 Bracket for installation on 16C Apparatus Mounting or when unit is relay rack mounted.

For use in the common audible signal control circuit of dial offices in the 1A and 1A1 Key Telephone Systems.

One required for each group of common audible signal circuits.

Comcode: 100 826 411

Arranged to mount in a number 105BW Apparatus Box. Requires angle type P-37B204 Bracket for installation on 16C Apparatus Mounting or when unit is relay rack mounted.

For use in the flashing circuit of the 1A, 1A1, and 6A Key Telephone Systems.

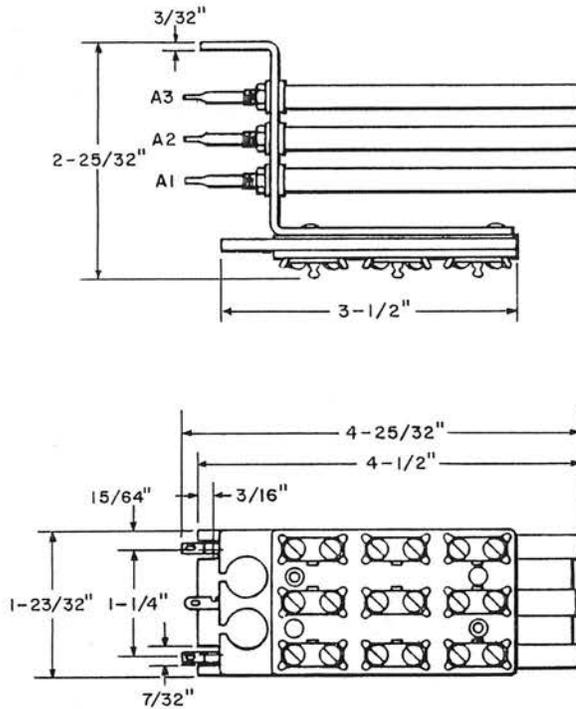

One required for each group of six central office or PBX lines.

Comcode: 100 826 452

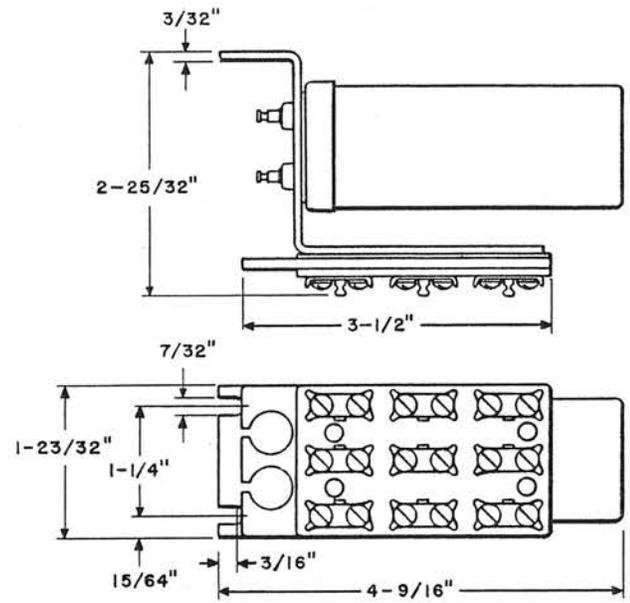

UNITS

Key Telephone

22 Type

23A

These are resistor units for dc lamp supply.

Arranged to mount in a number 105BW Apparatus Box. Requires angle type P-37B204 Bracket for installation on 16C Apparatus Mounting or when unit is relay rack mounted.

For use in the 1A, and 1A1 Key Telephone Systems.

Arranged to mount in a number 105BW Apparatus Box. Requires angle type P-37B204 Bracket for installation on 16C Apparatus Mounting or when unit is relay rack mounted.

For use in the noise suppression circuit of the 1A and 1A1 Key Telephone Systems.

One required for each system.

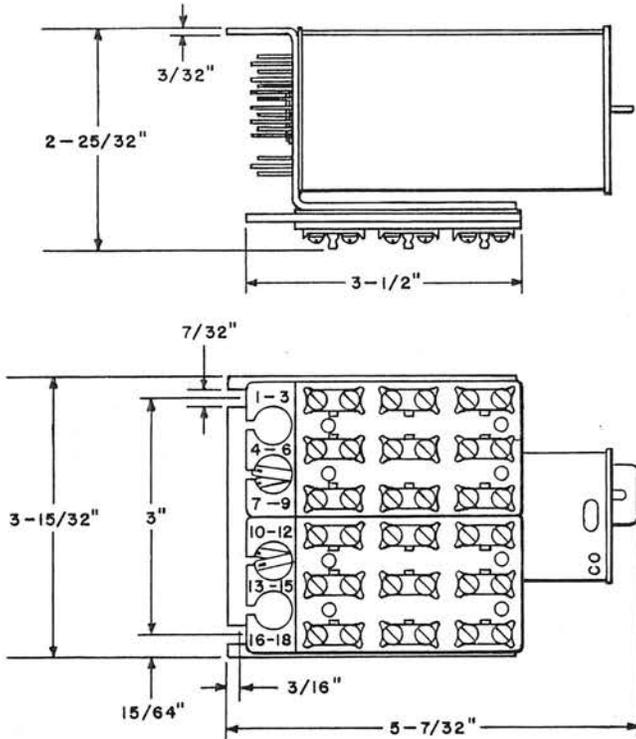

Comcode: 100 826 536

Code No.	Comcode	Battery Supply	
		Cells	Volts
22F	100 826 486	8	15 to 19
22G	100 826 494	9	17 to 21

UNITS

Key Telephone

26B

29A

Arranged to mount in a number 105BW Apparatus Box. Requires angle type P-37B204 Bracket for installation on 16C Apparatus Mounting or when unit is relay rack mounted.

For use in the automatic cutoff circuit of the 1A and 1A1 Key Telephone Systems.

One required for each central office or PBX line.

Comcode: 100 826 569

Arranged to mount in a number 105BW Apparatus Box. Requires angle type P-37B204 Bracket for installation on 16C Apparatus Mounting or when unit is relay rack mounted.

For use as a cut through and control unit in the 1A and 1A1 Key Telephone Systems.

One required for each station line.

Comcode: 100 826 593

UNITS

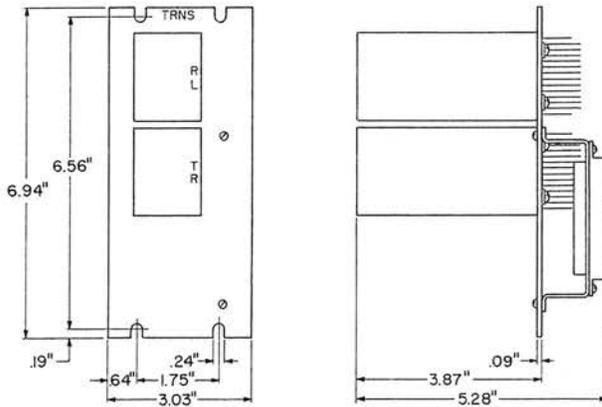

Key Telephone

For use as an additional transfer circuit unit in the 6A Key Telephone System.

One required for each additional nine stations.

Comcode: 100 826 858

216B

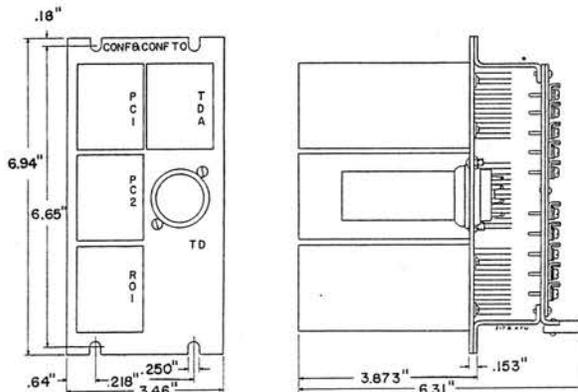

This unit is designed to mount on a 16C Apparatus Mounting. A KS-16672L1 Connector which has 50 contacts arranged in two rows of 25 provides plug-in connections when assembled in a key service unit.

The unit provides transfer facilities between the basic station selector circuit and an added station selector circuit in a 2A Communication System. One required for each additional six stations added.

Comcode: 100 826 866

217B

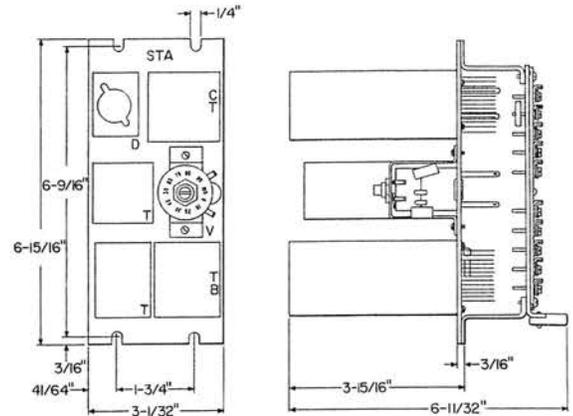

Terminal panel has 40 terminals, arranged in 4 rows of 10 each, numbered 1 to 40.

For use as preset conference control circuit unit in the 6A Key Telephone System.

One required for each two conference arrangements.

Comcode: 100 826 882

218A

Terminal panel has 40 terminals, arranged in 4 rows of 10 each, numbered 1 to 40.

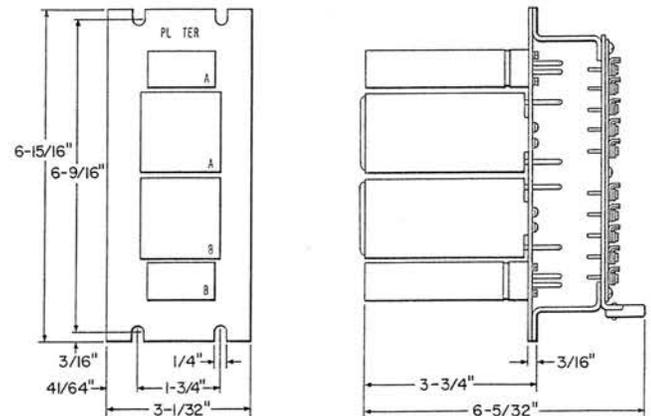

Mounting screws are furnished.

For use as station terminations on two- and four-wire private service lines.

One required for each private service line.

Comcode: 100 826 890

219A

Terminal panel has 40 terminals, arranged in 4 rows of 10 each, numbered 1 to 40.

Mounting screws are furnished.

For use as station terminations on two- and four-wire private service lines.

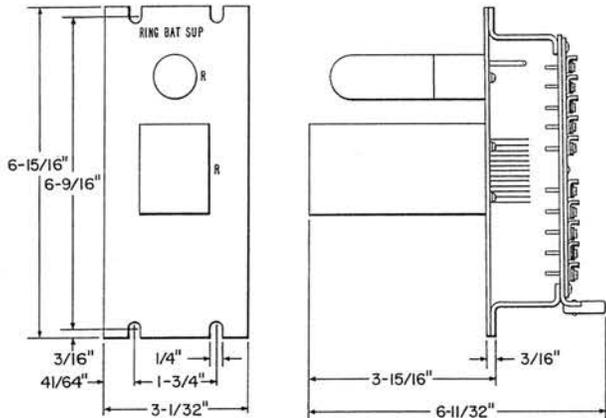

One required for each private service line.

Comcode: 100 826 908

UNITS

Key Telephone

220A

Terminal panel has 40 terminals arranged in 4 rows of 10 each, numbered 1 to 40.

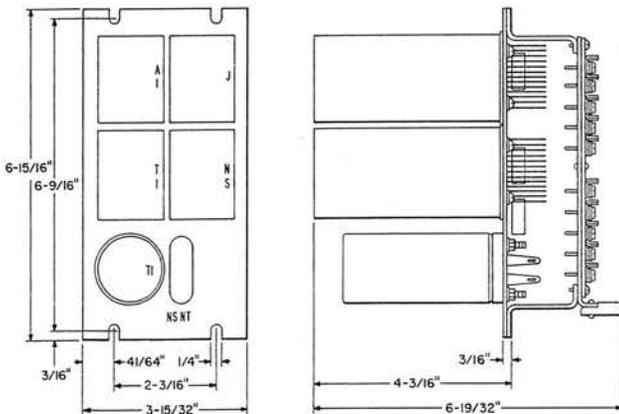

Mounting screws are furnished.

Used to provide a ring relay or power supply circuit associated with two- or four-wire lines terminating in two- or four-wire key telephone systems.

One required for each private service line.

Comcode: 100 826 916

221A

Terminal panel has 20 terminals arranged in 2 rows of 10 each, numbered 1 to 20.

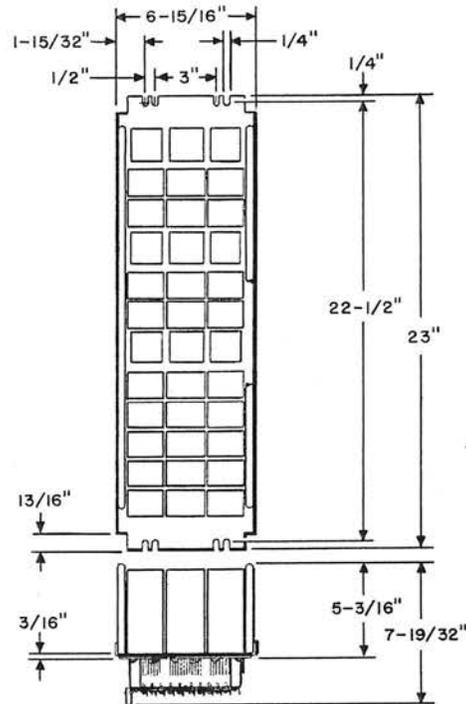

Mounting screws are furnished.

Used as an executive calling and flashing control circuit and no such number tone circuit unit in the 6A Key Telephone System.

One required for each executive line.

Comcode: 100 826 924

222A

Terminal panel consists of four groups of terminals. Each group has 40 terminals, arranged in 4 rows of 10 each, numbered 1 to 40.

For use as a battery supply and nine-station signaling circuit unit for link operation in the 6A Key Telephone System.

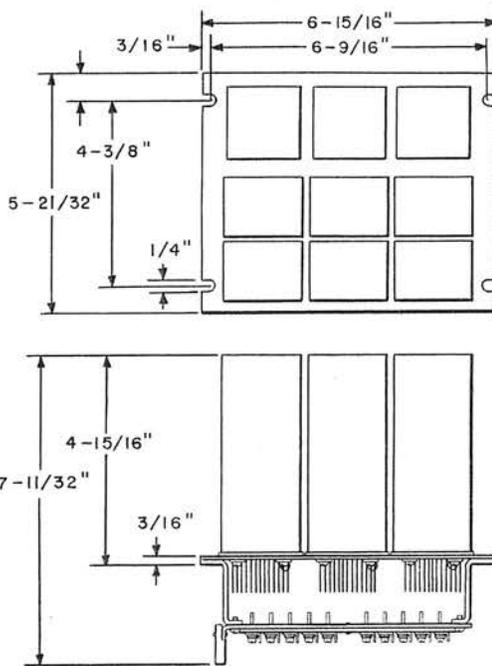

One required for each system.

Comcode: 100 826 932

UNITS

Key Telephone

223A

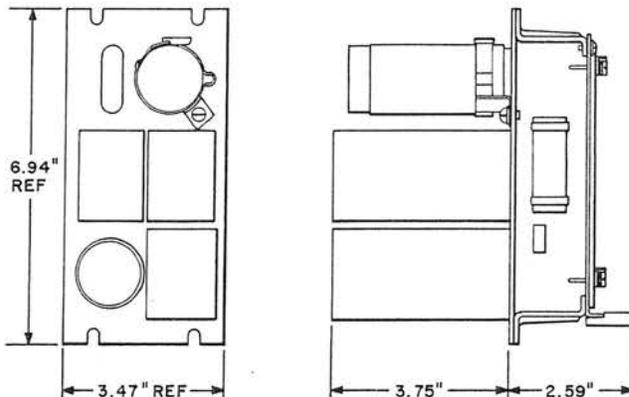

Terminal panel consists of two groups of terminals. One group has 40 terminals, arranged in 4 rows of 10 each, numbered 1 to 40; the other group has 20 terminals, arranged in 2 rows of 10 each, numbered 1 to 20.

For use as a three-station signaling circuit unit for two-link operation in the 6A Key Telephone System.

One required for each three additional stations.

Comcode: 100 826 940

224B

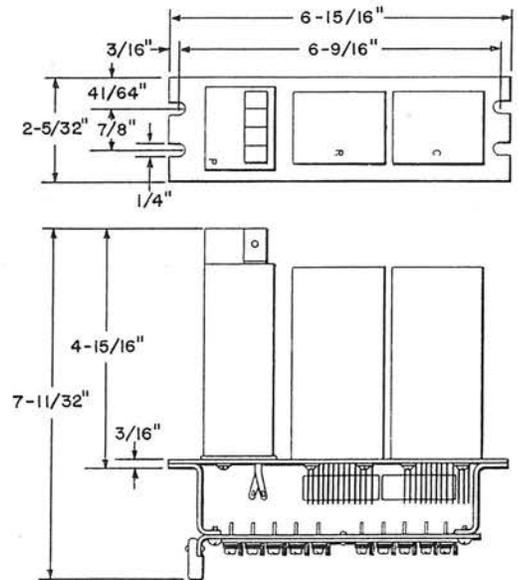

Terminal panel consists of a group of 40 terminals, arranged in 4 rows of 10 each, numbered 1 to 40.

For use as a busy signal and camp-on control circuit unit in the 6A Key Telephone System.

One required for each system.

Comcode: 100 826 965

225A

Terminal panel consists of a group of 20 terminals, arranged in 2 rows of 10 each, numbered 1 to 20.

For use as a long line circuit unit in the 6A Key Telephone System.

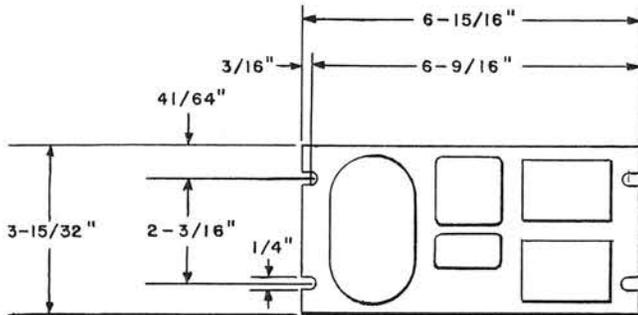

One required for each off-premise station.

Comcode: 100 826 973

UNITS

Key Telephone

226B

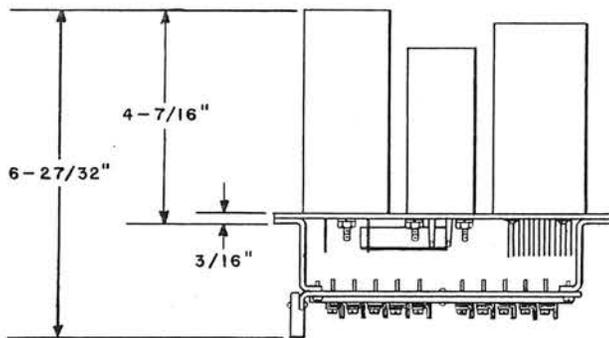

Terminal panel consists of a group of 20 terminals, arranged in 2 rows of 10 each, numbered 1 to 20.

For use as an incoming conference control circuit unit in the 6A Key Telephone System.

One required for each central office or PBX line to be conferenced.

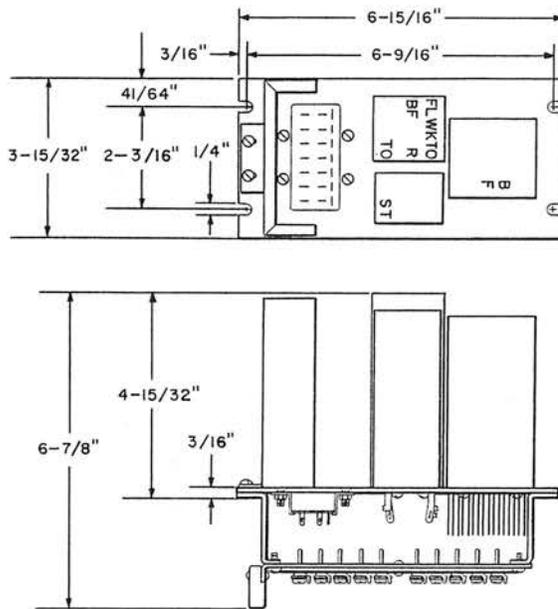

Comcode: 100 826 981

UNITS

Key Telephone

232B

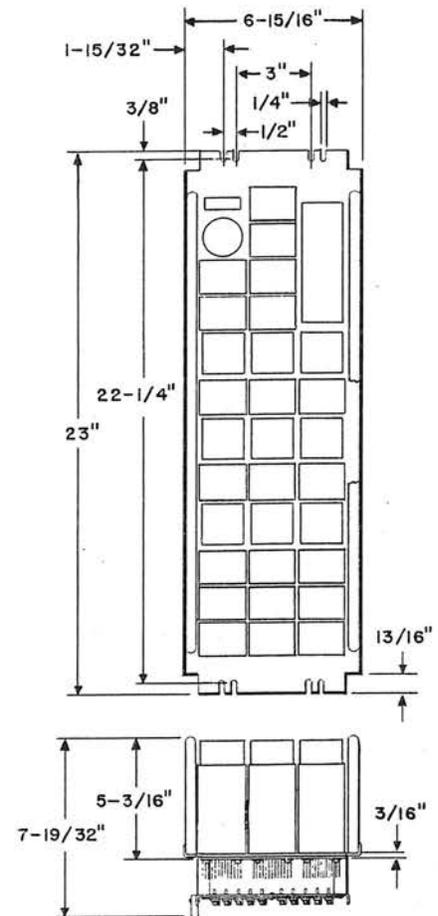

Terminal panel consists of a group of 40 terminals, arranged in 4 rows of 10 each, numbered 1 to 40.

For use as a time out and manual intercom circuit unit in the 1A1 and 6A Key Telephone Systems. When equipped with a plug in KS-15900L1 Interrupter, the unit will also provide flash and wink signals as well as busy tone and ringing circuit interruptions. The KS-15900L1 Interrupter is not furnished and must be ordered separately.

Comcode: 100 827 039

234A

Terminal panel has 200 terminals, arranged in 5 groups of 40 terminals each. Each group is arranged in 4 rows of 10 each, numbered 1 to 40.

For use as a battery feed nine-station signaling, selector and transfer circuit unit for single link operation in the 6A Key Telephone System.

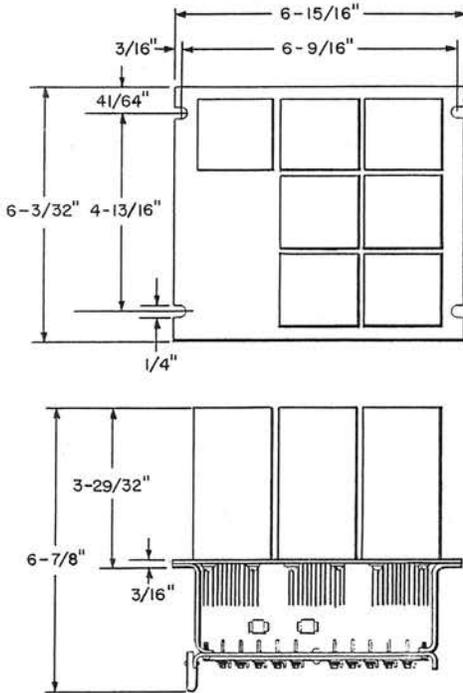

One required for each system.

Comcode: 100 827 047

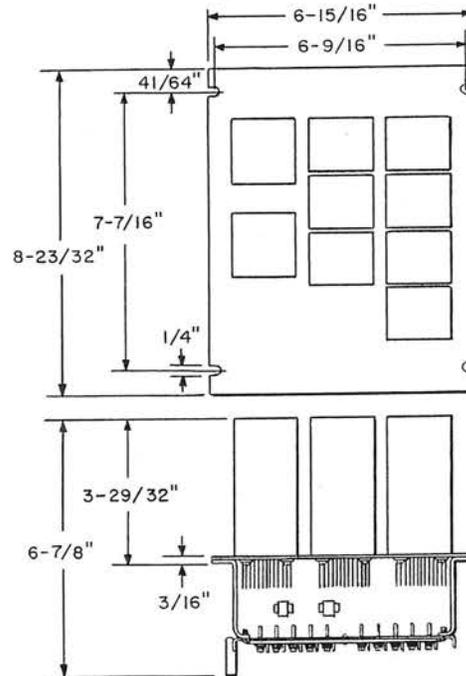

UNITS

Key Telephone

235B

236B

Terminal panel consists of two groups of terminals. Each group has 40 terminals, arranged in 4 rows of 10 each, numbered 1 to 40.

Provided with a circuit to protect relays in the event of a power failure.

For use with the number 630 type (CALL DIRECTOR) telephone set as a station line concentrator in the 1A1 Key Telephone System.

Comcode: 101 203 412

Terminal panel consists of three groups of terminals. Each group has 40 terminals, arranged in 4 rows of 10 each, numbered 1 to 40.

Provided with a circuit to protect the relays in the event of a power failure.

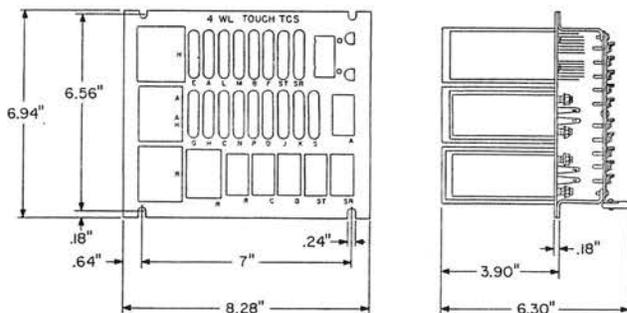

For use with number 631 type CALL DIRECTOR telephone set as a station line concentrator in the 1A1 Key Telephone System.

Comcode: 101 203 420

UNITS

Key Telephone

242A

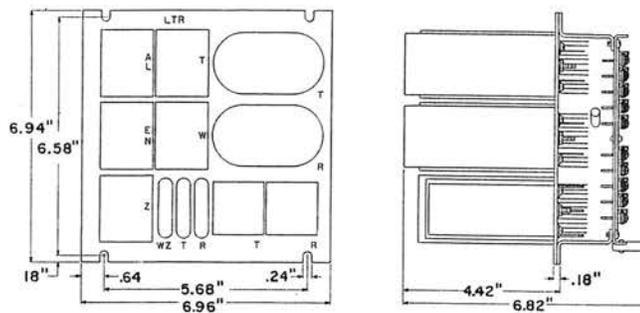

Terminal panel has 80 terminals, arranged in two groups of 40 terminals each. Each group is arranged in 4 rows of 10 terminals each, numbered 1 to 40.

Mounting screws are furnished.

Intended for use as a subscriber line circuit for terminating four-wire common battery lines in two- and four-wire key telephone sets arranged for TOUCH-TONE calling.

Comcode: 100 827 120

244A

Terminal panel consists of two groups of terminals. Each group has 40 terminals, arranged in 4 rows of 10 terminals each, numbered 1 to 40.

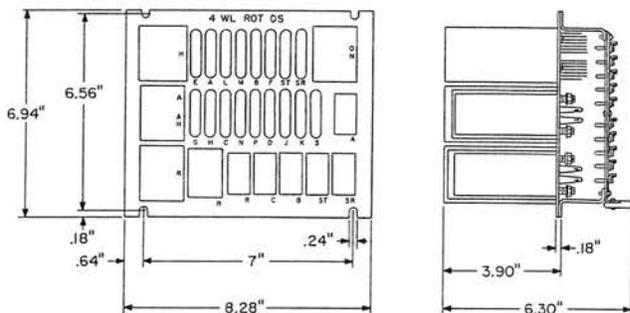

Mounting screws are furnished.

Used in a line transfer circuit to provide step-up or step-down impedance transformance in conjunction with two- and four-wire key telephone sets when used with four-wire lines.

One required for each line.

Comcode: 100 827 153

243C

Terminal panel consists of two groups of terminals. Each group has 40 terminals arranged in 4 rows of 10 terminals each, numbered 1 to 40.

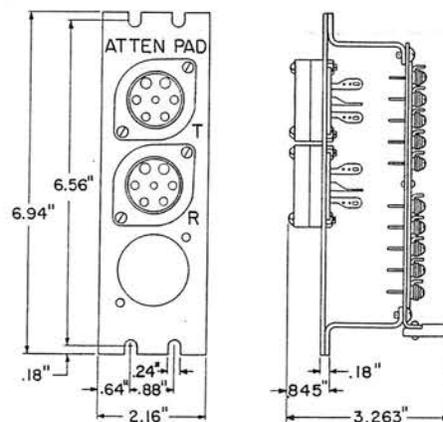

Mounting screws are furnished.

Used as a subscriber line circuit for terminating four-wire common battery lines in two- and four-wire key telephone sets arranged for conventional rotary dialing.

Replaces the 243B Key Telephone Unit.

Comcode: 101 207 629

245A

Terminal panel has 20 terminals arranged in 2 rows of 10 terminals each, numbered 1 to 20.

Mounting screws are furnished.

Two number 89 type resistors are required for each 245A Key Telephone Unit. These resistors are not furnished and must be ordered separately.

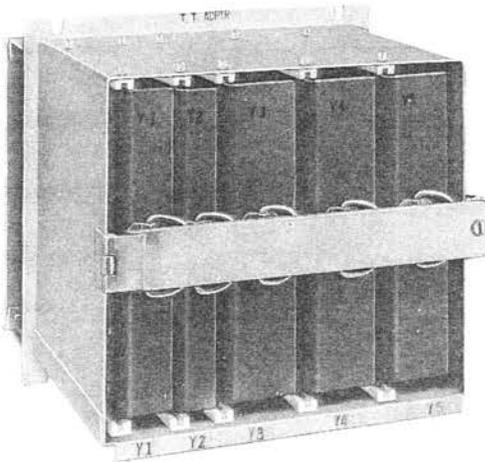

Used to provide attenuator pads in transmitting and receiving pairs in conjunction with two- and four-wire key telephone sets when used with four-wire sets.

Comcode: 100 827 161

UNITS

Key Telephone

247B

Consists of a metal casing equipped with two 906E and three 908C connectors, a terminal panel, and five circuit packs.

The terminal panel has two groups of terminals. Each group has 20 terminals arranged in two rows of 10 each numbered 1 to 20.

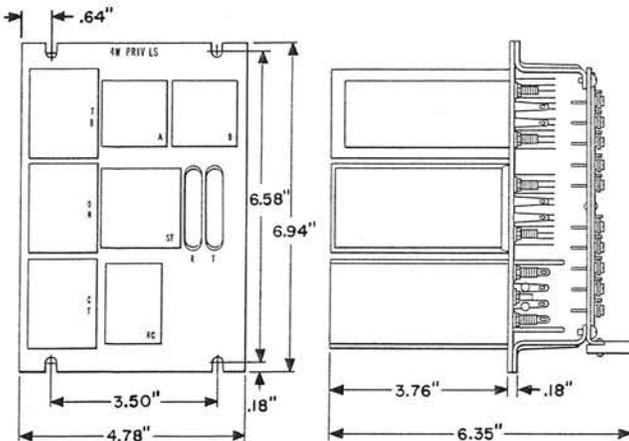

Used to permit TOUCH-TONE dialing on 2A Communication Systems (business interphone) and all arrangements of the 6A Key Telephone System. Converts multi-frequency tones, generated by a TOUCH-TONE dial, into relay operation.

Approximate overall dimensions are 6.96 inches by 7.50 inches by 6.86 inches.

Replaces the 247A Key Telephone Unit.

Comcode: 100 827 187

248B

Terminal panel consists of two groups of terminals. One group has 40 terminals arranged in 4 rows of 10 terminals each.

A second group has 20 terminals arranged in 2 rows of 10 terminals each, numbered 1 to 20.

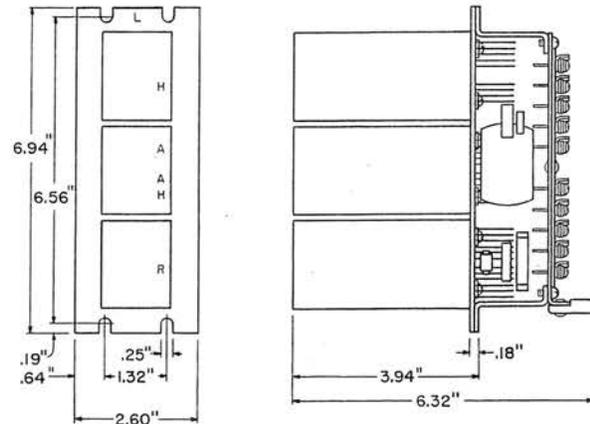

Mounting screws are furnished.

Used as a four-wire private line station circuit.

One required for each station group.

Comcode: 100 827 203

249A

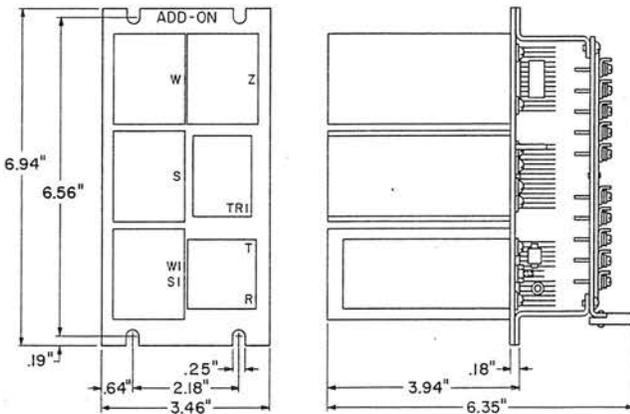

Terminal panel has 30 terminals, arranged in 3 rows of 10 terminals each, numbered 1 to 30.

Mounting screws are furnished.

Used as a line and signal circuit in the number 400 Switching System.

Comcode: 100 827 211

250A

Terminal panel has 20 terminals, arranged in 2 rows of 10 terminals each, numbered 1 to 20.

Mounting screws are furnished.

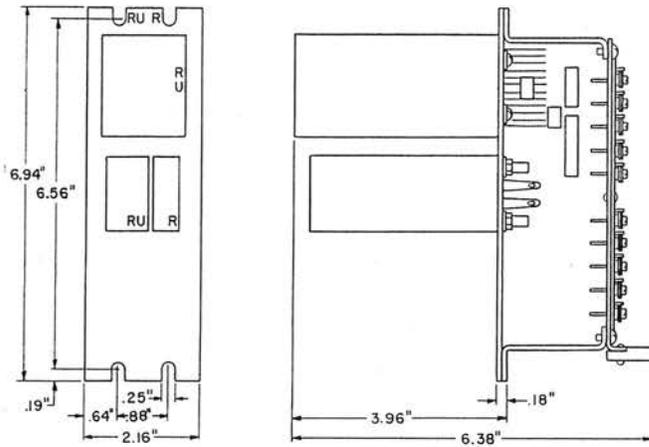

Used as add-on circuit in number 400 Switching System.

Comcode: 100 827 229

UNITS

Key Telephone

251A

Terminal panel has 20 terminals, arranged in 2 rows of 10 each, numbered 1 to 20.

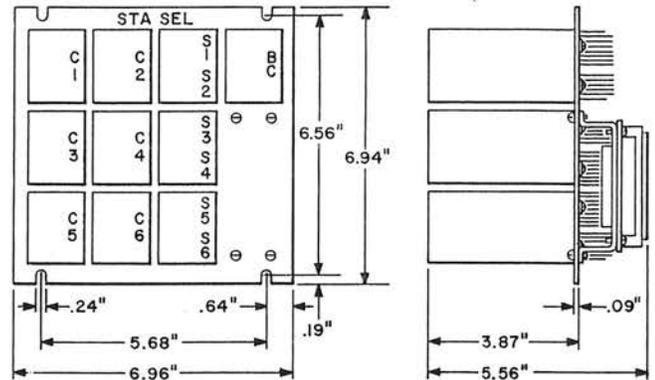

Mounting screws are furnished.

Used as a ring-up relay for 20 Hz incoming signal in four-wire private line circuits.

One required for each private line.

Comcode: 100 827 237

253B

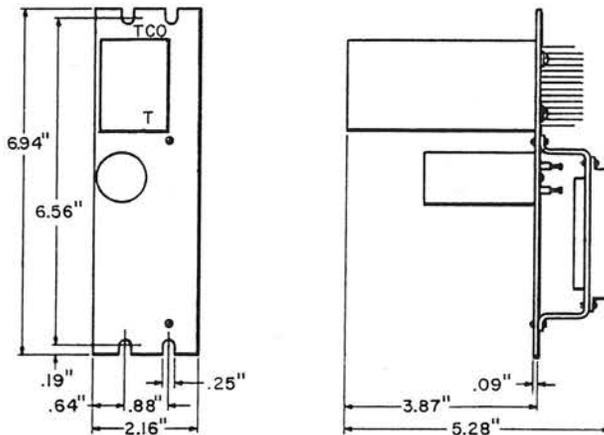

Apparatus mounted on plate is wired to two KS-16672L1 Connectors, each of which has 50 contacts arranged in 2 rows of 25 each, numbered 1 to 50.

Used for station selection circuit unit of six stations in the 2A Communication System.

One required for each six stations.

Comcode: 101 171 197

252A

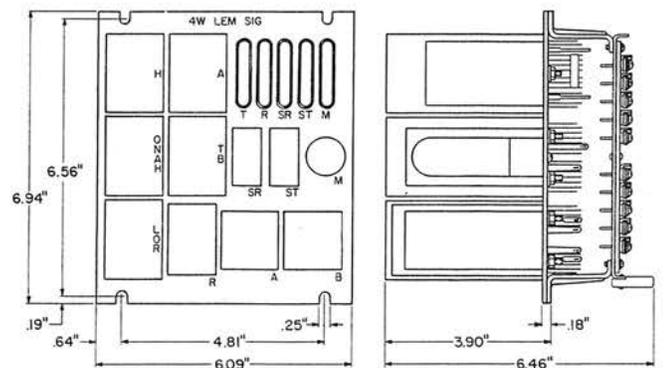

Apparatus mounted on plate is wired to a KS-16672L1 Connector which has 50 contacts arranged in 2 rows of 25 each, numbered 1 to 50.

Used as a tone and cutoff circuit unit in the 2A Communication Systems.

One required for each system.

Comcode: 100 827 245

255A

Terminal panel has 80 terminals, arranged in 2 groups of 40 terminals each. Each group is arranged in 4 rows of 10 terminals each, numbered 1 to 40.

Mounting screws are furnished.

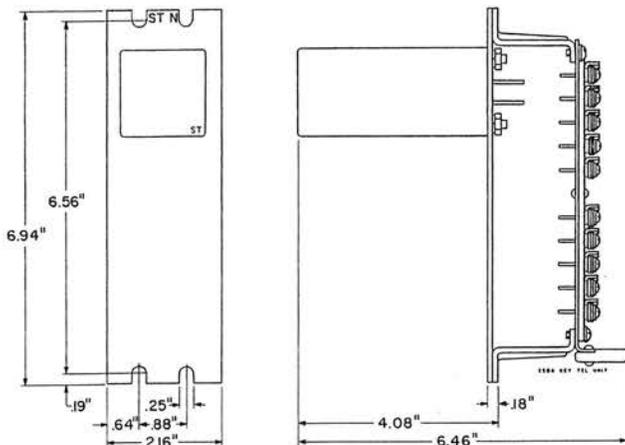

Used with NORAD switched network as a four-wire line circuit with E and M Signaling.

Comcode: 100 827 278

UNITS

Key Telephone

256A

Terminal panel has 20 terminals arranged in 10 rows of 2 terminals each, numbered 1 to 20.

Mounting screws are furnished.

Used with NORAD Switched Network as a sidetone network for four-wire lines.

Comcode: 100 827 286

Consists of a die cast metal panel equipped with two 913A Connectors on one side and a terminal panel and two fanning strips on the other side.

Terminal panel has two groups of terminals. One group has 20 terminals arranged in two rows of 10 each numbered from 1 to 20 and another group has 30 terminals arranged in three rows of 10 each numbered 1 to 30.

Connectors are wired to the terminal panel.

Arranged to mount two number 400 and similar type key telephone units.

Used initially in 1A1 and 1A2 Key Telephone Systems.

Replaces the 259A Key Telephone Unit.

Comcode: 100 827 310

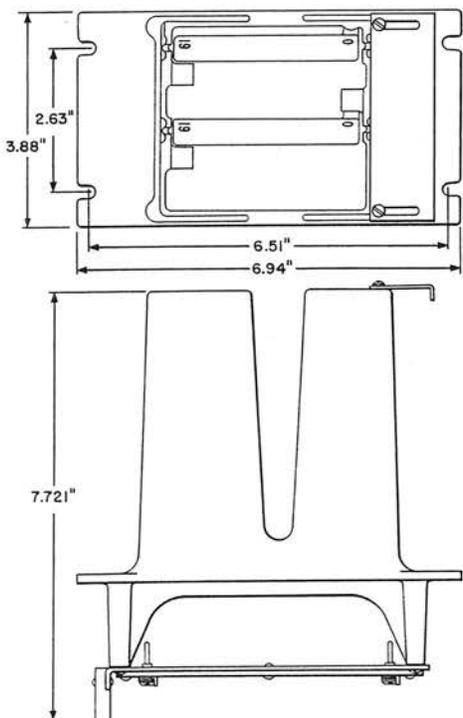

260A

Terminal panel consists of two terminal strips. Each strip has two fanning strips and 30 terminals, arranged in 3 rows of 10 each, numbered 1 to 30. Overall dimensions are 6.94 inches by 4.78 inches by 7.43 inches.

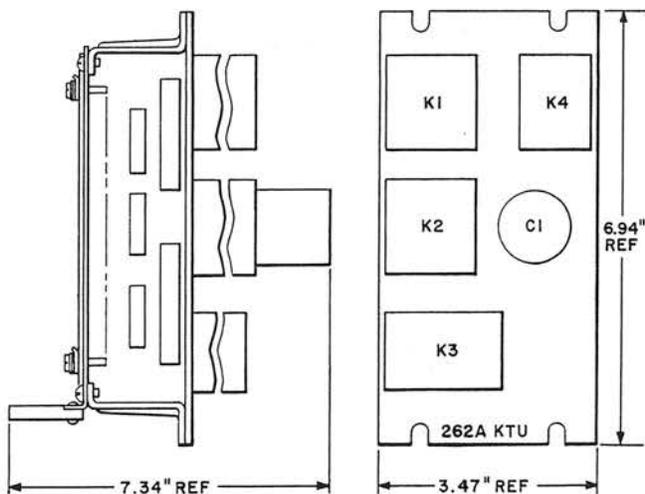

For use as a multiline exclusion circuit unit in 1A1 and 1A2 Key Telephone Systems.

Comcode: 100 827 336

259B

262A

Apparatus assembled and wired on 228 Key Telephone Unit.

For use as intercept service for common battery lines when the line is not answered in 25 to 30 seconds in the 1A1 Key Telephone System.

Comcode: 100 827 351

UNITS

Key Telephone

413A

Consists of component apparatus mounted on a printed wiring board. Overall dimensions are 5.30 inches long by 3.50 inches wide by 1.26 inches high including the components mounted on the board.

Functions as an auxiliary ring-up circuit. Provides a nonlocking ring detector for use on central office or PBX lines supplying either 20 Hz or 30 Hz ringing.

Relay contacts can be used for controlling external signaling functions.

Arranged for insertion into a number 906 type connector. Used initially in the 1A2 Key Telephone System.

Comcode: 101 618 130

428A

Consists of apparatus such as diodes, transistors, resistors, relays, and varistors mounted on a printed wiring board. Overall dimensions are 5.30 inches long by 3.50 inches wide by 1.26 inches high including the components mounted on the board.

Functions as a multiline exclusion circuit, providing a means to exclude a station from central office or PBX lines.

Arranged for insertion into a number 908 or 914 Type Connectors.

Used initially in the 1A2 Key Telephone System.

Replaces number 405A Key Telephone Unit.

Comcode: 101 608 818

429A

Consists of component apparatus such as resistors, capacitors, transistors, and diodes mounted on a printed wiring board.

Functions as a supplementary hold circuit providing a lamp flutter "SPECIAL HOLD" indication in addition to the normal lamp wink.

Arranged for insertion into a number 908 Type or 914A Connector.

Overall dimensions are 5.30 inches long by 3.50 inches high by 1.26 inches wide.

Used initially in the 1A2 Key Telephone System.

Replaces number 406A Key Telephone Unit.

Comcode: 101 608 826

430A

Consists of resistors, capacitors, transistors, a diode, a relay, and a potentiometer mounted on a printed wiring board.

Functions as a flutter generator and current limiter. Interrupts the lamp circuit to provide a lamp flutter signal and limits the current in the 24 volt lead to the supplementary hold key.

Arranged for insertion into a number 906, 908, or 913 Type Connector.

Overall dimensions are 5.30 inches long by 3.50 inches high by 1.262 inches wide.

Used initially in the 1A2 Key Telephone System.

Replaces number 408A Key Telephone Unit.

Comcode: 101 608 834

UNITS

Loading

MF and MFA Type

MF Type: Consists of one phantom coil and two side circuits mounted in a sheet metal container approximately 2.250 inches by 2.750 inches by 3.750 inches. The coils have toroidal cores of permalloy powder.

Designed to mount in number 209, 210, 260, 261, and 262 type coil cases.

MFA Type: Electrically the same as MF type. The three coils are mounted on a fiber strip approximately 2 inches by 8 inches for use in splice-loading installations. Equipped with leads 19 inches long.

Designed to mount in 166A Coil Cases.

Code No.	Comcode	Loading System	Nominal Inductance (Henry)		Average DC Resistance (Ohms) per Line Winding

- (a) 19 AWG, 4-wire operation, coils adjusted for minimum far end crosstalk.
- (b) 16 AWG, 2-wire operation, coils adjusted for minimum near end crosstalk.
- (c) 0.33 fractional weight loading unit.

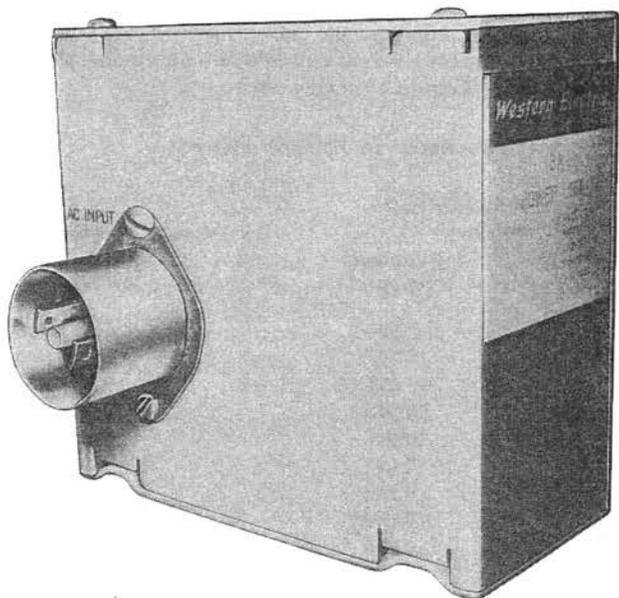

- (d) 0.86 fractional weight loading unit.
- (e) 0.5 fractional weight loading unit.

Used in voice frequency loading systems for quadded toll and toll entrance cables.

UNITS

Power

18A and B1

18A: Consists of a ferroresonant transformer, a diode, bridge, an ac capacitor, filter, capacitors, and resistors. The chassis and cover are aluminum.

Arranged to mount from the terminal end by four clinch nuts spaced on 3.4 inch by 1.52 inch centers located 0.830 inch and 0.380 inch from edges of the unit. The third clinch nut is centrally located and spaced 1.440 inches from the center line of the other clinch nuts.

Electrical input connections are made through a twist lock receptacle. Output connections are made through solder terminals.

With an input of 117 volts ac, 60 Hz input, the unit provides a positive and a negative output of 24 volts, 80 milliamperes dc and 21 volts ac rms, 40 milliamperes ac.

Overall dimensions are 4.92 inches long by 4.18 inches wide by 2.20 inches high.

Used initially in Data Sets number 108 and 109 and Data Auxiliary Set 816BW1.

Comcode: 101 171 213

18B1: Same as 18A except input connector is omitted and input connections are made through the leads of the primary winding which extend approximately 9 inches through the connector hole in the frame.

Comcode: 101 218 634

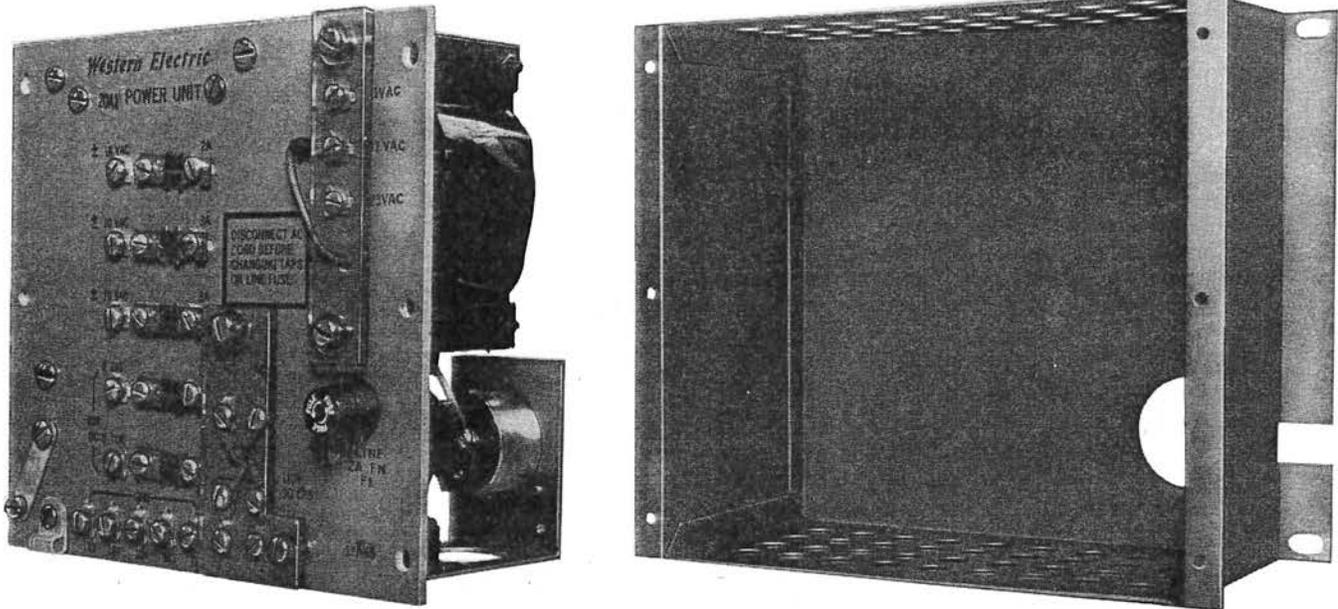

Fig. 2

19BW2: An ac-dc power supply consisting of such component apparatus as a transformer, diode, resistor, inductor capacitor, and a fuse and terminal panel assembled within a metal frame. A P15G706 Casing and a P33A830 Backboard are furnished for wall mounting.

Terminals are provided for connection to a 113A Frequency Generator.

Comocode: 101 188 761

A cord is required but not furnished and must be ordered separately. The required length must be obtained by ordering one of the following cords:

Part No.	Comocode
P40J326 is 1.5 feet long	824 013 262
P40J327 is 2.0 feet long	824 013 270
P40J328 is 4.0 feet long	824 013 288
P40J329 is 6.0 feet long	824 013 296

19CW2: Same as 19BW2 Power Unit except has a P15G705 Cabinet for frame mounting instead of casing and backboard.

Comocode: 101 188 779

20BW2: Same as 19BW2 Power Unit except in addition, equipped with a 113A Frequency Generator within the unit for ringing power. See Fig. 1.

Comocode: 101 188 787

20CW2: Same as 19CW2 Power Unit except in addition, equipped with a 113A Frequency Generator within the unit for ringing power. See Fig. 2.

Comocode: 101 188 795

Used in 1A, 1A1, 1A2, and 6A Key Telephone Systems.

19 and 20 Type (Continued)

OUTPUT AND FEATURES								
FEATURE		DESCRIPTION & OUTPUT			POWER UNIT			
		VOLTAGE	AMPS	NOTE	19BW2	19CW2	20BW2	20CW2
DC Output	Talk Sig	18-26	0.6	1	X	X	X	X
		20-26	1.5					
AC (60Hz) Output		8.75-11	4.5	2	X	X	X	X
		16-20	1.4					
AC (30 Hz) Output (Ringing Supply)		110-125	Not Specified				X	X
Wall Mounting		9-1/4" high by 8-3/4" wide by 5" deep. Includes metal back-board cover.			X		X	
Rack Mounting		7" high by 8-1/2" wide by 5" deep. Mounted on horizontal bars drilled on 7/16" centers and vertically spaced at 7". Requires 20 mounting spaces.				X		X

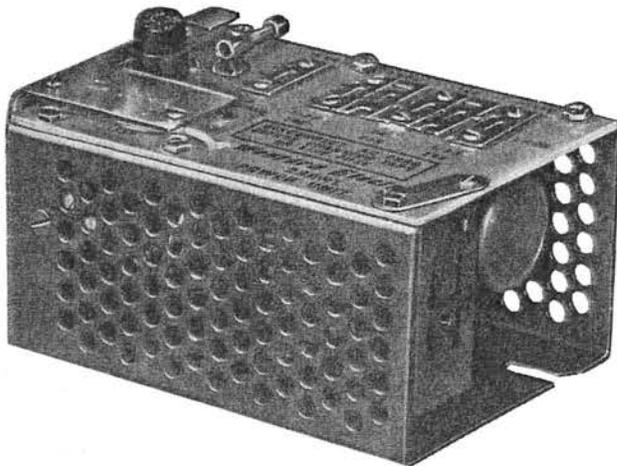

Note 1: Total DC TALK and DC SIGNAL not to exceed 1.5 amps.

Note 2: Where combinations of the two outputs are used to determine load-carrying capacity, add twice the current used in 16-20 volt output to the current used in the 8.75-11 volt output. A total of 4.5 amperes is maximum.

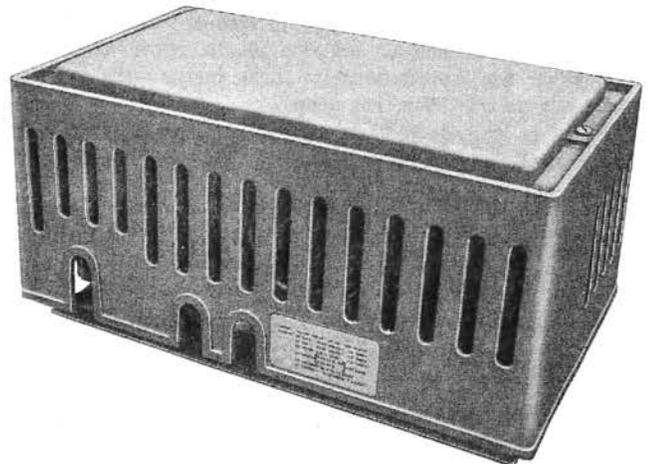

UNITS

Power

28AW1

29BW1 & 30BW1

A packaged power supply without battery reserve. Output connections are made through an Amphenol connector type 26-4200-8S which is designed to mate with Amphenol connector type 26-4100-8P. Arranged to mount in key telephone system cabinets.

When used with the number 551 Key Service Unit, one of the following cords is required and must be ordered separately.

Part No.	Length	Comcode
P40J326	1.5 feet long.	824 013 262
P40J327	2.0 feet long.	824 013 270
P40J328	4.0 feet long.	824 013 288
P40J329	6.0 feet long.	824 013 296
P40J099	12.0 feet long.	824 010 995

The primary is equipped with taps for nominal 111, 117, and 123 volt service. The outputs will remain within the working limits with ± 5 percent variation from nominal voltage. The outputs are as follows:

20 volts dc signal	0.2 amp
20 volts dc talk	0.09 amp
10 volts ac lamp	2.1 amp
18 volts ac buzzer	0.2 amp

Telephone type fuses are provided on one side of each output circuit.

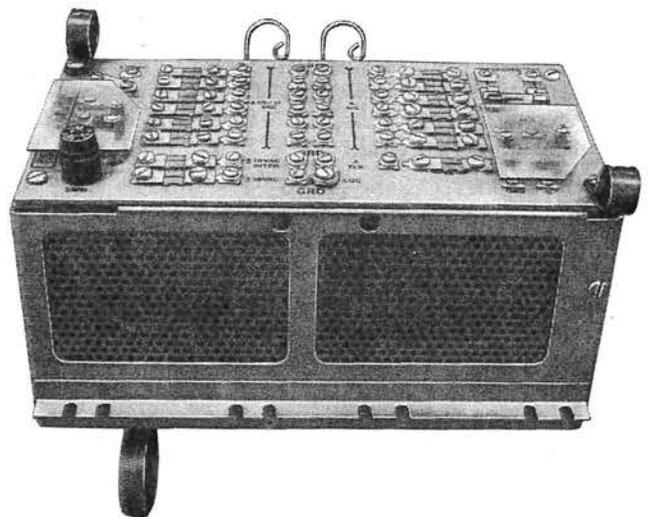

Overall dimensions are 5.81 inches long by 4.19 inches wide by 3.75 inches high.

Used initially to provide power for talking, relays, lamps, and buzzers in miniaturized number 551 type key service units.

Replaces the J86738A Power Unit.

Comcode: 101 594 042

29C1 & 30C1

UNITS

Power

29 Type (Continued)

29BW1: An ac-dc power supply consisting of component apparatus, and a terminal and fuse panel mounted within a metal frame. This assembly is mounted on a furnished wall plate and enclosed under a plastic cover. Overall dimensions are approximately 14.06 inches long by 8.25 inches wide by 6.37 inches deep.

With taps provided for inputs of 111, 117, and 123 volts, 60 Hz, this power unit provides the following outputs:

Tlk. — 18 to 26 volts dc at 0 to 1 ampere(*)

Sig. — 20 to 26 volts dc at 0 to 4 ampere(*)

(*) Total dc output, Tlk, and Sig., shall not exceed 4 amperes.

Lamp — 8.75 to 11 volts ac or 9.75 to 12 volts ac at 0 to 12 amperes.

Buzzer — 16 to 20 volts ac at 0 to 1.6 amperes.

A cord is required but not furnished and must be ordered separately. The required length must be obtained by ordering one of the following cords:

Part No.	Comcode
P40J326 is 1.5 feet long.	824 013 262
P40J327 is 2.0 feet long.	824 013 270
P40J328 is 4.0 feet long.	824 013 288
P40J329 is 6.0 feet long.	824 013 296
P40J099 is 12.0 feet long.	824 010 995

Comcode: 101 594 083

29C1: Same as 29BW1 except designed for rack mounting on 9.18 by 6.44 inch centers. Overall dimensions are approximately 10.50 inches long by 6.94 inches wide by 5.75 inches deep.

Comcode: 101 551 216

30BW1: Same as 29BW1 except has a 113A frequency generator added to the unit for ringing power.

Ringing — 110 volts ac at 30 Hz.

Comcode: 101 594 125

30C1: Same as 30BW1 except designed for rack mounting on 4.18 by 6.44 inch centers. Overall dimensions are approximately 10.50 inches long by 6.94 inches wide by 7.88 inches deep.

Comcode: 101 551 182

Used for supplying power to key telephone systems.

34BW1 and 34C1

34BW1: A power unit designed for wall mounting and intended to provide interrupter and lamp power. The unit is furnished with a parallel-blade, 3-conductor, input receptacle which will accept an input cord provided with a 3-conductor, parallel-blade, molded plug. A wall mounting plate and fiberglass cover are furnished. Overall dimen-

sions are approximately 14 inches wide by 8.25 inches high by 6.375 inches deep.

The 34BW1 power unit operates on an ac input of 111, 117, or 123 volts ± 5 percent, 60 Hz. The outputs of the power unit are as follows:

(a) AC Lamp Outputs: 8.75 to 11 volts or 9.75 to 12 volts; 0 to 25 amperes (0 to 35 amperes intermittent duty).

Note: Links are provided to furnish either ± 10 volts ac or ± 11 volts ac lamp power, depending upon individual key telephone unit requirements.

(b) AC Interrupter Output: 8.75 to 11 volts.

An ac input cord is required for each unit and must be ordered separately. Available part numbers and lengths are as follows:

Part No.	Comcode
P-40J326 is 1.5 feet long.	824 013 262
P-40J327 is 2.0 feet long.	824 013 270
P-40J328 is 4.0 feet long.	824 013 288
P-40J329 is 6.0 feet long.	824 013 296
P-40J099 is 12.0 feet long.	824 010 995

Comcode: 101 834 976

34C1: Same as 34BW1 except designed for frame mounting. Two units can be mounted side by side in a standard 23-inch equipment frame. The unit is furnished with an input cord provided with three parallel male blades which will accept a cord with female end. Overall dimensions are approximately 10.5 inches wide by 7 inches high by 5.5 inches deep.

Comcode: 101 628 162

Used for supplying interrupter and lamp power to key telephone units.

49A

The 49A Power Unit operates on ± 117 volts ac, 57-63 Hz input and furnishes outputs of +18 volts, 0.25 ampere dc and -18 volts, 0.25 ampere dc, with a common terminal.

Consists of component apparatus, such as capacitors, resistors, diodes, varistors, and transistors mounted on two printed wiring boards, an ac capacitor, and a number 2104E transformer mounted on a metal chassis. Equipped with a removable fiberglass cover.

Arranged to mount by means of three 0.138"-32 threaded holes located on bottom of unit.

Overall dimensions are approximately 4.300" wide by 4.350" deep by 3.250" high.

Used initially in Data Set 103G.

Replaces 25A Power Unit.

Comcode: 101 540 128

UNITS
Protector

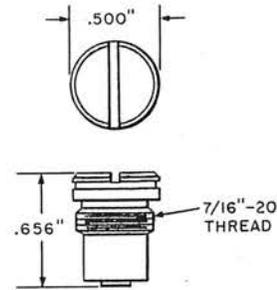

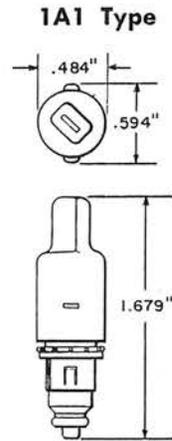

Fig. 1

Fig. 2
(Otherwise Same as Fig. 1)

Each unit consists of a heat coil and protector blocks assembled in a split metal sleeve holder and provided with a removable molded plastic cap of color indicated in table.

Code No.	Color of Cap	Protection Provided		Contains	
		Sneak Current (Amps)	Voltage	Heat Coil No.	Protector Block No.
1A1A	Black	—	500	77A1	32B and 33B
1A1C	Black	(a)	500	76A	32B and 33B
1A1D	Gray	—	—	77A1	33B and 34B1

(a) Operates at 68° F on .54 ampere. Will carry .35 ampere for 3 hours at 68° F.

1A1A: Used in providing central office voltage protection only.

Comcode: 100 828 052

1A1C: Used in providing standard central office sneak current and voltage protection.

Comcode: 100 828 060

1A1D: Dummy protector used in unexposed central office circuits that do not require protection.

Comcode: 100 828 078

Fig. 3
(Otherwise Same as Fig. 1)

Fig. 4
(Otherwise Same as Fig. 1)

2A1A, 2A1B, and 2A1E: Each consists of a cylindrical metal cap containing a pair of protector blocks, as indicated in table, and a fusible alloy spacer.

Used in providing high voltage protection in outside plant and station terminating apparatus.

2A1D: Dummy protector unit consisting of a cylindrical metal cap containing an insert of insulating material.

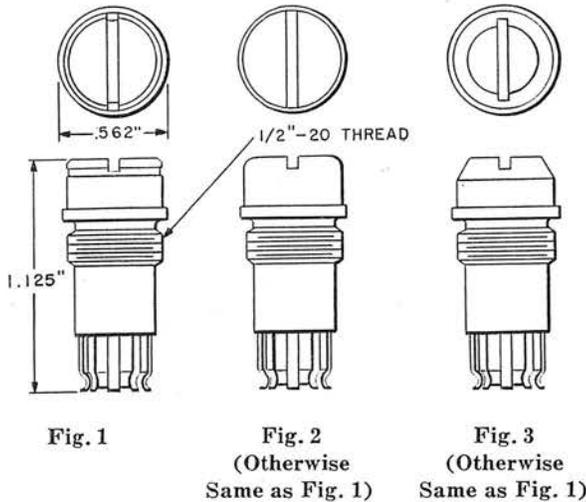

Used in place of 2A1A, 2A1B, and 2A1E Protector Units when these protector units are temporarily removed during testing or when protection furnished by these protector units is to be permanently removed.

Code No.	Comcode	Fig. No.	Protection Provided (Volts)	Contains Protector Block No.

UNITS

Protector

2B Type

3A Type

Each unit consists of a metal cap within which is assembled a coil spring and a metal cage containing a pair of protector blocks, as indicated in table, and a fusible alloy spacer.

Code No.	Comcode	Fig. No.	Protection Provided (Volts)	Contains Protector Block No.
2B1A	100 828 151	1	500	32A and 33B
2B1B	100 828 169	2	800	32A and 33A
2B1E	100 828 177	3	1250	32A and 33C

Used in outside plant and station terminating apparatus.

Each unit consists of a five terminal base assembled in a housing of insulating material of color indicated in table. Also contains protector blocks and fusible metal alloy spacers.

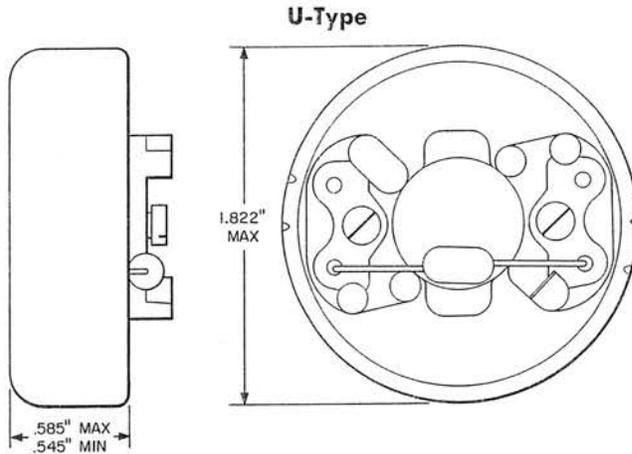

Arranged to plug into number 302 type connectors.

Code No.	Comcode	Color of Housing	Contains (2) Protector Blocks No.
3A1A	100 828 185	Black	32A and 33B
3A2A	100 828 193	Green	32A and 33B
3A3A	100 828 201	Red	32A and 33B
3A4A	100 828 219	Yellow	32A and 33B

Used to provide 500 volt central office protection for one pair of wires.

UNITS

Receiver

Composite diaphragm, ring armature, magnetic type receiver unit with screw terminals.

U3: Equipped with a 104A Varistor to limit voltages across the receiver unit and thereby limit acoustic output levels and protect against demagnetization. The 1000 Hz impedance is approximately 150 ohms.

Replaces U1 Receiver Unit.

Comcode: 101 177 913

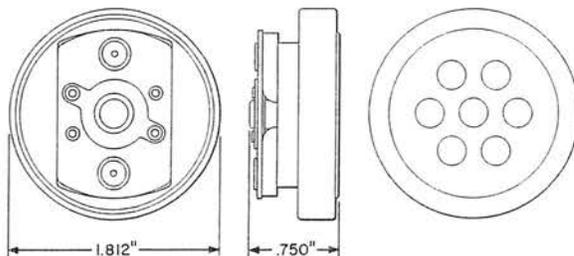

U4: Equipped with a 100A Varistor to limit voltages across the receiver unit and thereby limit acoustic output levels and protect against demagnetization. The 1000 Hz impedance is approximately 600 ohms.

Replaces U2 Receiver Unit.

Used in G-type hand sets.

Comcode: 101 207 660

HA Type

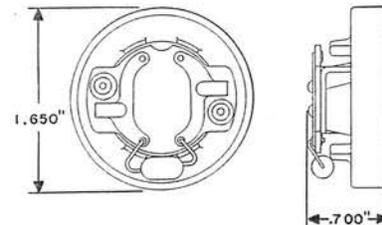

A controlled diaphragm magnetic type receiver unit equipped with varistors to limit the voltage applied to the receiver units and thereby limit acoustic outputs and protect the magnets against demagnetization. HA11 is moisture resistant.

Code No.	Comcode	Impedance at 1000 Hz (Ohms)
HA7	101 188 811	137
HA8	101 188 829	300
HA9	101 207 678	635
HA10	101 207 686	2238
HA11	101 189 611	137

For use in hand sets and receivers.

HA7, 8, 9, 10, and 11 replace HA1, 2, 3, 4, and 6, respectively.

HC Type

Controlled diaphragm magnetic receiver units.

Provided with a varistor to limit voltage applied to the receiver units and consequently limit maximum acoustic outputs and protect the magnet against demagnetization.

HC6: Forms a part of the 52MW, 52TW, 52PRW, 52RRW, 53JN, 53KW, 53NW, 53JRW, and 53MRW Head Telephone Sets.

HC7: Forms a part of the 52MW, 52TW, 52PRW, 52RRW, 53LRW, and 53PRW Head Telephone Sets.

HC8: Provided with a terminal plate and an adapter for mounting the unit in an F-type hand set. Intended for use in F-type hand sets where improved efficiency is required.

Code	Comcode	*Approximate Impedance (ohms) at 1000 Hz
HC6	101 139 871	275
HC7	101 139 889	600
HC8	101 139 897	275

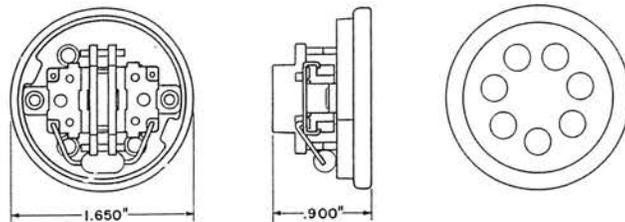

*Less Varistor

Replace HC3, HC4, and HC5 Receiver Units, respectively.

UNITS

Receiver

LA2 and LA3

LA2: A bipolar, central armature, composite magnetic type, light weight receiver unit. Terminals in the rear of the frame are arranged for electrical connections by means of screw and spade tip, spring contact, or soldered leads.

Equipped with a 104A Varistor which limits voltages across the receiver unit and thereby limits acoustic output levels and protects the magnet against demagnetization. The impedance of the receiver unit at 1000 Hz is approximately 150 ohms.

Replaces the LA1 Receiver Unit.

Comcode: 101 171 320

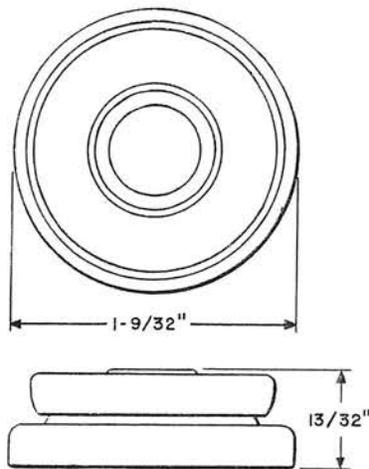

LA3: Same as LA2 except efficiency has been adjusted to more closely match the HA7 Receiver Unit.

Replaces HA7 Receiver Unit in F-type hand sets.

Comcode: 101 467 983

Transmitter

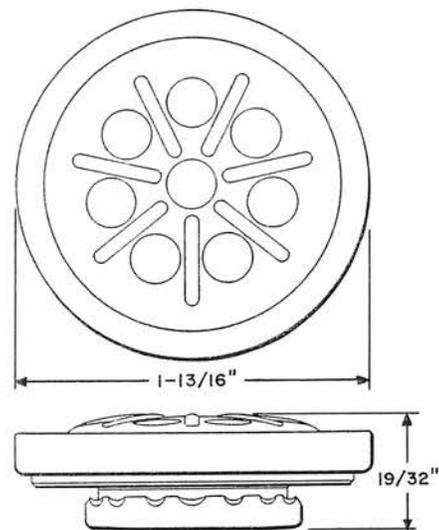

N1

A carbon type transmitter unit intended to mount in a 55AW Transmitter Arm. It forms a part of the number 52 type head telephone sets.

Comcode: 100 828 557

T1

A carbon type transmitter unit intended primarily for common battery stations.

Forms a part of the G1, 2, 5, 6, 7, and 8 Hand Sets.

Comcode: 100 828 573

UNITS

Transmitter

AB2

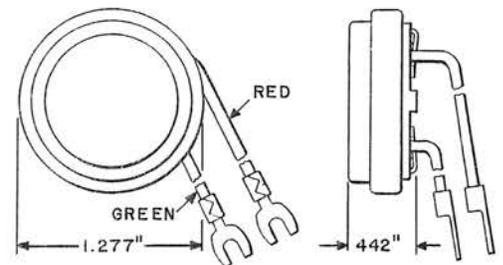

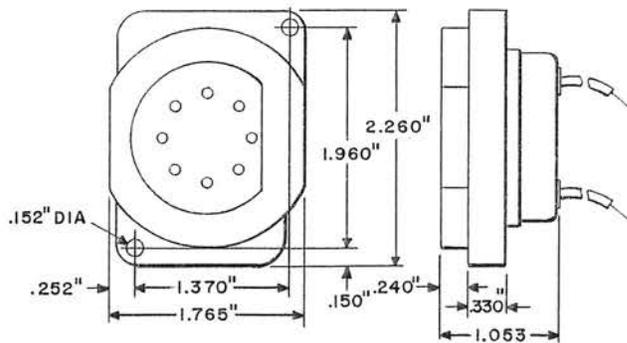

Fig. 2

A controlled diaphragm magnetic type transmitter unit. The impedance at 1000 Hz is approximately 300 ohms. The unit is equipped with two black terminal leads approximately 2-1/2 inches long.

The unit forms a part of the 667B Transmitter.

Comcode: 100 828 599

AC1: A controlled diaphragm magnetic type contained in a housing which provides magnetic shielding. Has a controlled acoustic shunt around the transmitter unit. See Fig. 1.

Impedance at 1000 Hz is approximately 300 ohms.

For applications where the phase of output is important, polarity as indicated by dot stamped adjacent to one of the terminals must be observed.

Part of the 666BW type transmitters.

Comcode: 100 828 607

AD1: A balanced armature magnetic type. Equipped with red and green terminal leads, approximately 3 inches and 2-1/2 inches long, respectively. The cord tips are arranged for a number 4, 5, or 6 screw. See Fig. 2.

Impedance at 1000 Hz is approximately 1000 ohms.

Part of the 52KW Head Telephone Set.

Comcode: 100 828 615

AC3: Same as AC1 except is not equipped with a rubber boot and overall dimensions are 1.434 inches long by 1.760 inch diameter.

Comcode: 100 828 623

AC1, AD1, and AC3

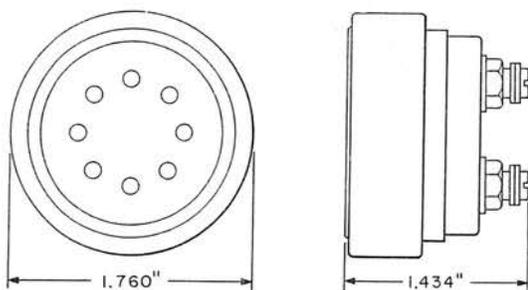

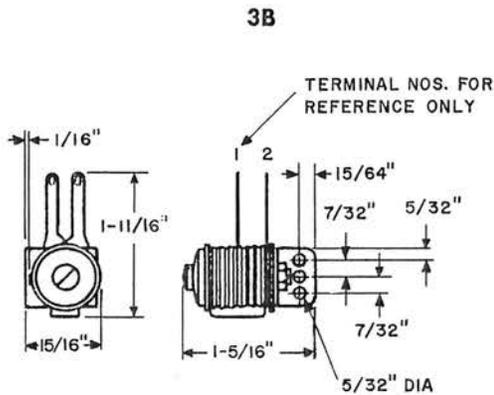

Fig. 1

VARISTORS

Oxidized copper disc type varistor with an enveloping lacquer finish. Has two parallel opposing arms each consisting of two 3/4 inch discs. Provided with mounting screws.

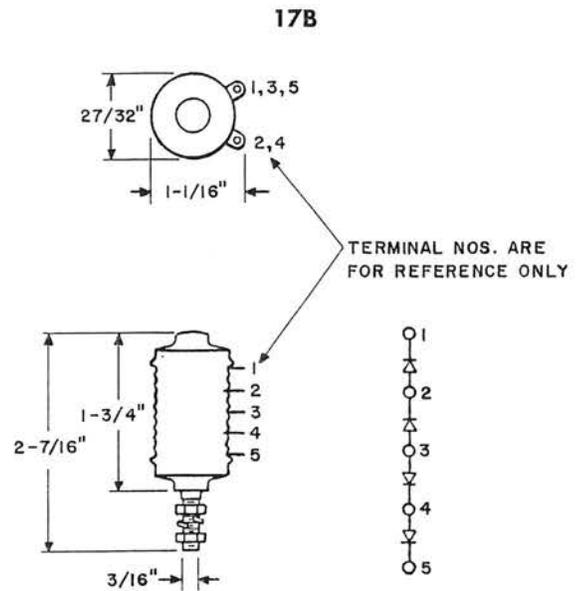

With .10 or 2.0 volts dc applied between the terminals in each direction in turn, the maximum current shall not exceed that determined from columns A and B and columns A and C respectively. See table below.

The insulation between each of the terminals and the mounting bracket shall be capable of withstanding 500 volts ac.

Intended for use across operator's receiver to reduce acoustic disturbances.

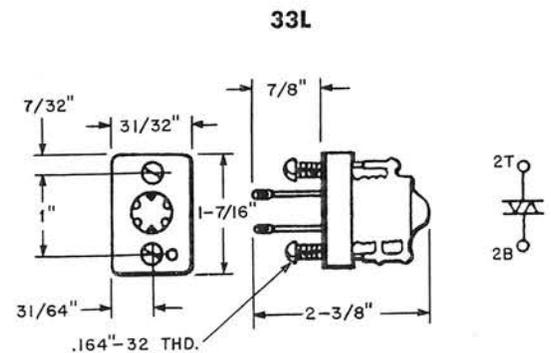

Comcode: 100 828 656

(A) Operating Temperature (°F)	(B) Ampere Max	(C) Ampere Min
60	.0000085	.134
70	.0000105	.152
80	.0000150	.170
90	.0000195	.188
100	.0000245	.206

Oxidized copper disc type varistor with an enveloping lacquer finish. Consists of sixteen 3/4-inch diameter discs arranged electrically to form a bridge with four discs in series per arm. At an ambient temperature not exceeding 105° F, it is designed to have a maximum continuous output per arm of .075 amperes dc and a potential per arm of 12 volts dc.

Comcode: 100 828 698

Oxidized copper disc type varistor with an enveloping lacquer finish. Consists of four 3/4-inch diameter discs clamped to a base of insulating material provided with terminals.

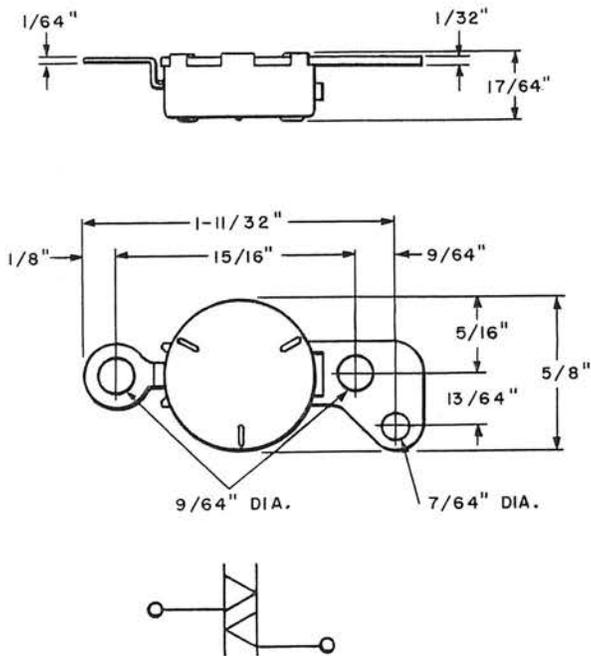

Closest recommended mounting centers are 1 inch by 1-3/4 inches.

The electrical characteristics are the same as the 3B Varistor.

Comcode: 100 829 019

VARISTORS

44A

Consists of two 1/2-inch diameter oxidized copper discs in a metal case. Provided with two terminals for electrical connection and also for mounting purposes.

With a .20 volt dc applied between the terminals in each direction in turn, the maximum current shall not exceed that determined from columns A and B of the table.

With 1.0 volt dc applied between the terminal in each direction in turn, the minimum current shall not be less than that determined from columns A and C of the table.

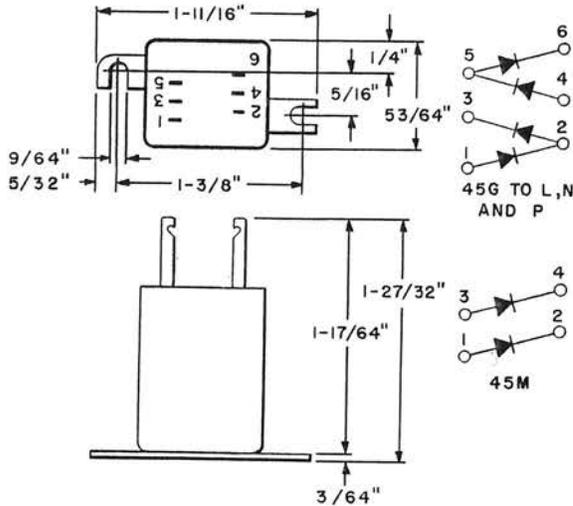

Intended for use as a click reducer.

Comcode: 100 829 191

(A) Operating Temperature (°F)	(B) (Ampere)	(C) (Ampere)
60	.000085	.134
70	.000105	.152
80	.000150	.170
90	.000195	.188
100	.000245	.206

VARISTORS

45G to P

Each consists of an assembly of copper oxide varistor discs potted in a metal can, all having four arms except number 45M which has two arms. Each arm consists of a 3/16-inch diameter disc.

Maximum reverse current per arm at 1.0 volt dc at 26° C is .050 milliamperes dc.

Maximum rating per arm at 40° C:

Reverse voltage, steady state	3.0 Vdc
Reverse voltage, peak for continuous ac operation	6.3 volts
Forward current, steady state	15 mAdc
Forward current, peak for continuous ac operation	45 mA

45G to L, N, and P: Maximum continuous dc output, when used as a bridge rectifier, is 30 milliamperes dc with an input of 4.5 volts ac at ambient temperature not exceeding 40° C.

Forward Current per arm at 26° C
(Milliamperes DC)

Code No.	Comcode	Forward Current per arm at 26° C (Milliamperes DC)			DC Current Balance per Arm (Percent of Average)
		at 0.3 Volt DC	at 0.75 Volt DC	at 1.0 Volt DC	
45G	100 829 209	1.3 to 4.0	25 to 46	—	±10 (a)
45H	100 829 217	.75 to 4.0	—	—	±10 (a)
45J	100 829 225	.55 (min)	—	—	—
45K(c)	100 829 233	1.6 to 4.0	—	—	±5 (b)
45L	100 829 241	.55 (min)	—	23 (min)	±5 (b)
45N	100 829 266	—	—	15 (min)	—
45P	100 829 274	.75 to 4.0	—	—	±5 (b)

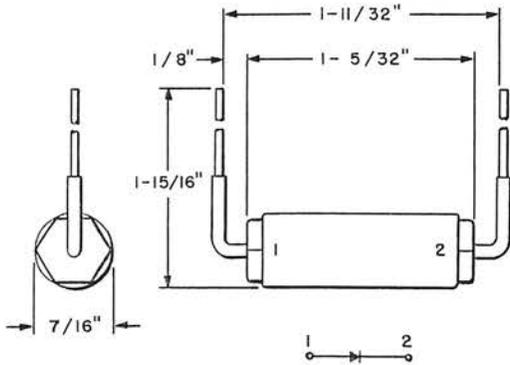

(a) At 0.75 volt dc.

(b) At 0.3 volt dc.

(c) Has an ac carrier balance of minimum 39 db.

VARISTORS

53A

Consists of eight 3/16-inch diameter oxidized copper discs in a tube of insulating material.

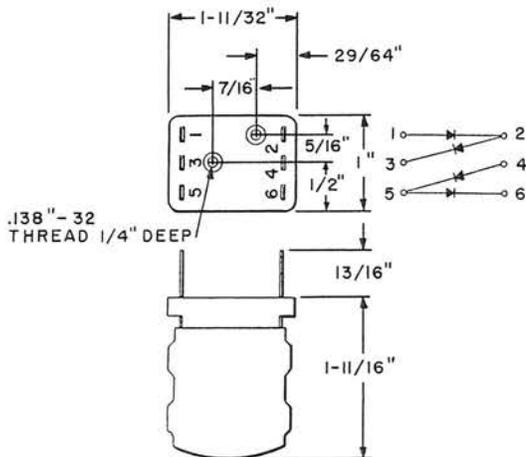

Maximum rating at 40° C:

Reverse voltage, steady state	24	Vdc
Reverse voltage, peak for continuous ac operation	48	volts
Forward current, steady state	15	mAdc
Forward current, peak for continuous ac operation	45	mA
Forward current at 26° C at 1.0 volt dc	15	mA (min)
Maximum reverse current at 25° C at 6.0 volts dc	0.30	mAdc

Replaces D-170188 for government applications.

Comcode: 100 829 365

54A

Consists of twenty-four 3/16 inch diameter oxidized copper discs in a block of insulating material.

With an ambient temperature not exceeding 40° C the maximum continuous dc output, when used as a bridge rectifier, is 30 mAdc with an input of 27 volts ac.

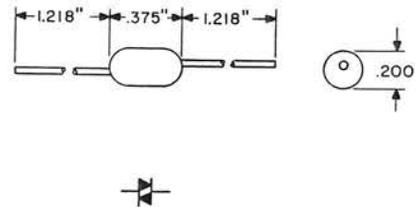

Maximum ratings per arm at 40° C:

Reverse voltage, steady state	18.0	Vdc
Reverse voltage, peak for continuous ac operation	38	volts
Forward current, steady state	15	mAdc
Forward current, peak for continuous ac operation	45	mA
Forward current per arm at 26° C	10	mA (min)
Maximum reverse current per arm at 26° C at 6.0 volts	0.30	mAdc
DC current balance per arm	±5	percent of average

Replaces D-170225 for government applications.

Comcode: 100 829 373

100A

Each consists of two silicon varistor discs encased in resin and equipped with tinned leads. Rated at 10 microamperes in either direction in turn at 0.2 volts dc.

Primarily used in U1 and U2 Receiver Units.

Comcode: 100 829 399

VARISTORS

101A

Consists of a group of seven selected 100A Varistors. Four or five varistors of the group will be of one color either aluminum, light green, or tan, and the balance of the seven varistors (3 or 2, respectively) will be colored pink. The colors will appear on the positive ends of the varistors. The electrical characteristics associated with the various colors are shown in the following table:

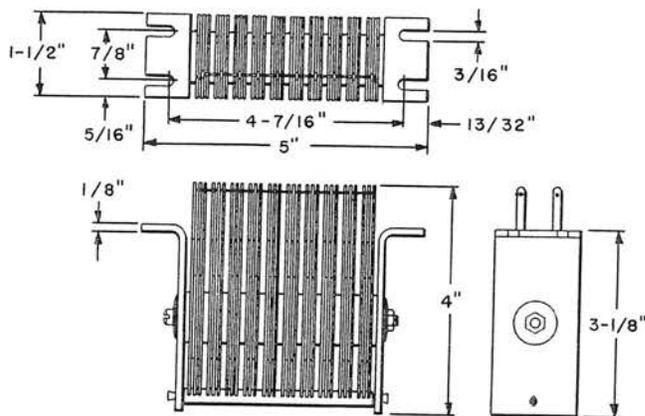

Color	DC Voltage Drop				
	Min.	Max.	(a)	(b)	(c)
Aluminum	0.35	0.45	0.2	0.2	0.9
Light Green	0.36	0.46	0.2	0.2	0.9
Tan	0.37	0.47	0.2	0.2	0.9
Pink	0.43	—	0.2	0.2	0.9

- (a) With 10 microamperes dc flowing in one direction.
- (b) With 10 microamperes dc flowing in opposite direction.
- (c) With 100 milliamperes dc flowing in either direction in turn.

Forms part of the 55A Control Unit.

Comcode: 100 829 431

300A

Silicon carbide disc type varistor with ten groups of discs, each group having two discs and three terminals. The center terminals of the ten groups are strapped together. Screws for mounting are furnished.

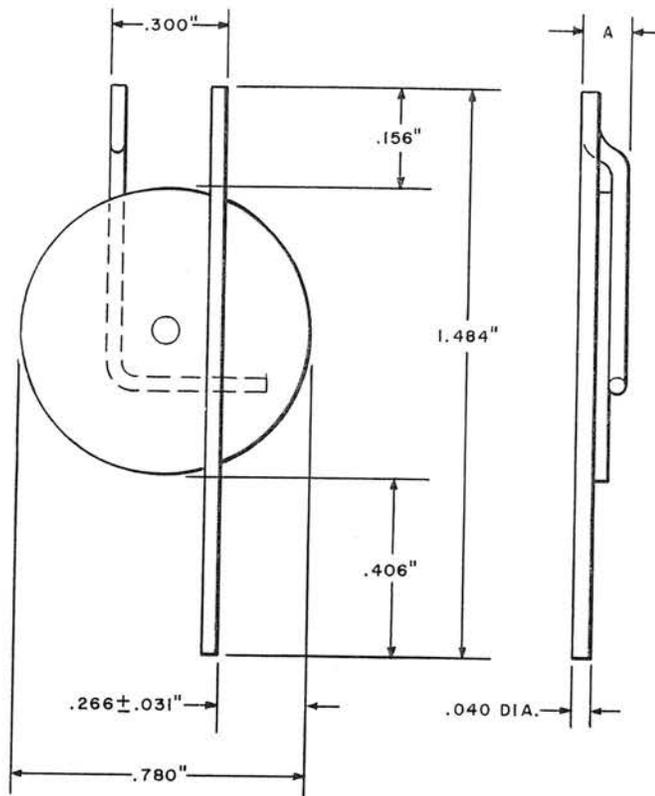

The closest recommended mounting centers are 5-5/16 inches by 1-3/4 inches.

With 20 or 53 volts dc applied between the two terminals, the current shall be .004 ampere maximum and 7.0 amperes minimum, respectively.

Intended for use in switchboards to protect the line lamp in circuits having a severe exposure to induced voltages.

Comcode: 100 829 498

312D and 312E

Each consists of a .780 inch diameter silicon carbide disc with metalized surfaces provided with a terminal on each surface for electrical connection.

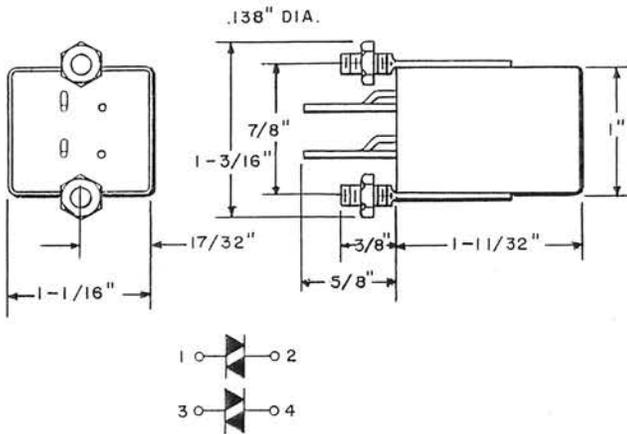

Current voltage characteristics specified in table below apply over the temperature range of 70° to 85° F.

For use as a component part of the 425C Network in the 500 type telephone sets.

Code No.	Comcode	Dimension A (Inches)	Current		DC Voltage	
			Milliamperes DC	DC	Max	Min
312D	100 829 696	.165	10	10.8	8.8

VARISTORS

316A

Consists of two 3/4-inch diameter silicon carbide varistor discs potted in a metal can.

Current voltage characteristics apply over the temperature range of 70° to 85° F. With 100 milliamperes dc flowing, the voltage drop across terminals (1-2) and (3-4) is 7.2 volts minimum to 8.7 volts maximum. With 1.0 milliamperes dc flowing, the voltage drop across terminals (1-2) and (3-4) is 1.5 volts minimum.

Intended for use in the 1A1 Key Telephone System to prevent false operation of a relay on incoming ringing signals.

Comcode: 100 829 761

317A, D, and E

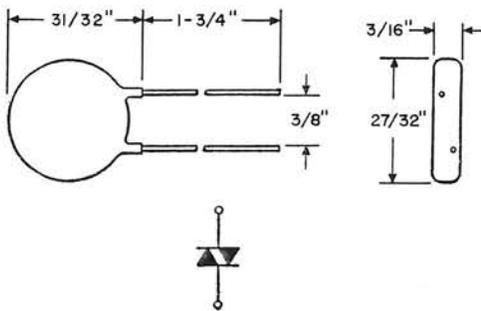

Fig. 1

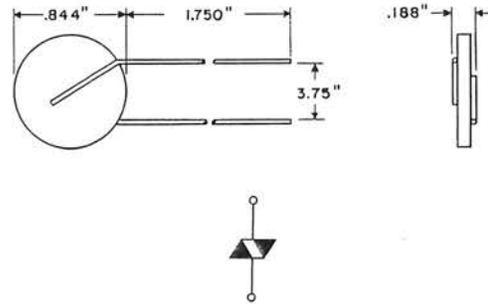

Fig. 2

Each consists of a 3/4-inch diameter silicon carbide varistor disc having a coating of insulating material and equipped with tinned leads.

Current voltage characteristics specified in table below apply over the temperature range of 70° to 85° F.

317A: For use in microwave equipment, PBX trunks, and in ringup relay circuits of the 1A1 Key Telephone System.

317D: For use in the number 400 type key telephone units.

317E: For use in the 400C Key Telephone Unit.

Code No.	Comcode	Current Milliamperes DC	DC Voltage	
			Max	Min
317A	100 829 779	1.0	55.0	41.0
		0.1	—	22.0
317D	100 829 803	4.0	26.0	17.0
		0.1	—	5.0
317E	100 829 811	4.0	26.0	17.0
		0.1	—	5.0

WIRE

Adapted for use in apparatus wiring and in local and toll switchboards. They are for the most part lacquer treated. This lacquer treatment has many advantages over wax impregnation, some of which are as follows:

1. Eliminates wax as a fire hazard.
2. Eliminates insulation fraying at terminals.
3. Does not collect dirt.
4. Colors remain brighter for long periods of time.

C-Type

A solid tinned copper wire insulated with PVC and covered with a cotton serving and lacquer coating.

It may be obtained in number 22 or 24 AWG in pairs, triples, spiral fours, and multiple-twin quads in various colors. **The quantity, gauge, number of conductors, and colors must be specified in the order.**

Weight: 2.627 pounds per 1000 feet for number 22 AWG single, and 1.815 pounds per 1000 feet for number 24 AWG single.

Used for switchboard wiring, local cable forms, local toll, and telegraph circuits.

G-Type

A solid tinned copper wire insulated with double cellulose acetate yarn and covered with a cotton braid and impregnated.

It may be obtained in number 22 or 24 AWG, single only, and in various colors. **The quantity, gauge, and colors must be specified in the order.**

Weight: 3.094 pounds per 1000 feet for number 22 AWG, and 2.313 pounds per 1000 feet for number 24 AWG.

Used for surface wiring of step-by-step switches and small relay units.

H-Type

A stranded tinned copper wire insulated with double cellulose acetate yarn and covered with a cotton braid and lacquer coating.

It may be obtained in number 22 AWG, singles only, in various colors. **The quantity and colors must be specified in the order.**

Weight: 3.192 pounds per 1000 feet.

Used for wiring telephone sets and for miscellaneous apparatus strapping.

J-Type

A solid tinned copper wire insulated with a double cotton braid and impregnated.

It may be obtained in number 18, 20, 22, and 24 AWG in black only. **The quantity and gauge must be specified in the order.**

Weight per 1000 feet:

18 AWG	6.636 pounds
20 AWG	4.664 pounds
22 AWG	3.381 pounds
24 AWG	2.559 pounds

Used as a sleeved strap wire.

K-Type

A solid tinned copper wire insulated with a double cellulose acetate yarn and covered with a cotton braid and lacquer coating.

It may be obtained in number 22 or 24 AWG in singles and pairs in various colors. **The quantity, gauge, number of conductors, and colors must be specified in the order.**

Weight: 2.766 pounds per 1000 feet for number 22 AWG single, and 2.341 pounds per 1000 feet for number 24 AWG single.

Used for making cross connections on crossbar system frames.

M-Type

A solid tinned copper wire insulated with a double cellulose acetate yarn and covered with a cotton braid and lacquer coating.

It may be obtained in number 22 AWG in singles, pairs, and triples in various colors. **The quantity, number of conductors, and colors must be specified in the order.**

Weight: 3.229 pounds per 1000 feet for single wire.

For use in carrier panel equipment.

WIRE

P-Type

A solid tinned copper wire insulated with PVC and covered with a cotton serving and lacquer coating. A tinned copper ground wire (same gauge as conductor) is laid in with the conductor or conductors, and the combination is covered with a braided shield of tinned copper wire and a plastic jacket.

It may be obtained in number 22 or 24 AWG in singles, pairs, and triples in various colors. **The quantity, gauge, number of conductors, and colors must be specified in the order.**

Weight per 1000 feet for single wire:

22 AWG	14.107 pounds
24 AWG	12.484 pounds

For general use where a shielded wire is required.

AA Type

A stranded tinned copper conductor insulated with double nylon yarn and a single cotton serving and covered with a cotton braid and lacquer coating.

It is available in 12, 14, 16, 18, 20, and 22 AWG in singles and pairs in various colors. **The quantity, gauge, number of conductors, and colors must be specified in the order.**

Weight per 1000 feet for single wire:

12 AWG	25.73 pounds
14 AWG	17.19 pounds
16 AWG	11.95 pounds
18 AWG	8.65 pounds
20 AWG	6.30 pounds
22 AWG	5.41 pounds

Used primarily for winding rectifiers.

AB Type

A stranded tinned copper conductor insulated with a double nylon yarn and single cotton serving, and covered with a cotton braid and impregnated. Obtainable unimpregnated when specified. Paired impregnated wire can be obtained with a braided copper shielding covered with a cotton braid when specified in the order.

It may be obtained in number 12, 14, 16, 18, 20, and 22 AWG in singles and pairs in various colors. **The quantity, gauge, number of conductors, and colors must be specified in the order.**

Weight per 1000 feet for single wire:

12 AWG	26.49 pounds
14 AWG	17.85 pounds
16 AWG	12.54 pounds
18 AWG	9.18 pounds
20 AWG	6.79 pounds
22 AWG	5.41 pounds

Used in amplifier wiring and as lead-out wire for coils.

AC Type

A solid tinned copper conductor insulated with double cellulose acetate yarn and covered with a single cotton serving and lacquer. It may be obtained in number 22 AWG in multiple quads in various colors. **The quantity and color must be specified in the order.**

Weight: 11.21 pounds per 1000 feet.

Used for quadded switchboard wires.

AF Type

A solid tinned copper conductor insulated with double cellulose acetate yarn and covered with cotton braid and impregnated. It may be obtained in number 20, 22, or 24 AWG in singles and pairs in various colors. **The quantity, gauge, number of conductors, and colors must be specified in the order.**

Weight per 1000 feet for single wire:

20 AWG	4.68 pounds
22 AWG	3.40 pounds
24 AWG	2.57 pounds

Used in transmission networks.

AG Type

A stranded tinned copper conductor insulated with double cellulose acetate yarn and covered with cotton braid and impregnated. It may be obtained in number 22 AWG in various colors. **The quantity and colors must be specified in the order.**

Weight: 3.43 pounds per 1000 feet.

Used in filter networks and as lead-out wire for coils.

WIRE

AK Type

A number 16 AWG solid tinned copper conductor insulated with double cellulose acetate yarn and covered with cotton braid and lacquer in various colors, and a number 22 AWG tinned copper ground wire. Both are covered with a braided shield of tinned copper wire. **The quantity and colors must be specified in the order.**

Weight: 17.090 pounds per 1000 feet.

Used for shielded carrier wiring.

AP Type

A galvanized solid iron wire covered with black cotton braid and impregnated. This wire is not an electrical conductor.

It may be obtained in number 12 AWG, black only. **The quantity must be specified in the order.**

Weight: 34.94 pounds per 1000 feet.

Used as a support in local cable forms.

AR Type

A stranded tinned copper conductor insulated with double cellulose acetate yarn and covered with a single cotton serving and lacquer. It may be obtained in number 24 AWG in red or blue. **The quantity and color must be specified in the order.**

Weight: 1.918 pounds per 1000 feet.

Used in step-by-step multiple bank wiring in mechanized assembly.

BF Type

A solid tinned copper conductor insulated with polyethylene and covered with crepe paper, a braided shield of tinned copper wire, paper tape, and a slate colored plastic jacket. It may be obtained in number 22 AWG in singles, pairs, and triples in various colors. **The quantity, number of conductors, and colors must be specified in the order.**

Weight: 10.915 pounds per 1000 feet for a single wire.

For general use where a shielded wire is required in carrier telephone installations.

BG Type

A solid tinned copper conductor insulated with PVC and covered with a single cotton serving and lacquer. It may be obtained in number 20, 22, or 24 AWG in singles,

pairs, triples, spiral fours, or multiple-twin quads in various colors. **The quantity, gauge, number of conductors, and colors must be specified in the order.**

Weight per 1000 feet for a single wire:

20 AWG	4.742 pounds
22 AWG	3.068 pounds
24 AWG	2.242 pounds

For use in surface and hookup wiring.

BH Type

A solid tinned copper conductor insulated with PVC and covered with cotton braid and lacquer. It may be obtained in number 20, 22, or 24 AWG in singles, pairs, triples, spiral fours, or multiple-twin quads in various colors. **The quantity, gauge, number of conductors, and colors must be specified in the order.**

Weight per 1000 feet for a single wire:

20 AWG	5.205 pounds
22 AWG	3.617 pounds
24 AWG	2.777 pounds

Used for lead-out wiring.

BK Type

An AM type wire and a number 22 AWG tinned copper ground wire which are covered with a braided shield of tinned copper wire and insulated with a plastic jacket.

It may be obtained in number 16 or 20 AWG in singles, pairs, and triples in various colors. **The quantity, gauge, number of conductors, and colors must be specified in the order.**

Weight per 1000 feet for single wire:

16 AWG	21.022 pounds
20 AWG	16.513 pounds

Used where a shielded wire is required for power equipment.

BM Type

A stranded tinned copper conductor insulated with double nylon yarn and cotton braid.

It may be obtained in number 27 AWG in various colors. **May also be obtained wax impregnated or lacquered when specified in the order. The quantity and color must be specified in the order.**

Weight: 1.493 pounds per 1000 feet.

Used as lead out wire in coils, networks, and transformers.

WIRE

BU Type

A solid tinned copper conductor with PVC insulation.

It may be obtained in number 22 or 24 AWG in singles, pairs, triples, quads, or spiral fours in various colors. **The quantity, gauge, number of conductors, and colors must be specified in the order.**

Weight per 1000 feet for a single wire:

22 AWG	2.636 pounds
24 AWG	1.822 pounds

Used in surface wiring, local cables, and switchboard cables.

BW Type

A solid tinned copper conductor insulated with PVC and covered with a single cotton serving and lacquer.

Maximum operating voltage is 300 volts dc or 200 volts rms ac.

It may be obtained in number 20, 22, 24, or 26 AWG in singles, pairs, triples, spiral fours, and multiple-twin quads in various colors. **The quantity, gauge, number of conductors, and colors must be specified in the order.**

Weight per 1000 feet for a single wire:

20 AWG	4.165 pounds	24 AWG	1.808 pounds
22 AWG	2.642 pounds	26 AWG	1.199 pounds

Used in surface wiring and local cables.

BY Type

A solid tinned copper conductor insulated with PVC.

It may be obtained in number 26 AWG in singles, pairs, triples, quads, or spiral fours in various colors. **The quantity, number of conductors, and colors must be specified in the order.**

Weight: 1.005 per 1000 feet for a single wire.

Used in surface wiring, local cables, and switchboard cables.

DD Type

A stranded tinned copper conductor insulated with PVC.

It may be obtained in number 27 AWG in various colors. **The quantity and colors must be specified in the order.**

Weight: 1.493 pounds per 1000 feet for a single wire.

Used in telephone set wiring.

Distributing Frame

U-Type

A tinned copper wire insulated with extruded PVC, covered with a serving of cotton yarn, and coated with plasticized cellulose acetate lacquer. This wire can be distinguished by a yellow tracer in each wire.

The wire is furnished in standard 1500-foot coils with the exception of the U22P and U22T. U22P is furnished in standard 3000-foot coils but is also available in coils of 1500 feet and on spools of 500 feet. U22T is furnished in 2000-foot coils.

Code No.	AWG	Number of Conductors	Weight (Pounds per 1000 Ft.)	Colors
U20S	20	1	4.120	Brown
U20P	20	2(a)	8.241	Brown, Black-Brown
U22P	22	2(a)	10.491	White, Black
U22T	22	3(a)	5.245	White, Black, Red
U22F	22	4(a)	7.868	White, Red, Black, Green
U22M	22	4(b)	10.491	Black, Black-White, Red, Green

- (a) Conductors are twisted together in a spiral.
- (b) The black and black-white conductors form one twisted pair, the red and green conductors form another twisted pair, and the two pairs are twisted together to form a quad.

WIRE

Distributing Frame

W Type

Tinned copper wire, insulated with extruded polyvinyl chloride compound covered with a jacket of extruded transparent nylon.

Furnished in standard coils of 1500 feet, except the W22P wire which is furnished in a standard coil of 3000 feet and the W22T wire is furnished in 2000 foot coils.

Used on distributing frames of No. 1 ESS.

Code No.	AWG	Number of Conductors	Weight (Pounds per 1000 Ft.)	Colors
W22F	22	(a)4	10.0	Yellow, blue, orange, brown
W22M	22	(b)4	10.0	Yellow, blue, orange, brown
W22P	22	(a)2	5.0	Yellow, blue
W22S	22	1	2.5	Brown
W22T	22	(a)3	7.5	Yellow, blue, orange

- (a) Conductors are twisted together in a spiral.
- (b) Yellow and blue conductors form one twisted pair, the orange and brown conductors form another twisted pair, and the two are twisted together to form a quad.

Station

D Type
(AT-8378)

Consists of number 22 AWG annealed copper conductors individually insulated with distinctively colored high density polyethylene compound for conductor identification. The insulated conductors are twisted in spiral quad and covered with a jacket of light olive gray or ivory polyvinyl chloride compound. The finished wire has a circular cross section with a maximum outside diameter of 0.150 inch and is intended for general use in station wiring.

The jacket has a very low coefficient of friction, consequently wire pulling lubricants are not needed.

The conductors can be terminated on number 66 type connecting blocks without skinning off the insulation.

The conductors have a resistance of 34 ohms maximum per 1000 feet at a temperature of 68° F.

The wire is furnished in 600-foot continuous length. Cord, individually packed in a carton.

Replaces the GS and JKT type station wire.

DJ-1

A stranded wire of 27 AWG conductors insulated with polyvinyl chloride and covered with a cotton braid and lacquer coating.

Weighs approximately 1.8 pounds per 1000 feet. Available on 6 inch spools containing 4000 feet or 16 inch reels containing 20,000 feet.

Available in colors of black or red as specified on the order.

Used in head telephone sets.

SK Type

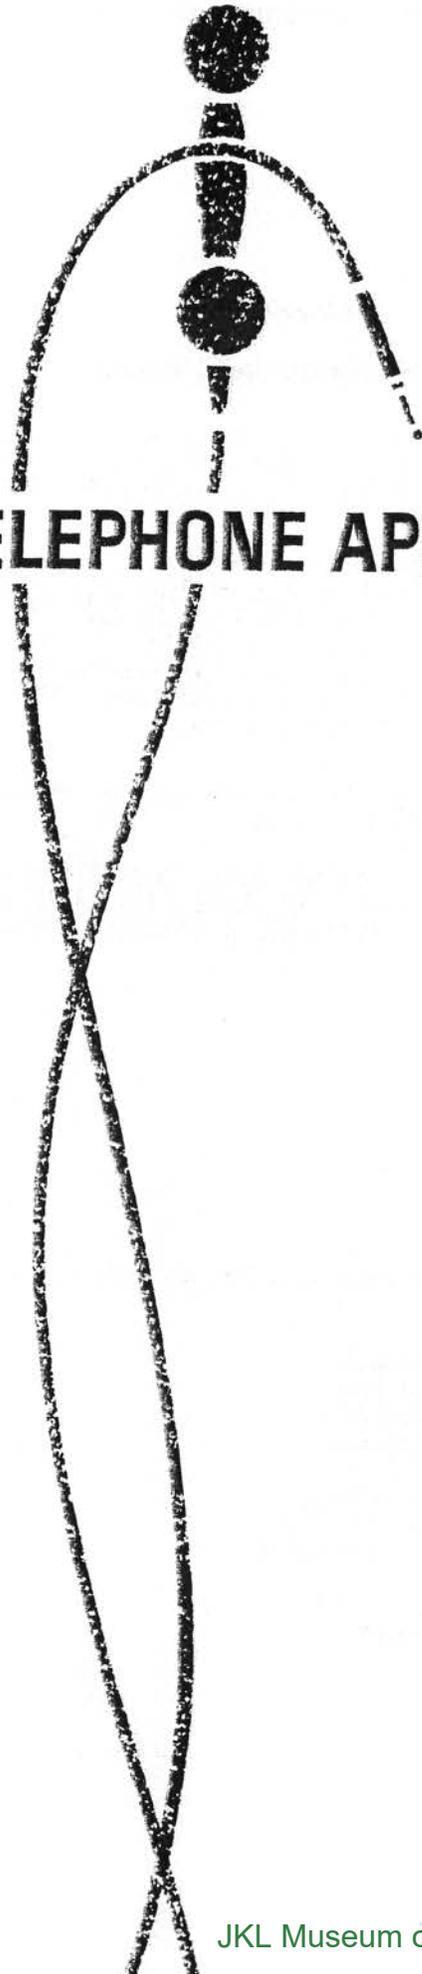

Two 20 AWG annealed copper steel conductors insulated with paper and a shield of braided copper wires covered with a light olive gray colored thermoplastic compound underlaid by a jacket slitting end of nylon.

The conductor resistance averages 52 ohms per 1000 circuit feet at 68° F, the mutual capacitance averages 0.050 uf per 1000 feet, and the attenuation averages 0.72 db per 1000 feet at 1000 Hz. The wire will withstand 1000 volts rms between conductors and between conductors and shield.

Furnished in 1000 foot bundles. Each bundle is divided into connected, separately bound coils 200 feet long. Each bundle is tagged to show the total length of wire which it contains. The connected separately bound coils are not tagged unless the lengths of wire which they contain differ by more than 25 feet from the usual 200-foot length.

Weight: Approximately 25 pounds per 1000 feet.

For use in loudspeaker paging systems and as amplifier leads and associated wiring.

TELEPHONE APPARATUS AND EQUIPMENT

The material included herein does not purport to be all-inclusive of our line of standard telephone products. Inquiries are invited regarding products not included.

TELEPHONE APPARATUS AND EQUIPMENT CATALOG

Equipment Section

The equipment listed in this section is included primarily to provide general information on some of the company's systems and major units of equipment. It is not intended as complete ordering information. In most instances, due to optional features, compatability with existing equipment and other factors, some engineering effort is involved before firm quotations can be made or orders accepted.

CARRIERS

(J99285) N2

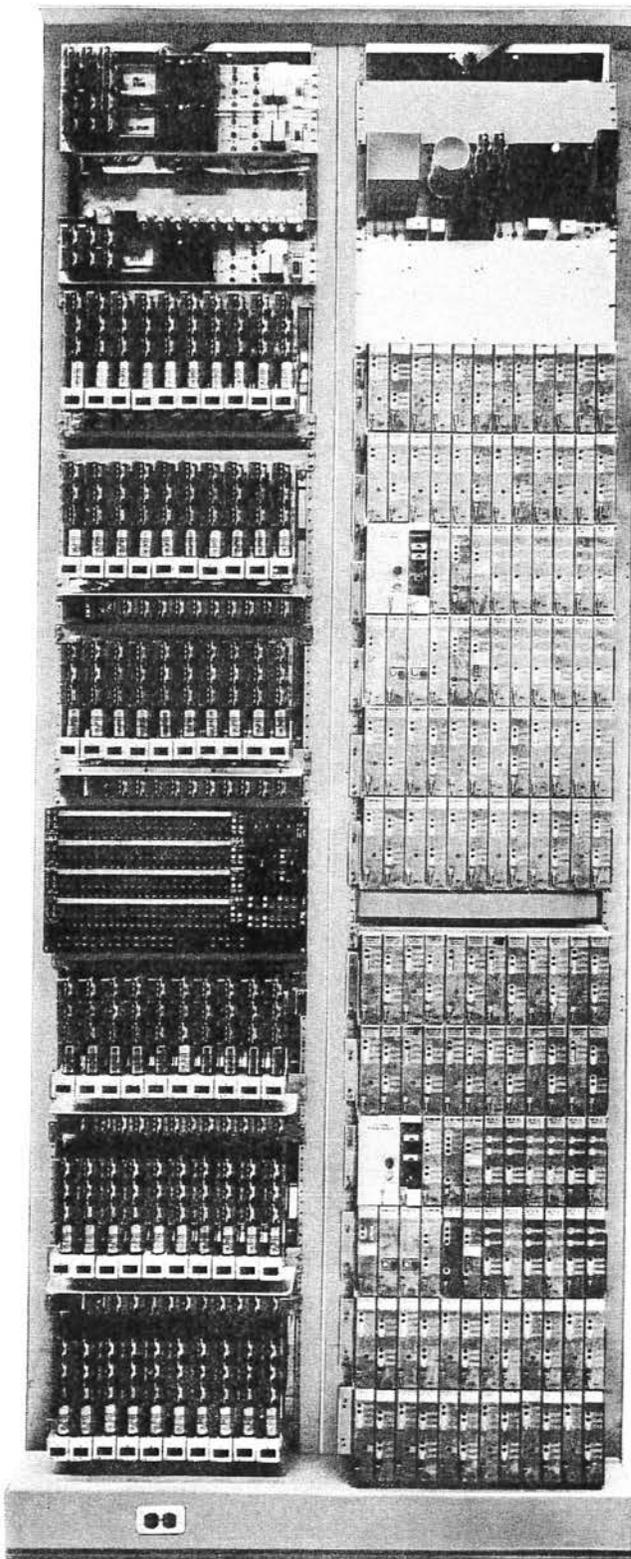

The N2 Carrier is a 12-channel system designed for short haul use on toll and exchange plant cables. The system uses double sideband transmitted carrier transmission with channels spaced every 8 kc. Directional separation, within a single cable, is obtained by using two cable pairs. Each pair requires a different frequency band for its direction of transmission. For most installations, 12 channels, numbered 2 to 13 in the range of 172 to 268 kc, are used in one direction of transmission and 36 to 132 kc in the opposite direction of transmission. Channel 1 is available for use in place of any other channel that may be inoperative.

The equipment for the N2 Carrier includes two terminals and a number of repeaters. The number of repeaters required is determined by the spacing, which depends on the type and gauge of cable used and various other conditions.

The N2 Carrier terminal bays are 23-inch bulb-angle bays available in 7-foot, 9-foot, and 11-foot 6-inch heights. These bays include the terminal shelves, terminal fuses, repeater power fuses and resistors, and the common bay alarm equipment.

CARRIERS

(J99300) N3

The N3 Carrier is a packaged 24-channel system designed for short haul use on toll or exchange cables. Different frequency bands are required for the two directions of transmission using the low band, 36 to 132 kc, in one direction and the high band, 172 to 268 kc, in the other direction. Directional separation within a single cable is obtained by using two cable pairs. Each pair uses a different frequency band for its direction of transmission. A frequency shift control unit corrects for line frequency deviation along the repeatered line. A separate common carrier supply provides all of the frequencies needed for N3 Carrier terminals.

The N3 Carrier terminal equipment is designed to meet the transmission performance requirements of intertoll trunks handling direct distance dialing and message channel traffic.

Transmission Characteristics:

Channel Gain-Frequency—characteristics average less than 3 db down at 200 and 3400 Hz when terminals are operated back-to-back.

Envelope Delay Distortion—less than 200 microseconds between 1000 and 2600 Hz; less than 800 microseconds between 500 and 3000 Hz.

Net Loss Stability—distribution grade of 0.5 db versus time, battery, and temperature variations.

Regulation—0.2 db over a 25 db range.

Compressor Tracking—typically within ± 1.0 db over entire range; maximum load capacity is 8 dbm at 0 db system level.

Noise Performance—quieter than 16 dbrnC at 0 TLP for terminals back-to-back.

The equipment for the N3 terminals is arranged in shop-wired packaged frames which are available in 7-foot or 9-foot heights.

CARRIERS

(J68858) L-Type Multiplex (LMX-2)

The L-type multiplex carrier is a heavy duty multiplex facility with small job flexibility. It is designed as a package concept which includes voice and high frequency patching outlets, channel banks, group banks, supergroups, and carrier supplies completely assembled and shop wired.

System Characteristics:

Number of Channels—up to 1860

Modulation—SSB Suppressed Carrier

Channel Spacing—4 kc

Frequency Allocations—basic 12-channel group 60 to 108 kc; basic 60-channel supergroup 312 to 552 kc; basic 600-channel mastergroup 564 to 3084 kc.

Line Frequencies—supergroups 1 to 10 (L-600) 60 to 2788 kc; universal mastergroup (U-600) 564 to 3084 kc.

Group Pilot (Edge of Band)—104.08 kc.

Supergroup Pilot (Edge of Band)—315.92 kc.

Channel Frequency Characteristics—160 to 3300 Hz (3 db points).

Supply Voltages—24 volts dc.

Terminal Background Noise—less than 21 dbrnc0.

Power Drain—receiving bay-transmission circuits 15 amps at 24 volts; transmitting bay-transmission circuits 2 amps at 24 volts; carrier supply 14 amps at 24 volts; scanner and alarm circuits 3 amps at 24 volts.

HF Levels:

Channel Bank— -42 db transmitting channel bank out; -5 db receiving channel bank in.

Group— -25 db transmitting group out; -28 db receiving group in.

Supergroup— -43.4 db transmitting supergroup out; -21.3 db receiving supergroup in.

L-600 and U-600 (at Line Interface)— -50 db transmitting output; -10 db receiving input.

L-1860— -21 db transmitting output; -14 db receiving input.

VF Levels— -16 db transmitting; +7 db receiving.

HF Impedances—channel bank to group, 135 ohms balanced; group to supergroup, 75 ohms unbalanced; supergroup to receiving and transmitting hybrids, 75 ohms unbalanced.

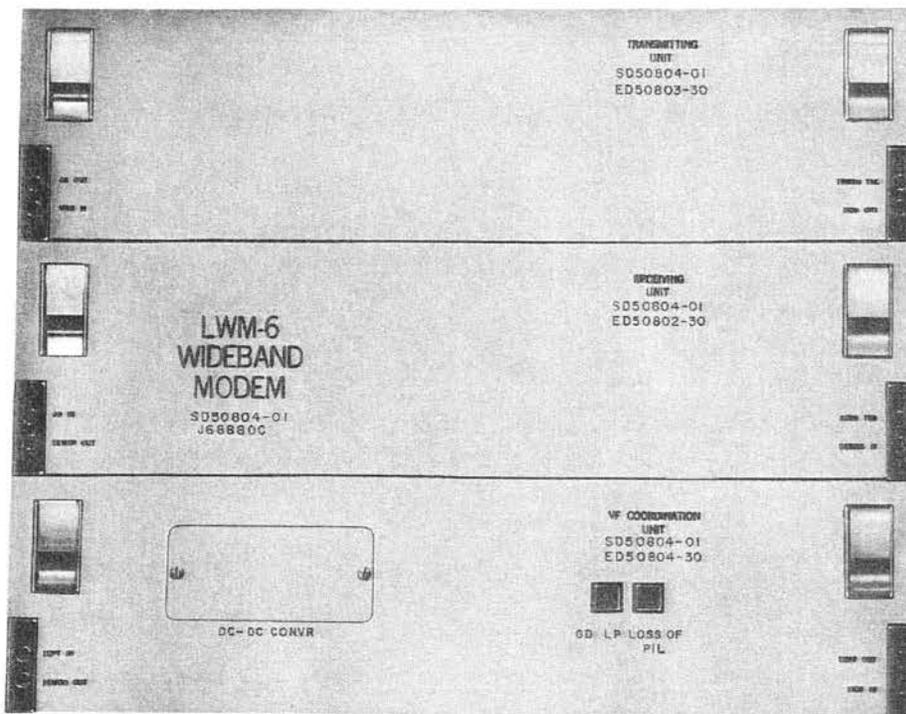

VF Impedance—600 ohms balanced.

Voice frequency pairs are connected through the voice frequency jack panel to the channel banks. Each channel bank modulates the voice frequencies with carriers, selects the lower sidebands, and combines them in a single 60 to 108 kc band. From this point on, the 12-channel group is treated as a single unit in subsequent steps of modulation. The 12-channel groups are amplified and modulated into the 312 to 552 kc frequency range to form a basic supergroup. The supergroups are combined and connected to the line or radio facilities via office trunks or wire line entrance links. In receiving from the line, the process is reversed by reintroducing the supergroup, group, and channel carrier frequencies and demodulating the sidebands to voice frequency channels.

The standard bay height is 7 feet; however, bay extenders are provided optionally for 9-foot, 10-foot 6-inch, and 11-foot 6-inch bay heights.

CARRIERS

(J68880) L-Type Multiplex (LWM-6)

The LWM-6 wideband modem is a modulator-demodulator unit that is designed to place a baseband data signal and a single 4 kHz VF channel in the L multiplex basic group band (60 to 108 kHz). It provides for full-duplex operation of both the wideband and voice channel. The equalized baseband data channel extends from 0.1 to 37.0 kHz. The coherent demodulation process, however, requires the recovery of the carrier at the receiving end of the system and this places a restriction on the low frequency content of baseband signals. The energy below 2000 Hz must be attenuated and the dc component removed. These requirements are met by the restored-polar signal format that is generated by the 303-type data set.

The modem incorporates vestigial-sideband suppressed-carrier amplitude modulation. A 100 kHz carrier pilot is added to permit coherent demodulation. The lower sideband extends to 63 kHz and the vestigial sideband to 104 kHz, resulting in an equivalent baseband of 37 kHz. When appropriate high-frequency band shaping is employed in the data set, the modem permits transmission of data signals at any rate up to 50 kilobits.

The LWM-6 wideband modem consists of a welded chassis unit equipped with three drawer assemblies cap-

able of housing a transmitting unit, a receiving unit, and a coordination unit. It occupies ten 1-3/4 inch mounting plate spaces on a 19-inch wide 10-inch deep, cable-duct type bay. The modem when fully equipped, weighs approximately 70 pounds. This equipment is arranged for both wiring and maintenance from the front or equipment side of the bay and may be located in back-to-back line-ups or against a wall.

The transmitting, receiving and coordination drawer assemblies contain plug-in-units and component apparatus and are mounted in the chassis on friction slides located at either end of the drawers.

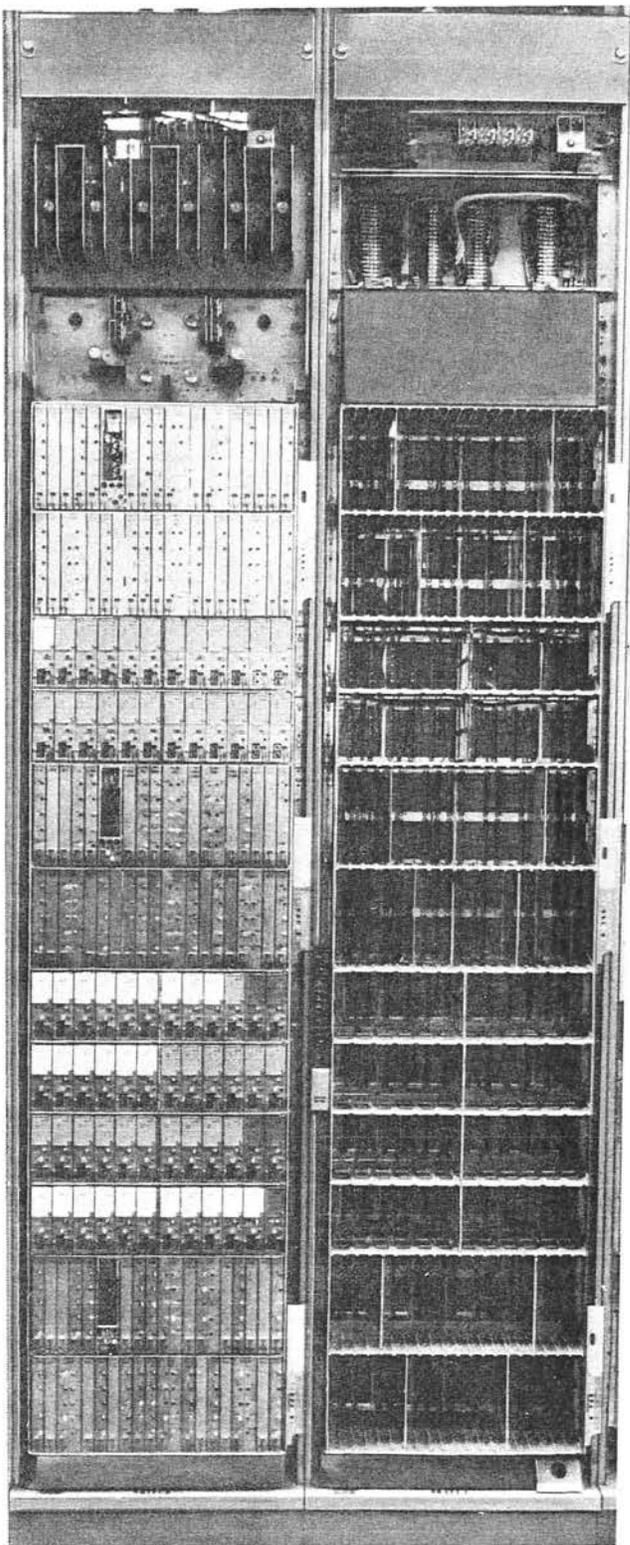

The 108 kHz carrier frequency for the VF coordination channel should be obtained from the J68857A channel carrier distribution unit.

The LWM-6 wideband modem requires a source of -24 volts and will operate within the office battery range of -22.0 to -26.0 volts. The normal current drain is 0.7 plus or minus 0.05 amperes. The maximum number of modems permissible on a single battery feeder is thirty.

The modem equipment has been designed to operate satisfactorily in ambient temperatures ranging from +32° to +120° F.

CARRIERS

(J98710) T1

The T1 Carrier is a 24-channel, transistorized, time division, pulse code modulation transmission system. It is applicable to short haul trunks, principally direct inter-office trunks, tandem trunks, toll connecting trunk, PBX trunks, and foreign exchange lines. The system is intended primarily for use in the larger metropolitan areas and should be most economical for large, fast-growing cross sections. The terminals for the T1 system are known as (J98711) D1 Channel Banks. Built-in signaling is provided and the transmission quality of the carrier channels is adequate for signals generally expected in the switched telephone network. Interoffice transmission is on a four-wire basis, i.e., one nonloaded exchange cable pair, free of bridge taps, for each direction of transmission. Regenerative pulse repeaters are required, nominally spaced at 6000-foot intervals. Line repeaters are powered from central office batteries over the carrier signal pairs.

The (J98711) D1 Channel Bank converts the continuously changing voice and signal information of 24 outgoing channels into a single train of pulse code modulated (PCM) pulses, and at the receiving end reconverts the train of PCM pulses into a close approximation of the original signals.

The repeater used in the T1 Carrier is identified by one of two codes: 201A Repeater for one cable operation and 201B Repeater for two cable operation. Each repeater includes two complete regenerators and a common power supply.

Alarms are provided at the terminal and repeater bays for fuse failures. An alarm to indicate loss synchronization between the transmitter and receiver is also provided.

With the exception of a miscellaneous alarm and filter panel on each bay, all the circuits, including all but one of the power supplies, are packaged as plug-in units.

The equipment mounts in a 9-foot high by 23-inch wide bulb-angle bay.

CARRIERS

Data

(J70169) 43B1

The 43B1 Voice Frequency Carrier is a solid state data system capable of multiplexing up to 17 single width (SW, 75 baud) channels or 8 double width (DW, 150 baud) channels and one single width channel on a single 4-wire voice facility. For a 2-wire facility, as many as eight single width or four double width channels may be multiplexed. This system utilizes a total of 25 center frequencies from 425 to 3145 Hz.

A 43B1 Voice Frequency Carrier shop-wired bay, 11 foot 6 inches high and 23 inches wide, is supplied and can be arranged for equipping 54 carrier channels and 54 High Voltage Hub Converter circuits or 72 carrier channels in low-voltage hub offices.

Two basic printed wiring board mounting units (nests) are provided for mounting apparatus coded plug-in circuit packs for channel, line, high voltage hub converters, and system alarm circuits. The channel terminal printed wiring board mounting unit holds the line, channel terminal and alarm circuit packs. The high voltage hub converter printed wiring board mounting unit mounts the high voltage converter circuit packs for use with No. 2 type hubs.

Circuit packs required for the printed wiring board mounting units are not included as part of the shop-wired bay and must be ordered separately. The circuit packs are equipped with a combination handle and lock which facilitates removal and prevents the printed wiring board from vibrating out of its connector. The channel terminal and high voltage hub converter printed wiring board mounting units contain individual fusing for all circuit packs and are arranged to operate a standard central office alarm when used with the shop-wired bay furnished fuse and alarm unit. All external connections, except for power busses, are made by means of wire wrap terminals in the rear of the printed wiring board mounting units. The power busses are connected by means of screw lugs located on the fuse blocks.

A channel terminal consists of a transmitter, an associated demodulator, and a receive interface. There are 25 versions of transmitter and demodulator circuit packs corresponding to the 25 center frequencies. The channel terminal printed wiring board mounting unit can physically accommodate any combination of nine channel terminals, two line circuits, and two associated system alarms; or nine channel terminals, three line circuits, and one system alarm.

The high voltage printed wiring board mounting unit is similar to the channel terminal printed wiring board

mounting unit, except that it is capable of holding up to 28 high-voltage, hub converter circuit packs.

The line circuit contains common transmitting and receiving amplifiers for any combination of single width and/or double width channels in each carrier system. The line end of the amplifier can be arranged for either 2- or 4-wire facilities, and can be set for either 600- or 900-ohm balanced terminations.

The transmitter may be set for either half-duplex (HDX) or full-duplex (FDX) operation by means of a screw terminal option strap which is visible through a window in the faceplate.

The demodulator is also equipped with a screw terminal option strap which is used to select mark hold or space-hold indication upon loss of signal.

The third circuit pack in the channel terminal is the receive interface. It is not frequency sensitive and may be used with any channel terminal in a 43B1 system.

A system alarm circuit pack may be associated with each line circuit used. Each system alarm monitors two preselected channels.

The purpose of the high voltage hub converter is to convert the low-voltage interface provided by a channel terminal to the higher voltage required to operate a high-voltage hub.

The fuse and system alarm unit, when used in conjunction with the system alarm circuit, is capable of triggering standard audio and visual alarms should any channel experience abnormal signal power conditions. An open fuse will also trigger these alarms. This unit is provided with the 43B1 voice frequency carrier shop-wired bay.

Voltages used in the 43B1 channel terminal, line circuit, and system alarm are plus and minus 24 volts. The high voltage hub converter requires -130 volts, which is obtained from a central office battery; in addition to plus and minus 24 volts.

A battery filter, which may be ordered as part of the shop-wired bay, provides a filtered plus and minus 24 volts. No more than 27 channel terminals, and associated line and alarm circuits, plus 27 high-voltage hub converters are to be connected to one filter.

The 43B1 is line compatible with the 43A1 carrier telegraph channel terminal with respect to frequency shift and channel assignment. However, the two lower 43B1 channels do not have corresponding mates in the 43A1.

CONCENTRATORS

1A Line

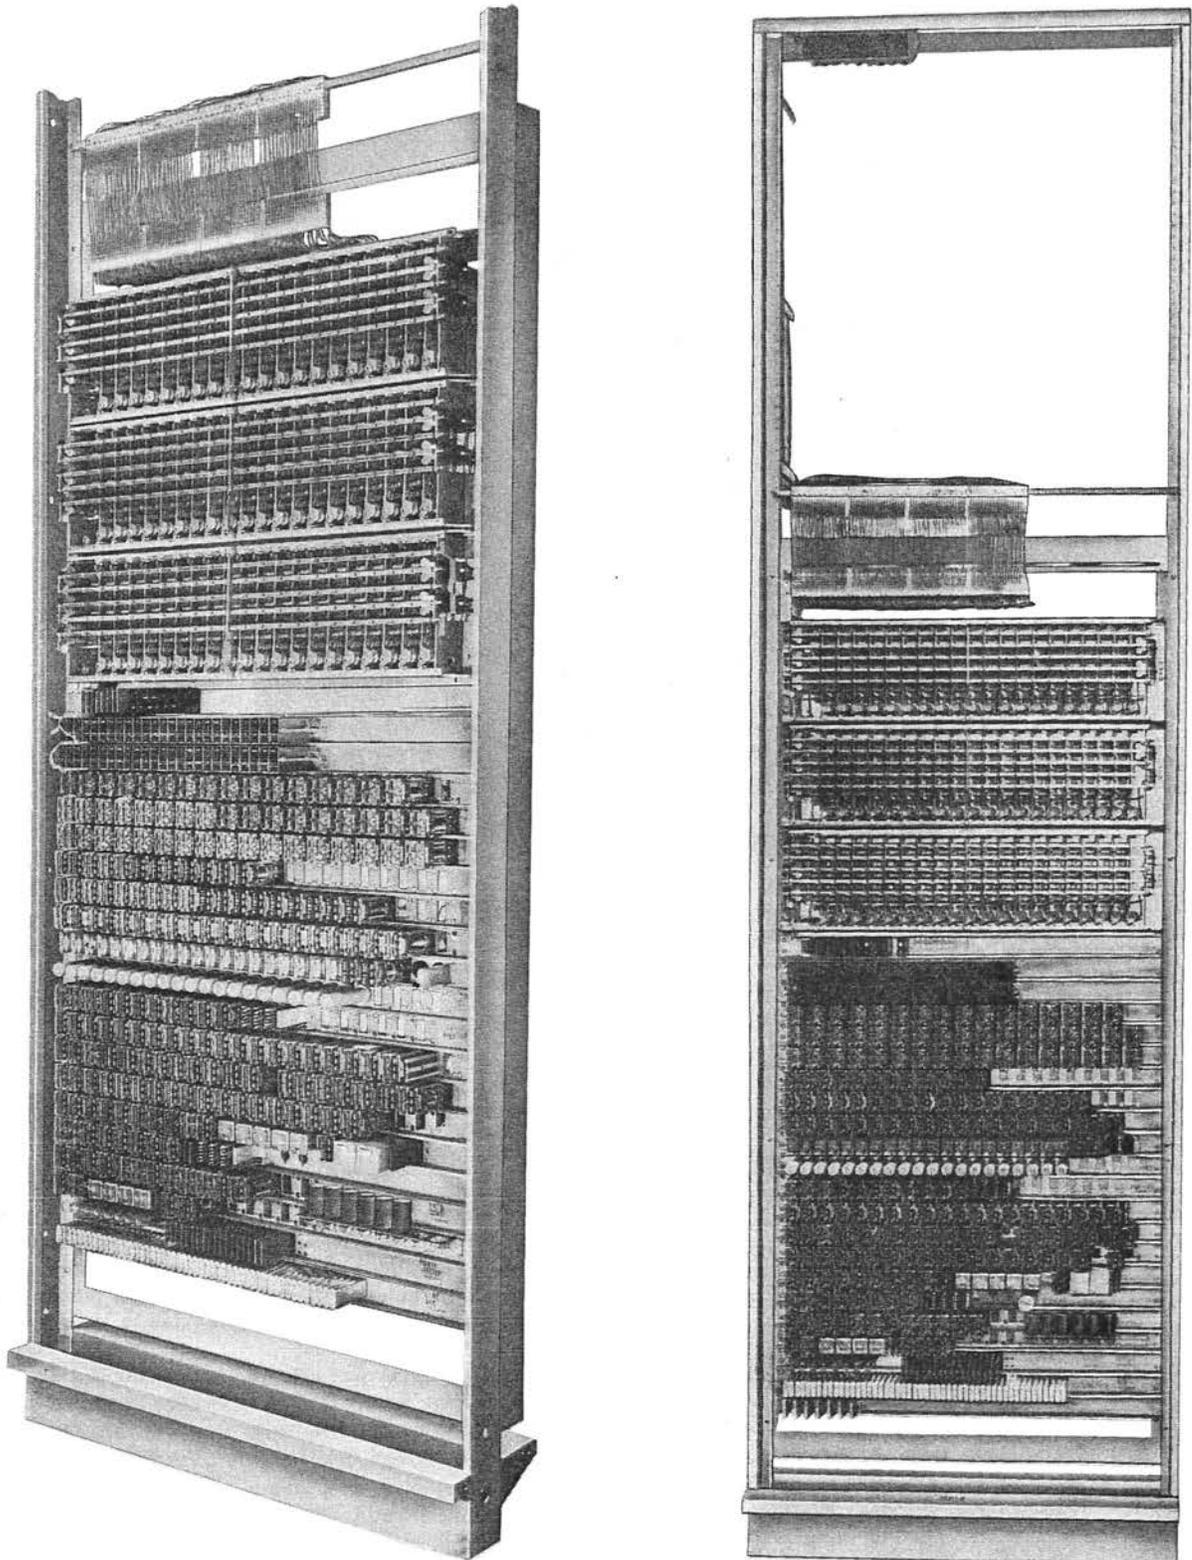

Fig. 1

EQUIPMENT

CONCENTRATORS

1A Line (Continued)

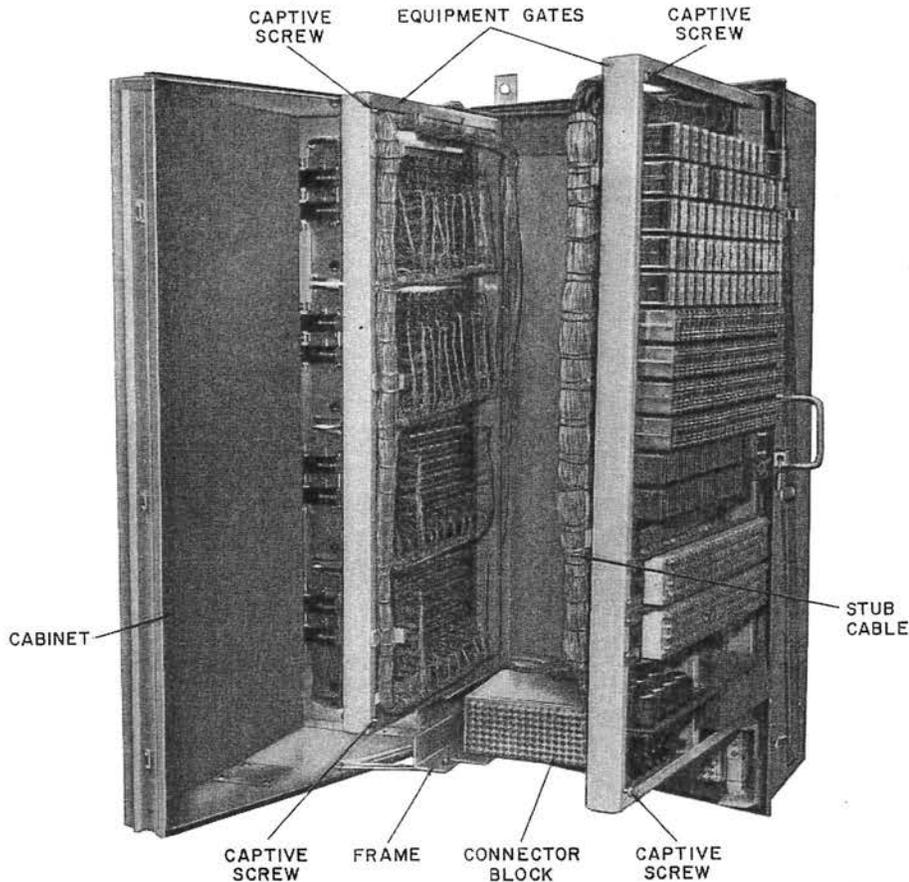

Fig. 2

The 1A Line Concentrator is used to increase the capacity of existing cables by reducing the number of cable pairs required to serve remote locations. The 1A Line Concentrator connects a maximum of 98 remote lines and 2 test lines to the central office by concentrating them over a maximum of 22 cable pairs. Twenty of the cable pairs are trunk circuits that connect a remote concentrator unit to a central office control concentrator-identifier unit. The two additional pairs are used for control signaling between the concentrator units. The 1A Line Concentrator is arranged for use in common dial offices such as No. 1 Crossbar, No. 5 Crossbar, and No. 1 350 and 355 Step-by-Step offices.

The concentrator consists of two major units of equipment: One is a central office (J99258) Concentrator-Identifier Control Unit (Fig. 1) for the remote 100-line concentrator. The expanding networks provide the facility

for connecting the 20 concentrator trunks to 98 line circuits in the central office. The control unit is 38-1/4 inches wide, 85 inches high, and weighs 500 pounds. It is arranged for mounting on 9-foot or 11-foot 6-inch high framework. The other major unit is a (J99259) 100-line Concentrator Unit (Fig. 2) in a compact housing which mounts on a telephone pole or building in a remote strategic location. The remote unit is 51 inches high, 26 inches wide, 16 inches deep, and weighs approximately 450 pounds.

Also available as optional equipment is the (J99263) Concentrator Trunk Usage Recorder, with its associated timer, designed for use with the concentrator to provide scanning of trunk usage. This information is recorded on message registers in terms of CCS's per trunk group indicating concentrator trunk group loadings. Each concentrator trunk usage recorder can serve ten trunk groups of ten trunks each or five 1A Line Concentrator control units.

TOUCH-TONE CONVERTERS

(J99266) TOUCH-TONE Calling Receiver

The TOUCH-TONE Calling Receiver is designed to be bridged across the input terminals of a dial pulse subscriber sender, originating register, or equivalent common dial pulse equipment without interfering with normal operation on dc dial pulses. The receiver is designed to respond to two simultaneous voice-frequency tones, one from a high group and one from a low group of frequencies generated by the operation of a button on a TOUCH-TONE calling subscriber set or similar device. The use of two widely separated frequencies for each digit provides for various operating features. The TOUCH-TONE Calling Receiver in itself is not sufficient to adapt an existing office for TOUCH-TONE calling. In addition to the receiver, a converter designed to accept the output of the receiver is necessary to pass the calling pulses to the existing dial machine.

The circuit components of the receiver are mounted on modular-type cards in slides which plug into a cabinet-type framework. This type of construction facilitates maintenance.

The receiver mounts in a standard 23-inch relay rack. It is 6 inches high and 9-3/4 inches deep. The mounting details are adjustable from front to rear to ensure that the receiver will be protected within the guardrails of the bay in which it is installed.

Panel System**(J27907) TOUCH-TONE Converter Frame**

This unit consists of the necessary apparatus for the installation of TOUCH-TONE converter frames in panel offices. The conversion equipment consists of one (J27907A List 1) Converter Frame on which are mounted eight (J27907B) Converter Units and eight (J99289B) Receiver Units. The converter frame is 11 feet 6 inches high.

Panel offices require that a receiver and a converter be permanently associated with each subscriber sender assigned for TOUCH-TONE calling. TOUCH-TONE lines are segregated by line finder groups, providing two groups of subscriber senders. One group handles only rotary dial calls, while the other group is associated with the TOUCH-TONE line finder groups and handles both rotary and TOUCH-TONE calls. The sender multiple is then rearranged so that the TOUCH-TONE line finder groups can only reach the modified senders and the rotary dial line finder groups only reach the rotary dial senders.

On a TOUCH-TONE call, the multifrequency signals are detected, translated, and stored in digit registers in the converter. The converter outputs the digits on an overlap basis into the pulse counting circuit of the modified sender at the rate of 20 pulses per second. On a rotary dial call from a TOUCH-TONE line finder group, dial pulses are presented directly to the converter. The con-

verter is arranged to follow dial pulses and repeat them to the sender for registration. Connection to dial tone is made in the converter under control of the sender. Rotary dial calls from rotary dial line finder groups will remain the same.

No. 1 Crossbar System**(J27951F) Originating Sender Frame**

To add TOUCH-TONE capability to a No. 1 Crossbar System a multifrequency (J99266) TOUCH-TONE Calling Receiver and a (J27951H) TOUCH-TONE Calling Signal to Dial Pulse Converter must be added to each subscriber-sender assigned to TOUCH-TONE lines.

The receiving unit is mounted on a (J99289A) Mounting Shelf which is designed to mount two receivers. The mounting shelf is mounted on a relay rack with the associated converters mounted directly above and below it.

TOUCH-TONE lines are segregated on a horizontal group basis. Each sender subgroup contains both modified and unmodified senders as follows:

- A. Rotary dial only (unmodified)
- B. TOUCH-TONE and rotary dial (modified)
- C. TOUCH-TONE and rotary dial (modified to accept overflow from either of the first two)

The line link controllers and sender link controllers must be modified to differentiate between rotary dial and TOUCH-TONE lines, and establish connections to the proper senders.

On TOUCH-TONE calls, the subscriber sender link directs the call to a TOUCH-TONE sender where the signals are detected, translated, and stored on digit registers in the converter. The converter then outputs the digits on an overlap basis into the pulse counting circuit of the modified sender at a 20 pulse-per-second rate. While rotary dial calls from the TOUCH-TONE horizontal group are also directed to the TOUCH-TONE sender, these dial pulses have no effect on the receiver-converter circuits. Rotary dial calls from rotary dial horizontal groups are directed to the rotary dial sender and are handled as at present.

No. 5 Crossbar System**(J27962A) Originating Register Frame**

To add TOUCH-TONE capability to a No. 5 Crossbar System, the (J27962A) Originating Register Frame must be modified by adding one (J27962AU) TOUCH-TONE Control Unit and one (J99289B) TOUCH-TONE Calling Receiver Unit for each originating register. In addition

TOUCH-TONE CONVERTERS

(J27962A) Originating Register Frame (Continued)

one TOUCH-TONE Calling Receiver Mounting Shelf is required for each two originating registers. These units are mounted on a relay rack with a TOUCH-TONE Control Unit above and below the receiver mounting shelf.

The receiver and converter detect the TOUCH-TONE signals, translate them into two-out-of-five indications, and transfer them on a multilead basis to the originating register for storage in the proper digit register.

A TOUCH-TONE indication is registered in the originating register for traffic measuring and trouble recording purposes. On both TOUCH-TONE and rotary dial calls, the originating register continues to perform such functions as applying dial tone, coin test, and party test.

Two groups of originating registers are provided. One group handles only rotary dial calls, while the registers in the other group are associated with TOUCH-TONE units and handle both TOUCH-TONE and rotary dial calls. Lines with TOUCH-TONE telephones are segregated on a vertical group basis. Dial pulses from a rotary subset are detected by the originating register. On the originating register frame, there is no requirement for segregation of registers in one group or the other, and any register position may be equipped for either type of pulsing.

Step-by-Step System

(J33024) Step-by-Step Converter Frame

The Step-by-Step Converter Frame contains the apparatus necessary to convert TOUCH-TONE calling signals to dial pulses in step-by-step offices. The conversion equipment consists of the (J33024P) Converter Frame which is 11 feet 6 inches high or the (J33024Q) Converter Frame which is 9 feet high. On each converter frame are mounted four (J33024R) Converter Units, four (J99289B) TOUCH-TONE receivers, two (J33024T) Party Test Units, and one (J33024S) Talk Line Miscellaneous and Test Set Connector Unit.

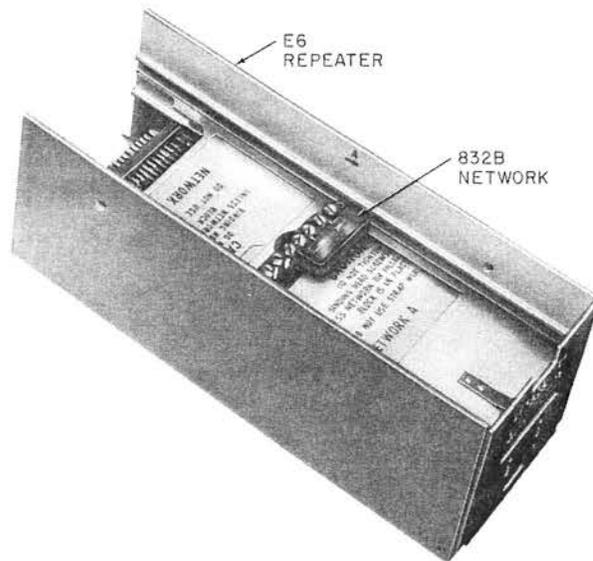

Use of this converter frame allows a step-by-step office to service both dial and TOUCH-TONE originated calls. When the pulses of the first digit of a call are dial pulses the converter will disconnect and the pulses will be registered directly on the step-by-step switches. When the pulses of the first digit of a call are TOUCH-TONE pulses, they are received by the TOUCH-TONE receiver and transmitted to the converter. The converter translates the output of the TOUCH-TONE receiver into dial pulses that are transmitted to the step-by-step switches for completion of the call.

A maximum of 13 customer keyed digits will be accepted by the converter. A timing control circuit monitors converter functions to allow a maximum time interval for call completion. The converter also provides dial tone for TOUCH-TONE telephone sets.

The converter frame is provided with signal lamps and test jacks for making maintenance and operational tests on each converter.

REPEATERS

(J99253) E6

The E6 Repeater is a two-wire voice frequency, transistorized repeater designed to reduce the transmission losses of exchange area trunks. The repeater assembly consists of a shell in which the various networks are mounted.

Quantity and type of networks determine whether the unit is used as a terminal repeater or as an intermediate repeater.

The E6 Repeater will operate on 48 volts from an unfiltered central office battery. Transmission gains up to 12 db are obtained by screw type adjustment on the networks. Direct current supervisory signals and most low frequency signaling currents are passed by the E6 Repeater without serious impairment and without the aid of auxiliary bypassing equipment. The only exception is that panel incoming revertive signals are not passed successfully. Voice frequency signaling is amplified the same as voice currents.

The repeater is suitable for use on:

- A. 6000-foot spaced, 88 millihenry (H88) high capacitance number 19, 22, or 24 AWG cable.
- B. 6000-foot spaced, 88 millihenry (H88) low capacitance number 19 AWG cable.
- C. 1500-foot spaced, 88 millihenry (D88) high capacitance number 19 or 22 AWG cable.

The overall dimensions of the repeater are 3-3/8 inches wide by 3-9/16 inches high by 9-19/32 inches deep. It is arranged for plug-in mounting on a relay rack mounted repeater shelf.

REPEATERS

(J99271) E7

The E7 Repeater is a 48-volt transistorized negative impedance device. It is designed for use on nonloaded loops used for TWX and DATA-PHONE services. It is installed at the central office end of such loops and is not intended for intermediate use. It improves the return loss of the loop by modifying the impedance seen from the central office end, and provides moderate gains at the higher voice frequencies to permit meeting return-loss and insertion-loss requirements. The E7 Repeater acts essentially as a series repeater at low voice frequencies and as a shunt repeater at high voice frequencies.

The E7 Repeater is designed to meet the following conditions:

- A. No more than 18,000 feet from the central office to distant working station.
- B. No more than 1200 ohms external loop resistance.
- C. Straight and mixed gauge utilizing number 26, 24, and/or 22 AWG cable. (Only trivial amounts of number 19 AWG or open wire.)
- D. Bridged taps.
 1. No loaded bridge taps.
 2. Total bridged tap (including nonworking end section) not to exceed 6000 feet.

3. No bridged taps within 600 feet of the central office.

E. No more than 500 feet of drop wire.

Variations within these conditions are taken care of by adjustment of the network in the repeater.

For transmission purposes, an E7 Repeater is not considered as an entity apart from its associated loop. It is designed so that, within the condition given above and with proper line-up, it will produce the following minimum return-loss results for the repeatered loop as a whole:

Frequency (Hz)	Return Loss (Decibels)
1000	At least 14
2300	At least 10
3500	At least 4
300 - 3000	At least 8

The return losses are measured against a standard of 900 ohms in series with a 2-uf condenser.

The E7 Repeater is an assembled unit consisting of a shell in which a negative impedance converter, an adjustable network, and an inequality ratio transformer are mounted. The overall dimensions are 3-3/8 inches long, 3-9/16 inches wide, and 9-13/32 inches deep. The E7 Repeater is arranged for plug-in mounting on a relay rack mounted repeater shelf.

REPEATERS

V4

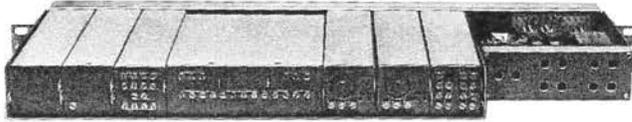

Fig. 1

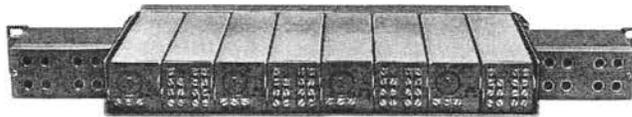

Fig. 2

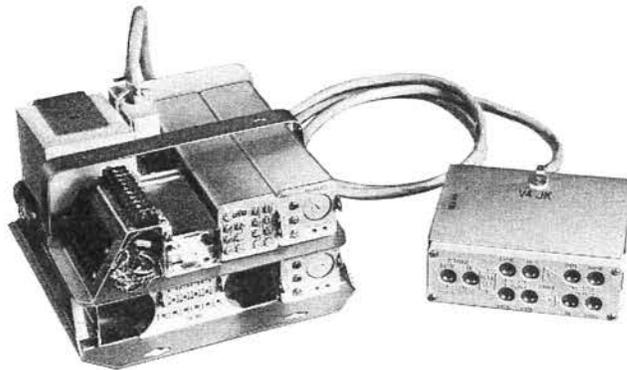

Fig. 3

The V4 Repeater is used primarily to provide a simple means for engineering and installing high-grade, low-loss, four-wire voice trunks. The V4 Repeater achieves extraordinary flexibility by standardizing two basic units: the 24V4 Terminal Repeater which furnishes gain, equaliza-

tion, and a two-wire to four-wire transition; and the 44V4 Intermediate Repeater which inserts at an intermediate point the gain and equalization in the longer four-wire trunks. Both units feature the transistorized 227 type amplifier as the basic plug-in module and will operate from either a 24 or 48 volt power source.

The V4 Repeaters are suitable for both voice and data transmission over four-wire facilities. Their applications include:

- A. Direct trunks
- B. Tandem trunks
- C. Intertandem trunks
- D. Short intertoll trunks or VF extensions of carrier channels in intertoll trunks
- E. PBX tie trunks and central office trunks
- F. Foreign exchange lines
- G. Off-premises extensions
- H. Special service lines
- I. Voiceband data circuits

For large installations the repeaters are mounted on a 23-inch wide by 1-3/4 inch high mounting shelf. One shelf mounts one 24V4 or two 44V4 Repeaters. These shelves are designed for mounting in the J98615 Repeater Bays.

Fig. 1 shows a 24V4C Terminal Repeater Mounting Shelf typically equipped.

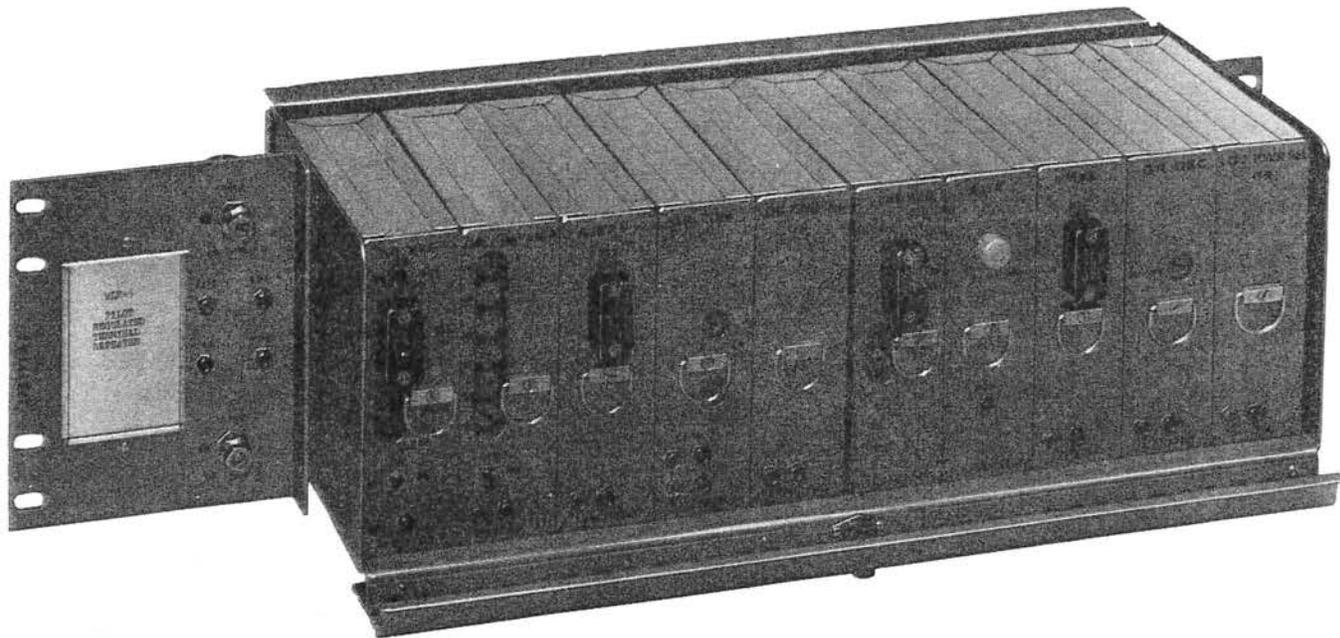

Fig. 2 shows a 44V4A Intermediate Repeater Mounting Shelf typically equipped with 2 units.

Fig. 3 shows a special V4 Voice Frequency Repeater complete for 24V4 operation. This unit is designed for small installations and can be mounted on a wall or under a desk. This unit features an optional ac power supply unit. The unit measures 8 inches wide by 9 inches long by 4-1/2 inches deep.

Another arrangement of the terminal repeater is the 24V4B which is arranged to fit into 16C or 31A Apparatus Mountings.

REPEATERS

(J70171) WLR-5

The WLR-5 wideband loop repeater is used to condition loops for wideband data transmission. It provides amplification and continuously adjustable loss equalization to postequalize wideband local loops.

The WLR-5 repeater provides active curve fitting pre-amplifiers that are capable of equalizing cable losses up to 30 db at 25 kHz from 100 Hz to 50 kHz. Pilot controlled twist regulation is available, on an optional basis, to compensate for cable attenuation changes caused by temperature variation.

Each Wideband repeater is a 2-way repeater normally required at each end of the loop. Long loops should be pilot regulated and may require repeaters at intermediate locations. For short loops, one of the repeaters may be eliminated.

The WLR-5 repeater consists of a shelf containing 10 plug-in units, 5 for each direction of transmission. Plug-in units are inserted, as required, to meet the individual requirements of a particular repeater. The repeaters may

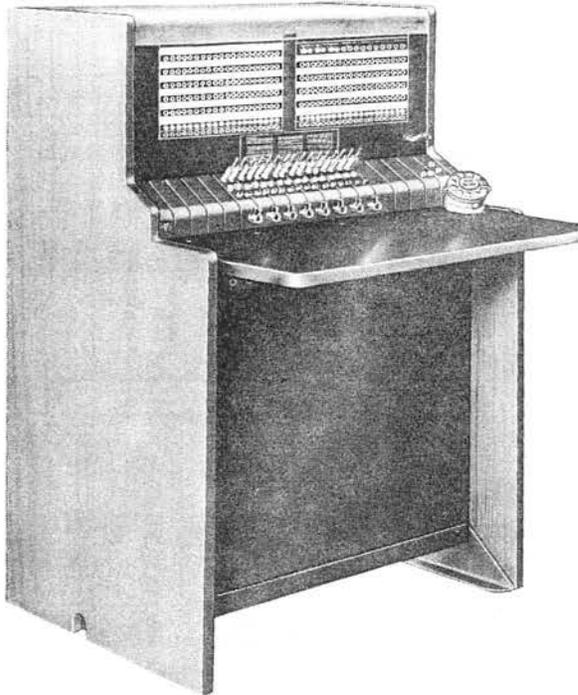

be mounted on 19 or 23 inch width relay racks or a single remotely powered intermediate repeater may be housed in a watertight apparatus case for pole or manhole mounting. A pole mounted weathertight apparatus case is also available for a maximum of 7 remotely powered repeaters.

A filtered power supply is provided for the active units associated with each direction of transmission by a voltage regulator in the plug-in power selector. The voltage regulator in locally powered repeaters is supplied directly from -48 volt battery, while remotely powered repeaters are powered by sending simplex current over the cable pairs.

Office mounted repeater shelves are available, equipped to send simplex current out over the line in either direction, to power remote repeaters or to seal unsoldered splices on the cable pairs. One or two repeaters may be powered in series by using +130 volts, -48 and +130 volts, or -130 and +130 volts, as required. All power should be derived from quiet, filtered supplies.

SWITCHBOARDS

(J59018) 556A PBX

A small, single position, nonmultiple switchboard for use with the 756A Dial PBX as a manual auxiliary. Two sections may be coupled together to be operated as a two-position switchboard. Connections are made manually between trunks and station lines, to trunks, to dial central offices, or to distant PBXs. The attendant establishes connections by inserting the plugs of the cord circuit into the jacks of the line or trunk desired. The stations are called directly by operating the ringing key instead of dialing.

When used with the 756A Dial PBX, the switchboard is arranged on a package basis for 60 dial station lines, three attendant trunks, six manual central office trunks, and eight cord circuits. Provisions are made for adding seven additional cord units and four additional central office trunks.

Power is supplied from the power plant of the associated dial PBX. Ringing current is supplied from the central office, whenever possible.

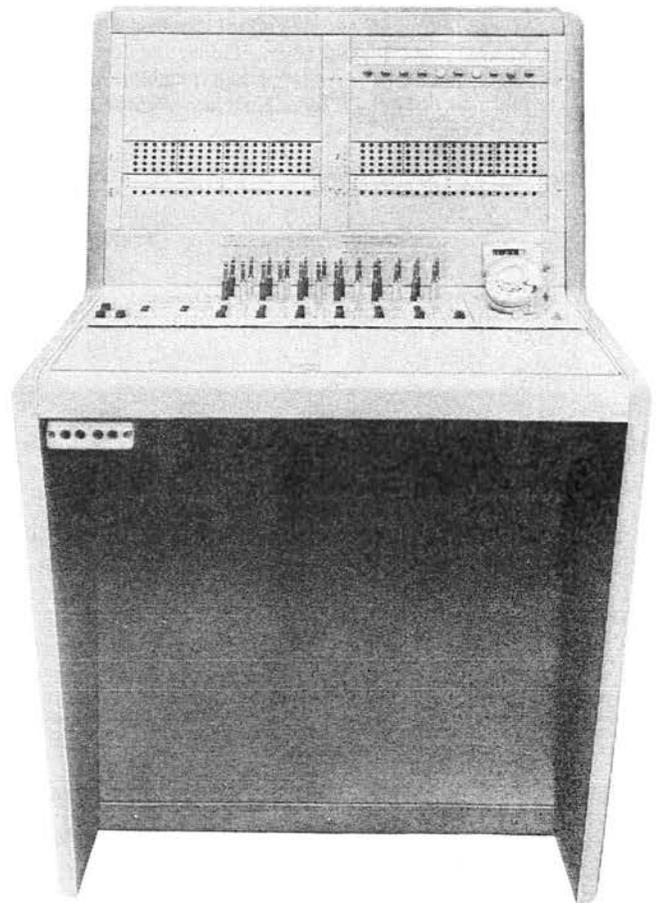

A convenient writing shelf is used instead of the conventional hinged keyshelf. All keys, plugs, and lamps have been located in a sloping panel in the face of the board at a convenient height, thus leaving a large unobstructed writing surface for clerical purposes.

This switchboard is suitable for built-in installation, particularly where the attendant must also serve as a receptionist. Available in oak or mahogany finish with walnut trim, or in unfinished panels that may be finished in the customer's choice of colors. The dimensions are 3 feet 10-1/16 inches high by 2 feet 5-7/16 inches deep by 2 feet 5-3/8 inches wide with an approximate weight of 400 pounds.

Capacity:

Station lines	60
Central office and tie lines	10
Manual conference circuits	2
Cord circuits	15

(J53129) 608D PBX

SWITCHBOARDS

(J53129) 608D PBX (Continued)

This PBX is a cord switchboard designed for use on a multiple or nonmultiple basis as a manual PBX or as an attendant board, for use with a dial PBX. It may be arranged as a single position nonmultiple switchboard or as a three or four-panel multiple switchboard and can be used as a manual board or as an attendant position for a 701 type PBX system. Connections are established manually between trunks and station lines, or from station lines to trunks to central office or to distant PBXs as required.

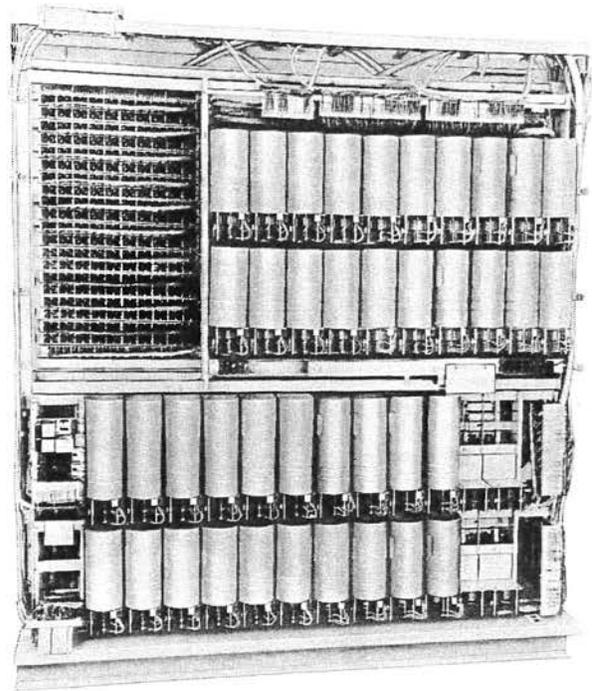

The 608D Switchboard offers slide-mounted equipment units, plug-in feeder cables and connector-ended jacks and an automatic transfer arrangement on all packaged positions. The circuit and equipment arrangements used in the 608D PBX shorten installation time and reduce maintenance effort.

Furnished in a Beige Gray or Medium Gray finish, the 608D PBX position without end panels is 48 inches high, 25 inches wide and 36 inches deep. The depth is measured from the front edge of the Keyshelf to the rear panel. End panels are 1-1/4 inches thick. Thirty inches of space should be provided in the rear of the position for maintenance. The weight of a single position is approximately 550 pounds.

Switchboard Capacity-Cord pairs per position 16.

Multiple	Station Lines	Trunk Jacks
Manual	560-1600	60-160
Dial	560-2400	120-480
Nonmultiple		
Manual	180-360	20-40
Dial	160-560	30-60

(J58831) 701B PBX

The No. 701B PBX is a Step-by-Step dial switching system arranged for the completion of intercommunicating calls directly by dial with provisions for completing calls to the central office over trunks, and to other PBX's over the lines directly by dial. Incoming calls from the central office are completed by the attendant of the associated manual switchboard. Station users can dial certain codes which will give them access, without assistance from the attendant, to central office trunks, tie trunks, and code calls.

Consists of dial equipment mounted on switch frames, a manual cord type switchboard, trunk and tie line circuits mounted on relay racks, the necessary cross-mounting facilities, and a local power plant. The manual switchboard furnished may be either multiple or nonmultiple type. The type of attendant positions are determined by the number of stations and trunks necessary.

SWITCHBOARDS

An equipment room is necessary for installation of this equipment, the size being determined by the equipment required.

CAPACITY

Based on the use of one selector level for attendant trunks to the switchboard.

Type of Operation	Switchboard	Station Lines
2 digit	608 Type Nonmultiple	90
3 digit	608 Type Nonmultiple	300
3 digit	608 Type Multiple	600
3 digit	608 Type Multiple	999
4 digit	608 Type Multiple	2,000
4 digit	608 Type Multiple	3,200**
4 digit	608 Type Multiple	5,600**

When selector levels are used for Central Office trunks or for trunks to another PBX, the capacity of the 2 digit PBX will be reduced by 10 and the 3 digit PBX by 100 per level used.

**608 Type may be used if station multiple is not required.

Optional pre-engineered 701B PBX equipment may be ordered for small and medium-size installations. Considerable flexibility in ordering makes this equipment readily adaptable to traffic and floor space limitations which may be encountered. The equipments range in size from 60 to 400 station lines, in steps of 20 lines and are intended only for initial installations. All installations are for 3-digit operation, so, in case of 60 or 80 line PBX's, this will permit growth with less conversion expense than would be required if selector-connectors and 2-digit operation were employed initially.

The pre-engineered equipments are associated with two basic codes. These codes are as follows:

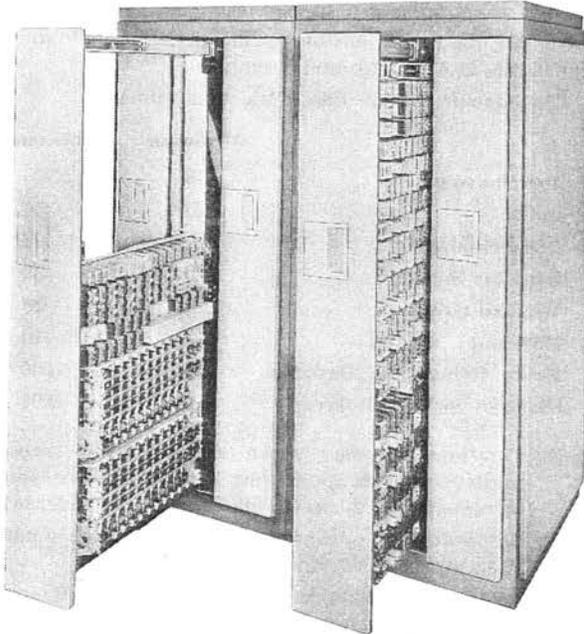

J58832A — Dial PBX Switching Equipment

J58832B — Power Plant Equipments

A 608D Attendant Switchboard may be ordered with the above coded equipment.

SWITCHBOARDS

(J58830) 756A PBX

This Crossbar PBX is a two-digit dial system available in 40- or 60-line sizes and compatible with existing systems, trunks, and tie trunks. It can be installed in any type dial or manual central office area. This PBX is designed primarily to operate with telephone consoles. However, when required, the 556A or the 608D Switchboards may be used as attendant equipment. A batteryless power plant is provided and, if needed for emergency types of business, storage battery power plants may be furnished.

The system is contained in two beige or gray modules, each of which is 5 feet 3.625 inches high, 2 feet 6.125 inches deep, and 2 feet 3.250 inches wide.

Capacity:

	40 Line	60 Line
Station lines	30	50
Universal lines	10	10
Trunks (two-way C.O.)	10	10
Trunks (attendant)	3	3
Intercom paths	6	6
Links	16	16

(J58839) 758A PBX

The 758A PBX is a four-wire, manually controlled, 20- to 40-link crossbar, common control switching system having a capacity of 100 terminations for connecting Dial Pulse Register (2 maximum), Conference Line Circuits (2 maximum) and Line Circuits.

Line circuits are used to provide connections to:

- A. Stations having loop signaling by four-wire auxiliary circuits.
- B. Remote locations using E&M lead signaling by four-wire auxiliary circuits.
- C. Central offices via two-wire auxiliary circuits.

The 758A PBX offers the following operational features.

- A. **Four-wire switching**—Assures good transmission.
- B. **Complete attendant control**—Ability to screen and exercise priority on calls.
- C. **Conference capability**—Attendant control of conference call (Five parties per circuit or ten parties per circuit when two conference circuits are bridged).
- D. **All calls handled by key operation.**
- E. **Connect and supervisory signals**—Visual display of all lines in use as well as visual call progress.
- F. **Automatic identification**—Of all established connections (both line and conference line) with one console operation.
- G. **Attendant monitoring**—Always automatically effected when entering an established connection.
- H. **Automatic ringing or signaling**—Provided on all calls directed to PBX stations. All signaling from station to the console is also automatic.
- I. **Hold**—On all answered calls, if desired, with signal identification.
- J. **Dialing**—To central office by attendant.
- K. **Hand set or head set**—Operation by attendant.
- L. **Manual release**—Automatic calling party control but attendant has ability to manually release.
- M. **Direct station selection by attendant**—Calls set up by pushing two buttons.

The 758A PBX equipment is housed in one or two consoles and on floor-supported, single-sided, bulb-angle type frames 6 feet 10.5 inches high by 2 feet .625 inches wide. The console constitutes a cordless switchboard mounting the keys, lamps, and associated equipment. Except for the common control keys all other keys and lamps are mounted on a plug-in basis. The two-piece pedestal permits desk or stand up attendant operation.

SWITCHBOARDS

(J58839) 758B PBX

The 758B PBX is a four-wire, two-digit, dial-controlled, 20- to 40-link crossbar, common control switching system having a capacity of 100 terminations.

A line circuit is used to provide external connection to four-wire auxiliary circuits to remote locations using E&M signaling.

A four-wire, two-way central office trunk is provided to connect four-wire central office facilities to four-wire line circuits.

Provision has been made on an optional basis for TOUCH-TONE receivers and TOUCH-TONE to dial pulse conversion.

The 758PBX offers the following operational features.

- A. **Four-wire switching**—Assures good transmission.
- B. **Dialing**—Arranged for dialing after receipt of a dial tone from a terminating PBX or switching system.
- C. **Hunting**—One- or two-way hunting over terminations in same ten groups.
- D. **Unattended operation.**
- E. **Busy tone trunk.**

The 758B system is used for interconnecting local and remote locations.

It is mounted on floor-supported, single-sided, bulb-angle type frames, 6 feet 10.5 inches high by 2.625 feet wide and can be optionally equipped with console type attendant equipment if desired, however, no standard arrangement is provided.

(J58845) 758C PBX

The 758C PBX is essentially a nonblocking, four-wire, crossbar, common control switching system capable of fully automatic tandem switching with senders. Manual switching and other attendant functions are performed at specially provided consoles.

The versatility of this system is such that it can connect to two- or four-wire facilities, dial or manual, crossbar or step-by-step systems and any other type system provided and can be interconnected to these systems by two- or four-wire metallic or four-wire carrier facilities. It has wideband data transmission capability and voice and wideband may be transmitted simultaneously.

The flexibility of this system permits operation with any numbering plan desired up to a maximum of 13 digits.

The system is arranged to receive TOUCH-TONE and/ or dial type pulses and outpulse dial type pulses. It may also be arranged to receive and outpulse multifrequency type pulsing. Station consoles can be equipped with 10, 12, or 16 button facilities to provide auxiliary functions, i.e., Priority and Preemption.

The capacity of the 758C PBX is as follows:

	Minimum	Maximum
Terminations	40	560
Links	20	100
Decoder-Marker	2	2
Register-Sender	10	30
Vertical Group	2	28
Horizontal Group	2	10
Route Relays per Decoder	40	100
Class of Service Relays	10	100

A. Terminations may serve station lines, trunks, or register-senders or no test trunks and are added in increments of 20 up to the maximum indicated.

B. Horizontal links may be increased in increments of 10 up to the maximum of 100.

The 758C system is arranged for operation with a negative 48-volt power plant.

All terminations in the system are switched at the same level. This level is an optimum level and is generally selected so as to require a minimum number of amplifiers in the overall system.

The system may be provided with two conference lines. The conference line enables the attendant to establish a conference between a maximum of five lines and trunks. When a 6- to 10-party conference is desired, the two conference lines may be connected together by the attendant.

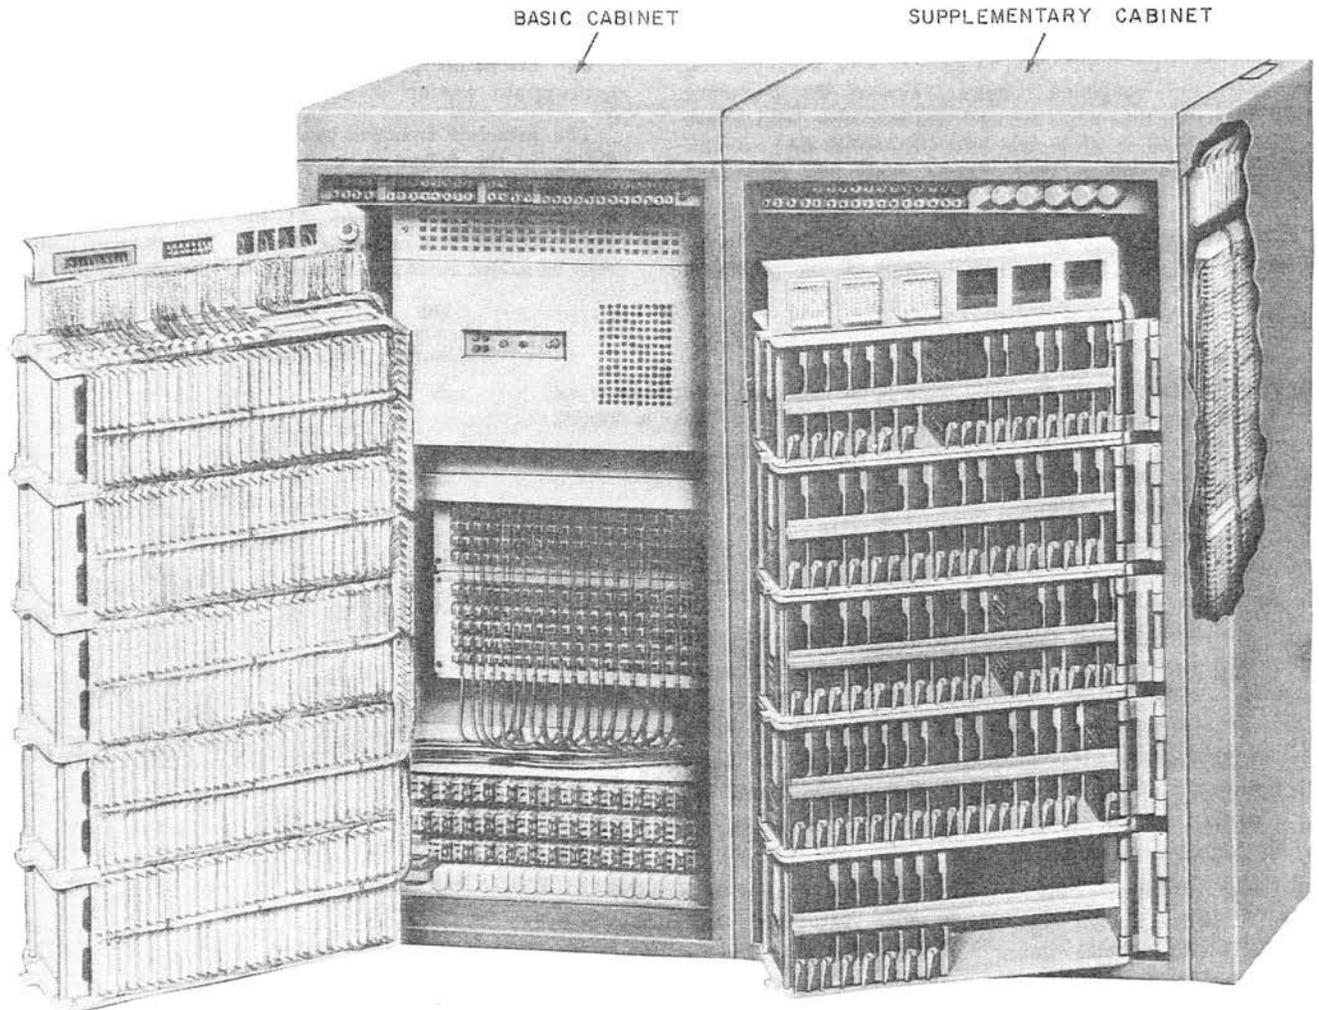

The system is arranged with an alarm system to furnish visual and audible signals to indicate alarm conditions in the PBX. The alarm system indicates two classes of alarms (major and minor) and distinguishes between them.

The switching equipment of the 758C PBX is arranged for relay rack mounting.

Due to the complex functions and extensive options of this system and associated equipment, the above description is expressed in general terms. For additional information, it is suggested that the engineering personnel listed on Page ii be contacted.

SWITCHBOARDS

(J58860) 800A PBX

A compact, self-contained, electronic dial switching system for use on customer premises. It uses solid state devices and three-wire ferreed switches to perform its switching functions and provides for batteryless operation for station-to-station, trunk-to-station, and station-to-trunk calling operations. Service is provided in the range of 14 to 80 station lines and from 6 to 20 central office trunks and may be arranged for light or heavy traffic capacities with series 100, 200, or 300 PBX service. In addition, a number of individual service features may be provided on an optional basis.

The 800A PBX is packaged so that the number of station lines, traffic handling capacity, and PBX service features can readily be changed at the customer's location. To facilitate circuit and feature changes after the equipment is in service, the equipment in the basic and sup-

plementary cabinets is arranged so that it is easily accessible for replacement on a plug-in basis.

The switching network used in the 800A PBX is available in 30, 44, 60, and 80 line sizes, each with a light and heavy handling option.

The series 100 service packages provides basic PBX service while the series 200 and 300 service packages provide additional service features.

The 800A PBX equipment, except for the attendant position equipment, is contained in equipment cabinets specially designed to match the height and depth of a standard five-drawer office file cabinet with the expectation that they will be installed in a general office area and possibly in a line up of file cabinets. The cabinet is 2 feet 10 inches wide, 2 feet 4 inches deep and 4 feet 9 inches

SWITCHBOARDS

(J58860) 800A PBX (Continued)

high. One to three cabinets are required at each 800A installation depending upon optional features provided.

The 800A PBX is intended to operate with a number 14, 15, or 16 type telephone console providing the attendant functions. All telephone consoles are available with either a rotary dial or a 10-button TOUCH-TONE dial. A full capacity 800A system will require only one attendant position.

A number 608 type cord switchboard is available on an optional basis and may be used in place of the telephone

console as the attendant facility for series 100 service installations.

The attendant position equipment is described in the appropriate section of this publication.

The principle features provided by the 800A PBX are shown in the following table. The features provided by each service package (series 100, 200, or 300) are indicated in separate columns. The optional features available are also indicated in a separate column. The optional features may be added to either of the three service packages.

Feature	100 Service Package*	200 Service Package*	300 Service Package*	Optional Feature*
A. Non-DSS direct trunk type console or 608 type switchboard as attendant equipment with either rotary dial or TOUCH-TONE key unit	X			
B. Station-to-station calling	X	X	X	
C. Station-to-trunk calling	X	X	X	
D. Station hunting	X	X	X	
E. Code restrictions	X	X	X	
F. Automatic attendant intercept when:	X	X	X	
(a) Station or dial repeating trunk dials a vacant code				
(b) Restricted station or dial repeating tie trunk dials a restricted code				
(c) Station or dial repeating tie trunk times out on a register				
G. Emergency transfer on power failure or major alarm	X	X	X	
H. One-way splitting on incoming central office trunk call	X	X	X	
I. Attendant transfer with locked-in attendant recall	X	X		
J. Batteryless operation	X	X	X	
K. Night station service with flexible night conditions	X	X	X	
L. DSS direct trunk type console with integrated busy lamp field with either rotary dial or TOUCH-TONE key unit		X	X	
M. Direct station selection by attendant		X	X	
N. Camp-on with indication of camp-on call to busy station		X	X	
O. Attendant controlled conference		X	X	
P. Dial transfer with private consultation and add-on conference			X	
Q. Trunk answer from any station			X	
R. Tandem dialing—tie trunk to tie trunk				X
S. Transmission pad control on tandem dialing tie trunk to tie trunk—provided with four-wire operation only				X
T. TOUCH-TONE calling with C1 (junior) or A3 (senior) receiver				X
U. Dial conferencing				X
V. Recorded telephone dictation				X
W. Code calling				X
X. Access to paging				X
Y. Tie trunks—ringdown and dial repeating				X
Z. PBX interface trunk				X

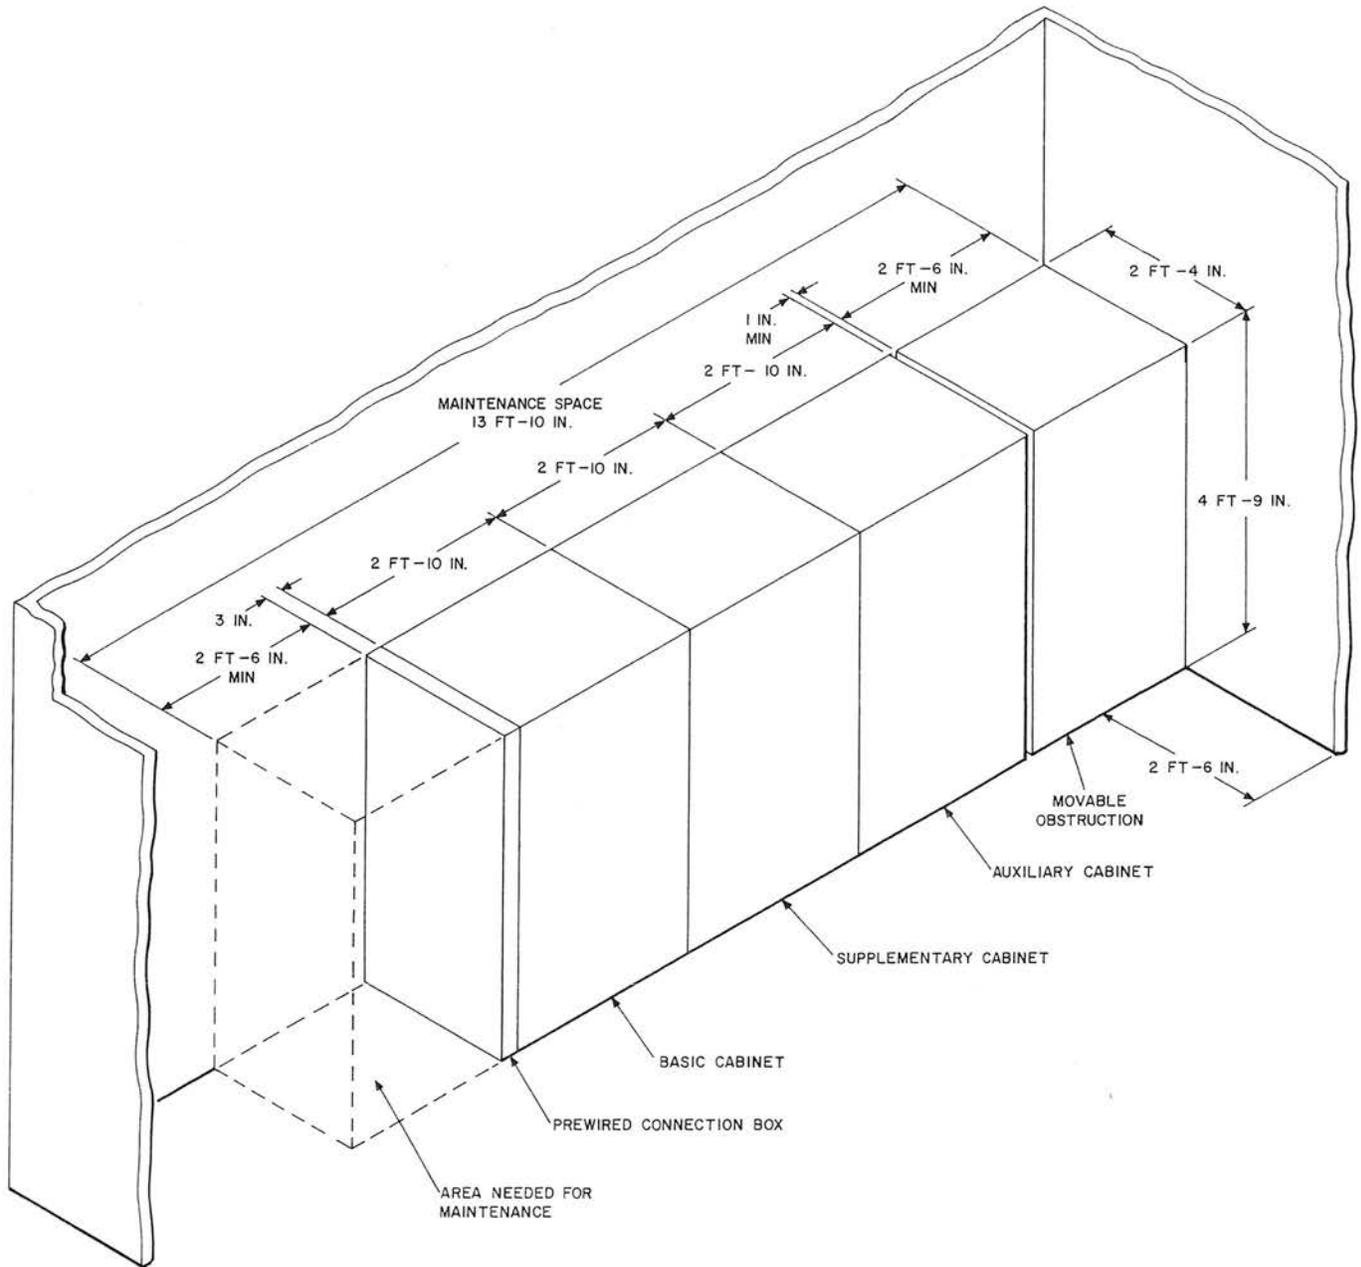

*The presence of an X in the 100, 200, or 300 column, but not in the option column, indicates option is provided with the feature package.

The presence of an X in the option column indicates the feature is available but is provided on a required basis only for 800A installations.

SWITCHBOARDS

(J58860) 800A PBX (Continued)

The following illustrates a typical equipment layout.

SYSTEMS

(J44108) A2AT Video Transmission

The A2AT video system is a solid state wide band transmission system used for establishing short-haul channels for the transmission of television signals at video frequencies.

A video circuit, approximately 4.5 miles in length, would use a transmitting terminal and a receiving terminal. When circuit losses exceed certain parameters, one or more repeaters must be included in the system. One such repeater will permit the circuit to be extended to approximately 9 miles (two 4.5 mile sections):

The A2AT channels may be used to interconnect the broadcaster's various locations within an area and to connect the broadcaster to a master control point. Examples of these connections are loops between the master control point and outlying studios, remote program pickup points, or transmitter location. In addition, the A2AT system may be used to provide special closed circuit television facilities such as theater television. The system may also be used to provide the entrance link for microwave radio systems. In these applications only the picture portion of the television signal is carried; the sound portion is transmitted over standard program channels.

The term "video transmission" denotes the flat transmission of all frequencies in the range extending from 30 Hz to 4.5 MHz. This system will meet the requirements for the NTSC method of color television as well as for standard monochrome television when engineered within the recommended system lengths.

A2AT systems are comprised of a transmitting terminal, a receiving terminal, repeaters (when required), and line facilities to interconnect the units. Combinations of fixed and variable equalizers, plus amplifiers to compensate for loss incurred by the signal in passing through the line facilities and the equalizers, provide an essentially flat transmission medium for video program signals.

The terminal is designed for either balanced or unbalanced input. In its simplest form, the transmitter contains an Output Amplifier, one pad, one equalizer, and a dc regulator. The receiver includes an Input Amplifier to terminate the balanced video cable and provide the large longitudinal suppression required. In addition the receiver includes a variable equalizer, an Intermediate "A" Amplifier, a Clamper-Amplifier to reduce the low frequency distortion and noise, and various pads and equalizers. The repeater includes Input and Output amplifiers which provide termination for the video cable, and the necessary equalizers and amplifiers to give the desired signal characteristics and level at the input to the next line section.

Terminals and repeaters of the A2AT system require both plus and minus 24 volt power for operation. Transistorized voltage regulators, mounted on the rear of each unit, provide regulated, low-noise voltages of plus and minus 18 volts from the primary power. The regulators are provided with alarm and protection features. Primary dc input power for A2AT units may be obtained from plant battery, dc-to-dc converters, or ac rectifiers.

SYSTEMS

3A Communications

The 3A Communication System is designed primarily for hospitals as a means of communication between nurse and patient. It is intended to operate as an adjunct to the hospital PBX system.

The system offers the following features:

- A. Patient-to-nurse or nurse-to-patient signaling and talking.
- B. Hands-free or hand set talking at control console and patient stations.
- C. Access to central office or PBX line at console and patient station.
- D. TOUCH-TONE or rotary dial operation.
- E. Direct station selection of patient stations at the control console.
- F. Privacy feature at patient station.
- G. Automatic selection and answering of patient calls from an optional remote answering station.
- H. Optional message waiting lamp and data jack at patient telephone set.
- I. Continuous audible and 120 ipm visual signaling on patient to nurse emergency calls from optional customer provided emergency key.
- J. Connection to optional customer-provided door lamp circuitry.

The system consists of a control console, up to 40 patient telephone sets, an equipment cabinet, and optional remote answering stations.

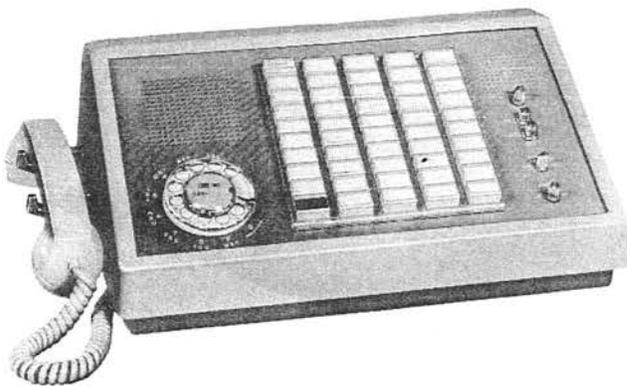

Fig. 1

CONTROL CONSOLE

A J53038E console, Figure 1, is used as the control console for the 3A Communication System. Overall dimensions are 17.500 inches wide by 6.750 inches high by 12.250 inches deep.

The following is an ordering guide for the control console.

J53038E, List 1—Control console equipped with: rotary dial; two 645A Keys for 20 interphone station lines; one 645B Key for pickup, hold, and auxiliary signals; 2 sheets of P49K048 Designation Strips; and SPEAKERPHONE transmitter unit.

J53038E, List 2—Same as List 1 except equipped with a TOUCH-TONE dial.

J53038E, List 3—Ten-button, nonlocking, illuminated 645A Key module. One List 3 must be ordered separately for each ten additional interphone stations. A maximum of two 645A Keys can be added.

ED-1E023-50—Housing for control console. Must be ordered separately and by group number for desired colors as follows:

Group 1	Moss Green
Group 2	White
Group 3	Light Beige
Group 4	Light Gray

ED-1E010-50—Face plate assembly for control console. Must be ordered separately and by group number for coordinated color and type of dial as follows:

	Rotary Dial	TOUCH-TONE Dial
Light Green	Group 1	Group 5
Light Gray	Group 2	Group 6
Muted Beige	Group 3	Group 7
Charcoal Gray	Group 4	Group 8

G3AR Hand Set—Hand set for control console. Must be ordered separately as follows: Green (-51), White (-58), Beige (-60), and Gray (-61).

D200L Mounting Cord—Eight feet long for control console, plug-ended to accept a 100C Connector Cable. Must be ordered separately (when required) as follows: Green (-51), White (-58), Beige (-60), and Gray (-61).

A100C Connector Cable—Plug-ended on one end to accept D200L Mounting Cord and raw-ended on equipment cabinet end. Must be ordered separately when required. Available in 50, 100, and 200 foot single-ended lengths.

A100F Connector Cable—Plug-ended to plug directly into console and raw-ended for equipment cabinet terminations. Must be ordered separately. Available in 100 foot single-ended lengths, unless otherwise specified.

Note: One of the two connector cables listed above is required when the equipment cabinet is to be located beyond the limits of the D200L Mounting Cord.

SYSTEMS

3A Communications (Continued)

55BW-49 Control Unit—Control unit for number 3 type SPEAKERPHONE service. A separate control unit must be ordered for the control console and for each remote answering station when equipped with SPEAKERPHONE.

760AW Loudspeaker—Loudspeaker for SPEAKERPHONE service. **Must be ordered separately, specifying color, when required.**

D18006 Kit of Parts—One required to modify each 55BW-49 Control Unit installed. **Must be ordered separately.**

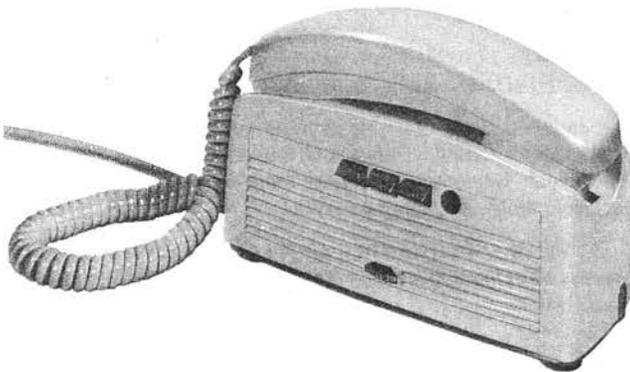

Fig. 2

PATIENT STATION

The system has a capacity of 40 patient stations. The sets used at these locations are composed of a hand telephone set and a telephone base, Figure 2. The patient telephone set has the following features:

- A. Recall switch in hand telephone set.
- B. P1A Ringer with volume control wheel and optional OFF position.
- C. Button assembly with NURSE, PRIVATE, and NORMAL buttons.
- D. Nurse call cord.
- E. Message waiting lamp.
- F. Optional data jack.
- G. Microphone with one stage of amplification for hands-free operation on interphone calls.
- H. Loudspeaker for hands-free operation with volume control accessible through base of set.

The following is an ordering guide for the patient telephone set:

AEW1 Telephone Base—Telephone base for patient telephone set. Equipped with: one 6 foot M2ER nurse call cord; P21F291 (bedding) clamp; and one loose 53A Lamp. Available in -58 (white), -60 (Light beige), and -61 (Light gray).

AEW2 Telephone Base—Same as AEW1 except equipped with a message waiting lamp.

220AW Hand Telephone Set—Standard rotary dial TRIMLINE hand set. Available in the same colors as the telephone base. A 220AW Hand Set must be ordered separately for each telephone base. Cord for Hand Set must also be ordered separately.

1220AW Hand Telephone Set—Same as 220AW Hand Telephone Set except equipped with a TOUCH-TONE dial.

M2ER Nurse Call Cord—Available in 6 and 11 foot lengths and in the same colors as the telephone base. One must be ordered separately if two cords are required at a patient's telephone set.

P21F291 Clamp—Used to fasten nurse call cord to patient's bedding. **Must be ordered in same quantity as separately ordered M2ER nurse call cords.**

D180032 Kit of Parts—Installed locally to provide optional data jack in AEW1 and AEW2 telephone bases. **Must be ordered separately.**

A12D Connector Cable—A 12-conductor cable to connect patient telephone set to equipment cabinet. Available double-plug-ended in 30, 80, 100, and 200 foot lengths, and single-plug-ended in 13, 50, and 100 foot lengths.

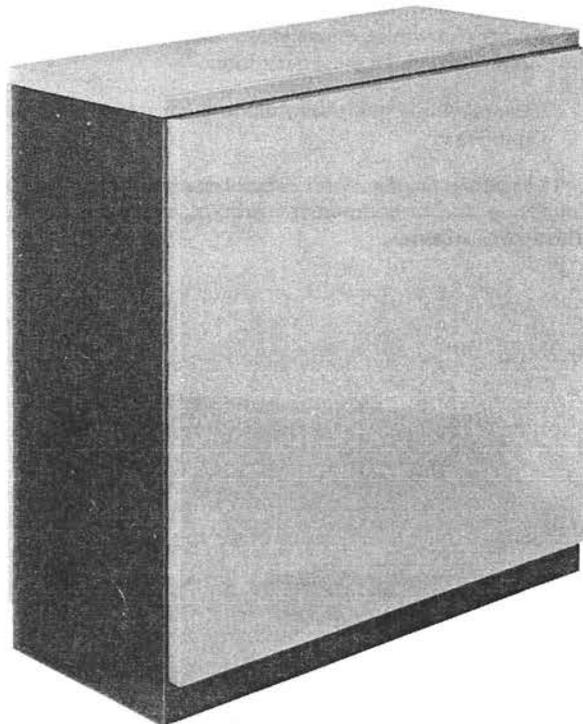

Fig. 3

SYSTEMS

3A Communications (Continued)

EQUIPMENT CABINET

The station and control circuit packs, power supply, and distribution terminal for the system are housed in a two-toned gray steel and fiberglass cabinet, Figure 3. The decor of the cabinet makes it suitable for installation in an office area or at the same location as the control console. Overall dimensions are 28.00 inches wide by 30.00 inches high by 13.750 inches deep. The following is an ordering guide for equipment cabinet.

J53038A-1, List 1—Equipment cabinet fully wired for 40 interphone lines. Equipped with: J86731D, List 1, A, and NP or 19C1W1 Power Supply; 57BW Control Unit; KS-15900, List 1 Interrupter and Circuit Packs AE1, AE2, and AE4. The interrupter and three circuit packs are shipped loose.

AE3 Circuit Pack—Station line circuit pack. One required for each interphone line. **Must be ordered separately.**

J53038A-1, List 2—Unit required in addition to List 1 to provide up to four 1A2 Key Telephone System central office or PBX line terminations at control console. One 400 type key telephone unit per central office or PBX line, and one KS-19175, List 1 Interrupter are also required and must be ordered separately.

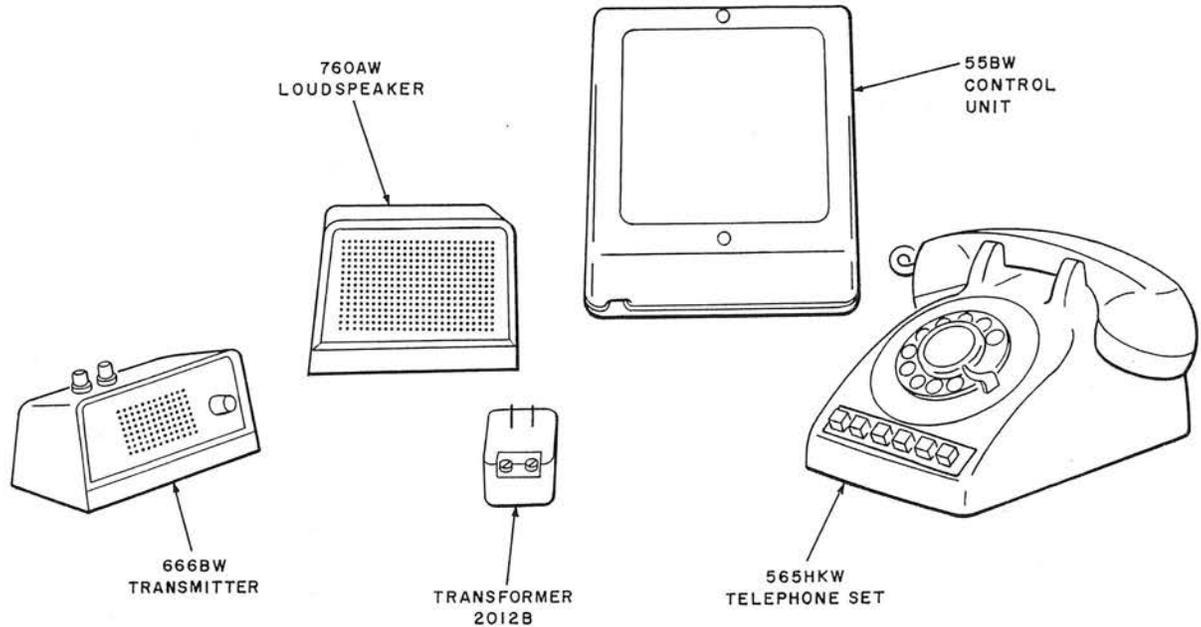

REMOTE ANSWERING STATION

When desired, an optional remote answering station or stations can be provided to answer patient calls when the control console is unattended. Any standard telephone set wired for "A" lead control may be used as a remote answering station; however, if it is necessary to answer central office or PBX calls in addition to the interphone line, a key telephone set or equivalent must be used.

When **SPEAKERPHONE** is required at a remote answering station, the telephone set used must be wired for this option. A separate number 55BW-49 Control Unit must be ordered. Only one remote station may have **SPEAKERPHONE**.

SYSTEMS

3B Speakerphone

The 3B Speakerphone is a transistorized voice switched microphone-speaker system which permits hands free conversation. An adjustable volume control for loudspeaker exclusion permits private conversation in a room without transmitting over a line.

A normal installation is composed of a 500SRW or 565HKW (six button) Telephone Set, 666BW Transmitter, 760AW Loudspeaker, 55BW-49 Control Unit, and a 2012B type transformer. A 110 volt outlet is required for power.

A conference system may be arranged by adding multiples of 670AW and 671AW type transmitter and 760AW Loudspeakers. This arrangement provides for adding up to five auxiliary transmitters and one additional loudspeaker to the system in order to improve the overall transmission performance of the system when it is used by a conference group.

The 3B Speakerphone System is available in the following colors: green, yellow, white, beige, and gray. Colors must be specified on the order.

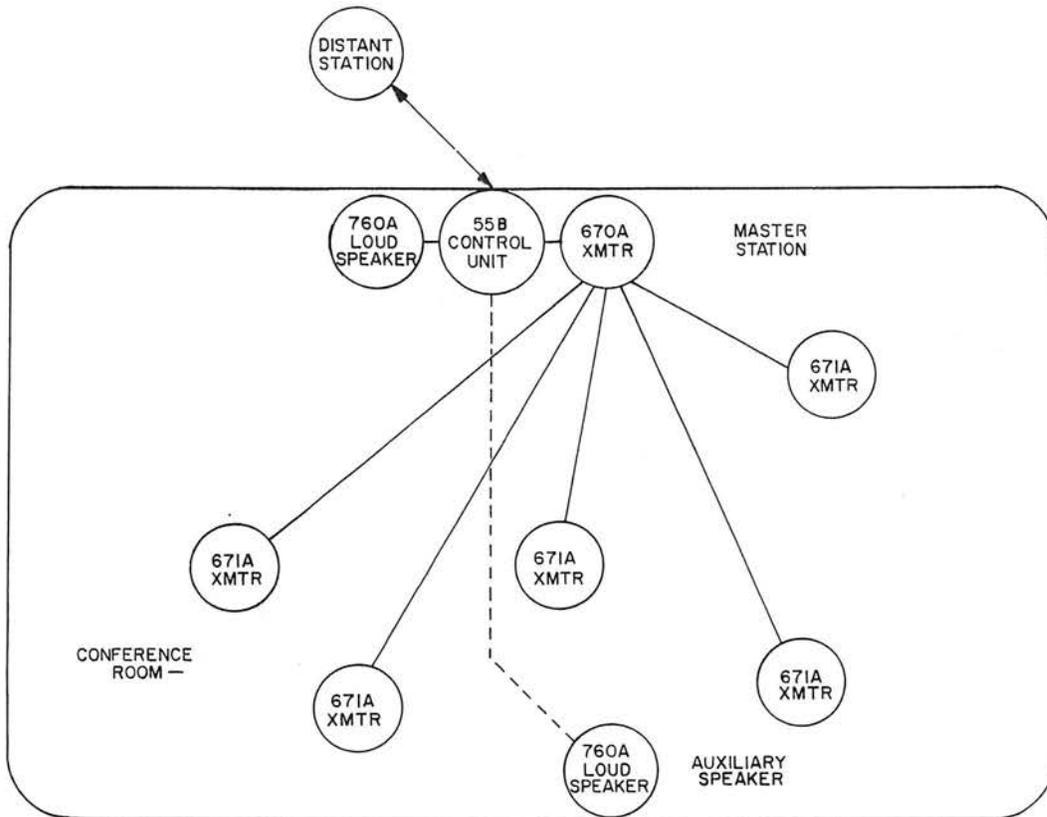

A 148B-49 Adapter is available for converting plug-ended 6, 18, and 30-button type telephone sets, which if required must be specified on the order.

A 667B Transmitter is available for use with existing 630 or 631 type CALL DIRECTOR telephone set (providing space is available) which if required must be specified on the order.

A 630 or 631 type CALL DIRECTOR telephone set may be used with the system thus eliminating the 666BW Transmitter and standard telephone set which if required must be specified on the order.

SYSTEMS

3B Speakerphone (Continued)

SYSTEMS

(J53026) 300 Switching

The 300 System is a crossbar type common control switching system designed primarily to meet the requirements of the Federal Aviation Agency (FAA) for use at Air Route Traffic Control Centers (ARTCC). The purpose of the system is to provide voice communication facilities between personnel at ARTCC's and to other allied agencies over regular telephone lines and also to connecting customer owned radio facilities. This system provides the means for attendants to communicate with each other over various types of land lines and customer owned radio equipment. The switching functions of this system are controlled by nonlocking push button keys at the attendant positions. More than one position can connect to the same line at the same time, but conference connections of more than one line to a position are not permitted except where combining of radio lines is provided. The switching equipment places no restriction on the number of calls that can be in progress at the same time. Transmission through the switching equipment is on a four-wire basis. The attendant equipment is designed to mount in various types of Non-Bell System consoles at ARTCC's.

The principal features of the 300 Switching System are as follows:

- A. Enables a position attendant to have direct access to a number of most wanted lines or air ground radio arrangements by merely operating a key (one per line).
- B. Enables a position attendant to have indirect access to any position, air ground radio line, or other line available to the center by the use of push button dialing.
- C. Permits incoming long line calls intended for a specific position in the ARTCC to be indicated at that position.
- D. Provides circuit arrangements to permit establishment of connections over dial, manual, or selective signaling lines or to air ground radio facilities either singly or in combination.
- E. Permits incoming dial selection of attendant positions with call storage and sequence answering, and with primary and secondary answering responsibility arrangement on certain lines.
- F. Provides position intercommunication on an override basis so that one position always has access to another even though it may be busy.
- G. Provides distinctive types of lamp indications at positions such as steady, flashing, fluttering, or winking to indicate the status of a line or call.
- H. Provides individual position blanking of lamp displays to eliminate any unnecessary flashing or steady lamp displays.
- I. Includes provisions for using the position telephone set with FAA provided radio equipment on an automatic transfer basis; for example, wire versus radio.
- J. Provides auxiliary lamp panels to indicate all or a limited number of calls to a center during light traffic periods.
- K. Includes an audible guard tone signal on dial lines while dialing is in progress.
- L. Includes arrangements to permit the origination and termination of a multiplicity of line and position connections established at the same time.
- M. Includes arrangements to prevent a position from establishing a connection to more than one line or position at the same time.
- N. Provides rapid service connections via push button dialing.
- O. Provides a means of establishing a radio combination or pattern by the operation of keys at an attendant position with access by direct access.
- P. Provides a means for an attendant, through the use of the push button dial, to set up radio lines in combination access via direct access.
- Q. Provides a means of assigning a fixed combination of radio lines to a position by soldered cross connections with access to the combination at the position via direct access.
- R. Provides a means of establishing combinations of radio lines with a push button dial from a remote point within the center for assignment to a position with access at the position via direct access.
- S. Provides a means of assigning single radio lines to a position with access at the position via direct access.
- T. Includes syllabic lamps to provide a visual indication of speech received from radio channels by a variation in the intensity of illumination.

SYSTEMS

(J53032) 301 Switching

The 301 Switching System is primarily for use at Nike-Zeus installations and for the Federal Aviation Agency (FAA) use at small Air Traffic Control (ATC) installations such as ATC towers and Instrument Flight Rule (IFR) rooms. The 301 Switching System provides a single line display lamp with nonlocking push button keys. Line connections are indicated by a flutter signal on the display lamp, a wink signal to indicate a hold, a 60 ipm flashing to indicate an incoming call signal, and a steady lamp to indicate a busy at other appearances. Multiple Access Attendant Telephone (MAAT) permits the attendant to talk on radio and override and/or hot (voice signaling) lines simultaneously when the pickup buttons for these lines are held depressed for the duration of the conversation. Connections can be made with two-wire lines, four-wire lines, and customer-provided radio equipment.

The attendant telephone circuit is provided with the following features:

- A. Low impedance connections to provide equalized transmission regardless of the number of simultaneous hot or override line terminations.
- B. Interconnections of a number of attendant positions on an override basis by establishing talking connections even though the calling party, the called party, or both, may be engaged in conversation on another line.

- C. Connection of a number of lines to a single position loudspeaker.
- D. Transfer of position receiver circuit to the loudspeaker when a hand microphone is used.
- E. Selectively transferring incoming override calls to the position loudspeaker.
- F. Separate recording facilities for the attendant receiver circuit and the position loudspeaker.
- G. Restricting preselected lines from recording except when the attendant is receiving an override call.

The equipment is arranged on a unit basis, i.e., each installation may be arranged for any combination of telephone lines, maintenance lines, station lines, etc., selected as desired and connected at the time of installation. At each installation there is a variety of consoles into which telephone keys, dial units, hand set units, jacks, connector cables, and connecting blocks are installed. There are equipment areas with special equipment for Nike-Zeus on which jacks, dials, and keys are mounted. At various locations telephone sets will be mounted which can be connected into the system. The dial, jack, and key units are provided with quick disconnect connectors to provide ready maintenance of units in consoles.

All relay units are surface-wired or local-cabled on 2-by 23-inch mounting plates or a multiple thereof unless otherwise specified.

SYSTEMS

(J53033) 302 Switching

The 302 Switching System provides telephone communications including central office, PBX, station lines, tie lines (for connecting to distant air traffic control facilities to effect coordination of flight plans, etc.) and ring down lines (used primarily for on-base coordination with facilities as the control tower, base operations, etc). The system also provides audible and visual communication between tower and station at Ground Control Approach (GCA) and Radar Control Approach (RAPCON) fixed on mobile installations.

The equipment for a typical fixed RAPCON installation is arranged on a unit basis, i.e., each installation, instead of being coded as a complete plan, may be arranged for

any combination of telephone lines and radio channels, selected as desired and connected at the time of installation. The exceptions to this are the GCA installation which is a 6 line, 3 position system and the mobile RAPCON installation which is a 12 line, 4 position system. In these cases, the equipment is provided in a 6-foot 8-inch steel cabinet.

There is a variety of consoles into which telephone key modules, apparatus units, dial modules, jacks, cable assemblies, etc. may be installed.

All cable assemblies are provided with quick disconnecting plugs and receptacles to provide for ready maintenance of the keys and for replacement of defective consoles.

SYSTEMS

(J1G013) 304 Switching

The 304 Switching System is designed to attain the following objectives:

- A. Simpler and more economical switching circuits by use of the bus bar bridging arrangement rather than the conventional four-wire bridging arrangement.
- B. Good transmission to all parties and more economical transmission by providing, in cases where the round-trip delay time is more than 20 milliseconds, a cancellation arrangement and sectionalized bus bars.
- C. A simple conference display at an attendant position which permits ready identification of connected parties.

The 304 Switching System provides push button control by an attendant of a four-wire cordless switching system. From a central console an attendant may set up point-to-point or conference connections, large or small, by simple operation of nonlocking keys. Arrangements are provided for the attendant to add or remove conferees at will and to control their talk-and-listen and listen-only capability. Lamp displays associated with each line permit the attendant to determine the immediate status of any line.

The system consists of a central control console (large console) or a desk-type turret (small console) and a push button controlled switching network with large conferencing capability. Crossbar techniques are used to establish conferencing paths by connecting the incoming lines to the verticals and using the horizontal links to connect the lines together. Each link may serve as a conferencing bus bar to which all parties in the system may be connected simultaneously. Point-to-point connections may also be set up on horizontal links. Equipment arrangements permit a user to equip a system with as many links as required in multiples of ten.

Two bus bar bridging arrangements are used. Lines having round-trip delays of 20 milliseconds or less may be connected to the simpler bridge. The other and more complex bridging arrangement is used where the delays are greater than 20 milliseconds. This helps to ensure good transmission to all parties with a minimum of transmission treatment.

Line equipment is provided for use with four-wire stations, ringdown and automatic trunks, central office lines, PBX tie trunks, and private lines arranged for SS1 signaling.

A patch panel provides means for patching any four-wire line facility to any associated four-wire line circuit. This panel also provides a means for monitoring and testing the transmit and receive loops of connected four-wire lines.

The following are the most important of a number of features included in the functions of the 304 Switching System:

- A. Termination of up to 200 four-wire lines or trunks on one console. (A limited number of two-wire lines may be included in this number.)
- B. The attendant may place all parties in the system into one single conference.
- C. The attendant may set up a number of conference calls at one time.
- D. The attendant may control the talk-and-listen or listen-only capability of each party on a connection.
- E. A patch panel permits access to drop and line terminations of lines and trunks.
- F. The status of each line may be determined by observing the console lamp display.
- G. Four conferences are continuously and readily identified by means of colored lamp indications. Parties to other point-to-point and conference connections may be determined by the state of the pickup key.
- H. A variety of signaling arrangements between the various line facilities and the 304 Switching System.
- I. Audible signals are used to alert the attendant.
- J. Prearranged conference arrangements.
- K. Attendant, push-to-talk operation via a handswitch or footswitch from either a hand set or a head set.
- L. Recorders, loudspeakers, or public address systems may be connected to conferences. (Loudspeakers are mounted on the console.)
- M. Attendant operation may be conducted from large or small consoles.
- N. The attendant may enter any conference connection at will.

All control is exercised manually from a console. Each termination, line or trunk, has an appearance in a field of pickup keys and lamps which extends across the full width of the upper section of the console. Two arrangements of indicator lamps associated with the pickup keys and lamps may be provided. One arrangement provides for an all-white conference link system, where only a white indicator lamp is used to indicate a connected line. The second arrangement provides a six-state indicator lamp display associated with each termination. The various states are indicated by different colors (red, white, yellow, amber, blue, and green), from which the attendant can tell the condition of any line or trunk. Four conferences are continuously and readily identified by means of the colored lamp indications. Common control keys and a dial are provided below the pickup keys and status indicators. The common control keys are used by the attendant to perform such functions as release, signal, audible signal, cutoff, etc. The dial is provided to permit dialing outgoing calls to PBXs or central offices. The TOUCH-TONE keying unit may be provided in place of the rotary dial.

SYSTEMS

(J1G013) 304 Switching (Continued)

The console can also mount up to four loudspeakers. A second console can provide dual control of the same lines.

A hangup hand set is positioned at the far left of the console. Jacks permit the use of a head set when desired. Push-to-talk capability via a handswitch or footswitch may also be provided.

Turret-type consoles designed to mount on the tables or desks are available for initial installations of 80 lines or less. The turrets include the same features as presented in the large console except only one loudspeaker is provided. Two turrets can be furnished to provide dual control.

SYSTEMS

(J1G022) 310 Switching

The 310 Switching System is a manually-controlled, short-haul direct access dispatch service system which provides for one to eight attendants to terminate, interconnect, or conference 2-wire and 4-wire telephone lines. Connections to lines and trunks are controlled from a cordless key type console. This system is used by right-of-way and similar customers for dispatching purposes.

A 310 system may be completely 2-wire or 4-wire or any combination of 2-wire and 4-wire lines. Connections between lines and trunks are established with a crossbar switch field with a capacity of up to 20 links and 100 lines. Provision for conferencing 2-wire, 4-wire or both 2- and 4-wire lines and trunks is provided.

The main components of the 310 system are the one to eight consoles and the supporting equipment consisting of wire spring relays, amplifiers, conference bridges, and one or more crossbar switches. The supporting equipment, except the crossbar switches, mounts on 7 foot (height) 23 inch (width) frames. Crossbar switches mount on 7 foot (height) 36 inch (width) frames.

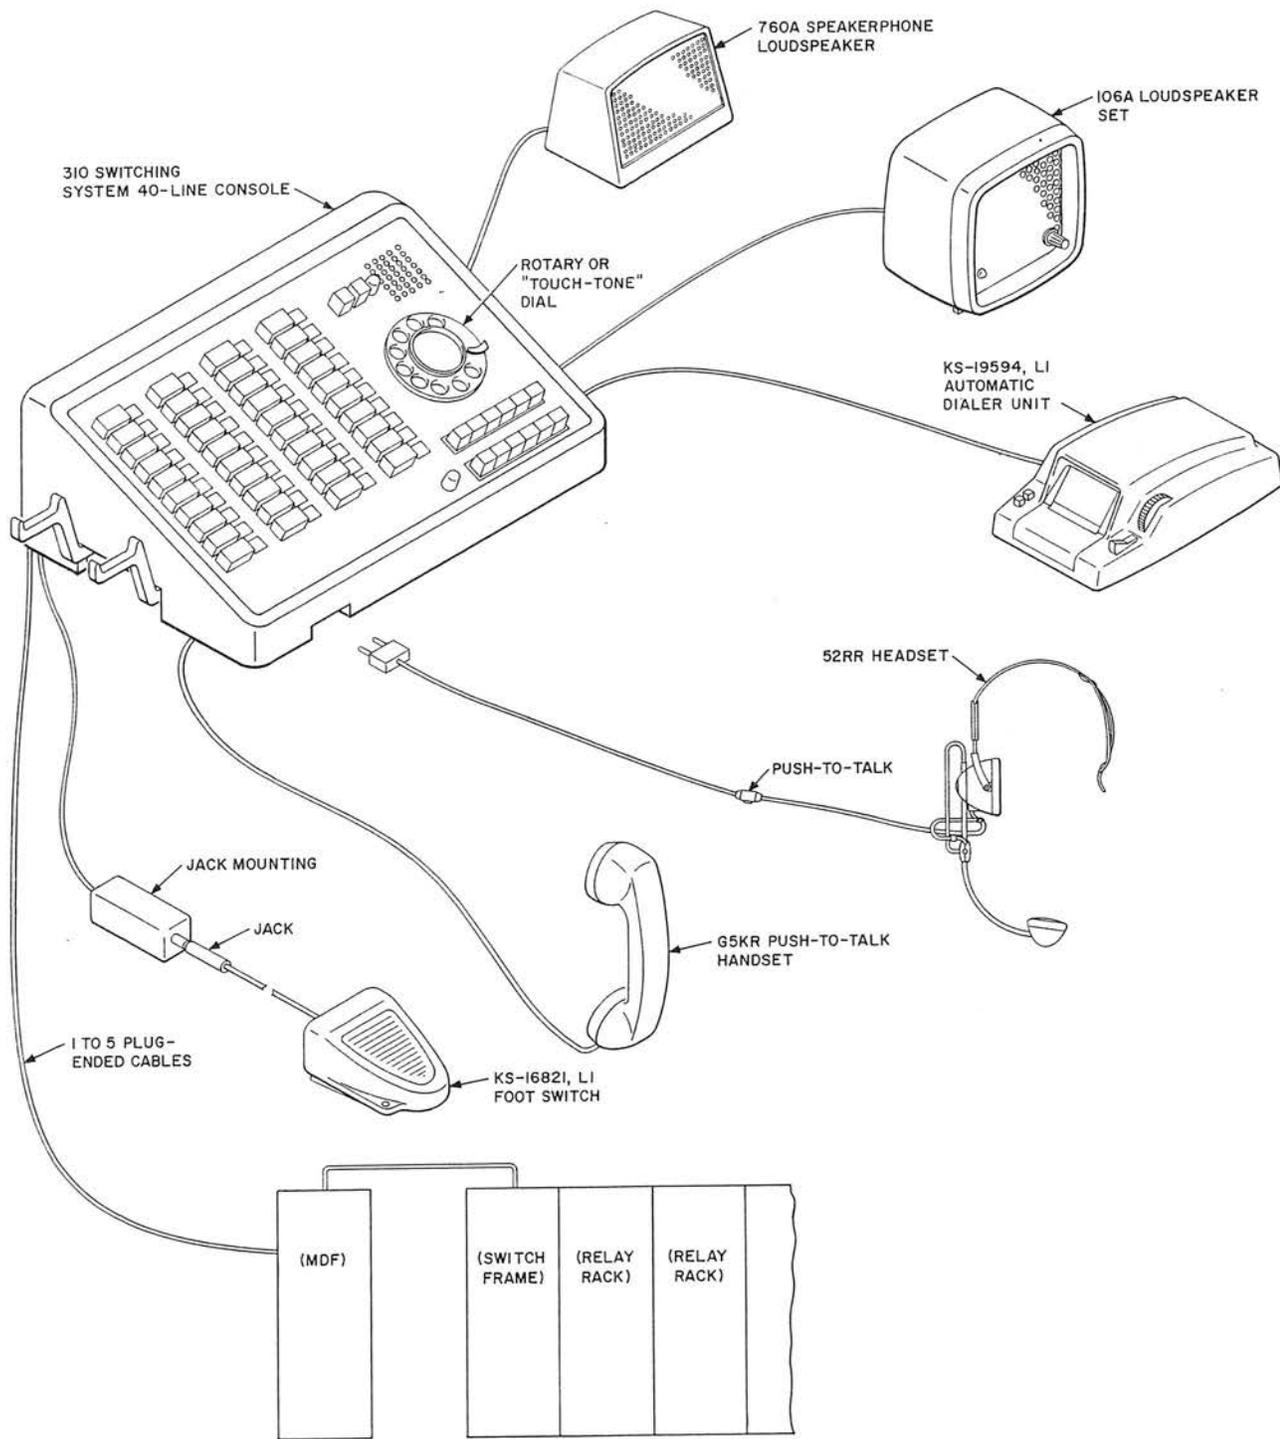

Attendant positions are of the console type and are available in 40- and 100-line sizes. The 40-line unit is normally supplied equipped for 20 lines and the 100-line console is supplied for 40 lines. The 40-line console is approximately 12 by 17 by 6-1/2 inches high with an additional 3 inches required on the left side for the handset. The 100-line console is approximately 12 by 31-1/2 by 6-1/2 inches high with an additional 3 inches required on the left end for the handset. When either console is flush-mounted, the handset is not mounted on the left side of the console, but is mounted separately on a handset mounting.

The 310 Switching System requires only one DC power supply. This power supply should be regulated 48 volts (45 to 50 volts) and should be engineered for the desired reserve in the normal manner. Lamps require a 115 volt AC source which can be supplied from commercial power or an optional solid-state inverter powered by the 48 volt DC.

SYSTEMS

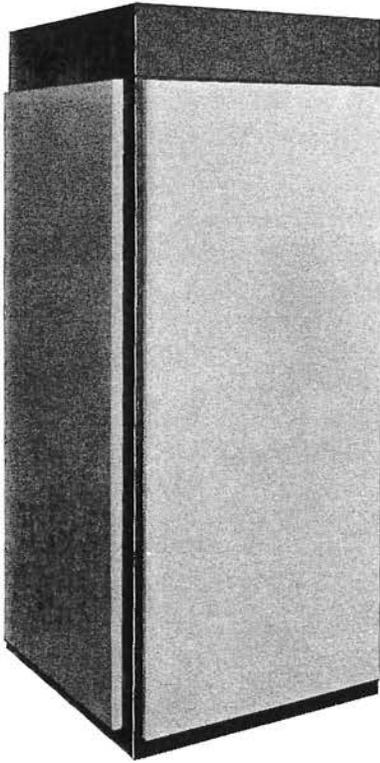

(J1G022) 310 Switching (Continued)

The following illustrates a typical equipment layout for a 40-line Console, 310 Switching System.

SYSTEMS

(J53035) 400 Switching

The 400 Switching System is a two-digit crossbar type dial system. The basic 400 Switching System is a packaged unit with six talking paths and 20 station lines. It is expandable to 30 or 40 station lines by adding plug-in, ten-line supplementary units. The system has a self contained batteryless power plant operating on 115 volts ac; it supplies +48, -48, and +10 volts ac. Dial tone, busy tone, automatic ringing, and audible ringing also are supplied. Calls between stations associated with this system are made by two-digit dial selection over six talking paths. Exchange and toll calls to and from stations which do not have direct termination of central office lines may be made through a primary answering station (six button key station or a CALL DIRECTOR set) by the use of an add-on feature.

The 400 Switching System is contained in a single cabinet 27-1/2 inches wide by 30-1/2 inches deep by 63-5/8 inches high. The apparatus within the cabinet is mounted on three vertical sliding type racks, each supported at the top and bottom by telescoping tracks. Each slide is readily released when a slide is to be withdrawn. The three slides are provided with an interlocking device so that only one slide may be pulled out at a time, thus the weight distribution is such that the cabinet need not be anchored to prevent tipping. Each slide has a capacity for twenty-six 2 inch by 23 inch mounting plates. Plug-in cables are furnished to interconnect the three slide units within the cabinet. There is space within the cabinet for providing combinations of Direct Station Selection, TOUCH-TONE Calling, and additional add-on units on an optional basis.

SYSTEMS

Crash Alarm and Command Conference

The Crash Alarm and Command Conference Systems are designed for use at air fields of the Armed Forces. The systems enable a responsible person at one of several control stations to communicate without delay with a group of subordinate stations over a telephone conference connection. With systems associated with PBX's, the subordinate stations will usually be regular PBX extension stations. When the control station originates a conference connection either of two conditions prevail: (1) With the crash alarm circuit, each station is cut off from the regular PBX line equipment and connected immediately to the conference circuit; (2) With the command conference circuit, an audible tone, which may be heard above the conversation, is applied to the established connection and the station is not cut off, but when the regular connection is released in the normal manner, the station is immediately connected to the conference circuit. With the crash alarm circuit, a group of lamps is provided at the control station, one for each station which lights while its associated station is on the conference circuit with its hand set off the mounting. These lamps are not provided with the command conference circuit.

The principal features of the crash alarm and command conference circuits are as follows:

- A. Audible signal is provided on incoming calls to the control station.
- B. When two control stations or control and subcontrol stations are provided, busy lamps are provided at the control and subcontrol stations.
- C. Provision is made for holding the PBX line.
- D. A supervisory lamp per called station is provided at each control or subcontrol station.
- E. Any called station may disconnect during the conference, except for the crash alarm circuit for use with 551, 555, 604 and other low voltage PBX's.
- F. Called stations which disconnect during the conference may be recalled before the end of the conference.
- G. On the crash alarm systems independent of the PBX, provision is made for a continuous electrical test of all lines to subordinate stations.

The crash alarm and command conference systems consist generally of one or more control, or control and subcontrol stations, and a group of subordinate stations. Except for the crash alarm system with continuous line test, the subordinate stations may be regular PBX extension stations.

With the exception of the low voltage circuits, all of the systems are arranged to couple the subordinate stations to the control station by means of repeating coils. The subordinate station repeating coils are connected in parallel groups of three coils in series. Up to a maximum of 21 stations may be connected in this manner to form a branch, and in larger systems, with more than 21 subordinate stations, the branches are connected in series and then through repeating coils to the control station. When there are two or more control stations, the control station repeating coils are connected in series. In the case of crash alarm systems for use with 551, 555, 604 and other low voltage PBX's, the subordinate stations are connected in multiple.

The capacities of these systems are as follows:

- A. Crash alarm circuit for use with 605, 701, 711, and other 48-volt PBX's.
 - (1) 63 subordinate stations and one control station.
 - (2) 62 subordinate stations and one control with one subcontrol station.
 - (3) 36 subordinate stations and two control stations.
 - (4) 30 subordinate stations and three control stations.
- B. Command conference circuit
 - (1) 63 subordinate stations and one control station.
 - (2) 62 subordinate stations and one control station with one subcontrol station.
 - (3) 36 subordinate stations and two control stations.
 - (4) 30 subordinate stations and three control stations.
- C. Crash alarm circuit arranged for continuous electrical test of lines.
 - (1) 147 subordinate stations and one control station.
 - (2) 63 subordinate stations and two control stations.
 - (3) A total of 24 subordinate or control stations.
- D. Crash alarm circuit for use with 551, 555, 604, and other 24-volt PBX's.
 - (1) Ten subordinate stations and one control station.
 - (2) Ten subordinate stations and two control stations.
 - (3) Ten subordinate stations and three control stations.

SYSTEMS

(J95421) Group Alerting

The Group Alerting System is designed to convert, on a temporary basis, a telephone system, or a part of it, to an emergency alerting system. Its purpose is to assure that certain personnel are notified (alerted) of a given situation so that they may take proper action.

An alert is initiated from the control station by dial pulses. The central office equipment, upon receiving the code pulses from the control station, makes a busy test on the lines to be alerted and rings the lines found idle. The lines found busy will be "camped-on" and receive 14 seconds of group alerting tone. This informs the person on the line that an alert is in progress and that by hanging up, he will receive the alert. If the user does not hang up before the tone times out, the line will be "camped-on" and will be connected to the alert when it becomes idle provided that the alert has not been terminated. The alerted lines that are idle are transferred from regular telephone service to the group alerting system equipment.

When the alerted telephone is answered and the announcement received, hanging up the telephone restores its line to the regular telephone network. The alert may be terminated manually by the control station or it will terminate automatically at the end of the timing interval set in the central office equipment. An alert period may be extended by redialing from the control station prior to the automatic time-out.

All transmission is one way from the control station to the alerted stations. The alerted stations cannot communicate with each other or with the control stations.

A maximum of 480 lines may be connected to one system. These lines may be individual, full selective, or eight-party semiselective, with a restriction of one alert station per party line.
